1. The Castello S. Angelo at Rome.—Quentin has sifted the further evidence of the Martyrologies. The castello is that of the Martyrology of Bede: 'iii. Kl. Oct. Dedicatio ecclesie sancti angelii Michaelis'. This is modified by the Mâcon MS: 'Romae, dedicatio basilicae sancti angelii' by the Cologne MS: 'Romane, dedicatio basilicae sancti Mikhailis archangelii'; and by the Bologna MS with the insertion of the words 'miliario sexto' between 'Romane' and 'dedicatio'. The earliest evidence supports that of the Leonian Sacramentary, and points to the dedication of a church at the sixth-mile-stone on the Via Salaria. The MS of Toul and Remiremont read: 'In Monte Gurgo, dedicatio basilicae sancti Michaelis archangelii.' This is the source of the entry in the Martyrology of Ado, archbishop of Vienne, e. 870: but he adds:

'summae post. Romae, venerabilis stiicm Bonifatius pontificis ecclesie sancti Michaelis nomine constructae sedis, in sommitate ecclesie sanctae misae pro diebus saeculis perpetuum. Unde et ibidem locis, in sommitate siti continuos ecclesie, inter tabernae stabat vocatur' (Quartin, Les Martyrologies historiques, p. 50, 90).

The entry in the Martyrology of Ado is the most ancient testimony to the consecration of the tomb of Hadrian to St. Michael. A century later Lippi from the Apulian monks witnesses to this church on the top of the Castel S. Angelo: 'Mutilio vero ipse sancta altitudinis est, ut ecclesia que ad cocceos sussexerit eum pro deum sanctificat orbis, hic de eo sancto sanctificatur et diadema ad eum. Boni, et de sanctum sanctissimi de sancto sanctissimi' (ib. p. 86).

Baronius also identified the Church of St. Michael inter nubes with the Castel of S. Angelo, assigning its dedication to Boniface iii. (606) or Boniface iv. (697-714), in memory of the staying of the plague under Gregory the Great (C. Baronius, Martyrologium Romanum, Venice, 1602, p. 544).

ii. The church on the Via Salaria.—The dedication festival of Sept. 29 would seem to have three steps in historical progress. The earliest has reference to the church on the Via Salaria, the second to the Apulian church at Monte Gurgo, and the third to the church on the Castel S. Angelo. The sixth mile-stone on the Via Salaria is north of the site of Fidenae, somewhere between Castel Guglie and Castello Marchiano. The fact that Sette Fagni, which lies on the hill-side north of the little stream of the Allia, cannot be far from the old Basilica of St. Michael. The evidence from the Michael shrine near Spoleto, which was known for its healing springs, may explain the origin of the dedication.

iii. The church on Monte Gurgo.—Monte Gurgo juts out from the north end of Apulia into the Adriatic. The Michael shrine is on the Monte S. Angelo, about ten miles from Manfredonia, the ancient Sipontum. The dedication is assigned to the last years of the 5th century. Baronius refers it to MS 2171 (p. 25). And in the Martirium Legumin, a calendar in the same MS under Sept. 29, is: 'iii. (Kal. Oct.) dedicatio sancti Michaelis angeli regni' (G. Morin, 'Libri Comicus, Anecdota Moriboliana', i.[1883] 362, 402). A coin of the same Spanish monastery of Silos in Old Castile (Brit. Mus. Add. MS 30851) has two inscriptions: 'in die sancti Michaelis Arcangeli', where reference is made to the 'sacred'. The first hymn has the line: 'ut glorietur in deo cern consorts socios'; and the second: 'Urioel Gabriei Rafaeli sacrii' (Mozarabic Hymnal, H. Brunshaw Soc. xxx. [1905] 254). The latest hymn has the line: 'et Michaelis et Michaelis in monte Gurgo' (Beroldus, ed. M. Magistrati, Milan, 1894, pp. 11, 17).

iv. The Michael sanctuary in Umbria.—The Antonino Itinerary thus notes two stations on the way from Rome to Milan by the Via Flaminia: 'civitas spolioli... mil. vii; mutatio Sacriarum... mil. viii'. This 'mutatio' is placed at Le Vene, near Spoleto (P. Antonino, ed. R. A. Gilson, M. Pinder, Berlin, 1848, pp. 288, 378). Wesseling rejects the theory of P. Claver that this referred to a sanctuary of Jupiter Clitumnus, and accepts that of L. Holstein that there was a Christian sanctuary on this site when the Itinerary was written (P. Wesseling, Vet. Rom. Itinera, Amsterdam, 1735, p. 613). H. Leclercq states definitely that the sanctuary cannot have been dedicated to the 'God of Angels' before the epoch of Theodosius, or at the latest before the beginning of the 5th century. The inscriptions of the Tempio di Clitumnus belong to this date. The inscription over the central door reads: 'SUSE DEUS ANGELORUM QUI FECIT RESURRECTIONEM.' Leclercq says:

'Q. sedelice, dont la premiere destination n'est paschrete, et que l'antique ...' (DAlch., art. 'Ages', p. 214).

And again, after examining the theory of H. Grisar that these buildings (i.e. the Tempio di Clitumnus and the Church of S. Salvatore at Spoleto) are works of a school of the 12th cent., he concludes:

'Nous pensons donc, jusqu'a nouvelle demonstration que contrairement a l'opinion de L. Holstein, le tempio di Clitumnus a ete une destination primitivement palatiale, il fut vrai de ces sanctuaires que les clercs, ou autres qui dans la rive du Clitumnus pour avoir fait devenir son nato de Sacriaria un site d'epoque situe entre Spoleto et Terri' (ib. p. 210).
The consecration of the healing water of the Citiummass to the God of Angels suggests a similar origin for the basilica on the Via Salaria, and may perhaps lie behind the dedication on Monte Gargano. The legend that the angelic agency, associated with healing springs, is recognized in St. Michael, states that there is evidence of the prevalence of the cult of angels in Umbria from the first half of the 5th century. The Church of S. Salvatore outside of Rome is dedicated to St. Michael. This church originally dedicated to St. Michael in 429. There is another in the parish of Mandorletto near Perugia, of the same epoch, called in the inscription: 'hac sacramento angelorum' (ib., p. 2148).

2. The Michael churches in the East.—I. St. Michael of Khonai.—The Church of St. Michael the Archistrategos was the centre of the angel cult of Asia. When the hill-station of Khonai took the place of Colossae in the 7th cent., the Church of Colossae became known as the Church of St. Michael of Khonai. The legend tells that St. Michael saved the people of the Lausiac valley from inundation by clearing the gorse outside Colossae. The miracle of Khonai in its present form is of the 9th cent., but it represents the foundation of St. Michael's Church of Khonai. W. M. Ramsay has no doubt of the identity of the Church of St. Michael of Khonai with the Church of Colossae. The mid of the Turks in 1189 swept almost completely away the Lausiac valley. Khonai on the hill-side escaped them, but the threshing-floors along the valley were destroyed, and the great church was burnt (Nicetas Choniates, Annales de Isacco Angulo, bk. iv. ch. 2 [Hist. Byzant., Venice, 1729, xil. 210]). The legend also explains the origin of a spring of sweet water on the north of the city (Ramsay, Cities and Bishops of Phrygia, i. 214 ff.). St. Michael of Khonai in the later Christian legend takes the place of the Zeus of Colossae of pagan tradition. The power associated with Zeus was in the Christian period attributed to St. Michael. Ramsay sums up the importance of the legend in its bearing on early Christian history: The worship of angels was strong in Phrygia. Paul warned the Colossians against it in the first century (Col. ii. 15). The Council held at Laodicea on the Lausiac valley, about A.D. 263, stigmatized it as an idolatrous (Conc. Laod. Cah., 53). The church at Laodicea, about 439-540 A.D., mentions that this disease long continued to infest Phrygia, and sought a new resting-place. But that which was once counted idolatry, was afterwards reckoned as piety (Church in the Roman Empire, London, 1882, p. 477).

ii. Asia.—Michael the Archangel was honoured there as the patron of the Church by his name preserved in Mihayil near Phrymmenos, in Michaelitch on the Sangarios, and in other city names (Ramsay, Phrygia, i. 31 f.). He is connected with the introduction of Christianity into Isaura, and is associated with the cities of Akronisos-Nicopolis and Gordium-Endokia. Sozomen speaks of the cures wrought at the Michaelion, a shrine built by Constantine on the north shore of the Bosphorus (HE ii. 3). Its ancient name was Hestia, and was traditionally associated with a temple built by the Argonauts (Cedremus, Hist. Comp. [Hist. Byzant. vii. 93]; Ramsay, Church in Eon. Emp., p. 47, n.). It has been transferred to Constantinople, and is now represented by Armouni.

Procopius describes the rebuilding of this basilica by Constantine, and the building of another under the dedication of St. Michael at Prochteschos on the Asiatic shore (Procopius, de Edificiis, i. 8). It built another on the Asiatic coast at Mokadion (ib. i. 9). Procopius also mentions the Michael churches in Phrygia (ib. iii. 111) and at the healing springs of Pythia in Bithynia, with a house of rest for the sick (ib. iv. 3), while at Perga in Pamphylia stood a pachecoin of St. Michael (ib. v. 9).

iii. Constantinople.—There are important references to the Michael churches of Constantinople and the neighbourhood in the Imperium Orientale of Anicius Banduri (Hist. Byzant., xxii. and xiv.), and the Michael churches of Chios (C. D. du Cange, Hist. Byzant. xxii.). The latter gives a list of fifteen churches (Const. Christ. iv. 3) in the city and five monasteries in the suburbs (ib. iv. 13). The chief festival of St. Michael in the city is that of a small church on Nov. 8, iv. Alexandria.—The Annals of Eutychins of Alexandria (790) have a legend connected with a Michael church in Alexandria. It was on the site of a temple of Saturn, in which there had been an image of brass named Michael. The image was broken up, and the pagan festival was transferred to St. Michael (R. Singer, DCA, p. 1179).

3. The Michael churches in the West.—In Italy and the East, headland, hill-top, and spring sanctuaries now dedicated to St. Michael were formerly sacred sites of earlier religions. The associations rest frequently on folk-lore; the testimony is that of legend and tradition or place-name. The same associations are to be expected in the West. In some cases the legend may be traced; in others it may linger in folk-lore, and can be looked for only in local tradition, and in the association of Colossae with St. Michael and a site associated with a headland, hill-top, or spring, on a road or track of early origin, it is reasonable to look for a pre-Christian sanctuary.

1. Headland and coast churches.—On the French coast are St. Michael near the mouth of the Loire, St. Michael on the Pointe du Raz in Brittany, St. Michael en Greve, and St. Michael at the mouth of the Saône, St. Michael near the Cap de Frehel, and, best-known of all, Mont St. Michel. The legend associated with Mont St. Michel suggests the tradition of an ancient sanctuary of Celtic heathenism. The giant slain by Arthur on the site is said to have come from Spain, the Hades of Celtic mythology (Rhys, Celtic Heathendom, p. 901.). He is said to have ravished Elain, who is equated with a goddess of Welsh mythology (ib. p. 161). Thus, by the overthrow of a giant by the champion of Christendom, the Celtic sanctuary becomes the sanctuary of St. Michael.

Among the coast and headland churches in England are St. Michael's Mount, the church of Lyme Regis, and that of Bere near Seaton, all of ancient origin. There are also St. Michael near the mouth of the Camel opposite Padstow, St. Michael, Mawnan, in Cornwall; St. Michael on the Penkridge, and St. Michael-Caes-hayes. On the west coast there is a Michael church at Workington in Cumberland; on the east coast, Garton in the East Riding, Sidestrand and Ormesby St. Michael, in Norfolk; on the south coast, Newhaven in Sussex and East Toymouth, Devon. With a few exceptions the majority are in Dorset, Devon, and Cornwall, where the old lore lingered longest.

2. Hill-top churches.—These are to be found throughout the West, sometimes as hermitage chapels, sometimes as town and village churches. St. Michael is the central church of Limoges, the Augustinorum monasteries of the Metzgate in Limoges. St. Michael is also the central church of Castelanadour on the old road between Carcassonne and Toulouse. These sites are frequently the high-places consecrated to early religious rites. The church of Penkridge in Staffordshire is dedicated to St. Michael. Penkridge is the Celtic site of the ancient city of Penimor, 'a place-name which bears evidence of a true Celtic origin and the centre of ancient Britain' (Rhys, Celtic Heathendom, p. 2021.). It is the Brythonic equivalent of the Irish Cenn Cuarach, 'the Chief of the Mound,' who bowed before the staff of St. Patrick.
Penkridge was formerly the sanctuary of the Celtic Zeus.

A Michael church may often witness some pre-historic centre of religious worship.

The story of a bull is associated with the foundation legend of the Church of St. Michael in Monte Gargano. The legend rests on a 'libellus' which was kept in the church. Garganis, a rich citizen of Spistium, missed his bull from the herd;

Quemvis discesque multitudinis per devia
queque requieres, inventis tandeo in vertice montis fortuna
culuroam admittere sollicitum non labor aliusque;

The sanctuary of the bull-shrine is here vindicated. The terror is averted by the dedication of the site to St. Michael.

The life of St. Francis of Assisi alludes to the forty days' fast in honour of St. Michael. It was kept 'ad heremum Alverneus.' It was on the occasion of one of these fasts that the birds gathered round his cell. They are called his 'sacred angels' ('Monsangeli') (Fam. i. 512).

The vision of the stigmata is assigned to this sanctuary.

'En timo itaque antiquum spiritum referet caele... per
adsequentem eum exequam sanctam: Diem omnem Alverneus
Dum ignit luxsa solium movere quadragesimam hibern ad
inoceantem'. This vision of St. Michael was noted by
Michaelsis lectoane cum sensit:... coepti
commissionis cumulatione duos sentir.' (ib. i. 524).

vi. The spring churches.—The dedication of wells and springs to St. Michael may be noted in the Michael churches of Askerwell, and the head of the Askar Valley in Dorset, at Barwell in Leicestershire, and at Houghton-le-Spring in Durham. In Portugal near Leiria on the Monte de São Miguel a warm and a cold spring issue close together from the Olhos de São Pedro.

There is a remarkable example of a Michael church in association with a spring at Llanllyhein near Llanidloes Major in Montgomeryshire. The church is in a dell, and just outside the N.W. corner of its churchyard is a spring. The spring-head is ornamented with the bust of a woman, and the water used to issue from the breasts. It is now (April 1913) nearly filled up with mud.

Llanllyhein churches in Wales.—It has been noted by W. L. Bevan (Disc. Hist. of St. David's, London, 1888, p. 36, ap. Willis Bund, The Celtic Church of Wales, p. 336) that the Michael churches of the diocese of St. David's, to the number of forty-five, with one exception, are in the country districts. It has been suggested by Willis Bund (p. 336) that they mark a second stage in the spread of Christianity in Wales; our conjecture is that this group marks the spread of Christianity.

'The term selected was one that would elevate the victory of the cross over the Pagans.' (ib. p. 336).

The Michael churches of Anglesey bear out this suggestion. There are four of them, and they are all in the near neighbourhood of sites of great antiquity, associated with the legend and myth of Wales: Llanllyhein-ty'n Sylwog, on the coast north-west of Beaumaris, is within the pre-historic site of Bwrdd Arthur. Llanllyhein Tr'Erleid derives its name from the ancient Carneddan Tr'Erleid. It lies to the east of Llanerchymedd. Llan-
llyhein-ty'n-Nhowyn, south-east of Valley, is near the site of Cerr-Ellen. Llanllyhein Esgolig is parochially connected with the old site of Plas Berw. This association of the Michael churches of Anglesey with the site of a pre-historic race of the Celtic tribes in churches in Italy and the East, can hardly be accidental. It would seem to support the evidence that the Michael churches occupy the situlae and seats of Celtishethandyn:

v. The Michael churchyards.—The churchyard of St. Michael's at Lichfield is referred to in the MS Historia Ecclesiae Lichfeldensis in the Catholic Library at Lichfield. It was a venerated site even in the time of St. Augustine.

'Corporibus oceorum sepelluntur insolina magnitudinis
post eremum in se ipso, accipitur. Sin sunt sedes
orum sancta aliqua.

They speak of certain national burial-places in the early ages of the Church:

In primordii sanctae Ecclesiae Anglicae cemeterii erant
rara, paucis et siclius et spatioic; in cemeterium Avellenae
sacram in quo Rex Arthurius sepultus est; cemeterium
Dorchester; Cenobium; Bever Heres: Lindisfarne: atque
acerdotes et celerum Divo Michael ac turris Lichfeldensis
et Augusti

A note 'de Cornovis' in the same MS speaks of a similar burial-place in the neighbourhood of Hexham:

'Est manibus securitatem, semore rarum et vulgo circumdata,
non longe ab ecclesia, labores et sepulchrum.

vi. The Angel Victor in Ireland.—The Genair
Patraco, the hymn of St. Fiac in honour of St.
Patrick, has two references to St. Michael under the name of Victor.

In v. 4 it is his command that Patrick went across the seas:

'Abert Victor frigil

He sent him south to Victor: It was he (Victor) that stopped him' (ib. xiii. 102, xiv. 34).

The gloss on v. 4 reads:

'Victor, l. angel communis Scotiae gentis sein: quia Michael
angulus Ebriceae gentis, ita Victor Scotorum' (ib. xiii. 16).

The translation of the Irish gloss on v. 46 reads:

'It is to be noted, his Excellency, that he is the common angel of the Gaels as well as the Irish: and he is Michael judge of the Irish.' (ib. xiii. 102, xiv. 134).

The hymn seems based on notes written by Maelruain Mac Maelcened in the 7th cent. and preserved in the Book of Armagh. The hymn itself belongs to the 8th century (ib. xiv. 176). The name Victor may be traceable to the inatio of the Mozarabic Missal for Michaelmas:

'Ecce unus Christi: in qua manet semper
subitum in inferno: et ipse victor exuit victori placavit: quia victor

It is a point of affinity between the liturgical uses of Ireland and Spain.

But the name Michael is not sunk in the title Victor. J. H. Bernard, in his note on the Hymn of St. Colman Mac Murchan in honour of St. Michael, says:

'St. Michael was very popular in Ireland. In the Second Vision of Adamnan we read in section 19: 'The three hostages that were taken on behalf of the Lord for warding off every disease from the kingdom Peter the Apostle, John the Baptist, and St. Michael, the Archangel.' There are a large number of fragmentary Irish poems in praise of St. Michael in the manuscript collection of the Royal Irish Academy. There were churches dedicated to him in many localities; the place-name Temple-Michael still exists in 6 or 7 counties (ib. Hibern. Soc. xiv. 135).

The Michaelmas goose.—There is an old saying: 'If you eat goose on Michaelmas-day you will never want money all the year round' (Hone, Every-Day Book, i. 1339). In Herefordshire in 1470, 'one goose fit for the lord's dinner on the feast of St. Michael the archangel' was due as
part of service or rent for land (ib.). G. Gascoigne, in his poems published in 1575, alludes to a similar custom:

'At Christmass a capon,
At Michaelmas a goose,
And somewhat else at New-year this,
To make their lease file longer.'

Such customs lie deep in the folklore and religious ideas of a people. Geese have sacred associations, as attested to by the phrases 'liberum sacris Junoni' (Livy, v. 47). The goose-pond, or 'fuenta de las oca,' is still preserved in the cathedral court of the cathedral of Barcelona. The temple is built on the site of a Roman temple—a temple ascribed to Hercules. Some columns in an adjoining street still witness to the antiquity of the site. There were sacred geese in the Greek temples (ELE i. 518). Geese were taken to the ancient Britons ('leperon et gallinam et anserem gustare fas non putant' (Ces. de Bell. Gall. v. 12). They also have a place in the story of St. Werburga ('in Wedane mansione, quod est lustria Hamptoniana... infinita auncarum silvestrium... multitudine' (Nova Legenda Anglie, ed. C. Horatmann, Oxford, 1901, ii. 423)). The witness of East and West, the folk-lore and legend of Britain, alike point to the sacred Michaelmas goose. The established Michaelmas custom rests, together with the sites of so many of our Michael churches, on a foundation of primitive religion, and it is probable that they are less sacred to us today than to our forefathers. The goose-ponds are rooted in the liturgical traditions of Celtic heathendom.

5. The liturgical meaning of the festival: St. Michael and All Angels.—The festival of Michaelmas is especially in honour of St. Michael, but the words of the officium or introit to the mass in all Western uses are: 'Benedicite Dominum omnes angelis.' The festival thus includes All Angels. The English liturgy entitles the festival 'St. Michael and All Angels.' The Colbertine Breviary of c. 1675 (H. Bradshaw Soc. xliii. [1912] p. xxxvi) agrees in this title: 'S. Michaelis et omnium Angelorum.' The Dedication of the Great Hall of the Bishops of Diocletian in 1544 under the title S. Maria degli Angeli shows the same intention.

The Collect: 'Dens, qui miro ordine—'the services of Angels and men in a wonderful order and manner—is common to all the uses. Its subject is the ministry of angels. The Gospel, offertory, and postcommunion are also common to all. The Gospel—'Quis putas magae digne, qui ad guardiam of the angels, the Offertory—'Stetit Angelus'—to the incense of prayer, the Postcommunion—'Beatit Angelichi tuui Michaelis'—to the intercession of St. Michael. The Epistle common to the Roman and Sarum and most of the Western uses—'Significavit Deus quae operis fieri cito'—commemorates the Angel of the Apocalypse (H. Bradshaw Soc. xii. (1897) 1935).

The Epistle in the English Prayer-Book, 'There was war in heaven,' represents a different strain of liturgical tradition, and celebrates the victory of St. Michael over the dragon, 'that old serpent, the old serpent, the devil, and Satan, which is called the dragon of the whole world.' The Westminster Missal of c. 1575 has this Epistle as a First Lection, followed by the usual Epistle, 'Significavit Deum.' It is a rare instance of two prophetic lections before the gospel, which of itself shows the influence of Gallusian use. This inference is strengthened by its use as the First Lection in the Mozarabic Missale Mixture (ed. Lesley, p. 339). It also appears as a Matins lesson in the Breviary of Milan, 1840, Para Aestiva, ii. Prop. de Tempore, p. 403). Wickham Legge traces it in the Missals of Durham, Abingdon, and Sherborne among old English uses; and in that of Rouen of 1499 and the Cistercian Missal of 1627 (H. Bradshaw Soc. xii. 1595).

The English Epistle is inspired by the thought of the triumph of Christianity over heathenism, and belongs to the same cycle of ideas as the Angel Victor in Ireland.

THOMAS BARNES.
also exposed himself to Maccius by his exaggeration of his master's teaching on similitudes in funeral rites (Maccius, bk. iii. pt. i. ch. 5). Maccius did no more than encourage extravagance on utilitarian grounds, as being of no profit to men or of no benefit to the state, nor was he guilty of any heresy for a decent interlocutor (Maccius, bk. v. ch. 25).

Among other points worthy of notice are these.

In bk. iii., on the value of uniformity, Maccius holds that men originally were hopelessly at strife and odds, each having his own view of right, and that order is based on submissive acceptance of the judgment of the supreme ruler, whose judgment, however, must conform to heaven if heaven-sent punishments are to be avoided. Hence the piety of the ancient kings. Maccius is firmly convinced of the existence of spiritual beings, the instruments of heaven's commandments, and so far affirms the necessity of religious belief for social stability (bk. viii.). Of two chapters criticizing the Confrican school one survives, though Chinese editors are inclined to deny this reference in Maccius, while whole Maccius deserves Legge's praise of him as 'an original thinker,' who exercised a bolder judgment on things than Confucius or any of his followers.

J. J. Maclagan.

MIDRASHIC LITERATURE.—The term midrash (from the root daraah, 'to seek,' 'inquire') signifies 'research,' 'inquiry,' 'study.' Applied by the Chaldeans to historical writings of didactic import, 1 as the Midrash of the Prophet Eel (2 Ch 15:7) and the Midrash of the book of Kings (2 Ch 21:17), it assumed later, with the advent of the sofroom, or scribes, upon the stage of Jewish history, the connotation of free exposition or exegesis of Scripture, eventually becoming a general term for pure theoretic study as opposed to a practical pursuit of knowledge. 2 From the latter usage the Jewish academy received its name lichtin mi-rashim, 'house of study.' In a narrower sense, midrash is employed to mean any specific exposition of a Scriptural passage differing essentially from the pesharim, the literal meaning (the plural form in such case being midrashim, and in such cases often transferred to a collection of such free expositions, known collectively as midrashim, Midrash works. 3

The intellectual activity of the Rabbis with regard to this expository work of the Bible was developed along two distinct lines, the Halakhah and the Haggadah, and a brief remarks on the basic differences between these two currents of Rabbinic thought, flowing in parallel streams, are of paramount importance. Reduced to their bare etymology, the terms signify: halakhah, 'way of setting,' 'habit,' 'rule of conduct'; hagadah (also known in its Aramaic form 'agdah' or 'agada'), 'the telling,' 'the relating.' Hence the Rabbinistic conformity of the halakhah to itself the legalistic aspect of the Scriptures; the Haggadah to their moralizing and edifying aspect. From the Rabbinic standpoint, the Bible is a microcosm, in which is reflected every person and event of the great universe. One teacher comments: 'Turn it, and again turn it; for the all is therein' (Sayings of the Jewish Fathers, p. 36). It requires only the light of a great thinker to extract from its compact pages all this esoteric wisdom; like a hammer which strikes the inherent sparks from the rock, it is possible to unravel all the secrets which the master of exegesis revealed in the cold letter of the text (Sanh. 34a).

The Halakhah takes up this work of rekindling the mystical spark of knowledge in the legal field; in all other fields of human activity that task is undertaken by the Haggadah. The Haggadah relies, for its powers, mainly on the intellectual and logical faculties of man; the Haggadah on the imaginative and emotional faculties. The Halakhah strives to preserve the letter of the law by insisting on the observance of all the details in the ritual; the Haggadah, by a well-defined analysis of the relation of man to his environment, seeks to preserve its spirit. 4

Midrashic study, therefore, assumes a twofold aspect. On the one hand, it is concerned with the evolution of legalism—the Halakhah; on the other, it centres about the process of divination, or the universe—the Haggadah. The origin of Midrashic study is shrouded in the gloom of antiquity. The Rabbis themselves often assign Midrashic interpretations of Scripture to the ancients. Yet, though such statements are not to be taken literally. A noteworthy instance of this occurs in the Mishna (Shabb. vi. 6): 'This is the midrash which Jehoi-dada, the high priest, taught, etc.' Rabbis who accused the Rabbis who taught that which the Rabbinic authorities, A.D. 10-220; (c) the period of the Amorim, later Rabbinic authorities, A.D. 220-500. The historical side of the development of Midrashic study has been ably dealt with by L. Zunz, Die gottdienstlichen Vorträge der Juden, Frankfort, 1882; Z. Frankel, Hodgecast in Mish-nam, Leipzig, 1859, and Introductio in Talmud Hierosolymitum, Breslau, 1870; D. Hoffmann, Zur Einleitung in der halachischen Midraschim (Beilage des Rabbiner-Seminariums zu Berlin), 1877; and especially in the works of W. Bacher, Die Agada der Tannaiten, Strassburg, 1906, Die Agada der babylonischen Amorim, do. 1878, and Die Agada der palästinischen Amorim, do. 1892-99. Only few traces remain of the Midrashic exegesis of the early scribes (cf. Mishnath Sotah, viii.; Midr. Ahare Shelomoh, 10 f.). During the second period, the Tannaitic, Midrashic study must have developed to grand proportions, as is evident from the fact that the various schools of Rabbis, begin-

2 <i>id.</i>, Rabbin Simon, the son of Gammalel, adds: 'Not the midrashim (pure theoretic study) in the Talmud, but the desire (Sayings of the Jewish Fathers, ed. C. Taylor, Cambridge, 1897, p. 118.)

4 W. Bacher, Die exegetische Terminologie der jüdischen Traditionsteilnehmer, Leipzig, 1939-1935, i. 103.

5 This word from the formula mag'dah 'i, 'the text explains that,' in use in the earliest Midrashic works.
The period of the Anorah was most prolific in the field of Midrashic research, most of the collections, in fact, having their beginnings during that period. The legalistic exegesis of Scripture did not proceed in an unsystematic manner. Each school of Rabbis would hand over the results of its work to the next in the form of rules of legal hermeneutics which were derived from the previous. Rabbi Akiba and his followers in the Pentateuch. Accordingly, the school of Hillel, at the beginning of the first century of our era, left seven such rules, which, in the school of Rabbi Ishmael, were later amplified into thirteen. These are either based on some logical syllogism or of purely exegetical character. Thus the seven original rules laid down by the school of Hillel embrace the following: (1) the inference from minor and major (at the bottom of which is a *foraioi* reasoning); (2) the analogy of expressions; (3) the generalization of one special provision; (4) the generalization of two special provisions; (5) the effect of general and particular terms; (6) the analogy made from another passage; (7) the explanation derived from the context.

From the school of Rabbi Ishmael a complete commentary was added to the Pentateuch. In the Mishna this commentary was issued, the following parts of which have been preserved.

(a) The *Mkhlit* (Aramaic for 'rule' or 'measure'), which is the earliest rabbinic work extant, is a running commentary to the legal portions of Exodus. It begins with the injunction concerning the Paschal lamb in 12:6, and ends with the injunction concerning the kindling of fires on the Sabbath (35:6). A large portion of Haggadic material has also been added. In the *Mkhlit*, as well as in all the other Halakhic Midrashim, the activity of Rabbi Akiba in the legal field is analyzed. In the Mishna it is synthesized. The *Mkhlit* went through the hands of later redactors, whose work is still traceable. The *Mkhlit* was completed by Hoffmann ('Einleitung', pp. 72-76) from fragments preserved in various places in Babliic literature.

(b) The Halakhic Midrash to Numbers from the school of Rabbi Akiba, for example, is a running commentary to 5:25-35 with omissions. The work is generally bound together with the *Sifer* to Deuteronomy, and both were, for a long time, considered of similar origin. The latter work, however, originated in the school of Rabbi Akiba. The name *Sifer* probably means 'books.' The first edition was printed in Venice, 1545, and a critical edition was issued by M. Friedmann, *Sifer del Rabi Akiba* (Vienna, 1864).

(d) Fragments, from the same school, of a commentary to Deuteronomy were published by D. Hoffmann, in *Judenth!' zum zweiten Geburts- tag des Dr. Israel Hildebr, Berlin, 1890, pp. 1-82.

Opposed to the methods pursued by the school of Rabbi Ishmael was the more rigoristic school of Rabbi Akiba. The latter, in expounding the law, followed a method known as 'extension and limitation' (ribbhot 'um- david), introduced by his teacher, Nahum of Gimzo. According to this system, it was necessary to consider the amplifying or limiting value of certain words when considering the legal question involved in the passage, in order to include the additions of tradition or to exclude it when no longer sanctions. Thus the particular words 'lest' or 'only' were considered as amplifying, the particles 'but,' '... and,' 'from as limiting, the original law. Rabbi Akiba's disciples included the most distinguished teachers of the law, such as Rabbi Me'ir, Judah ha-Nasi, and Rabbi Yohanan ben Zakkai. His disciple, Aquila, followed his methods of exegesis in his Greek version of the OT. From the school of Rabbi Akiba the following Halakhic Midrashim have been preserved: (i), the *Mkhlit* of Rabbi Akiba on Exodus, continued in the *Midrash hag-Gadol*, and published by D. Hoffmann (*Mechilta de Rabbi Simon b. Johai*, Frankfort a. M., 1895); (ii), the *Sifer* or *Torath Kohanim*, 'The Law of the Priesthood,' which is a complete running Halakhic commentary to Leviticus, and was edited by Rabbi Hyya (middle of 2nd cent.; cf. Hoffmann, 'Einleitung,' p. 225); (iii), the *editio princeps* was Venice, 1545, and the standard edition is *Yefra, Commentar zu Leviticus...* nebst Erlauterung des R. Abraham ben David und I. H. Weiss... herausgegeben von Jakob Schlossberg, Vienna, 1862; (iv), the *Sifer* to Numbers, and the *Sifer* to Deuteronomy, which is the running commentary to Numbers from the school of Rabbi Akiba, existing only in fragmentary form in various collections, foremost among which is the *Yefra, Arba'een 'Ber* (cf. Hoffmann, 'Einleitung,' pp. 69-66); and (iv), the *Sifer* to Deuteronomy, which was first printed in Venice, 1574; and (v), the *Sifer* to Numbers, which is the running commentary to this book issuing from the same school. It is usually bound with the *Sifer* to Numbers emanating from the school of Rabbi Ishmael (cf. above).

These Midrashic collections are but small remnants of the great number of such works which the ravages of time have destroyed. They were compiled, for the most part, during the first two centuries of our era. While their scope is primarily Halakhic, the Haggadic content in each instance forms no mean proportion, for the Rabbis felt themselves bound by no rigorous division-line in arranging their material. The later Mishna and Talmud are extensive collections which comprise the greatest efforts of the Rabbis in the realm of Halakhha and Hagga'da.

To illustrate the methods of the Halakhic Midrash the following passage, in which the legal aspect of tort is discussed, will be of interest:

"'Eye for eye' (Ex 21:23) means a money-compensation. This, however, is a mere assertion; perhaps we are actually to understand the passage in its literal sense. Says Rabbi Elasar: 'Scripture unites in one passage (Lv 24:17) the two injunctions, 'He that killeth a beast shall make it good' and 'be that killeth a man shall be put to death.' For what purpose is this collocation—in order to establish a like precedent for the laws of tort in the case of man and beast. Just as the damage inflicted on a beast is punishable by a fine, so the damage inflicted on a human being is punishable by a fine." Rabbi Issac adds: "In the case where one man's beast has repeatedly inflicted death on several human beings, Scripture specifically imposes a fine on the owner a death penalty (Ex 21:23) in this case, where the Scriptural penalty is only the loss of an eye, there is all the more reason to believe that the law has been issued, to allow a money compensation" (cf. *Mkhlit* of Rabbi Akiba, Mishpatim, 8).

The binding force of the decisions of the Rabbis with regard to their interpretations of the Mosaic law is clearly expressed in the following:

"Concerning the authority of the words of the scribes, Scripture says (Lv 24:17): 'According to the law which they shall teach thee.' It does not say which the Torah

VoL. VIII.—40
Haggadic Midrashim.—The Haggadah is the expression of the philosophy of Jewish life, and, as a result, had a wider appeal than the more abstruse Midrashim. There was a keen appreciation of the consoling powers of the Haggadah, Rabbi Isaac informs us:

"Generations before, when the penny had a freer circulation, there was a desire to listen to Midrash and Talmud; but to-day, however, when the penny is scarce, there is only a desire for Scripture and Haggadah" (Pilpul of R. Eliezer, Bahnhofshash-Shirmah).

The Haggadah Midrashim are of two kinds: (1) exegetical and (2) homiletic. The first form running commentaries to the text of the various books of the OT, and in this respect follow the method of the Halakhic Midrashim. They are, however, frequently introduced by several proems—opening remarks generally based on some text in the Haggadah—which is rather a characteristic of the homiletic Midrashim. The latter are collections of homilies or sermons, which were delivered in the Synagogues and festival services in the synagogues, and which were based on the portion of the law read during such service. The homiletic Midrashim, therefore, differ essentially, in their treatment, on the homiletic, from the exegetical, on the subject-matter, from all the other Midrashic works.

They are regularly introduced by proems in which a passage from the Haggadah or Prophets is explained or interpreted. Several homiletic works (notably the Tḥonḳamāh) also resort to a Halakhic exordium. The lesson of the day is then attached to the opening verses of the passage. In the course of the law read, the text being often used merely as a basis for a lesson on morals quite fully developed. The homilies close, for the most part, with verses of encouragement, prophesying the redemption of Israel and the advent of the Messianic era.

Two cycles of homiletic Midrashim are in existence: (a) those originating in the three-year-cycle of Scriptural Sabbath readings then in vogue in Palestine; and (b) those based on the readings during the special Sabbaths in the Jewish calendar (occuring before Purim and Passover) and on the festivals and fast-days—thus the *Pilpul* cycle.

3. Exegetical Midrashim.—Of these the oldest and most important is *Br'orrhah Rabbâ* a Haggadic commentary to Genesis. It is the first in the collection known as Middrash Rabhâ, or *Middrash Rabbâ*, which comprises ten Midrashic works, one for each book of the Pentateuch, and one for each of the Five Scrolls (the books of Esther, Canticles, Ruth, Lamentations, and Ecclesiastes). The works included in this collection are of a miscellaneous character, and their time of composition extends from the 6th to the 12th cent.—the period in which the different Haggadic Midrashim were redacted. Of the Haggadah Midrashim Brereth Rabbâ is, no doubt, the oldest as well as the richest from the point of view of subject-matter. Like most of the Midrashim, it had its origin in Palestine, and was put into its final form no later than the 6th century. Older authorities assign the work to Rabbi Roshalah, a Palestinian teacher of the 3rd cent. (with whose remarks the book has been confused) and it cannot be responsible for the

1 Cl. J. Theodor, in Monatschrift für Geschichte und Wissenschaft des Judenthums, xxiv. [1850-57], 396.
2 For introduction to the various Midrashic works cf. JR, under each title; Winter and Wünsche, I, 411-601; and the introductions to the separate works.

work in its present form. The historical and legendary content of Genesis furnishes ample material for Haggadic exposition. The ten Midrashic works forming the collection *Middrash Rabbâ* were printed for the first time in Venice, 1545. The standard edition is that of Wilna, 1875-87. The collection was translated into German by August Wünsche in Bibliotheca Rabbinica, eine Sammlung alter Midrashim, Leipzig, 1889, and L. Shapiro translated it into English as *Brereth Rabbâ* into English (Middrash Rabhâ, New York, 1906).

*Ekhâ Rabbâthî, a Haggadic commentary to Lamentations, is also a very early exegetical Midrash, and is included in the *Middrash Rabbâ*.

This work (as well as *Brereth Rabbâ*) is introduced by many elaborate proems followed by commentary to the text of Lamentations. The book is especially rich in anecdotes and legends of the pathetic events that transpired during the destruction of Jerusalem. A critical edition has been issued by S. Buber, Ekhâ Rabbûthî, Wilna, 1890.

*Middrash Bâbâ* (also included in the *Middrash Rabhâ*) is an exegetical Midrash to Ruth. The book is introduced by a series of proems, and the conversion of Ruth furnishes a beautiful lesson to the Rabbinic commentators.

*Koheleth Rabbâ* (also included in the above collection) is an almost complete exegetical commentary on the *Koheleth*.

Ester was preserved, and it was utilized much of the material found in the Talmud and in various earlier Midrashic works, and mentions several sources by name—a sign of the late origin of the *Middrash Ester*.

Finally, *Esther*> is an exegetical commentary on Esther included in the *Middrash Rabhâ*. This is one of a number of extant Haggadic Midrashim to the book of Esther, very richly because of its use during the Purim festival. The others were published by S. Buber, Sammlung agadischer Kommentare zum Buche Esther, Wilna, 1896, and Aegidius, Abhandlungen zum Buche Esther, Cracow, 1897.

Besides the above-mentioned Midrashim to the Five Scrolls, Buber published several other extant Midrashim to the books of Canticles, Ruth, Lamentations, and Ecclesiastes, in *Midrash Suta* Berlin, 1894.

There are still extant several Haggadic Midrashim dealing with the remaining books of Scripture. There can be no doubt that originally such exegetical works existed on all the books, but they have been lost. Foremost among them are *Middrash Tehillim*, a Haggadic commentary to the book of Psalms. It is also known as *Shehâr Tôhâ*, 'He that seeketh good' (Pr 11:12), which are also the opening words of the book. This Midrash is especially rich in the rhetorical devices employed by the Haggadists—analogies, legends, fables, maxims, etc. A critical edition was issued by Buber (Midrash Tehillim, Wilna, 1891). A Midrash to the book of Samuel has, likewise, been preserved, and it is a collection of Haggadic comments on the book, gleaning from various parts of Rabbinic literature. The first edition of the work was Constantinople, 1517. A critical edition was published by S. Wiinsche (Middrash Tehillim, Cracow, 1893). *Middrash Midhalah* is an incomplete Haggadic Midrash to Proverbs. The comments in this Midrash are exceptionally brief, so that the work approaches the character of a Biblical commentary. A critical edition was
issued by S. Buber (Midrash Minchot, Wilna, 1895). The Midrashim to the books of Isaiah and Job have been compiled by older authors and, of the latter extracts are found in the collection, Yalkut Machiri (to Is 61), and in a few other old works. Several fragments of a Midrash to the book of Jonah have been published by A. Jellinek (Beth han-Sidra, Leipzig, 1823-70, i. 06-105); and by C. M. Horovitz (Sammlung kleiner Midraschim, Berlin, 1891).

4. Homiletic Midrashim.—The purely homiletic Midrashim belonging to the Pentateuch (based on the homiletic commentaries of the Talmud in the synagogues of Palestine) are: (1) the Tanhûma, (2) Aggadah Brâschîeth, and (3) the four remaining works in the Midrash Rabba on the four last books of the Pentateuch. The Tanhûma (the well-known Vinnamâdî, 'Let him teach us,' because of the frequent use of this formula to introduce the Hâlakhic exordiums in the Midrash) is a complete homiletic commentary to the Pentateuch, extant in two versions, containing also special homilies for the days of the Psikte cycle. A third version is known to have existed. A critical edition was issued by Buber (Midrashim, Wilna, 1885). Shemôth Rabba on Exodus, Wawûkî Rabba on Leviticus, Shemôth Rabba on Numbers, and vBôcharîm Rabba on Deuteronomy are four homiletic works of different origin belonging to the same cycle. Of these the homilies to Leviticus are, no doubt, among the oldest, and are characterized by a frequent use of popular sayings and proverbs to illustrate the lesson of the day. The other three works include material, which previous collections are already found in the Tanhûma collection. Aggadah Brâschîeth is a collection of homilies to portions of Genesis and to portions of the Prophets and Psalms, and was edited by Buber (Aggadah Berashîth, Crickow, 1929).

2. Two collections of homilies of the Psikte cycle have been preserved: (1) Psikîth of Rav Kahana, and (2) Psikîth Rabba. The first consists of thirty-four homilies on the lessons for the special Sabbaths and the fast days. It was edited by Buber (Pesiktha . . . von Rav Kahana, Lyck, 1868). The Psikîth Rabba is a later work, and also contains homilies for the special days of the Psikte cycle. It was edited critically by M. Friedmann (Pesikta Rabba, Vienna, 1880).

5. Style and content of the Haggadic Midrash.

1 Besides the collections already mentioned, there are special Haggadic works of didactic import based upon a large amount of material in previous works, but not arranged in the form of a commentary. Such are the Periké Rabbi Eliezer (periké Rabba, Wilna, 1885), and the collection made by Buber (Haggadot Beroseh, Crickow, 1929).

In order to make their teachings more effective, the Rabbis resort to well-known rhetorical devices. Foremost among these is the use of the nasîḥâ, 'analogy.' The analogy, or extended metaphor, is a well-known figure in literary composition; in the hands of the Rabbis it reached the acme of its development. The analogies were drawn from two sources,—first, from the events of every-day life, and, secondly, from the institutions of the Roman empire, during which period the Rabbis lived. On the subject of the political history of the Jews and the practices of Rome as depicted in the nasîḥâ an interesting volume of no mean size has been written (J. Ziegler, Die Königsfiguren des Midrash beleuchtet durch die römische Kaiserzeit, Breslau, 1903). On the comparative side, Paul Fiebig has contributed an interesting volume on the differences between the Rabbinic and the NT use of the nasîḥâ (Alljüdische Gleichnisse und die Gleichnisse Jesu, Tubinga and Leipsic, 1904). The analogy was most helpful in explaining difficulties in the narrative, and often in accounting for extraneous matter in Scripture not quite adaptable to preaching purposes. A few examples will suffice to illustrate the use of the nasîḥâ.

A nasîḥâ once asked Rabbi Yose bar Halâth, 'Why does Scripture say: 'He which knoweth the righteous, and giveth knowledge to them that know understanding' (Dt 32: 2)? It were notes that the phraseology of the P'siktoth, yôsho bâ me," the newies, and knowledge to them that have not understanding." This Rabbi Yose met with the following: 'Let me give you an analogy. If, for instance, one were to approach thee to borrow a sum of money, to whom wouldst thou lend the money, to the poor man or to the rich? 'Of course to the rich man,' she replied, 'for, in the event of his loss, he still has assets from which I might recover, whereas from the poor man I could not get a penny.' (Babylonian Talmud, Yebamoth 46).—The second method by which we may interpret the homilies of the Psikte cycle is a method of didactic homilies, which, from the point of view of the assembly, could be presented in the form of a sermon (Kabbalat hatehillsa, &c.).

In commenting upon the fact that the Pentateuch does not enumerate by name the participants in the sedition of Korah, the Rabbis use the following nasîḥâ: Rabbi Judas, the son of Simon, explained, on the authority of Rabbi Levi ben Parata—This may be compared to the son of a debaucer who once committed a theft in the public bath, and the keeper of the bath does not desire, for tactical reasons, to reveal his name; but describes him as 'a handsome youth dressed in white.'

Similarly the Pentateuch does not mention the names of all the participants in the sedition of Korah, but merely describes their behavior. This may be compared to the congregation, called to the assembly, men of renown (Ne 10: 16; cf. Brûcharîm Rabba, xiii. 3).

Another form of the nasîḥâ was the fable or parable. Collections of parables are already associated in the Jewish world with the name of the wise king, Solomon, who is said to have spoken of beasts, and of fowl, and of creeping things, and of fishes (I K 4). In the Talmud two collections are mentioned on several occasions—a collection of fox-fables and a collection of date-fruit parables (cf. Sukkah, 28a; Rabbi Bathra, 13me). The latter uses the parable in the speech of Jotham (Judg 9: 8-9) and in that of Jehoshâ (2 K 14: 14). A casual example will illustrate its use in the Midrash.

In the following, the fable of the fox and the fishes is effectively employed by Rabbi Akiba during one of the persecutions, when the study of the Torah was forbidden under penalty of death. Pappus discovered Rabbi Akiba hastily engaged in the study of the Scriptures. Rabbi Akiba was guilty of an art thou not endangering thy life in transgressing the royal mandate? Whereupon Rabbi Akiba replied, 'Let me give thee an analogy in the following story: Once the fox rambled alongside the bank of a river and, beholding the fishes, exclaimed, 'Come unto me, and I will give thee very sweet fruit.' The fishes, however, answered, 'Wouldst thou grapple with us, and snatch us from the crevices of the rock, where you will never fear capture.' To which the fishes replied: 'Pappus wouldst thou, art nothing more than a simileton. Our whole life depends upon the element of water, and thou wouldst have us for thy prey.'
MKIRS

in one element—the study of the Torah, as it is written, "For he is the foundation of the holy tongue." [De 30:9], and the would have me leave it because of personal danger." [Tanhuma Taan. 10, 2].

Another means of impressing a lesson is the aphorism, maxum, or proverb. The OT already contains extensive gnoseologies in proverbial form. This is how Rabbi Becha later added to this original store, and the Sayings of the Jewish Fathers is a historically arranged gnoseology written in the Talmudic period, and comprising the most important examples of the learned teachers from the time of Simon the Just to the period of the Amora'im. A later author, Rabbi Nathan, is said to have made a large collection of such maxims; and in the Aboth of Rabbi Nathun (ed. Schecter, V. 1, 1887) a sublustrum of his original work remains. This work is characterized by the frequent use of the numerical proverb, in which a number of sayings are associated by means of a numerical key. The material in these collections, as well as the sayings current among the masses (generally introduced by the formula 'as the people say'), was employed by the Rabbis in teaching their lessons. Many of these proverbs are also found in the Gospels. For example, the well-known saying in the Sermon on the Mount, "With what measure ye mete, it shall be measured unto you." [Mt 7:2], is very frequent in Haggadic literature (cf. Talmud, Bavli, 38: Phillsin, xxii. 2; and Mishnah Sotah, i. 17). Similarly, 'Enough for the servant that he be as his lord' (Mt 10) is found in Tanhuma, Esh Elcha, 28; Phillsin, xxvi. 8; and in the Talmud (Brâbithâh, 80). Only a few of these gems can be quoted here:

A single coin in an empty ar est makes a loud noise('T'hillim, i. 21, and in the Talmud, Bâbithâh, 50a). 'Say to the bee, I want not thy honey and I crave not thy sting' ('Phillsin, i. 21). 'Woe to thee, Phillsin, xx. 22, 23, to the doth which the baker condemns as unrighteous' ('Phillsin, ch. 14). 'Woe to the living who implores aid of the dead, woe to the hero who intercedes with the weakling, woe to the seeing who ask help from the blind, and woe to the generation whose leaders are women' (Veh. xxvii. 2).

Another rhetorical device for impressing a lesson is the pun. This leads into the field of Rabbinic humour. Scripture has set the precedent for its use in carefully executed word-plays and puns especially on the names of individuals.

And the bare Cain, and said, I have gotten ('Eshb. K'thatim) ('Genesis 4:1), as 'phillsin' (Phillsin, xxvii. 22). Similarly, the Rabbis take great liberties in punning on proper names.

Where was the prophet called Jeremiah? Because, during his life, Jerusalem was left in a state of ignomia ('desecration') ('Kethoth Rabba, i. 2). The name of the daughter-in-law of a rich man because in her back (Chesid) she carried herself to her mother-in-law. The name of the other was Ruth, because she unprejudiced ('râkothâh) the words of her mother-in-law (Rapâh Babbath, i. 9).

The Rabbis decide from a pun that the language of the creation was Hebrew.

"She shall be called Woman [''Hâshbah, because she was taken out of Man [''Udish]. [Gen 2:24], from this it is evident that the Torah was given in the holy tongue." Rabbi Pineshas and Rabbi Bishkah claim the following on the authority of Rabbi Simon: 'Just as the Torah was given in the holy tongue, so was the world created with the holy tongue. For, hast thou ever heard anyone derive a form gynno from the word gynne (Gr. γυνή), meaning a woman? (one derives a form anthroops (Gr. ἄνθρωπος, man), or phihkri from ghâdhr (Syr. for 'man')." But one does say, 'Hâshbah (Yeb. for 'woman') from teh (Heb. for 'man')' (Pethah D'hâshbah, xvii. 4).

The Massoretic variations of the Heb. text of the Bible are of such a nature, that removing one or more accidental errors for the sake of the text, the Midrash often assigns explanations for the defective writing in the text or for the marginal variations (פֹּלַח and פְּלַח). The following is an example:

'When it giveth its colour (lit. 'eye') in the cup" (Pr 22:35) is rendered "the script reads 'in the purse'" (Eshb. K'thatim, not in the cup" (Rabbi bakkhi, referring, of course, to the drunken, who giveth his eye in the cup: and, on the other hand, to the merchant whockett his eye on his purse' (Tanhuma Shmuel, 7).

The Midrash also employs the well-known rabbinic method of exposition, 'g'morât, which consists in deducing hidden meanings from the numerical value of the letters in the Heb. words.

Finally, the Midrash employs the anecdote to advantage. The value of the anecdote as a didactic force is generally recognized. But, more than this, we are to seek in the anecdote for historical events witnessed by contemporaries, for folk-lore, for primitive conceptions of nature, science, etc. Only a few examples can be given here. The following pathetic tale is one of a series of anecdotes depicting the events that transpired during the destruction of the Holy City:

The story of Miriam, the daughter of Na'âshôâdône, whom the ages had granted an allowance of 500 (sic) gold dole for her daily oatmeal expenditures, and who maligned them for it in the words 'Thus mistreat your own daughters!'... Says Rabbi Eleasar: 'So sure may I be of seeing Elijah as a prophet as I am that she (Miriam) falls fast asleep after the destruction in Asse, picking barley grains from beneath its ashes, and watered for her face. And I applied the law, ..." (Midrashic gloss on Ex 20:3). But should it be so? If thou know not, O thou fairest among women, go thy way forth by the footsteps of the Rock, and feed the kids beside the shepherdess' tent, (De 19)'(Eshb. Rabbâthâh (proem 29), it is said, 'The Arab slays a lamb and inspects the liver for the purpose of auguring future events.' This practice is well known to students of Kulturgeschichte. Philosophy, primitive conceptions of science, natural history—all cater to the one end of teaching a lesson in ethics or morals, which is ever the ultimate aim of the Haggadic Midrash.

LITERATURE.—This is given throughout the article.

SOLOXON T. H. HEURWITZ.

MIGRATION.—See RACE.

MKIRS—Name and History.—The people known to the Assamese by the name Mikir are one of the numerous Tibeto-Burman races of Assam. Their own name for themselves is Arêng, which (like many other tribal names in this region and elsewhere) means 'man.' In general. Their numbers, according to the Census of 1911, were 106,239—a large total for a homogeneous Tibeto-Burman group in Assam; of these 730 were classified in the returns as Hindu, 1182 as converts to Christianity, and the remainder as animists. The race occupies the central portion of the Assam range, looking north to the Brahmaputra, and the isolated mountainous block south of that river between Newong and Sibisgar called the Mikir Hills; a few have settled in the plains of Newong and Kamrup, and north of the river in the barren districts, and follow shifting cultivation, but the main strength of the tribe is found in the hilly region of the Kamrûp (about 11,000), Khasi and Jaintia Hills (15,000), Newong (45,000) and Sisagar (25,000) districts. A hill tribe, essentially a hill tribe, practising the form of cultivation by axe, hoe, and hoe known as jhûm. Their remembered history, like that of most tribes of the kind, goes back a very short distance in time. There is reason to believe, from the local names of places and streams, that they once occupied the

1 In Heb. the letters have numerical values.
southern portion of the hill tract north of the Kachar valley, where they are not found at the present day; it is certain that they afterwards resided in mass in the Khowai, Dair-jon Hills, as subjects of the Jaintia Raja; and a still clearer tradition relates that, being harassed by warfare between Khásí (or Jaintia) chiefs, they resolved to move into territory governed by the Ahom kings. Thereupon migrated into the tracts which they now hold in the Nowgong and Sibsagar districts. This migration probably took place, as can be gathered from the Ahom annals, about A.D. 1756. As the figures just given show, large numbers continued to live in the Khásí and Jaintia Hills and along the Kámarú border, which tract they call Níliang, the territory into which they migrated in the cast being called Nilip. They are a peaceful and unwarlike race, and are said to have given up the use of arms when they placed themselves under the protection of the Ahom kings. Their traditions tell of fights with the Hill Kachars, or Dimásis, but these were anterior to the migration into Jaintia territory, or at any rate to that into the Ahom dominions.

2. Physical characteristics. — Physically they possess the ordinary features of the Thibeto-Burman race of races; a light yellowish-brown complexion, an average height of about 5 feet 3 inches, cephalic index 77-9. The nose is broad at the base, and the nasal index of 80-1 and an orbito-nasal of 107-7. The facial hair is scanty, and only a thin moustache is worn. The front of the head is sometimes shorn; the hair is gathered into a knot behind, which hangs over the nape of the neck. The body is muscular, and the men are capable of prolonged exertion. They have been largely employed (like the Khásí) as porters in frontier expeditions in Assam, and carry heavy loads, the burden being borne upon the back and secured by a plaited bamboo or cane strap passing round the forehead; this, however, is the general method of carriage from Nepal eastwards along the whole sub-Himalayan region, and not peculiar to the Mikirs. The staple food is rice, fish, and the flesh of pigs, goats, and fowls, but meat is chiefly eaten at sacrifices. The flesh of cows is not eaten, nor is milk drunk. Large quantities of rice-beer are made and consumed, being prepared by each household, and spirit is also distilled. Opium is used to a large extent, as by other races in Assam. Tobacco and betel-nut are also commonly used.

3. Marriage and inheritance. — The Mikir people are divided into three sections, called Chhitông, Rông-hang, and Amrí. These, however, are only local names, the first representing that portion of the tribe inhabiting the Mikir Hills, the second the central portion, in the hilly parts of Nowgong and N. Kachar, and the third those in the Khásí and Jaintia and Kámarú Hills. The whole tribe, wherever settled, is divided into five large exogamous groups, and these into sub-groups. The five main groups are called Ingti, Tóring, Lákthi or Inghi, Téírón, and Timung. Within each of these groups intermarriage cannot take place. The scheme of society is patriarchal, the children being counted to the father's group. The most usual marriage is between first cousins on the mother's side, and the maternal uncle occupies a privileged position at the funeral ceremonies; this may be a custom adopted from the Khásí, among whom the strictly matriarchal system prevails. However, the custom of marrying a girl to her father-in-law, or his son to his father's house; but, if he has to make a payment to his father-in-law, he may stay a year, two years, or even for life, and when his term of service is over, he works to the family in return for his bride. There are traces of a former condition of things analogous to that which obtains among the Naga tribes, in which the boys of a village lived together in the terér, or bachelors' house, and their unmarried girls are said also to have had their own terér or to have lived in that of the boys, when promiscuous intercourse and illegitimate births were common. The practice, however, no longer obtains anywhere. The marriage-tie is said to be ordinarily observed with strictness, but divorce is permissible. Polygamy has been adopted sporadically from the Assamese, but generally monogamy prevails. The sons inherit, if there be none, the brothers; after them the deceased's nearest agnate of his own exogamous group. The wife and daughters get nothing, but retain their personal property, ornaments, etc.

4. Gods. — The religion of the Mikirs has been to some extent affected by ideas borrowed from the Khásí, and in a larger degree by Hinduism. One of their gods, Pirthâ Récho (the god of thunder), bears a Khásí name; but borrowings here are chiefly noticeable in the funeral ceremonies and the methods of divination. Hinduism has contributed the name of Jom, or Yama, of the dead, and the abode of spirits is called Jon-drông, or 'Yama's town.' Possibly Mahâdeva may be the original of Arám-kethê ("the great god''), who is a house-god worshipped at a triennial sacrifice; and the gods, and lot and paró ("the hundred-god''), includes under this name Kâmkhâyâ, the Hindu goddess of Nilachal above Gauhati. The original Mikir conception of deity is, like that of the rural population of India, generally, open to the adoption into the pantheon of any divine agency venerated or propitiated by their neighbours. The word árman ("god") may be generally defined as representing anything fearful or terrible. All natural objects of a striking or imposing character have their divinity. The sun and moon are regarded as divine, but are not specially propitiated. Localities of, and habitats of, divinities, such as mountains, waterfalls, deep pools in rivers, great boulders, places where a river disappears underground, have each their árman, who is concerned in the affairs of men and has to be placated by sacrifices. Such local divinities of the jungle are propitiated chiefly to avert mischief from tigers, which are a terrible plague in some parts of the Mikir country.

Besides these divinities of flood or forest, there are other deities of a more specific character. These may be classified into house-gods, concerned in the welfare of the household, and gods concerned in the prosperity of the village generally, while a third class preside over various kinds of disease or trouble. The most important of the house-gods is Hêmphô ('head of the house,' or 'householder'), who owns all the Mikir people. With him is associated Mukrang, who is slightly lower in dignity. These two gods, the preservers of men, are approached by the sacrifice of a fowl or goat. Everybody can sacrifice to them at any time, and Hêmphô must be invoked first in every sacrifice, being the peculiar owner of men. Pêng, another house-god, lives in the house, and gets the offering of a goat, sacrificed once a year in the space before the house; tóring, rice, and a mound of rice-beer are placed for him above the verandah of the house, and the first-fruits of the harvest are offered to him. Armân-kêthê, already mentioned, is another house-god, who lives in heaven, not, like Pêng, in the house itself. He is propitiated by the sacrifice of a castrated pig once in three years. Both Pêng and Arám-kêthê have to be specially invoked to take up their abode in the house, and the summons to it is generally due to the action of a diviner (tuchê), called in on the occurrence of a case of sick-
ness, who declares (after the appropriate incanta-
tions) that Árnám-keth or Pëng wishes to join the household. If it were not for this, Mikir families would generally be satisfied with Húmpá and Mikrungá. The village or communal gods are called Rêk-
anglung (= ‘mountain of the community’) or Inglông-plë (‘great mountain’); and Árnám-pårö, also named Mykungá. The Mikir tribes are nomadic, moving from place to place as the soil in the neigh-
bourhood becomes exhausted. Rêk-anglung is the god of the hill on which the village stands, the deus ex machina, with whom they have to be at peace. He is worshipped in the field, and only men eat the sacrifice, which is a fowl or goat per house once a year. Árnám-pårö is the name of a god who takes a hundred shares of rice, rice-flour, betel-nut, and the red sapble of the plantain-tree cut up; the name seems to be a collective, and to indicate all the divine powers in the neighbourhood. He is worshipped with a white goat and a white fowl. These two gods figure particularly at the Rông-
or great annual festival, celebrated for the most part in June at the beginning of the year’s rainy-season cultivation, or in some villages during the cold winter months. The sacrificed goats are eaten by the men only of the village, and they keep apart from their wives on the night of the festival. The observances correspond with the custom of gens (village) head, which is common among the neigh-
bouring Naga tribes.
The gods named above are all invoked and pro-
pitiated to grant prosperity and avert misfortune, both generally and specifically. There are, besides, numerous gods who take titles from the special diseases over which they preside or which they are asked to avert; such gods are called after rheumatism, cholera, barrenness among women, goitre, pustules, stone, diarrhoea, small-
pox, black and white leprosy, elephantiasis, etc. Each worship has its appropriate ritual, often of a complicated character. Among these deities perhaps a temple is associated with the name for smallpox, pi-düm, ‘the mother’s flowers’; in Assamese and Hindi the goddess of smallpox is known as ‘the mother’ (Máth, or Sítala Má). It is difficult to draw the line which divides the gods, Árnám-dám, who preside over these plagues from the demons or devils, A-i, who are also said to cause continued sickness. They too are propitiated with sacrificial offerings in the same manner as the gods.
An interesting name in the list of gods is Lâm-
áphi, ‘the head or master of words,’ a power proba-
bly of modern origin. He is the deity sacrificed to by a man who has a case in court; the sacrifice is a young cock, which should be offered at night, secretly, by the sacrificer alone, in a secret place.
There is no worship of trees or animals, and the gods have no visible shape, temples, or shrines. Idols are not in use. At the time of the sacrifice the gods to whom it is offered are addressed in set forms of words by the worshippers, but there does not appear to be any separate class of priests charged with the sacrificial ritual. The animal sacrificed is beheaded, as in Hindu sacrifices, by a stroke delivered from above with a heavy knife. The most important person with reference to the worship is the diviner (mekh, fem. uchê-plë), who decides on the deity to be invoked. Here, again, there does not appear to be any caste or hereditary function; any one may be an uchê. The most important of all the Mikir diviners is the ailing man, called sâng-kol-yéng-dông, ‘he who in-
spects grains of rice,’ whose art is acquired by instruction and practice; and the superior, called tor-), is a learned workman who works under the inspiration or afflatus of divine powers.

The services of these persons are generally sought in cases of sickness, the loâlt being inquired of in the more serious cases. The humble practitioner proceeds by arranging grains of rice, taken at random from those left in the pot, in particular fashion in small heaps; the grains in the heaps are then counted, and, if the numbers predominate, the patient is cured. Communities sometimes use shells instead of grains of rice. Another way, apparently derived from the Khonds, is to arrange a circle from a point marked on a board, as many little heaps of clay as there are gods suspected in the case, each heap being called by the name of the god. An egg is tied to the point marked in the middle of the board; when it breaks and the yolk is sucked up, that heap which remains is the largest heap, or towards which the largest and longest splash points, indicates the god responsible for the affliction. Another mode is to hold, instead of the hand a long iron kind of special form, called the nobij, which is invoked by a spell to become inspired and to speak the truth. The holder then asks questions of the nobij as to the probability of the sufferer’s recovery and the god responsible for his sickness, and the nobij shakes at the correct answer and name.
The loâlt is an ordinary woman (not belonging to any particular family or group) who feels the divine afflatus, and, when it is upon her, yawns continually and calls out the names and will of the gods. Her assistance is invoked when witch-
craft (nàjëd) is suspected. She baulks the brooks, feet, and face in water in which the sacred basil (cowasam saanam, the tudî of Indian languages) has been soaked; it has been stewed, or boiled. It is said that when milked, indifferently to the riddles, answers, the enemy who has bewitched the sufferer, or the gods to whom the sacrifices must be offered. Charms are much used for the treatment of dis-
case, as they are everywhere else in India, and do not present any special features. Oaths and imprer-
cations take the place of oracles, the speaker invoking evil on himself if he swears falsely or fails to perform a promise.

6. Funeral ceremony.—The most elaborate cele-
bration is the funeral ceremony, of which a long account, found in some of the works, is inserted in the monograph on The Mikirs cited at the end of this article. Much money is spent upon it, and it is spread over several days. It is the only occasion on which dances are performed by the young men of the village or music used, except (to a much less extent) at the harvest-home. The ceremony is considered obligatory in all cases except that of a child who has been born dead, or who has died before the after-birth has left the mother; in such cases the body is buried without any ceremony. Victims of smallpox or cholera are buried shortly after death; but the funeral service is performed for them later on, when the bones are brought together and cremated. When a person is killed by a tiger, if the body or clothes are found, they are buried at a distance from the village, because the tiger is sup-
posed to visit the burial-place. The sacrifice is made, not gain admittance to Jôm-àrông unless elaborate funeral and expiatory ceremonies are performed for them. Being killed by a tiger is generally im-
puted to the victim’s sin; his spirit is believed to dwell in the most dreary of the places where dead men’s spirits go. Except in such cases, the dead are disposed of by cremation, the burnt bones being afterwards buried.

What is chiefly noticeable about the ceremony, as described in the work referred to, is the confident assumption of the continued existence of the dead person’s spirit, for whom death, specially in this ceremony. If the deceased is a person of unusual importance, a still more elaborate ceremony is required, and monumental stones, upon the model of those erected by the Khonds, are set up in the town square, and the work is under the supervision of afflatus of divine powers.

7. Ideas of future life.—Apart from the ritual of
the funeral, the Mikirs seem to have a strong conviction of the survival of the dead. They speak of (holy image) of a dead man; a sickly or neurotic person catches such glimpses in the house, on the road, etc. Phāṭhā, 'spirit,' is used both of living persons and dead. The Mikir is ovatelled in his mind as the (living) spirit from whom I saw him,' where phāṭhā is the spirit of the sleeping man. When such glimpses are experienced, betel and food are set aside in the house, and after a time thrown away. After a death a chant is composed, setting forth the parentage and life of the dead, and ending: 'You will now meet your grandparents, father, deceased brother, etc., and will stay with them and eat with them.' As already mentioned, food is regularly provided for the spirit until the completion of the funeral; after that there are no regular offerings, but occasionally a man or woman puts aside from his or her own share of food a portion for the dead, as, e.g., when another funeral reminds them of those who have died before. There is said to be no fear of the dead coming back to trouble the living. The Mikirs' conception of 'Jom's town' is that everything there is different from that of Jom, and the Mikirs, from Hinduism, is said to prevail that the spirits of the dead do not stay for ever in Jom-ārung, but are born again as children, and this goes on inde- finitely. One of the Mikirs is the head of the family, and in the words of his informant, the following:

'The Mikirs give the names of their dead relations to children born after such a child has a way that the dead be near him; but they believe that the spirit is with Jom all the same' (Mikirs, p. 29).

3. Conclusion.—The unwarlike character of the Mikirs has prevented them from becoming, like their neighbours, the Nāgas and Kukīs, split up into different units, with hostile feelings towards all outside the community, and with languages gradually diverging more and more from the common standard. Their speech is very uniform wherever they are found, and a large amount of co-operation and friendly intercourse exists among them. On the other hand, the group differs very much, in habits, institutions, and particularly in language, from the other tribes by whom they are surrounded. A study of their speech and social institutions has led to the conclusion that they should be classed with those tribes which form the connecting link between the Nāgas and the Kuki-Chins, and that the preponderance of their affinities lies with the latter race, especially with those dwelling in the south of the Arakan range, where the Chin tends to merge into the Burman of the Irrawaddy valley.

LITERATURE.—All that has as yet been put on record about the Mikirs is included in the section on the various tribes of Assam. Ethnographical Monographs entitled The Mikirs, from the papers of E. Stack, edited, arranged, and supplemented by C. J. Lyall, London, 1892.

C. J. LYALL

MILINDA.—Milinda is the Indian name for the Greek king of Bactria called in Greek Menander. When Alexander's empire broke up on his death, Greek soldiers on the east of India founded separate States, and the names of about thirty of them and their successors are known by their coins. Of these the most powerful and successful was Menander, who must have reigned for at least thirty years at the end of the 2nd and the beginning of the 1st cent. B.C. He died probably about 30 B.C., but we know neither the boundaries of his kingdom nor how far he was merely overlord, rather than the actual administrative sovereign over the various portions of his vast domain. He is the only one of those Greek or half-Greek potentates whose memory has survived, and he is living in his own time. He is characteristic enough, not as a political ruler, nor as a victor in war, but as an intelligent and sympathetic inquirer into the religious beliefs of his subjects. This has found expression in a very remarkable book, the Milinda Paśha (Questions of Milinda). Just as in one of the most popular of the Dialogues of the Buddha Sakka, the king of the gods, is represented as putting puzzles in religion to Nāgasena, a wise teacher among the Buddhists of his time. In all probability it was with the Sakka Paśha Suttaṭṭha that the author of the Milinda Paśha, whoever he was, framed his work.

The Milinda Paśha is divided into seven books. The first is introductory, and is very cleverly so drawn up as gradually to raise the expectations of the reader regarding the great interest of the encounter of wit and wisdom which he will find in the following books. Bk. i., 'On Ethical Qualities,' and bk. iii., 'On the Removal of Difficulties,' contain a number of questions, put by the king and answered by Nāgasena, on the elementary doctrines of Buddhism. On the conclusion of this book the king is converted, and devotes himself to a long and careful study of the text of the Pāli canon. In bk. iv., the Menaṇḍaka-panha, or 'Dilemmas,' the king submits to Nāgasena the difficulties which he has met in the course of his studies. The discussion is again a clever one, and ends up with the meaning of nirvāṇa, and closes with an eloquent peroration on that subject.

Having thus brought his reader up to the bracing platform of emancipation, the author proceeds in the next book, the Anu-maṇḍa Paśha, 'Problem of Inference,' to describe what is to be found there. In an elaborate allegory of the City of Righteousness he sets out the various mental and moral treasures enjoyed by the arahant who has reached in this life the ideal state. The next book, the Dhutangaṭṭha, 'Extra Vows,' is devoted to an exaltation of those who have adopted the ascetic practices so called. The last book, incomplete in our existing MSS, consists of a long list of types of the arahant, showing how he has, e.g., five qualities in common with the ocean, live with the earth, live with water, and live with fire. The details of sixty-seven such similes are given. Of the remaining thirty-eight only the list is given, the detailed explanations being lost.

There are peculiarities both of merit and of defect in this book. The author, or authors, have an unusual command of language, both in the number of words used and in the fitness of the words chosen in each case. There is great charm in the style, which rises occasionally throughout the book to real eloquence; and there is considerable grasp of the difficult and important questions involved. On the other hand, there is a great weakness in logic. The favourite method is to invent an analogy to explain some position, and then to take for granted that the analogy proves the position taken to be true; and quite often, when the right answer to a dilemma would be a simple matter of historical criticism, the answer given savours of casuistry, or is mere play on the ambiguity of words. Then the author, though he naturally avoids the literal interpretations prevailing in European books against Buddhism—that nirvāṇa, e.g., is a state to be reached by 'a soul' after it has left the body, or a state not attainable except by a 'priest' or a 'monk'—does not stand on the ancient Path. His description of the other who calls a yāgī (a term not found in the older books), lays more stress on those qualities afterwards ascribed to the bodhisatta (g.v.) than on those belonging to the

1 See the authorities quoted in Haug Davids, Questions of King Milinda, i. (SBE xxxv.) pp. xvii-xxxii.
arhat) in the Nibbānas. His Buddhism has advanced beyond that of the Nibbānas. The ethies of the Aryan Path are barely referred to; the doctrine of causation, the necessity of seeing things as they really are (yathābhūtānā pi jānānāvā), is not even mentioned, notwithstanding its cardinal importance in the earlier teaching. The author devotes a book to a topic not occurring in the Nibbānas, and in that book manifests a spirit entirely opposed to the early teaching. All these peculiarities of style and meaning suggest some indifferent thought on the part of the translator. It would seem, therefore, most probable that it was the work of one author or of one school within a limited period of the history of that school. Probably the latter will eventually be found to be the right explanation.

The work is four times quoted as an authority by the great Buddhist commentator, Buddhaghosa. It is the only work outside the Pāli canon which he thus quotes. It is also quoted as an authority in the Dhammapada commentary (i. 127). All these references may be dated in the 6th cent. A.D. They are taken from the second, third, and fourth books which, at least must be considerably older than the works in which the Milinda is quoted as an authority. None of the quotations is exactly word for word the same as the corresponding passage in Trencnker's edition of the text, and the present writer has pointed out elsewhere the various interpretations possible of these interesting, though slight, discrepancies. In one passage (p. 192 of the text) Buddhaghosa seems to have the Abhidharma-kōavyadhyakṣa, a Sanskrit Buddhist work which may be dated in the 6th cent. A.D. There are also several incidental references in Chinese "translations" of Indian books. When we know the dates of the latter, and can be sure that the references really occur in them, these references may have importance.

At the beginning of the work (p. 9 of the text) there is a table of contents giving the titles of the subdivisions of the book. The editor, V. Trencnker, also gives us titles, which differ, however, from those in the table of contents given in the text. Hinaṭkumbarā's translation into Sīthaleśa likewise gives titles, presumably from the much older Pāli MSS which he used. These titles differ from those in Trencnker lists. Trencnker, who has certainly made one glaring mistake (p. 363), gives no apparatus criticus for his titles; and, as he used only three of the seven MSS of the work known to exist in Europe, one would like to be informed also as to what readings are given by the other four. Even for the canonical books the discrepancies in the subsidiary titles are very frequent, and it is often probable that such titles are later than the text to which they refer. It is clear that, pending further information, Trencnker's titles to the divisions of the Milinda cannot be relied on as original.

B. Nānja, in his most useful catalogue of Chinese Buddhist books, gives under no. 1358 the title of one called Nāsien Bihkhu King, Nāgasaṇa the Bhikkhu's Book. The attempt to reproduce the sound of the words of this title suggests that the words before the translator must have been, not Sanskrit (bhikṣu), but Pāli (bhikkhu) or some other Indian dialect akin to Pāli. J. Takakusu has discussed the date of this work, which purports to be a translation of an Indian book with the same title. It is first mentioned in a catalogue dated A.D. 785-804, and subsequently in others. But, though the compilers of all these catalogues are usually careful to give the name or names and the date of the translators or authors of the books which they mention, they do not do so in this case. They add, however, a remark: "The translation of some we register as belonging to the Eastern Taśa dynasty (A.D. 317-429)."

So we have a book known to have existed at the end of the 6th cent., and then believed, on grounds not recorded, to have existed in the 4th cent. A.D. There is no evidence that the original was in Sanskrit.

There are two recensions of this book in Chinese, the longer one about half as long again as the shorter one. The difference arises mainly from the omission in the shorter of two long passages found in the longer. In other matters the two are much the same. These omissions are probably due to a mere mistake, perhaps of the translator, perhaps of the printer, and the two recensions may be considered as restatements. This bears to the Pāli text the following relation.

The translation into English by the present writer consists of 850 pages. The Chinese corresponds more closely to 90 of the recension omitting about 34 of those 90. The paragraphs corresponding in Chinese and Pāli are those on pp. 40-155 of the English version. But there are seven or eight omissions, and three additions of wording, paragraphs, and quite a number of smaller variations or discrepancies. It is clear that there is some connexion between the Chinese and Pāli books. It is possible that the Indian original (for this was only one) of the Chinese book may be the original out of which the Pāli was developed, mainly by the addition of the last three books. It is equally possible that the Indian work translated into Chinese was itself derived from an older work in seven books, and that its author or authors omitted the last three books as dealing with arahat-ship, in which he (or they) took little interest. This would be precisely in accord with the general feeling in the north-west of India at the period in question—the end of the 3rd cent. B.C. The doctrine of an emancipation to be reached in this life by strenuous mental effort, not unnaturally, taking place to a doctrine of salvation in the next life through bhākī, personal devotion to a deity. The psychological details of the old system of self-control rather bored people. So the Milinda may, quite possibly, have been reduced to a short and easy book, with the sting of arahant-ship taken out of it.

A solution of this Milinda problem would be of the utmost importance for the elucidation of the darkest period in the history of Indian literature. Unfortunately, each of the alternatives suggested above involves great difficulties, and none of the scholars who have written on the subject has so far been able to persuade any other to accept his conclusions. The evidence at present available is insufficient. When the Tibetan translation has been properly examined, when the quotations from the Milinda in the Pāli commentaries are edited, when all the references elsewhere (and especially those in the numerous Buddhist Sanskrit works still buried in MSS) have been collected, we shall be better able to estimate the value of the external evidence as to the history of the Milinda literature in India. When an adequate compari-
son has been made between the words used and the ideas expressed in the Fahi Miiindia and those found in the Indian and European literatures. On the one hand, we shall have more valuable internal evidence than is yet available. The lists of about a hundred words peculiar to the Miiindia published by the recent writer in 1873 are not completely adequate, and has not since then been improved upon.

MILITARISM.—See War.

MILK (Primitive Religions).—That milk should have become an object of sacred importance in the mind of early man was inevitable. All food was sacred, and milk, so beneficial in every way, has been accorded a special place among the objects of religious veneration by mankind at nearly all stages of his development. Anthropologists have not specifically dealt with the first stages in the domestication of animals, except as a part of the larger question of totemism. There are people who have practically no tamable animals, and these are in the lowest stages of savage culture. An observation of O. T. Mason is clearly indicative of where these first stages must be looked for.

Women were always associated especially with the milk-animal, which, since the earliest times, has possessed sacred associations. In the two continents where they were not known in aboriginal times, the human mother had to suckle her young with her body and milk, and she was able to walk at her own will and had the power to give birth to children. In the absence of milk-yielding her suddenly increased her burdens and retarded the growth of population ('Women's Share in Primitive Culture,' London, 1886, p. 103.).

The two continents here referred to are America and Australia, and E. J. Payne has also summarized the economical and social results of the absence of milk-producing animals (Hist. of America, Oxford, 1892, I. 297-332).

These results may be contrasted with the corresponding economical and social results of the European, Asiatic, and African continents, who have, as far as observation goes, always possessed milk-producing animals. Milk takes an important part in their religious belief and ceremonial. It is neither, however, whether the diverse practices obtaining among the varied races of these continents have any relationship as stages in the evolution of man's religious attitude towards milk. Consideration of the subject from this point of view can be conducted only by the widest survey of the evidence, and it will be well to approach it from the highest form to which religious belief concerning milk has attained, and proceed thence to some of the lower forms of the cult.

The use of milk in religion has reached its climax among the Todas tribe of India. The sanctity of the milk among these people is the chief element in their religion. The gods take part in the churning, and the dairy organization marks off two great clan divisions: 'The most important dairy institution among the Todas is a churn, and to the Toda calendar, but their dairymen are Teivali' (I. W. H. R. Filtnister, The Todas, London, 1900, p. 650). The milk of the buffer is sacred. The ritual connected with the buffalo and with the dairy is 'certainly a religious character,' and there can be little doubt that the dairy formula 'are intercessory and that they bring the dairy operations into definite relations with the Toda deities' (ib. p. 351). The dying are given milk sparingly by their relatives as an adequate, and has not since then been improved upon.

The sacred character of milk in other parts of the primitive world is shown by its use in various ceremonies of a religious character, but not in connexion with an organized religious cult, as among the Todas. Both in Africa and in India these ceremonies reach a high grade in places, but do not attain the Toda level. Perhaps the royal milk-drinking observances of the king of the Uyoro, a section of the Bantu people in Africa, affords the nearest parallel (J. G. Frazer, Totemism, London, 1910, ii. 320-328) to the Toda practice of an interesting Kaffir folk-tale, 'The Story of the Bird that Nibbled Milk' (ib. p. 432, p. 482).

E. Theud, Kaffir Folk-tales, London, 1882, pp. 146-155, appears to be founded on the first use of milk and refers to events which preceded the use of milk, but it contains details which bring it within the general condition of the African beliefs. 'They used to get milk from a tree. This was got by squeezing, and the people who drank it were always thin.' The Kaffirs now drink a kind of fermented milk, and it is noticeable that, 'when poured out for use by the master of the household, who is the only one permitted to touch the milk sack, a portion is always left behind to act as a sacred offering.'

These are clearly religious practices which require further investigation, but in the meantime it is permissible to classify them as less developed in form than the Toda example.

Every one knows the reverence paid to the cow in India; but, in spite of the attempt of the early mythologists to identify the cow with the higher forms of Hindu religion (A. de Gubernatis, Geological Mythology, London, 1875, ii. 245), there is little doubt that the cow is not a god. The reverence for the cow is quite human in its character, and the 4th book of the Laws of Manu contains the clearest evidence of this.

Crooke points out that respect for the cow in India is of comparatively modern date, and gives some interesting data to show the lines along which it has developed (PB ii. 203-206). This view is confirmed by the usages to which the products of the cow were put. According to Vijn, a house is purified by plastering the ground with cow-dung, and land is cleansed by the same process; cows alone make sacrificial oblations possible by producing sacrificial butter, and among six excellent productions of a cow which are always propitiated, milk and sour milk are included (Institutes of Panjab in 1911, pp. 114). It is also a protective from the evil eye, and has various uses in magic and divination. This reverence for Panjab milk is on its way towards a definitely religious status.

In Europe the once sacred character of milk is indicated by the evidence of folklore, which records
the protective measures which have to be taken to secure it against harm from witches and other malevolent powers (GEB, pt. i., The Magic Art, London, 1911, pt. 214). The best examples are found in Russia, where the people on Midsummer eve drive the cattle through the fire to protect the animals against ‘two wicked witches, who are the ravenous after milk’ (W. R. S. Ralston, Songs of the Russian People, London, 1872, p. 391). This rite affords the explanation of a curious story told of an Irish prince on the occasion of the Festival of Fionnachta. It is related of him ‘that he arrogated to himself the milk of all the hairless dun cows in the land,’ and he ‘caused a great fire of ferns to be made, and all the cows in Munster to pass through it, so that they might fulfill the necessary conditions, and their milk become the royal property’ (H. d’Arbois de Jussainville, Irish Mythological Cycles, Eng. tr., Dublin, 1963, p. 59). Included in this tradition are the following ritual observances—the restriction of cows of a single colour, the passing through fire to secure protection, and the right of the king to a royal supply of milk. The restriction as to colour also appears elsewhere in Irish folklore (P. Plimer, Vita Sanctorum Hiberniae, Oxford, 1910, vol. i. p. cxivi, and K. Meyer and A. Nutt, Voyage of Bran, London, 1863–67, ii. 186). The legend of the Dun na nGall, in which they were destined to be milked in the same order, the attacking witch being successful in this case (J. Harland and T. T. Wilkinson, Lancashire Legends, London, 1882, pp. 16–19).

Ritual in custom and ritual in myth are parallels, and it would be well to inquire whether in folklore there is more than this suspicion of sanctity in the attitude of popular belief as to milk. The milkmaid is almost everywhere an important personage in the social fabric of the village, and her utensils share her importance. The present writer differs from Lady Gomme in her explanation of the famous game of ‘Milkling Palls’ as a mere teasing of the mother (Dict. of Traditional Games, London, 1894–98, s.v.) in that it appears to be a cumulative estimate of the superior value of the milkling-pall as an article of domestic use, and it is pertinent to note in this connexion that the Irish chieftain had ‘in his house constantly a cask of milk’ (Anc. Laws of Ireland, Dublin, 1865–1901, iv. 311). That milk was poured on the ground is attested by J. G. Dunan in his Grammar of Glasgow and the Western Islands, Glasgow, 1835, p. 193), and W. Gregor states that at death all the milk in the house was poured out on the ground (Folklore of N.E. of Scotland, London, 1881, p. 208). This must have originally been an offering to the earth-god as in the Panjab. In Ireland it is called an offering to the fairies (W. G. Wood-Martin, Traces of the Elder Faiths of Ireland, London, 1902, ii. 7), and the fairies are the successors of the gods. It was offered every Sunday on Brownie’s stone in the island of Vayal and other islands (M. Martin, Western Islands, London, 1716, pp. 67, 110).

This brings us very close to the stage when milk was a sacred object in the cult of the gods. In the Christian Church it was substituted for wine in the elements of the communion. This was after the First Council of Nicaea (325), quoting Gratian, Decretal., i. 111), but it may be surmised that it originated as one of the surviving rites of ancient pagan religion. St. Bridget was in some degree regarded as the special patron of milk, as appears in the beautiful milkling-songs of Scotland (A. Carmichael, Carmina Godelica, Edinburgh, 1900, i. 261–275), and she was at her birth bathed in milk (Lives of Saints from the Book of Saints, London, 1889, ed. E. L. Stage, Oxford, 1900, pp. 184, 318). St. Bridget is in many of her attributes a pre-Christian goddess, and her association with milk in the surviving forms once more takes us back to ancient pagan religion.

That bathing in milk was also a death rite is shown both in traditional ballad lore and in traditional games. In the beautiful ballad of ‘Burde Ellen,’ preserved by R. Jamieson (Popular Ballads and Songs from Tradition, etc., Edinburgh, 1866, p. 125), is the verse—

’Tak up, tak up my bonny young son,  
Gar wash him wi’ the milk.  
’Tak up, tak up my fair lady,  
Gar row her in the milk.’

Lady Gomme has analyzed the different versions of the children’s game of ‘Green Grave,’ and has shown from the general movements of the game that it is derived from a funeral rite. This view is confirmed by the fact that the most constant formulae of the game rhyme include the lines,

‘Wash them in milk and clothe them in silk’

(L. 172).

There seems little doubt that these words are survivals of an ancient burial rite.

In the religions of antiquity there is more definite evidence. J. E. Harrison, in her discussion of primitive baptism (Prolegomena to the Study of Greek Religion, Cambridge, 1903, p. 589 f.), asks what was the exact ritual of the falling into milk? ... Did the neophyte actually fall into a bath of milk, or is the ritual act of drinking milk from the belly of the Bull as the Bull is described? and in spite of a useful parallel from Egyptian ritual, comes to the conclusion that ‘of a rite of immersion in milk we have no evidence.’ This, however, cannot be quite true if St. Bridget really regarded as there is strong evidence to prove, an early Celtic goddess who has brought into her Christian attributes traditions and rites of pre-Christian origin. There is the further example of the Fiats in Ireland saving themselves from the Fomorians by their Fir-Fidga enemies by taking a bath filled with the milk of one hundred and twenty white hornless cows, where the single colour condition is again repeated in the rite of bathing in milk attributed to St. Bridget was certainly not of Christian origin any more than the offering of milk and honey in early baptismal rites was Christian (ib. p. 587 f.), and we must take it that these rites come from early Celtic religion. The offerings of milk and honey were made to the nymphs and to Pan (Theoc. Id. v. 53 f. and 58 f.), and to this day in modern Greece they are made to the Nymphs (J. C. Lawson, Modern Greek Folklore, Cambridge, 1910, p. 150 f.).

To sum up the evidence—it would appear that in primitive religions there are three stages in the sacred characteristics attributed to milk: (1) where it is a definite part of the dominant religious cult; (2) where it is extensively used in religious ceremonial, but is not an exclusive or predominant element in the ceremonial; (3) where it is looked upon as a religious object, and is, consequently, subject to danger from outside forces, from which it demands various forms of protection. The survey seems to make it clear that the unique example of the Todas is a highly specialized development of the religious conception of milk, and not a normal condition, while the evidence of folklore and of the religion of antiquity leads us to conclude that the endowment of milk with sacred properties arose from its enormous social influences, which led to specialization of its use on solemn and important occasions. This would be the normal position of milk in religion. A last stage is represented by the necessity of protecting it from malignant influences. This is survival from the normal stage, and arises only when it was no longer a protective force in itself.

LITERATURE.—This is given fully in the article.

L. GOMME.
MILK (Civilized Religions).—1. As food and sacrifice.—Since man is a mammal, milk is universally known; and, as man early learned to use the milk of goats, cows, and camels, milk became a natural symbol of nourishment. The ancient Egyptians sometimes pictured the heavens as a woman with hanging breasts, and sometimes as a cow with full udder, thus suggesting that the heavens were fed men. The Hebrews suggested, similarly, that milk is the divinely given nourishment of man by picturing the mother-goddess with breasts so full that she must support them on high beams. Since milk is the universal element of human diet, it is but natural that it should have been offered at times in sacrifice to deities, as meat, meal, and firstfruits. Thus in I Macc. x. the Avestan there is frequent mention of a sacrificial gift of boiled milk, and it was mingled with haoma (g.v.) in sacrifice. Among the Arabs milk seethed in milk is still a common dish; yet the Hebrews were prohibited from boiling a kid in its mother's milk. W. R. Smith thought that this was because milk for boiling is usually sour, so that such boiling would involve the offering of a fermented sacrifice, or that possibly milk was here regarded as a substitute for blood.

2. In a supposed Semitic myth.—In the OT "flowing with milk and honey" is a phrase frequently used in the designation of Palestine. It occurs in Ex. 33:17; 13:23, Lv. 20:13, Jer. 11:33, and Ezek 20:44. Curdled milk (the modern laban) and honey are also mentioned in Is. 7:23 as the food of the child that is to be named Immanuel. It occurs again in the same chapter (79), where it is more difficult to interpret, and where its occurrence may be due to editorial redaction. The phrase "flowing with milk and honey" occurs in the J document (c. 950 B.C.), and continued to be used till the time of Ezekiel. T. K. Cheyne in 1901 noted that the phrase is more poetical than the context seems to justify, and suggested that it might be a survival of a description of Israel's idealized past. Since ancient poetry is always tinged with mythology, he thought it not improbable that this phrase was of mythological origin. Usener in 1902 held that the phrase was of mythological origin, and that it was borrowed by the Hebrews from Iranin mythology, where, according to him, we hear of heavenly honey and holy cows. The phrase had, he thought, descended by one line to the Hebrews and by another to the Persians. He described the food of the infant Zeus on Crete as curds and honey. Stade, in commenting on Usener's article, claimed that the phrase "flowing with milk and honey" was not used earlier than the time of Ezekiel, that in the J document and Jeremiah it was a later addition, and that Usener was right in claiming that in J 33 the use of the figure was due to Greek influence. Whether "curd and honey" could have been a mythological phrase introduced from Assyria, he thought, was a problem for Assyriologists. H. Zimmern in the next year, 1903, claimed that the Assyriological side that honey and curd played a great role in the Babylonian cult, and that it was of mythological origin, though he offered little proof for the statement. Finally, Greessmann in 1905 endeavoured to work this view into an elabor-

MILK (Civilized Religions)

brought forth a still-born child, in order to effect her purification (see Vendidad, v. 52, vii. 67). Milk is here only one of several ingredients—meat, bread, wine, water. As she had first to drink ox

urine she has been chosen for its mythical reasons. Another fragmentary text which has been frequently cited on the basis of an

infinite reference by Friedrich Delitzsch as reads as follows: 2

1 Crown of . . . 2 For the shepherd of the black-headed (people) . . . .

1 I pray a prayer . . . 2 A sceptre of maple should may his hand (group).

1 For the shepherd of the black-headed (people). . .

1 Honey and lavan abundantly . . .

1 The mountain bearing produce . . .

1 The steppos, the field bearing fruit . . .

1 The orchards bearing fruit . . .

1 On his left hand may the god Sin . . .

1 To the king in person may they homage !

This is clearly a prayer for a Babylonian ruler. The petitioner asks that great fertility and prosperity may come in his time. The language resembles that of Joel and the Sibyl, but the imagery is capable of as natural an explanation as that of the Hebrew seers.

The other passage which has been thought to show that the Babylonians and Assyrians held mythological views of milk and honey occurs in an incantation. The part in question reads:

1 Pure water bring into its idol.

2 The exalted lord, the great serpent of heaven, By pure water shall he be called.

3 To a place of purity shall bring thee,

4 To a place of purity shall bring thee,

5 With his pure hands shall bring thee

6 Into honey and laban shall bring thee.

7 Water of an incantation he shall put to thy lips.

8 Thy mouth with an incantation he shall open.

Here at last we have a passage that moves in such a realm of heavenly unreality that it may possibly be regarded with something like amusement, but the mythical part does not centre at all in the honey and laban, but in the action of the god. Honey and laban are used to denote a place of fertility and plenty, and it may fairly be claimed that they were introduced here from such usage as that of the preceding passage, and are no necessary part of the myth.

The names probably had their origin as a separate people in Arabia, which was a land of deserts and oases. It was thus that the oasis and its palm-tree became one of the symbols of paradise and the garden of Eden, and finally entered as one of the elements into the Christian symbolism of the New Jerusalem. 5 It seems probable that in the primitive language of the desert an oasis or fertile land like Babylonia and Palestine may have been designated as a land flowing with milk and honey. 6 The occurrence of the phrase among both Babylonians and Hebrews points in this direction; it probably had an origin in their common ancestry. As the phrase is lacking, however, in the description of paradise both in Gn 2, 3 and in Ezk 28, it can hardly have formed an integral part of the traditions of the Golden Age, or have entered as an important element into the mythology of the Semites.

Indeed, in the paradise story of Gn 3 the food which makes man like God is not milk and honey, but the fruit of the tree. So in the corresponding Babylonian story, the Adapa myth, it was not milk and honey, but 'food and water,' that might have gained immortality for Adapa. 7 As these accounts are doubtless both variants of the same primitive paradise myth, it is impossible to resist the conviction that milk and honey formed no part of that myth among the Semites, but was simply borrowed and enlarged by the later poets to form a descriptive legend as to when the desert was to be described fertile lands—a phrase which survived both in Babylonia and in Palestine, and which came only in post-Exilic times among the Hebrews to designate a Golden Age that was still future.

3. In the Avesta.—Among the Persians these ideas apparently did not in the early time play a prominent rôle. Milk was offered in sacrifice and was used in certain incantations, as noted above. Homage was rendered to it, 1 and it was regarded as a divinely purified provision in the breasts of females, as was the seed in males; 2 a prosperous woman was 'rich in children and rich in milk.' 3 The cow was regarded as a benedict animal guarded by Ahura Mazda as he guarded all other things on which the prosperity of people depends, 4 but in no sense a heavenly animal. So far as the Jews having borrowed a myth from Persians, as Usser thought, the elements of the supposed myth appear only in the later syncretistic Mithra cult, and would seem to have been borrowed from the Semites.

4. In the Vedas.—In India milk was viewed as a symbol of nourishment. The Atharvaveda regards a house full of nurturing as one full of milk, 5 and the earth is a mother who can pour forth milk for her suppliants. 6 Nevertheless in the Rigveda both milk and honey were employed in the ritual, though they were both subordinate to the all-prevaling soma. When milk was used as an offering, it was sometimes sweet and sometimes sour, both kinds of offerings being recognized. 7 As in Iranian ritual, the milk was mixed with honey and latedel element sometimes being sour. 8 Honey was in the same way used as an offering; sometimes it was mixed with soma, but sometimes with milk. Thus Rigveda, viii. 4. 8, addresses Indra: 9

'With honey of the bees is the milk mixed;

Come quick, run and drink!' 

Milk was created in kine by Varuna, even as he gave cool breezes to the forests, swiftness to horses, wisdom to the heart of man, lightning to the clouds, the sun to the sky, and soma to the mountains (Rigveda, x. 1 sv. 22). This reveals a high estimate placed upon milk and honey as foods, but lacks any mythical element, 10 as does the passage (x. 123. 5) in which the sky (dyaus) gives milk to the Aryan race.

The Sanskrit poets often allude to the ability of the eon to separate milk from water; but this, as C. R. Lukanoff has shown, has no mythical significance. It is a reference rather to the fact that these birds fed on the milk-like juice of the lotus stalks, which grew beneath the water. 11 Similarly the religious teachers of India often use as an illustration of a changing existence the relation between sweet milk, sour cream, and butter, not because they saw anything mythological in them, but because they illustrated change in forms of existence. 12

In India, then, it can only be said that milk and honey were so highly valued as food that they

11 Cf. p. 278.  
naturally formed a part of the most valued offerings to the gods. Perhaps the proper mixture of these viands was supposed to have some magical significance, for one passage (Rigveda, IX. 12) says that they were mixed by the athermal; 1 but there is no trace of such a myth as some have supposed for the Semites. 2

5. In Egypt.—In Egypt, as already noted, the sky-goddess was pictured as either a woman or a cow with full breasts; but this was only to symbolize her nurture of her earthly children. If milk had in early Egyptian thought any mythological significance, we should expect to find it prominent among the foods promised to the deified kings to whom the many-texts of the Old Kingdom promised a place among the gods. True, the departed king is frequently represented as suckled by the sky-goddess or some other divinity connected with her. The goddess is once thus addressed: 'O mother of this king Pepi . . . give thy breast to this king Pepi, suckle this king Pepi therewith.' The goddess replies: 'O my son Pepi, my king, my breast is extended to thee, that thou mayest suck it, my king, and live, my king, as long as thou art little.' 2 Milk was, then, the food of the celestials only during their heavenly childhood. When Pepi was grown, he is promised bread which cannot dry up and 'beer which cannot grow stale.' Later he is given a 'snared fowl.' 3 Bread is called 'the bread of the god.' Pepi is invited to 'sit down to thy thousand of breas.' thine thousand of oxen, thine thousand of geese, thine thousand of everything whereon the god liveth.' 4 Another source of food for the deified king is the tree of life situated in a mysterious islet at a distance, and th is king Pepi sought and attained. 6 This tree of life is probably a survival from a desert and oasis life similar to that of the Semites. 7 Milk plays very little part in these mythological myths. It was only the food of the deified kings during that part of their celestial life which corresponds to childhood on earth.

6. In Graeco-Roman literature.—Among the Greeks and Romans, as among the Semites and people of India, milk and honey were delicacies that were much appreciated, and their use goes back to an early time. Libations of milk and honey were, according to the Iliad, poured out for the dead, and such libations appear to have continued down to the Christian era. 8 In case of pestilence milk and honey were among the offerings presented at the sacred mountains of Pelion and Ithaqua. Before eating, milk, honey, and bread were offered to Hestia. 9 Milk and honey were also symbols of plenty and prosperity. Thus Pindar (744 B.C.) says:

'Rejoice, my friend! E a I send you, though at late hour, this honey mixed with white milk, fringed with the froth of blending, a draught of song conveyed in the breathings of Aeolian ducts.' 10

Though here metaphorical for sweet poetry, the metaphor attests the use of milk and honey as delicacies. In course of time both milk and honey became symbols of plenty. Thus Tibullus (18 B.C.) says:

'The oaths themselves give honey, and beyond the sheep bounding to milk the mind easily takes the hand to the dairy-tree.' 11

11 Neum. Ill. 70 ff.

12 Astl. 43 f.

Similarly Ovid:

'Nows Rivers of milk, now rivers of nectar run,
And yellow honey distills from the green box.'

With these poet's milk and honey have become emblems of the Golden Age, but with many others they are simply symbols of plenty. 2

Latin writers are, of course, dependent on Greek models for their imagery, and it is possible that Tibullus and Ovid were influenced directly or indirectly by Semitic ideas. A usage of milk and honey, however, which goes back to Homeric times cannot have been borrowed from the Egyptians. Possibly it may have come from Semitic Mesopotamia through the Hittites, since Hittites appear to be mentioned in the Odyssey, 3 but we know as yet too little of Hittite ritual to regard this as more than a mere possibility. Possibly, too, it may have been carried to the Aryan lands by Phoenicians, but it is quite as probable that the uses of milk and honey developed in the Aryan lands independently of Semitic ideas.

7. Among Christians.—The many references to milk and honey in Patriotic literature collected by Usener 4 are chiefly echoes of Indian myth. Some curious Christian myths connected with the milk of the Virign Mary are, however, still current in Bethlehem and its vicinity. There is at Bethlehem a cave called the 'Milk Grotto,' 5 a legend has it that the Holy Family took refuge there, and that, as the Virgin nursed the Child, a drop of her milk fell on the floor. Because of this it is still believed that a sajourn in the grotto not only increases the milk of women and animals, but cures them of barrenness. In reality this legend arose to Christianize a grotto that was originally a shrine of Ashareth. 6

All about Bethlehem the limestone crumbles and forms little white pebbles about the size of peas. These are accounted for by the story that a drop of the Virgin's milk fell on the rock, and that these peas are the miraculous result. Similarly it is said that, as the Virgin nursed the Child by the wayside, a drop of her milk fell on a thistle, which on this account became flecked with white and is called 'Mary's thistle.' 7 These myths are the outgrowth of the transfer to the Virgin of the old grotto of the mother-goddess, and are really much more erotic to Christianity than the quotation in the Patriotic writers about the Golden Age.

In the early Church the newly baptized were given milk and honey to taste (or, in some Western churches, milk and wine) as symbolizing their regeneration through baptism (cf. l. Co 7, He 6, v. 12 f.). By the twenty-fourth canon of the Third Council of Carthage (307) this milk and honey was to be consecrated at the altar on Easter Even, the most solemn day for baptism, but the use has been forbidden since the Trullan Council of 692. 8

George A. Barton.
MILL, JAMES, and JOHN STUART—The two Mills, father and son, occupy a unique position in the history of British thought. They were, after Bentham, the greatest figures in the utilitarian school and the leaders of the philosophical radicals.

1. James Mill.—Next to Bentham, James Mill was the force that moulded the early expression of utilitarian doctrine. He was a Scotsman by birth, the son of humble parents (his father a country shoemaker), and was born at North Water Bridge, on the North Esk, in the parish of Logie-Pert, Forfarshire, on 6th April 1778. By his intellectual ability and his industry he raised himself to the commanding position that he ultimately attained. His early education was received at the parish school of his native place, and afterwards at Montrose Academy, where he had as school-fellow Joseph Hume. From Montrose Academy he went to Edinburgh University (in the palmy days of Dugald Stewart), where he graduated M.A. in 1794, and forthwith proceeded to the study of Divinity, and was licensed as a preacher of the gospel in the Church of Scotland in 1798. The ministry, however, was not destined to keep him long. Being appointed tutor to the only daughter of Lord Stair, then Speaker of the House of Commons for Kincardineshore, he came under the special notice of Sir John, and went with him to settle in London in 1802. He was not long in London, for in 1803 he married Catherine, and in 1805 we find him active in originating The Literary Journal and making many contributions to it. In 1804 he produced his pamphlet on the Corn Trade, in which he advanced a series of articles, in an unceasing flow, to innumerable periodicals and magazines.—The Philanthropist, The Annual Review, The Westminster Review, The London Review, The Edinburgh Review, &c. He was now, and continued to be, in his active period, a contributor to a large number of periodicals, and was regarded as the chief of them being on 'Government,' 'Education,' 'Jurisprudence,' and 'Laws of Nature,' as a sort of textbook of the Encyclopaedia articles was made in book form and had a wide influence. For about eleven years (from 1806 to the end of 1817) he worked strenuously at his History of British India, which he began in 1806 and published by installments in 1820; an immense work, which was at once a great increase of knowledge. The immediate result was his appointment to a post in the India House, in the department of Examiner of India Correspondence, where he remained for some years. Besides a little book on the Elements of Political Economy (1821), largely reproducing Adam Smith, but embodying also the distinctive principles of Ricardo, he produced his great psychological work, the Analysis of the Phenomena of the Human Mind, which was brought out in 1839. This at once raised him to the position of psychologist in chief of the utilitarian school, filling the gap that had been left in the elaborate and multifarious teaching of Bentham. With Bentham himself Mill was on terms of the most intimate friendship, and the master regarded him as his most stalwart disciple. So much so, that when he died, in 1835, it was Mill that it was doubted whether he was anything more than a brilliant reproducer of Bentham's opinions. That, however, does Mill an injustice. He was no mere echo, but a voice that was potent as a political force to an extent that even Bentham hardly equalled. When he died (his death took place in London, on 20th June 1836), he left behind him a London University, the great inspiring spirit of radicalism and the one man who could have made the radical propaganda the success that it had become. In the year before his death (1835) appeared his Fragment on Mackintosh. This is really a vigorous defence of empiricism against intuitionism, though it assumes the form of a vehement criticism of Mackintosh, and is chiefly valuable as presenting Mill's philosophical positions in a clear and condensed light, rendered all the more effective by the polemic setting.

Mill's fame as a psychologist rests on his consistent experientialism, his thoroughgoing application of association to the phenomena of the mind, and his uncomprising attack on the doctrine of associationism to explain the mind and all its processes. But this has already been brought out in the art. Association, and need not be further dwelt on. A word, however, is not to be omitted on psychological ethics. Mill's ethics is essentially hedonistic; the human will is moved by pleasure (or the avoidance of pain) and by this alone; and with a view to the attainment of pleasure (or to the getting rid of pain) men habitually act. But there is such a thing as disinterested conduct; and by the utilitarian himself benevolence is regarded as the supreme virtue. How, then, explain this? In the first place, Mill has recourse to the distinction (of which Bentham had made so much) between motive and intention, and maintains that, while our intention in benevolence is disinterested, our motive is interested. To the other words, benevolent action pleases the individual, gives him satisfaction, else he would not do it, but it also promotes the happiness of others. Now, this being pleasant with an action benevolence is always considered—i.e., the principle that we see at work in the micer, whose nature is so changed by his traffic with money that the original desire of money for the 'pleasure that ensues' becomes ultimately the desire of money for its own sake. What happens in the case of the miser happens in the case of disinterestedness and benevolence. Although individual pleasure lies at the root of a man's benevolent action, on the other hand, it is through intercourse with men and the experience of mutual help, to submerge the thougt of his own pleasure and make benevolence itself his end. What, then, with its intentions and its intimations? Conscience is Mill not a simple and elementary faculty in human nature, but the product of association. That gives it to its power, and explains its peculiarities, and indeed constitutes its value. The ultimate test of morality is utility: right and wrong are qualities of conduct and are to be gauged by the tendency of actions to produce pleasure or pain. Education occupied a large share of Mill's attention. As a utilitarian radical, he was eager that the people should be educated—educated so as to develop and improve their intelligence, and render them fit to be the children of a great nation, and to enter into the practical interest in the educational movement of the time, and entered as a keen polemic into the controversy between the Lancasterian and the Bell systems of education. He tried to establish a school (but failed) on the principles of Bentham laid down in his Christianmatics ('Study of useful things'); and he was one of the small band of ardent educators who, generally speaking, were not admitted to the University. But his claim to honour as an educationist rests on his broad-minded theory of education, as developed in his Encyclopaedia article, where education is shown to be the work of a man's life-time, where
the roots of it are laid in associationist psychology, and, where the principles of Helveticus regarding the almost unlimited power of education in transforming the individual are vigorously enforced.

In the realm of jurisprudence Mill made for himself a great name by his logical and philosophical treatment of the problem of law. His Encyclopaedia article on that subject is, within its limits, almost perfect. It might be elaborated at points and more fully illustrated, but it is almost descriptive of precisely the work that is striking is its handling of the rights of nations in the time of war, and its treatment of the possibility of an effective court of arbitration in international quarrels.

A philosophical politician Mill achieved fame by his theory of government. It is not a theory that is invulnerable. It lays itself open to objection as to the adequacy of its analysis of human nature; it was attacked by Macaulay on the ground of its deductive method and disregard of the inductive mode of procedure; and Sir James Mackintosh attacked it on the side of its extreme advocacy of popular representation. But Mill seems to have ignored the demand of democratic tyranny, or the abuse of power on the part of the 'masses' in defiance of the interests of the 'classes.' The foundation of the theory is that every man is by nature self-centred, that he aims at pleasure for self and as much of it as he can obtain, and that, in his pursuit of personal interest, he is ready to lay hold of everything that ministers to his gratification, regardless of the pleasures and desires of others. Hence the need of government, and its meaning: government just signifies keeping one man from grasping at and mercilessly pursuing what belongs to another. But the members of a government are themselves men, with men's selfish passions and readiness to tyrannize over others, and, consequently, need themselves to be restrained. The restraint comes and only can come from the people; and the only tolerable form of government is a representative government—a government where the people's representatives act as a check on legislative abuse. It is only when the people are governed by men elected by themselves and representing them that the interests of governors and governed can be identified. Yet this identification of interest is liable to be broken through, if representatives are not sufficiently watched.

A body of representative men, if left entirely to their own actions, will have 'sinister' interests and may become as selfish and oppressive as an individual. The fruits of frequent parliamentary elections; thus only (so it appeared to Mill) could the people retain a proper hold on their own representatives.

Into social reform Mill threw himself with much energy. Reforming zeal was the great characteristic of the utilitarians. This was but the practical side of their all-controlling principle, the general welfare, or the greatest happiness of the greatest number. Prisons and prison discipline, mendicancy, the Poor Laws, and such like engaged his pen; and it was through the influence of his views, to no small extent, that subsequent reforms were effected.

2. John Stuart Mill.—The eldest child of James Mill was John Stuart Mill (born in London on 20th May 1806; died at Avignon, in France, on 5th May 1873). He was educated solely by his father, who, although constantly occupied in literary and exacting work, did not grudge to act as schoolmaster to his son. His method of teaching was an exceptional kind; and, although the result of it was also exceptional, the method has not been imitated by others or regarded as generally practicable. At three years of age the boy was set to learn Greek, which was his chief study for the next five years, English and arithmetic being added as secondary subjects. This created in the youthful learner a love for Greek—not only for the language, but for the literature and the thought of Greece—so that lasted throughout his life, and was more noticeable in his writings than his genuine appreciation of the dialectic method of Plato and his constant use of the Socratic mode of inductive definition, in order to secure clear concepts and exact verbal expression of them, with a view to truth. At the age of eight, the boy had Latin added to his Greek; and, by the time that he was fourteen years of age, he was indoctrinated into the principles of logic, psychology, and political economy. These were still subjects for a boy of that age; but they were the subjects in which he afterwards excelled.

All the time that these subjects were being set as tasks, the father was making the boy his constant companion, sharer in his daily walks, and, through his conversation and judicious cross-questioning, was successfully developing the boy's mind and imparting to him clearness and exactness of thought and confidence in thinking. This Socratic procedure was supplemented at the earliest moments by making the boy a teacher. He was set to superintend the education of the younger members of the family, thereby enabling him to gain further clearness of ideas and to strengthen his intellectual faculty. No wonder that the precocity of young Mill became proverbial.

A further stage in his education was a year's sojourn in France, as the guest of Sir Samuel Bentham, at the age of fourteen. This introduced him to the French language and to French literature and politics; and, through excursions in the Pyrenees and elsewhere, aroused in him an enthusiasm for natural history and a love for botany and zoology. These things all influenced him in later life.

On his return from France, he was further taken in hand by his father. He was now directly introduced to Bentham's teaching, in the French translation and exposition of it in P. E. L. Dumont's Traité de législation (London, 1802). 'The reading of this book,' he says (Autobiography, p. 64), 'was an epoch in my life; it is the first point in my mental history.' At this time also he studied Roman law under John Austin, the jurist. At the age of sixteen, the youth was beginning to feel his intellectual independence. Baring with enthusiasm for Bentham, he started a Bentham Club of young men, which he designated 'The Utilitarian Society.' Somewhat later he became a member of 'The Speculative Society,' and was also a prominent figure among the youths who met, at stated times, in George Grote's house for discussion of philosophical and economic questions. Later he took an active share in 'The Political Economy Club.' Thus was the development of young Mill's thought and mind further aided by a variety of powerful intellectual agencies.

In 1823, at the age of seventeen, came his appointment, by the East India Company, to the post of Assistant Examiner, under his father, in the Office of the Examiner of India Correspondence. This continued to induced the position of Chief of the office in 1850—two years before the abolition of the East India Company.

A turning-point in his life was his break-down in health together with a failure at the age of thirty-eight, to keep fit, and an over-strain of early education under his father's tuition were largely the cause of this. But there was something more. There was the emotional
nature of the young man, which had been cramped but not destroyed by his father's one-sided training, craving for satisfaction. The end of the crisis was what he himself regards as analogous to a 'conversion.' It came in large measure through study of the poetry of Wordsworth and the philosophy of Coleridge, and showed itself in a revolution both in his intellectual opinions and in his character. He was no longer the undiscriminating follower of Bentham that he had been; he was no longer affected by the formal, stereotyped, one-sided slice of human nature. He emerged from the ordeal a new man, with wider mental outlook and deeper and intenser sympathies. The extent of the change may be seen by reference to his two remarkable essays on Bentham and Coleridge, republished in vol. i. of his Dissertations and Discussions (London, 1859–67).

Another important factor in his life was the influence over him of Mrs. Taylor, who became his wife in 1851.

His work in connexion with literary journals was enormous. He wrote articles almost without number and on an exhaustive variety of subjects (philosophical, political, economic, social). They began with The Westminster Review and extended to other magazines—especially The London Review and a London and Westminster Review. They are valuable as enabling us to trace the development of his opinions, the growth of his views in philosophy, and the gradual modification of his radicalism in politics.

His intellectual work was his System of Logic, Ratiocinative and Inductive, which appeared in 1843. This was followed, in due course, by his Essays on some Unsettled Questions of Political Economy (1844), and Principles of Political Economy (1848). In 1859 appeared his little treatise on Liberty, and his Thoughts on Parliamentary Reform. His Considerations on Representative Government were first published in 1860; and in 1863 (first appearing in magazine form) came his Utilitarianism. In 1865 came his Examination of Sir William Hamilton's Philosophy in 1867 his Rectorial Inaugural Address at St. Andrews University, on the value of culture; in 1868 his pamphlet on England and Ireland; and in 1869 his treatise on The Subject of Education. In 1869 also was published his edition of his father's Analysis of the Phenomena of the Human Mind, with many valuable notes illustrative and critical by J. S. Mill himself, by Bain and Grote, and by Andrew Findlater. His two posthumous works are his Autobiography (1873) and his Three Essays on Religion (1874). To these have to be added the two large volumes of Letters (ed. Hugh S. R. Elliot) published in 1910.

A phase of Mill's life has still to be noted—his parliamentary career. In the Parliament of 1855–68 he sat as Radical member for Westminster. Three things in chief did he advocate in the House of Commons—women suffrage, the interests of the labouring classes, and land reform in Ireland.

In philosophy J. S. Mill's fame rests chiefly on his Logic, his Political Economy, and his Examination of Sir William Hamilton, to be taken in connection with his notes in his edition of his father's Analysis.

As a logician he stands out as the great empiricist who formulated and elaborated inductive logic, who restated and in part redefined deductive logic, who made systematic application of logical principles to the moral sciences (including politics), and who, enforced, in polemic form, the power of expression the spirit of the age, and the ultimate test of truth. The brilliancy of his thought and the clearness of his style (including an unwonted aptitude for felicitous illustration, ranging over a wide field of knowledge) cannot be too highly praised.

The stimulus to the student derivable from a study of his Logic is unqualified. The explanatory character of his great work must be acknowledged without reserve. But how far he has succeeded in bridging the gulf between inductive and syllogistic logic may be judged by the reaction of his friend and associate, who has doubts (see his Dissertations on Leading Philosophical Topics, London, 1903, pp. 21–26); and empirical logic has made great advances since his day. On the other hand, it must be admitted that his theories were rendered possible only through Mill's work.

In psychology Mill upheld the associationism of his father, but gave a more attractive expression of it as 'mental habit; or, more generally,' his psychology into theory of knowledge and formulated his doctrine of psychological idealism (found on Berkeley), which, resting on the empirical genesis of knowledge through the various senses operated by association, issues in the conception of matter or objective reality as the permanent possibility of sensations' and of mind as the permanent possibility of feeling. In the case of mind, however, there is a peculiarity: it is conscious of its states. This we must accept, as it is given in our experience, but we must accept it in its inexplicit form. It is not further defined.

He was unbending in his opposition to those who base truth on intuition. Not that he denied the fact of intuition, but he demanded that it should be tested by experience, so that it may not become (as it had doubtless become to a school of empiricism at the time) the bulwark of prejudice and irrationality and the hindrance to intellectual, political, and social progress.

Mill's great work on Political Economy (equal in originality of thought and in importance to his Logic) is a clear exposition of the various branches of the science—wealth, distribution, consumption, and exchange. It is a masterly work, and out of these. It shows him also as a keen, but fair, critic. But his chief merit lies in his widening the scope of political economy and removing from it the reproach of being the dismal science. This he did partly under the influence of Auguste Comte) by infusing into it human feeling and associating it with the philosophy of society. Economic principles were now conjoined with their practical applications (including thought and action). Not only do we have a minute and scientific handling of such things as labour, capital, rate of interest, money, international trade, and all the other points in political economy, but Mill was actuated by an interest in these problems and not only were the problems dealt with, but also a stimulating and wise treatment of such deeply interesting problems as the future of the labouring classes, the land question, socialism, etc. In explanation of the exceptional popularity of the treatise he himself says:

'It was, from the first, continually cited and referred to as an authority, because it was not a book merely of abstract science, but also of application, and treated Political Economy not as a thing by itself, but as a fragment of a greater whole; a branch of Social Philosophy, to which the other branches, that its conclusions, even in its own peculiar province, are only true conditionally, subject to interference and counter-action from causes not directly within its scope: while in the character of a prophetic guide it is not without apart from other classes of considerations ' (Autobiography, p. 230).

That is, doubtless, absolutely correct.

Mill's utilitarian ethics, as expounded in his Utilitarianism, is extraordinarily significant in both the matter and the style. And the style, not less than the glee of conviction that permeates the whole. Justice has really been done to it by the critics, but not indeed by the utilitarians. (a) that it is not a treatise of pure abstract reasoning, but one written out of the living conviction of a man who loved his fellow-men; (b) that it is practical in its object, and not merely theoretical; and (c) that,
although it sets forth pleasure or happiness as the standard and test of human conduct, it makes supreme the conception of man as a social being and conditions all by the conception of the general welfare. His view of the human will, as determined by character, and of character as formed by a man, and not for him, is his contribution to the solution of the free will problem, and his defence of the principle that the human will is such a thing as a science of ethics—and, if of ethics, then also of economics.

Mill as a political thinker is a great subject. As a political philosopher he loved the people and worked hard for them in parliament and out of it. But he would not submit in any degree or for a moment to their irrational desires and expectations. They had to be led and not followed. He was actively conscious of their tendency to tyrannize and their selfish disregard of justice. He was exceptionally alive to their readiness to dominate over minorities; hence, he powerfully advocated the principle of parliamentary proportional representation. Thus alone, he thought, could minorities of electors get their rights. He saw the people's jealousy and suspicion of the educated and aristocratic classes, and he worked fast by the principle of plurality of votes, as determined by culture and social position. He was very sensitive to the tendency in the masses to act unscrupulously and blindly on land and fashion; therefore he opposed vote by ballot.

On the other hand, he was a strong upholder of the liberty of the individual; and he gave a powerful defence of individualism in his treatise Liberty—a defence of the right of the individual to hold his own opinions and to give free expression to them, and his right to live in such a way as seemed fit to himself, so long as his mode of living did not interfere with the lives and liberties of others. In the same spirit, though he was quite alive to the necessity of the government dictating and controlling within limits, and, therefore, restricting the liberty of the individual, to that extent, he thought that the less government interfered the better: his legislative principle, with necessary qualifications, was laissez-faire.

Another object that lay near to Mill's heart was that of women's suffrage. His book on the subject has exhausted the handling of the theme from that point of view. But he added active support to theory by consistently advocating universal franchise for women and personally guiding the Women's Movement in London and the provinces.

The problems of the universe were constantly in Mill's thoughts. He puzzled himself long and anxiously over the question of the freedom of the will, and ultimately reached the determinist solution that has just been referred to. The nature of the external world and of the human ego also exercised his mind; and his doctrine of 'psychological individualism' was the result. But there still remained the problem of God. With the conception of the Deity as 'the Absolute,' unknown and unknowable (such as knowledge, mercy, and love) could be applied, he had no sympathy. His criticism of H. L. Mansel's view, as set forth in his Bampton Lectures on The Limits of Religious Thought (London, 1870), is scathing and effective. But Mill's thought on the great theme is best given in his supremely interesting posthumous Essays. His honesty of character and his 'indifference to truth' (as Locke would express it) here come out in a very striking fashion. Discouraged from theistic thinking by his father in his early training, and not encouraged to it by his utilitarian friends and fellow-thinkers in after life he yielded that openness of mind that would willingly receive truth to whatever extent it might reveal itself. His faith would have been optimistic in his view of the universe, but he could not; and the most that he could do was to allow a conception of God that conserved his goodness but limited His power. In face of our harrowing experience of Nature 'red in tooth and claw with ravin' and of the unutterably hard and harsh experiences of life in general, he is led to the idea of a Great Power who was All-loving, Omniscient, and Omnipotent. But he was willing, or, at any rate, not unwilling, to believe in a Power of Goodness or of Law if He would, if He could, subdue evil and put an end to suffering and misery and was only hindered by the recalcitrant circumstances of the world. This admission, combined with his admiration of Jesus of Nazareth as the highest of ethical teachers, shows his power of detachment from early upbringing and from immediate social environment, and his readiness to respond to the light whenever it came. This was the noblest trait of his character.

Mill's nature was, in many ways, an attractive one, characterized by high and sterling qualities. He was generous in his outlook and sympathetic with men in the struggle for justice. He was free from all doubts. He was eager to be fair in his estimate of others and of their opinions, and always ready to admit that there is likely to be some truth in very doctrine and a belief that has been sincerely held; there was always kindness of the heart. His disinterested regard for truth was unbounded; and he took little care to cloak or hide unpalatable opinions, but expressed himself freely without regard to personal consequences. He delighted in championing persons and causes that he conceived to be unjustly treated by society or by the law of the land. His public spirit was intense; and he never feared to attack legislatures and magistrates and justices, and to uphold unpopular views, in the interest of the working classes or of the downtrodden. His life was consistently devoted to one end—the furtherance of the good and welfare of his fellow-men.

WILLIAM L. DAVIDSON.

MILLENNIUM.—See Eschatology.

MILTON.—I. Life.—John Milton was born in London at the Spread Eagle in Bread Street, Cheapside, on 26 Dec., 1608, the son of John Milton, a London scrivener, whose conversion to the faith of the Anglican Church had led to his being disinnherited by his father, a member of St. John's, Forest, and a staunch Roman Catholic. The poet inherited the stubborn self-will of his grandfather and the more sensitive and cultured spirit of his father, from whom he also derived his taste for music. From the first the boy was studious, and his father supplied him with the best teachers. When in 1625 (Feb. 12) he entered Christ's College, Cambridge, at the age of sixteen, he had already acquired, under his first tutor, Thomas Young (a graduate of
Milton left the University in 1632 without taking orders, and the next six years of his life were spent at Horton in the quiet prosecution of his studies in classical literature, history, mathematics, and music, with occasional visits to London to purchase books, to visit the theatre, to be an onlooker perhaps at Court ceremonies.

Yet I had rather, if I were to choose, Thy service in some greater subject use, Such as may make these search the sower round, Before thou clothe my fancy in its sound: Spurn shallow works, and deep transport me, May soar Above the wheeling poles, and at Heaven's door Look in, and see each blissful deity; etc.

Milton was not destined to sing of kings or the Round Table. The meeting of the Long Parliament determined him to return home, and he made his way back to England by Venice and Geneva to plunge soon into that long course of controversy, ecclesiastical and political, which determined the choice of themes, the doctrinal framework, and the temper and spirit of Paradise Lost, Paradise Regained, and Samson Agonistes.

The first of the controversies into which Milton plunged with arduous and venerable was that concerning Church government and the preeminence of a Presbyterian and Prelatical organization. In the first pamphlet, Of Reformation in England (May–June 1641), he raises the question why the English governments and earlier monarchs called against them as enemies of the Church. These pamphlets (Of Prelatical Episcopacy [June–July 1641] is an examination of the origin of Episcopacy in reply to a

any English pieces (some of the Latin elegies are very much in this vein) had been or were ever again to be written by Milton. But in Comus, or A Mask Presented at Ludlow Castle (1634), which he composed as a coronation gift to Henry Lawes, all the resources of Milton’s learning and art were employed to set forth his deepest ethical and religious convictions, his passionate love of purity, his sense of the dependence of all human virtue on the protecting grace of God. The theme of the second book of the Faerie Queene is rehanded by a poet of a higher moral temper and a less, though more controlled and classically educated, sense of beauty.

Milton had gone to Cambridge with a view to taking orders, and, though he left without doing so, there is no evidence that he had ceased to be, when he settled at Horton, an orthodox Anglican. He was a communicant; he had signed the Articles; nothing had yet betrayed that he was by conviction a Presbyterian in his views on Church government; while on the doctrine of predestination in its relation to the human will his position was always closer to that of the Arminians than to that of the Calvinists. What alienated Milton from the Church of England was the permanent and intransigent rigour of Laud and the identification of Episcopacy with the Court and its arbitrary policy. His intense and ideal love of liberty was awakened, and the first note of the countryman’s feeling for a Laudian England was struck in Lycidas (1638), the most passionate, plaintive, and musical poem which Milton had yet written. In the same year he went abroad, still intent rather on self-cultivation and the preparation for the task of writing a great poem on controversy and theology. In Paris he met the Dutch savant Hugo Grotius, whose Adsumus Exult was one of the sources of Paradise Lost. He spent two months in Florence, conversing and interchangeing Latin and Italian verses with young Academicians. He proceeded to Rome, where he visited the Vatican Library and the English College, and heard Leonora Baroni sing at the palace of Cardinal Barberini. The elevated strain of compliment in the Latin verses addressed to her betrays the influence of Italian preciosity. At Naples he met Manso, Marquis of Villa, Tasso’s patron and Marzio, and in a Latin poem addressed to him prays that he may find a like patron when he undertakes to sing of...
On 13th February 1649—a fortnight after the execution of Charles I—are published, in defence of his predecessors, 'The Eikonoklastes,' and 'A Defence of Kings and Magistrates,' proving that it is lawful, and hath been held so through all Ages, for any who have the Power, to call to account a Tyrant or wicked King, and after due conviction to depose and put him to death, if the ordinance of the Commonwealth has neglected, or deny'd to do it. And that they who, of late, so much blame deposing are Men that did themselves. The sting in the tail of this bold title is intended by the Presbyterians, who are roughly handled throughout as hypocrites and revolters from their own principles. The Eikonoklastes, of the same year, follows chapter by chapter the Eikon Basilike in Milton's most scornful style. To Salmassius and other impugners of the King's execution Milton replied in his first and second 'Defensio pro populo Anglicano' (1651, 1654). The 'Defensio contra Morrish' (1653) was a savage onslaught on one, who, he believed, had slandered himself. His last purely political pamphlet, the 'Ready and Easy Way to Establish a Free Commonwealth' (March 1660), was published on the eve of the Restoration.

That conception of the Church's influence and authority as purely spiritual which is evident in Milton's first sketch of an ideal Presbyterianism, and had been intensified by the increasing activity of the Presbyterians, led him to disapprove of Cromwell's attempt to combine religious endowment with a wide though still limited toleration; and his own position was exposed in the 'Defensio Secunda' (1656), a 'libertine' pamphlet, the 'Ready and Easy Way to Establish a Free Commonwealth' (March 1660), was published on the eve of the Restoration.

That conception of the Church's influence and authority as purely spiritual which is evident in Milton's first sketch of an ideal Presbyterianism, and had been intensified by the increasing activity of the Presbyterians, led him to disapprove of Cromwell's attempt to combine religious endowment with a wide though still limited toleration; and his own position was exposed in the 'Defensio Secunda' (1656), a 'libertine' pamphlet, the 'Ready and Easy Way to Establish a Free Commonwealth' (March 1660), was published on the eve of the Restoration.
though a device peculiar to himself) had been practised by Italian poets known to Milton. In 1638 Paradise Lost was resumed in epic, not dramatic form; was composed to dictate, corrected, and completed by 1668; and published in 1667. It was followed in 1670 by Paradise Regained, an epic in the brief meter of the Book of Job, and Samson Agonistes, Milton’s sole experiment in those ‘dramatic constitutions wherein Sophocles and Euripides reign.’

The epic and the works. — Of Milton’s early poem, no more need be said here. Apart from their rare poetic beauty they bear delightful witness to the delicate purity and profound piety of the poet’s childhood and youth, combining in an effect of spots the transitory levelling of literary and classical culture with the finer spirit of a Puritanism which was not yet heated and hardened by the fires of religion and political controversy. The purpose of the present article is to outline the creed of Milton as it took shape in the years of storm and stress which followed his return to England and to consider the reflection of this creed, and the temper which it at once expressed and intensified, in his longer poems.

In his earliest pamphlets Milton ranges himself on the side of the Presbyterians reformers of the Anglican Church. The Scriptures are the sole authority for the right government of the Church, which is not a matter that has been left to human discretion and experience to devise. God, who shaped to its minutest detail the government and work of the Jewish Temple, should be no less now by his own prescribed discipline have cast his line and level upon the soul of man which is his rational temple, and, by the divine square and compass, direct not only the upright but the lovely shapes of virtues and graces, the sooner to edify and accomplish that immortal stature of Christ’s body which is his church, in all her glory and relations and proportions? (Reason of Church Government, I. 2). But the NT recognizes only two orders, bishops or presbyters (they are the same thing) and deacons — so Paul writes to Timothy, not the same as the orders in the Church'. Prelacy is an addition of man’s devising and ambition (‘Lucifer . . . was the first prelate angel’) opposed to ‘the reason and end of the gospel’ (ch. 1. 31 E.)

But when Milton came to state the respect in which Episcopal jurisdiction opposes the reason and end of the gospel, he parted company at once (how far conscientiously it is hard to say) with his Scottish and English sympathizers, and with the actual practice of dominant Presbyterianism. For his objection to Episcopal jurisdiction is the, for Milton, fundamental principle ‘that jurisdic- tion in the church there ought to be none but all.’ His objection is to the archiconclaves with their penalties and fines, and the Star Chamber. Over the outward man, person, and property, authority belongs to the State, which is not concerned with inner motives but with the ‘warden peace and welfare of the common wealth, and civil happiness in life’ (ch. ii. 3). The authority of the Church is over the inward and spiritual man, and her sole weapons are instruction, admonition, reproof, and, finally, excommunication, the last to be so used as always to keep open the door of reconciliation to repentance. The motive to which the Church appeals is not terror, but shame, ‘the reverence and due esteem’ in which a man holds himself both for the dignity of God’s image upon him and for the price of his redemption which, he now knows, is sufficient, the knowledge that is his head, the making him account himself a fit person to do the noblest and godliest deeds, and much better worth than to deject and defile, with such a debase-
different passages are duly compared and when all allowance is made in the light of the Lutheran law of charity, in the spirit of the words 'the sabbath was made for man, and not man for the sabbath'? The one consideration to which Milton never condescends is experience, the difficulties and the practical means of achieving those revealed by experience; he has none of Burke's reverence for 'prudence constituted as the god of this lower world'.

Milton's polemical pamphlets are, accordingly, a bewildering blend of ideal reasonings, high a priori principles set forth in glowing and harmonious but elaborately Lati-nized periods; a pedantic, at times captious and wrong-headed, citation and cross-examination of Biblical texts; truculent polemic, condescending not infrequently to coarse personal abuse; and withal a general absence of the mellower wisdom that proceeds from experience and charity. There is much to inspire and delight in these pages burning with fires that are perhaps not yet altogether extinct but in general have died down; there is little to interest the statesman. If Milton's pamphlets yet live, it is as eloquent statements of high and abstract ideals, to ignore which altogether is to reduce political expedience to sheer opportunism.

The divorce pamphlets have nothing to say upon the difficult problems of children and the mutual relations of the family and the State. They combine elevated exhortations on the ideal significance of marriage as a spiritual rather than a carnal union (regarded solely from the point of view of the man) with a tedious, passionate, wrong-headed attempt to reconcile Christ's prohibition of divorce 'but for adultery' with Moses' permission. (And cannot have at any time permitted sin.) The later command cannot have been intended, therefore, to annul the earlier, but merely to check certain prevalent abuses. Milton was not without apprehension of the fact of moral and religious progress. He went beyond the English Protestantism of his day in asserting that under the new dispensation the Mosaic law as well as ceremonial law had been abolished. But the new law was, he maintained, a law of liberty, of greater responsibility because of greater freedom. Such a rigid law of marriage as the Churchers asserted was a curtailment of the highest of earthly liberties. Law had granted, a fresh enslavement of the spirit to the letter. Looking at the question exclusively from the man's point of view, he advanced to an assertion of divorce as the private concern of the individual and to a defence of polygamy (De Doctr. Christ. i. 10).

The Areopagitica was an overflow from the divorce controversy, and is a magnificent a priori vindication of freedom of thought and speech as the fundamental condition of the successful quest of truth. The practical difficulties which have beset the attempt to find a solution, other than a compromise varying in different countries, are set outside Milton's ken; nor could be foreseen all the evils that have attended the freedom allowed to a Chauvinist or a commercial press to deceive and to corrupt.

The same lofty but a priori idealism combined with exposition of texts and interchange of personalities characterizes the pamphlets, Latin and English, written to vindicate the execution of Charles I, and those on, what became his favourite themes, an unenclosed clergy and a universal toleration of all religious bodies, the Book of Common Prayer and the liturgy of the MS in which was set down the creed of the Church of John Milton, the final result of his resolve to have done with traditions and definitions, councils and assemblies, and to formulate for himself,
Milton from a study of the text of Scripture, a complete and articulate body of divinity and morality. The creed was, as it were, a fountainhead, from which the thought of Milton flows. But Milton's faith is not limited to the spirit of the classical Renaissance, for the points on which Milton stands most resolutely aloof from orthodox Calvinism are just those on which his creed is formed to compromise the dignity and liberty of the human mind which the Renaissance had re-asserted. In this respect Milton's Ariantism, though the most startling, is not the most important of the dogmas which he formulates. Yet it reflects the poet's temperament, and is in harmony with the religious tone of the two epics. The doctrine of the divinity of Christ regarded on its psychological side is the expression of the transient worth ascribed by the Christian consciousness to the personality and life of Jesus: it is the intellectual expression of a passionate devotion. Milton's reverence for the 'author and finisher' of the Christian faith is sincere and profound, but it is not animated with the ardent flame of love which throve in Dante's Divina Commedia or Bunyan's Pilgrim's Progress or Thomas de Kempis' Mystical Ecclesiastical, or many others of the great distinctively Christian works of feeling and imagination. A high and austere monotheism is of the innermost tenor of Milton's soul.

The same high, not to say proud, soul is revealed in Milton's refusal to accept the Calvinistic doctrine of predestination and the complete corruption of man's soul by the Fall—his refusal to sacrifice the reality of human freedom, the intrinsic worth of human nature, Predestination, he declares, extends to election only, not to reprobation. It did not determine man's fall, but the means of his redemption, since God foreknew that of his own free will man would fail: 'For man will hearken to his glezing plea, And easily transgress the sole command, Sole pledge of his obedience, so will fail He in his faultless preggy, Whose heart? Whose but his own? Ingano, he had of me All he could have; I made him just and right, Sufficient to have stood, though free to fall.' (Paradise Lost, III. 95 ff.)

The redemption purchased by Christ is in the same way not to all, not to himself, but to a predestined number. To all, God gives grace, 'though not in equal measure yet sufficient for attaining knowledge of the truth and final salvation': 'I for will clear their senses dark What may suffice, and stony spots clear To pray, repent, and bring obedience due, To pray, repentance, and obedience due, Though but endued with sincere intent, Mine ear shall not be slow, mine eye not shut' (ib. 185 ff.). Nor—and here again Milton diverged from orthodox Protestantism—is all apprehension and aspiration after good extinguished in man as a result of the Fall. The result, indeed, of Adam's sin is not only guilt but spiritual death, which is 'the obloquy to a great extent of that right reason which enabled man to discern the chief good,' that 'dreadful subjection to sin and the devil which was united, and on which the death of the will,' Yet the divine image in man's soul is not wholly extinguished. 'This is evident, not only from the wisdom and holiness of many of the heathen, manifested both in words and deeds, but also from what is said in Gen. ix. 2 the creed of you shall be upon every beast of the earth, v. 4, those that man's blood by man shall his blood be shed, for in the image of God made He man, Though his image was corrupted, yet his understanding. Ps. xvi. 1 the heavens declare the glory of God; which could not be if man were incapable of hearing their voice. Nor finally, is the frame in which they will eternally be destroyed' (De Doctr. Christ. I. 12 (Sumner's tr.)).

Man retains sufficient liberty at least to endeavour after righteousness, at least to make himself responsible for his actions, though his power is so small as to afford him no subject for boasting.

In accordance with the same high regard for the will, for conduct as the test of a living religion, Milton refuses to accept the orthodox distinction of faith and works, and the re-assertion of the command to the former alone. In the text 'A man is justified by faith without the deeds of the law' (Ro 3), he insists that stress must be laid on the words 'of the law.'

For Paul does not say simply that a man is justified without works, but without the works of the law, nor yet by faith alone, but 'by faith which worketh by love,' Gal. 5. Faith has its own works which may be different from the works of the law. We are justified therefore by faith, but by a living not a dead faith; and that faith alone which acts is accounted living. James i. 20, 26 (ib. 122).

The same takes Milton assert more completely than the Westminster Confession the liberty of the Christian under the new dispensation. It is not the ceremonial law alone that is abrogated but the whole Mosaic law, including the Decalogue (ib. i. 26), the place of which is taken by a higher law 'written not in tables of stone, but in fleshly tables of the heart,' the law of love given in our Lord's words, the imagination to the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbour as thyself' (Lk 10).

In the Decalogue included the Fourth Commandment (ib. i. 10, ii. 7), on which English Puritanism laid so much stress. In his first pamphlet Milton had joined in the general condemnation of the Book of Sports, and the instigation to 'wassailing and mixed dancing on that day which God's law, and even our reason, hath consecrated.' But in The Likeable Means to remove Hirlings, the seventh day is not moral, but a convenient recourse of a week in 17th century, whether seventh or other number. Our rigid observance is an unnecessary cause of separation from the Reformed Churches of the Continent. The argument (e.g., of the Westminster Confession) that the Jewish law of the Sabbath had been transferred intact to the first day of the week is invalid (De Doctr. Christ. ii. 7).

'Under the Gospel no one day is appointed for divine worship in preference to another, except such as the church may set apart of its own authority for the voluntary assembling of its members, wherein, relinquishing all worldly affairs, we may dedicate ourselves wholly to religious services as far as is consistent with the duty of our calling. Such are the Last Supper, the Lord's Day, and the Catechism.'

Such are some of the most important divergences of Milton's creed from the creed of the Protestant Churches and the Jews. Of the differences between Paradise Lost and Paradise Regained are the poetical setting forth. Like the Divina Commedia, the Paradise Lost is not primarily an epic, but a didactic exposition of a theological creed; and, as all the details of Dante's creed may be discovered in the Summa of Thomas Aquinas, so Milton's conception of God, of Christ, and of the angels and devils is that which he has set down more clearly in the De Doctrina; and the purpose which Milton declares he has in view—'To justify the ways of God to men'—is theologically conceived. His poem is not an attempt to reconcile the heart and the imagination to truths already accepted. It is a restatement in poetic form of these doctrines in such a way as will finally justify God and indite man. Therefore thou art inexcorable, O man, whosoever thou art that judgest (Ro 2).

Looked at steadily from this point of view, it cannot justly be said that Paradise Lost will bear comparison with the true and the false Nature of Lucretius. Take away from either of these poems the high purpose that shines through them, and half their beauty is gone. It is its symbolic, mystic character that gives sublimity to
every detail of Dante's heaven and hell. Few to-day read Paradise Lost with any desire to discover Milton's 'defects,' as he himself called his 'errors with any conviction, any such willing suspension of criticism as it is the function of poetry to beget, his justification of God's way to men, this stern and harsh rendering of the passionata feelings of Satan.' The time is past in which Milton's poem was read almost as if it were the Bible itself, the poetic presentation of those momentous events as if they actually occurred, to judge of the justice or injustice of the proceedings. We are more willing to believe that the epic form and the spiritual intention of the poem are not capable of being harmonized. The poem is held together from the first line to the last by the miracle of Milton's style—a veritable 'cloth of gold' encrusted with all the barbaric spoil of his multifarious learning—and by the miracle of his verse harmonies. But, when we look beneath this dazzling surface, we see that the unity is not so complete as we imagined, that a magnificent epic story is troubled and rendered abortive by the cramping theological purpose. All that is greatest in Paradise Lost is the product of Milton's creative, mythopoeic vision as freely on the scanty material of Biblical record and ecclesiastical tradition as did Homer or any primitive poet when shaping and embroidering popular myths. But the result has something in all of that is essentially Christian. The splendid scenes of the opening books—Satan and his companions debating in hell, Satan voyaging through chaos or descending through the heavenly bodies in the first freshness of their creation, the scenes in Eden, the wars in heaven—these might be fragments from the primitive myths of some forgotten religion, and perhaps nowadays we should read them with greater and less troubled interest if we might do so without the necessity of a reference to our own religious traditions and feelings, without having to ask ourselves 'Is this our God?' Is this the Second Person of the Trinity? For, as Milton approaches his proper theme, in the theological disquisition in heaven, in the story of the Temptation and what follows, we cannot but feel, despite frequent beauties, a steady subsidence of the creative power of the opening; the didactic disposes the epic poem. The magnificent promise of the opening books seems to be unfulfilled. The great characters there brought upon the stage achieve nothing. Even the Satan of the Temptation strikes us not quite the Satan of the first and second books, of whose dauntless, passionate soul we should have expected some action larger, more magnificent, than this rather over-elaborately treated temptation of a not too wise woman. The simple Bible story will not adapt itself to the classical epic treatment. The large, creative movement of the earlier episodes is lost as the poet feels himself confined by the original story and the didactic purpose.

The harmonizing of story and didactic is better achieved in Paradise Regained, Milton's epic on the 'brief model' of the book of Job; but it is so because the didactic and argumentative strain is, as in Job, dominant throughout. The poem is a finely wrought presentation of Milton's ideal Christian virtues, obedience, temperance, and the scorn of worldly glory. But, beautiful poem as it is, austere in spirit and chaste yet rich in texture, there is none of the wonderful creative power of the great episodes and characters in the longer poem; and its austerity of tone marks its limits as a religious poem, for obedience, temperance, and unworldliness are Christian virtues only as they flow from or lead to charity, and but little of the radiance of Christian beauty illuminates and warms this severe and stately poem.

The passion which sleeps under Milton's austere lines flowed forth like a flood of lava in the work which closed his career. Samson Agonistes has the rare interest and beauty of the present in Lycidas and Paradise Lost. Unfettered by Scriptural details or didactic purpose, Milton pours into the artificial mould of classical tragedy all the passionata feeling which the course of his own life and the history of the cause with which he had identified himself so wholeheartedly. The never-closed wound of his first marriage, the loss of his sight, the defeat of the high hopes which he had formed to see himself as a chosen people, a Kingdom of God on earth, the triumph of the hated prelates and the despised

Of Belial down with insolence and wins"—
all found utterance in the severely moulded lines and choruses of this tragedy, not a lament, as the Pre-Raphaelite last utterance of Milton's indomitable will, that unshakable self-confidence which he called faith in God—a fitting close to the career of the loftiest soul among English poets: 'Samson hath quit himself like Samson, and hereby hath finish'd
A life Hercules, a day, a world.'

Of Milton's supreme greatness as a poet there is no question. In sustained loftiness of soul, elaborate magnificence of language, and mastery of varied cadences he has no superior. His works have become the touchstone of poetic taste, for, unless a reader has an ear and taste for the technique and music of poetry, he may not find much to attract him in Milton; if he does, he will find endless delight. To the question whether he is also to be considered a great Christian poet a more modified answer must be given. A study of his articulated creed bears out the impression communicated by his poetry that Milton's was not an animo naturali Christiana. His was rather the soul of an ancient Stoic, blended with that of a Jewish prophet, which had accepted with conviction the Christian doctrine of sin and redemption. The spirit of his poetry wants two of the most distinctly Christian notes—humility and love. Milton's soul was as proud as Dante's; he was less conscious of the failing (Purg. xiii. 186 ff.) it is the absence in all his poetry of the note of passionate self-surrender to the love of Christ that separates him, not only from Dante, but from a Puritan like Bunyan, an Anglican like Herbert, a Roman like Cranmer or his contemporaries. It was on another side that Christianity claimed Milton. His work begins and ends in the idea of liberty and its correlative duty, human freedom and the responsibility that it carries with it of living

'As ever in the great Taskmaster's eye.'

God is, for Milton, indeed the great Taskmaster, but he rejoices in the tasks; 'the victories of the conscience are gained by the commanding charm which all the severe and restrictive virtues have for him' (Emerson, in North Amer. Review, xlvi. [1838] 65); for Milton freedom is obedience in the highest and hardest tasks. To restore this freedom is the great service of Christianity, the fruit of Christ's perfect obedience and the regenerating work of the Holy Spirit. Christianity alone is perfect liberty, a liberty that no human authority, Church or State, may limit. Milton's defects, is an ethical and religious poet because of the conviction which his poetry imparts that, in the words of a recent French writer,

'God is for Milton the all in all of life, there is no more terrible evil than sin which separates us from God; there is no more sublime mystery than the Redemption which reconciles us to God' ('C. Chauvet, La religion de Milton').

All his acts and writings were inspired by his desire that the Kingdom of God might come on
MINAMSA

earth, be it his conception of that Kingdom was in some way mainained and incomplete, that it was not always given to distinguish between the other worlds and God's

'O, may we soon again renew that song.
And keep in tune with Heaven, till God ere long
To do the same as we must
To live with Him, and sing in endless morn of light!'
(Cat a Solomon Music, 25.)

LITERATURE.—I. EDITIONS.—Ed. Birch's poems are numerous, but a really good annotated ed. has yet to be made.
The first edition of H. London, 1719-23 is still valuable because of its collection of classical sources. Of later ed. mention may be made of D. Mason's (London, 1754) and W. Aked Wright's (Cambridge, 1802). Collected ed. of the prose works are J. Toland's (Amsterdam, 1699), T. Firth's (London, 1738, 1753), and J. A. St. John's (Bodleian Libraries, 1810). Some of the pamphlets—e.g., Areopagitica—have been edited separately.

H. J. C. GRIESSON.

MINAMSA.—Mimamsa in Sanskrit signifies 'investigation,' 'explanation.' The word is usually employed as the title of one of the six systems of philosophy recognized as orthodox by the Brahmanas. The Mimamsa system is most closely related to the Vedanta (the ultimate and final truth). For in them both the subjects of ancient Indian speculation which meet us in the Brähmaṇas and Upanisads are methodically developed. The two systems form a connective whole in the sense that the Mimamsa comprises the ritualistic doctrine of works, the Vedanta the doctrine of salvation by knowledge. Each, while limited to its own sphere, makes reference also to the other, so that it is impossible to doubt that they received a literary form at the same time. It is due chiefly to this close connexion with the Vedanta that Mimamsa is accorded the position to which it has been cast, that the Mimamsa has found a place in India among the philosophical systems; for with philosophy its particular subject does nothing to do with anything else. Mimamsa as a name of the ritualistic system is an abbreviation of Pārāra- or Karmamimamsā, 'first explanation,' or 'explanation of the function of work.' These names are explained by the conjunction of the system with the Vedanta, which, on its side is termed Uttarā or Brahma-mimamsā, 'second explanation' or 'explanation of the All-Soul,' also Sarvāra-mimamsā, 'explanation of the constitution' (of Brahman), the oldest and most important text-book of the Mimamsa is the MimamsaDarsaṇa of Jaimini. H. Jacobi places the composition of this work (and the contemporary composition of the Vedanta or Brahma-mimamsā) between c. A.D. 200 and 450 (JAOS xxxi., (1911) ff.).

The aim of the Mimamsa is to give rules for the correct interpretation of those Vedic texts whose subject matter is the ritual. Since these texts contain in great part an imperfect and obscure description of the ceremonies, and, besides, are interspersed at every step with speculations on the origin of the Veda (or Brahma-sūtras) between c. A.D. 200 and 450 (JAOS xxxi., (1911) ff.),

The Mimamsa offers a solution of all doubts which might present themselves with regard to the details of the sacrifice, and also proposes to remove the discrepancies which are actually found in the Vedic texts. These last, however, according to the view of the Mimamsa, are in every case alone apparent. The sacrificial procedure, moreover, discusses at the same time the rewards which are offered for the correct performance of the sacrifice; so that the Mimamsa is a compendium of both the ritualistic and the theological.

The Mimamsa does not recognize the existence of God. Nevertheless this fact interferes as little here as in the Sāṅkhya and the other systems with belief in the supernatural beings of the popular Indian faith. If we ask on what authority the instruction given with regard to the sacrifice and its consequences rests, the Mimamsa answers that the Veda needs no authority, but is eternal and uncreated; and that its revelation concerns only things existing from eternity, and self-evident. This conviction is in India maintained with remarkable tenacity, and is strangely opposed to the entirely personal wishes, for the most part quite worldly, which were continually presented to the gods by the authors of the ancient Vedic hymns. In reality the teachers of the Mimamsa are not the ancient hymns than with the ritualistic texts of the second period of Vedic literature, in which the individuality of the authors is not so prominent.

It has been already remarked that the form in which the Mimamsa is presented may have contributed towards its being regarded, in spite of its essentially unphilosophical character, as a system on a level with the other five systems of Indian philosophy. For the contents of the Veda are here classified under definite categories, and every subject of investigation is explained according to a method which represents already a high degree of logical skill in their arrangement and established scheme, which the other schools also adopt as their standard, contains the following five divisions: (1) the proposition, (2) the doubt as to its correctness, (3) the erroneous method of treating the question, (4) the refutation of the erroneous method by the true argument, (5) the result of the investigation. Occasionally also, for the purpose of the connexion of the subjects to the form in which the Mimamsa, questions of philosophical import are discussed. This is true especially of the proposition that sounds and therefore words are eternal, and likewise the connexion of words with their meaning. On the basis of this theory the Mimamsa teaches that the relation of sound and meaning is not dependent on general agreement, but that the meaning is naturally inherent in the word. The Mimamsa was compelled to propound this theory in order to protect the Veda from the suspicion of fallibility which attaches to all human works. If the Veda were to be regarded not as a collection of books composed or inspired, but as something uncreated, existing independently from eternity, then the connexion of the words of which the Veda is composed, with their meaning, could not be the result of human activity, but the words, and in the last resort the sounds that form the words, must have existed from all eternity—a view which could have held sway only within the narrow horizon of a school to which one language alone was known.

MIND—Questions of empirical psychology and of the relations between body and mind are discussed in other articles (see BODY, BODY AND MIND, BRAIN AND MIND). The present article must be limited to a discussion of the metaphysical theories of mind. Owing to the peculiar position which these problems occupy in philosophy, as well as in the study of ethical and religious problems, it is advisable, first of all, to make explicit some of the epistemological problems which especially confront the student of the nature of mind; and, in order to do this, we must, in view of numerous traditional complications which beset the theory of the knowledge of mind, open the discussion with some general statements concerning the nature of problems of knowledge.

The history of epistemology has been dominated by a well-known contrast between two kinds of knowledge, namely, perceptual knowledge and conceptual knowledge. This dual contrast seems insufficient to supply us with a basis for a really adequate classification of mental types of knowledge. It is proposed in the present article to base the whole discussion upon a threefold classification of knowledge. Having begun with this threefold classification of knowledge, and illustrated it, we shall go on to apply it to the special problems which we have to face in dealing with mind. We shall then consider in some detail what kinds of mental facts correspond to the three different kinds of knowledge thus defined. In conclusion, we shall deal with some problems of the philosophy of mind in the light of the previous discussion.

1. Perception and conception as fundamental cognitive processes.—A careful study of the processes of knowledge, whether these occur in the work of science or in the efforts of common sense to obtain knowledge, shows us three, and only three, fundamental types of knowledge present in every developed cognitive activity and interwoven in more or less complicated fashion. Of these two have been recognized throughout the history of science and philosophy, and their familiar contrast has dominated epistemology. The third, although familiar and often more or less explicitly mentioned, was first distinguished with sharpness, for epistemological purposes, by the American logician, Charles Peirce. We shall speak first of the two well-known types of cognitive process, perception and conception.

The name 'perception' is used in psychology with special reference to the perceptions of the various senses. We are here interested only in the most general characteristics of perception. William James has used, for what is here called perception, the term 'knowledge of acquaintance.' He distinguishes 'knowledge of acquaintance' from 'knowledge about.' In the simplest possible case one who listens to music has 'knowledge of acquaintance' with the music; the musician who listens in the light of his professional acquaintance has not only 'knowledge of acquaintance,' but also 'knowledge about': he recognizes what changes of key take place and what rules of harmony are illustrated. A deaf man who has learned about the nature of music through other people, in so far as they can tell him about it, but who has never heard music, has no 'knowledge of acquaintance,' but is limited to a knowledge of acquaintance' is also sometimes called 'immediate knowledge.' In the actual cognitive process of the individual human being it never occurs quite alone, since, when we know something perceptually or by acquaintance, we also always have or less 'mediate' knowledge, i.e., one who listens to music, but who also considers the person of the artist, the relation of the music to the programme, the name of the composer, or the place of this experience in his own life, has in his knowledge, which is more than the immediate hearing of the music.

Knowledge about includes, on occasion, mental processes which may be very widely and which may be mingled with 'knowledge of acquaintance' in ways which are far too complex to analyze here. But 'knowledge about' is especially opposed to 'knowledge of acquaintance' in one class of cases which need to be emphasized through the use of a special name. We may name that class by calling the kind of knowledge involved in it by the name already used, 'conceptual knowledge.' Conceptual knowledge is knowledge of universals, of relations, or of other such 'abstract' objects. The Socratic-Platonic theory of knowledge called attention from its very beginning to universals and relations, and consequently made this type of knowledge specially prominent.

No doubt, even if one is disposed to cling to this merely dual classification of knowledge, one may make a well-considered objection to the division of knowledge into two types of knowledge. 'Knowledge of acquaintance' is of the grade of conceptual knowledge. For there is much 'knowledge about' concerning which we should not hesitate to say that it is knowledge of universals. Socrates himself, in his effort to define the knowledge of universals, met at the start with the fact that much of our knowledge of universals is confused and inarticulate. But if, for the moment, we neglect the intermediate cognitive states in which we more or less mingle 'knowledge of acquaintance' and conceptual knowledge, or possess conceptual knowledge in imperfect degrees of development, we may readily admit that this traditional dual classification of cognitive states is sufficient to call attention to a distinction which is of the utmost importance, both for empirical science and for metaphysics.

While the distinction between perceptual and conceptual knowledge is of great importance in determining the distinction between the deductive and the inductive methods in the sciences, the classification of these two modes of cognition does not of itself suffice to determine what constitutes the difference between inductive and deductive science. When we have clear and accurate conceptual knowledge, we are able to take scientific processes that in the case of further development will involve deductive methods. Thus, in particular, a conceptual knowledge of the racial, or other general, relations of the species, is indispensable to the production of a system of logical deduction.

2. The axiomatic method.—The axiomatic method is the most developed form of deductive science. The axiomatic method, in its most rigorous form, starts with a precise list of axioms, and then proceeds by logical deduction to prove all the propositions that can be obtained from the axioms. This method is the most rigorous form of deductive science, and it is also the most powerful form of deductive science. It is the most rigorous form because it starts with a precise list of axioms, and it is the most powerful form because it can be used to prove all the propositions that can be obtained from the axioms.

The axiomatic method is the most developed form of deductive science. The axiomatic method, in its most rigorous form, starts with a precise list of axioms, and then proceeds by logical deduction to prove all the propositions that can be obtained from the axioms. This method is the most rigorous form because it starts with a precise list of axioms, and it is the most powerful form because it can be used to prove all the propositions that can be obtained from the axioms.

3. The scientific method.—The scientific method is the most developed form of deductive science. The scientific method, in its most rigorous form, starts with a precise list of axioms, and then proceeds by logical deduction to prove all the propositions that can be obtained from the axioms. This method is the most rigorous form because it starts with a precise list of axioms, and it is the most powerful form because it can be used to prove all the propositions that can be obtained from the axioms.

4. The general method.—The general method is the most developed form of deductive science. The general method, in its most rigorous form, starts with a precise list of axioms, and then proceeds by logical deduction to prove all the propositions that can be obtained from the axioms. This method is the most rigorous form because it starts with a precise list of axioms, and it is the most powerful form because it can be used to prove all the propositions that can be obtained from the axioms.

5. The empirical method.—The empirical method is the most developed form of deductive science. The empirical method, in its most rigorous form, starts with a precise list of axioms, and then proceeds by logical deduction to prove all the propositions that can be obtained from the axioms. This method is the most rigorous form because it starts with a precise list of axioms, and it is the most powerful form because it can be used to prove all the propositions that can be obtained from the axioms.
and the conceptual types of knowledge. When a hypothesis, such as Newton’s formula for gravitation, or Galileo’s hypothesis concerning the laws of falling bodies, is stated, the type of knowledge involved in formulating and in understanding the hypothesis is prevailingly conceptual. When the hypothesis is tested by comparing the predictions issued upon it with experience, the test involves mainly—although it involves to a considerable extent—to perceptual knowledge, or ‘knowledge of acquaintance.’ The processes of experiment used in an inductive science might seem to be typical cases of processes involving perceptual knowledge. And experiment unquestionably do involve such knowledge. But an experiment reveals a truth, because it brings concepts and perceptions into some sort of active synthesis. Upon such active synthesis depends the process of validation which is used for the definition of truth used by recent pragmatists (see Error and Truth).

In so far as we insist upon this dual classification of fundamental processes of cognition, the questions which most come to our notice, regarding both knowledge and its objects, concern (1) the relative value of these two cognitive processes, and (2) the relation, if any, between them.

Conceptual knowledge gives truth; perceptual knowledge gives illusion or appearance—such is, on the whole, the Platonic doctrine. In recent discussion the pragmatists—and still more emphatically Bergson—have insisted upon the relative superiority of the perceptual type of knowledge.

The familiar expression of this view is the thesis of recent pragmatism: ‘Conceptual knowledge has only a sort of ‘credit value’; perceptual knowledge furnishes the ‘cash of experience’; concepts are ‘bank notes’; perceptions, and perceptions only, make ‘cash.’’ The statement of Bergson questions, and declares that, if we had unlimited perceptual knowledge, i.e., ‘knowledge of acquaintance’ whose limits and imperfections we had no occasion to feel, because it had no limits and no imperfections, then we could have had no possible interest for us as cognitive beings.

In other words, we use concepts, i.e., we seek for a knowledge of universals, only when our perceptions in some way fail us. Conceptual knowledge is in its very essence a substitute for failing perceptual knowledge. The opposition between Plato and Bergson regarding this estimate of the relative significance and truthfulness of the two kinds of cognitive processes is thus characteristic of the contrast which is here in question. Of course all the philosophers admit that, in practice, our knowledge makes use of, and from moment to moment consists in, a union which involves both conceptual and perceptual processes.

(2) On the question whether the two foregoing types of knowledge, however closely linked in our normal human experience, can, at least in ideal, be separated—i.e., whether a knowledge by ‘pure reason’ is possible on the one hand, or a knowledge of ‘pure experiences’ is over attainable on the other hand—it is to be observed that, although the questions of ontologies are closely related to well-known metaphysical controversies. For Plato, as (in another age, and in a largely different metaphysical context) for Spinoza, and in the last resort for Kant, perception, or for the individual philosopher, to attain a pure intellectual insight into the realm of ‘ideas’ or into the nature of the ‘substance.’ For various forms of mysticism, as well as for theories such as the one set forth in the Kritik der reinen Erkenntnis (Leipzig, 1898-s) of R. H. L. Avenarius, a mental transformation may be brought about through a process which involves either a practical or a scientific correction and gradual suppression of erroneous or intellectual distinctions, and, at the height of this process, reality becomes immediately and perceptually known, without confusion through abstractions.

The ‘radical empiricism’ of James’s later essays makes use of a theory of knowledge which attempts, as far as possible, to report, apart from conceptual constructions, the data of pure experience.

2. Interpretation through comparison of ideas as a third fundamental cognitive process. It is an extraordinary example of a failure to reflect in a thoroughlygoing way upon the process of knowledge, that until recently the third type of cognitive process to which we must next turn has been neglected, although every one is constantly engaged in using and in exemplifying it.

When a man understands a spoken or written word or sentence, he gives an expression or an expression of an idea or meaning, which in general belongs to the mind of some fellow-man. When this sign or expression is understood by the one who hears or reads it, it becomes, in a sense, a part of his consciousness, and it may be any combination of perceptual or conceptual knowledge that chances to be in question. But, if any one cries ‘Fire!’ the sort of knowledge which takes place at the moment of reaction, which we understand this cry essentially depends upon this fact:

I regard my fellow’s cry as a sign or expression of the fact either that he himself sees a fire or that he believes that there is a fire, or that, at the very least, he intends me to understand him as asserting that there is a fire, or as taking an interest of his own in what he calls a fire. Thus, while I cannot understand my fellow’s cry, unless I have at least some perceptual knowledge, and while I equally shall not have a ‘knowledge about’ the nature of fire, and so a ‘knowledge about’ the object to which the cry refers, unless I am possessed of something which tends to be conceptual knowledge of his object, my knowledge of my fellow’s meaning, my ‘grasping of his idea,’ consists neither in the percept of the sign nor in the act of reversion, the sign, but in my interpretation of the sign as an indication of an idea which is distinct from any idea of mine, and which I refer to a mind not my own, or in some wise distinct from mine.

It is to be noted that, however we reach the belief in the existence of minds distinct from our own, we do not regard these minds, at least in ordinary conditions, as objects of our own perceptual knowledge. For the very motives, whatever they are, which lead me to regard my perceptions as my own even thereby lead me to regard my fellow’s perceptions as never present within my own field of awareness. My knowledge of my own physical pains, of the colours that I see, or of the sounds that I hear is knowledge that may be called, in general terms, perceptual. That is, these are objects with which I am engaged, occasion could be, acquainted. But with my fellow’s pains I am not acquainted. To say this is merely to say that, whatever I mean by ‘myself’ and ‘the others,’ the very things that I perceive is some sort of perceptual knowledge, as ‘I and my friend’ in the case of my own object of acquaintance. Thus, then, in general, perceptual knowledge has not as its object what is
at the same time regarded as the state of another mind than my own.

But, if the mind of my fellow, in particular his ideas, his feelings, his intentions, are never objects of perceptual knowledge for me, so that I am not directly acquainted with any of these states, must we regard our knowledge of the mind, of the ideas, of the intentions, of the feelings, of the interests of our fellow-man as a conceptual knowledge? Is our fellow-man's mind the object of a concept of our own? Is the fellow-man a universal, or a relation, or a notion not in the least distinct in its character from a mathematical entity or a law of nature? Unquestionably we regard him as possessing conceptual knowledge of his own, and also as engaged in processes of knowledge which may be conceptual, or which may involve any union of percept and concept. But the fact remains that neither by our own perceptions can we become acquainted with his states of mind, nor yet by our own conceptions can we become able to know the objects which constitute his mental process. In fact, we come to know that there are in the world minds not of our own by interpreting the signs that these minds produce on our own interpretation. And an interpretation is a third type of knowledge which is closely interwoven with perceptual and conceptual knowledge, very much as they are bound up with it, but which is a highly complex or combined consisting of elements which are merely perceptual or merely conceptual.

Every case of social intercourse between man and man, or (what is still more important) every process of inner self-comprehension carried on when a man endeavours to make up his own mind or to understand what he is about, involves this third type of cognition, which cannot be reduced to perception or to conception. It is to this third cognitive process that, following the terminology which Peirce proposed, we here apply the name 'interpretation.'

In order to distinguish more clearly the three types of cognition, we may say that the natural object of perception is some inner or outer datum of sense or of feeling, such as a musical tone, a colour, an emotional state, or the continual flow of the inner life upon which Bergson so much insists. For these are typical objects of perceptual knowledge, i.e. of 'knowledge of acquaintance.' The typical objects of conceptual knowledge are such objects as 'moral property,' 'difference,' 'equality,' and so on. But typical objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the commonest expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

The form of cognitive process involved in the social relations between man and man is essentially the same as that involved in the cognitive process by which a man makes clear to himself his own inner and external mean. For, despite well-known assertions to the contrary on the part of Bergson, nobody has any adequate intuitive 'knowledge of acquaintance' with himself. If such perceptual or intuitive knowledge of the self by the self were possible, we should not be obliged to acknowledge that the world of human beings is dominated by such colossal and often disastrous ignorance of every man regarding himself, his true interests, his feelings, his talents, his personal value, his intents, and his powers, as we actually find characterizing our human world. In brief, man's knowledge of himself and of his neighbour, and knowledge of the signs.

This thesis is very ably maintained by Peirce in some of his early essays, involves consequences which are at once familiar and momentous for the theory of knowledge. That the type of knowledge involved whenever signs are interpreted is a fundamental type of knowledge which cannot be represented either to perception or to conception can be exemplified in most manifold and futile away from a mathematical entity or a law of nature. Unquestionably we regard him as possessing conceptual knowledge of his own, and also as engaged in processes of knowledge which may be conceptual, or which may involve any union of percept and concept. But the fact remains that neither by our own perceptions can we become acquainted with his states of mind, nor yet by our own conceptions can we become able to know the objects which constitute his mental process. In fact, we come to know that there are in the world minds not of our own by interpreting the signs that these minds produce on our own interpretation. And an interpretation is a third type of knowledge which is closely interwoven with perceptual and conceptual knowledge, very much as they are bound up with it, but which is a highly complex or combined consisting of elements which are merely perceptual or merely conceptual.

Every case of social intercourse between man and man, or (what is still more important) every process of inner self-comprehension carried on when a man endeavours to make up his own mind or to understand what he is about, involves this third type of cognition, which cannot be reduced to perception or to conception. It is to this third cognitive process that, following the terminology which Peirce proposed, we here apply the name 'interpretation.'

In order to distinguish more clearly the three types of cognition, we may say that the natural object of perception is some inner or outer datum of sense or of feeling, such as a musical tone, a colour, an emotional state, or the continual flow of the inner life upon which Bergson so much insists. For these are typical objects of perceptual knowledge, i.e. of 'knowledge of acquaintance.' The typical objects of conceptual knowledge are such objects as 'moral property,' 'difference,' 'equality,' and so on. But typical objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the commonest expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

The form of cognitive process involved in the social relations between man and man is essentially the same as that involved in the cognitive process by which a man makes clear to himself his own inner and external mean. For, despite well-known assertions to the contrary on the part of Bergson, nobody has any adequate intuitive 'knowledge of acquaintance' with himself. If such perceptual or intuitive knowledge of the self by the self were possible, we should not be obliged to acknowledge that the world of human beings is dominated by such colossal and often disastrous ignorance of every man regarding himself, his true interests, his feelings, his talents, his personal value, his intents, and his powers, as we actually find characterizing our human world. In brief, man's knowledge of himself and of his neighbour, and knowledge of the signs.

This thesis is very ably maintained by Peirce in some of his early essays, involves consequences which are at once familiar and momentous for the theory of knowledge. That the type of knowledge involved whenever signs are interpreted is a fundamental type of knowledge which cannot be represented either to perception or to conception can be exemplified in most manifold and futile away from a mathematical entity or a law of nature. Unquestionably we regard him as possessing conceptual knowledge of his own, and also as engaged in processes of knowledge which may be conceptual, or which may involve any union of percept and concept. But the fact remains that neither by our own perceptions can we become acquainted with his states of mind, nor yet by our own conceptions can we become able to know the objects which constitute his mental process. In fact, we come to know that there are in the world minds not of our own by interpreting the signs that these minds produce on our own interpretation. And an interpretation is a third type of knowledge which is closely interwoven with perceptual and conceptual knowledge, very much as they are bound up with it, but which is a highly complex or combined consisting of elements which are merely perceptual or merely conceptual.

Every case of social intercourse between man and man, or (what is still more important) every process of inner self-comprehension carried on when a man endeavours to make up his own mind or to understand what he is about, involves this third type of cognition, which cannot be reduced to perception or to conception. It is to this third cognitive process that, following the terminology which Peirce proposed, we here apply the name 'interpretation.'

In order to distinguish more clearly the three types of cognition, we may say that the natural object of perception is some inner or outer datum of sense or of feeling, such as a musical tone, a colour, an emotional state, or the continual flow of the inner life upon which Bergson so much insists. For these are typical objects of perceptual knowledge, i.e. of 'knowledge of acquaintance.' The typical objects of conceptual knowledge are such objects as 'moral property,' 'difference,' 'equality,' and so on. But typical objects of interpretation are signs which express the meaning of some mind. These signs may be expressions of the meaning of the very mind which also interprets them. This is actually the case whenever in memory we review our own past, when we reflect upon our own meaning, when we form a plan, or when we ask ourselves what we mean or engage in any of the inner conversation which forms the commonest expression of the activity whereby an individual man attains some sort of explicit knowledge of himself.

The form of cognitive process involved in the social relations between man and man is essentially the same as that involved in the cognitive process by which a man makes clear to himself his own inner and external mean. For, despite well-known assertions to the contrary on the part of Bergson, nobody has any adequate intuitive 'knowledge of acquaintance' with himself. If such perceptual or intuitive knowledge of the self by the self were possible, we should not be obliged to acknowledge that the world of human beings is dominated by such colossal and often disastrous ignorance of every man regarding himself, his true interests, his feelings, his talents, his personal value, his intents, and his powers, as we actually find characterizing our human world. In brief, man's knowledge of himself and of his neighbour, and knowledge of the signs.
type of knowledge in question can be designated by a single term, namely, appreciation or description, just as in the foregoing these two types of knowledge have been designated each by a single term, acquaintance in one case and conception in the other.

In designating the instances of interpretation it is impossible to do either without the presence of a mere conception has these aspects. For the one who interprets it is an expression of his own meaning. With reference to the object, i.e., to the sign, or to the mind whose sign this is, the interpretation is the reading or rendering of the meaning of this mind by another mind. In other words, every interpretation has so far a dual aspect: it at once brings two minds into quasi-social contact and distinguishes between them or contrasts them. In the light of this contrast and with reference to the direction in which it is read, the two minds are known each in the light of the other. As has already been said, the two minds in question may be related as a man's own past self is related to his present or future self. And in fact, as Peirce has pointed out, every act of interpretation has also a triadic character. For this act, containing as it has not only a social character, but what one may call a directed 'sense.' In general, when an interpretation takes place, there is an act  \( A \) wherein a mental process is interpreted, read, or rendered to a third mind. That is to say, the whole process can take place within what, from some larger point of view, is also a single mind with a threefold process going on within it has already been pointed out. Thus, when a man reflects upon himself, or any other mental or social character, his present self, using the signs which are indispensable, interprets his past self to his future self, the cognitive process being well exemplified when a man divides himself of himself into its threefold character, and, on the one hand, his present self interprets the past self to the future self; or some generally more explicit social process takes place whereby one self or quasi-self has its meanings stated by an interpreter for the sake of some third self.

Thus, in brief, knowledge by interpretation is (1) an act of judgment (or \( A \)) (2) the idea or meaning whereof some other mind gives a sign, and (3) such an expression as is addressed to some third mind, to which the interpreter thus reads or construes the sign.

3. Self-interpretation, comparison of one's own ideas, and knowledge of time.—When such interpretation goes on within the mind of an individual man, it constitutes the very process whereby, as it is sometimes said, he 'finds himself,' 'comes to himself,' 'directs himself,' or 'gets his bearings,' especially with reference to time, present, past, and future. In the inner life of an individual man this third mode of cognition, therefore, appears at once in its most fundamental and simplest form as the cognitive process whose being consists in a comparison of ideas. The ideas compared here belong in one sense to the 'same self'; but they differ as the ideas of 'past self' and 'future self'; or, in various ways, they belong to different 'quasi-minds.'

Thus much process is, indeed, irreducible to pure perception, to pure conception, or to that active synthesis of the two which James has in mind when he uses the term 'idea,' readily becomes manifest if we consider what changes a 'past self,' a 'future self,' the two belong to men who are 'different individuals' or to the past, present, or future selves of one who is, from another point of view, the same man.

An 'idea,' when the term is used in the sense which recent pragmatism 1 has made familiar and prominent, is not a mere perception, nor a mere collection or synthesis of various perceptions, images, and other immediate data; nor yet is it a perception of an idea, but a mental process. It is, for James and his allies, a 'leading,' an 'active tendency,' a 'fulfilment of purpose,' or an effort towards such fulfilment, an 'adjustment to a situation,' a seeking for the 'cash,' in the form of sense-data, as such may, when found, fulfill the requirements, or 'calls,' made by the conceptual aspect of the very idea which is in question. This concept has, in Bergson's phrase, its 'credit value.'

When the wanderer in the woods decides to adopt the idea that 'yonder path leads me home,' he makes an active synthesis of his concept of home and of his present sense-data. This active synthesis, expressed in his idea, 'I am homeward bound,' is a 'leading,' which, if he is successful, will result in furnishing the perception of the ideas of the perceptions of home which constitute the goal of his quest. This, then, is what is meant by the term 'idea' in that one of its senses which pragmatism has recently most emphasized.

In this way we can illustrate how the cognitive process possesses the two forms or aspects which have usually been regarded as the only fundamentally distinct aspects of knowledge: perception and conception. These two aspects are not active union of these two which constitutes the 'idea' as defined by recent pragmatism. But we do not thus illustrate an aspect of cognition which is equally pervasive and significant but which exists in the comparison of ideas. It is just this aspect of cognition upon which our present theory most insists. For by what process does the wanderer, when he reaches home, recognize that this home which he finds is the very home that he had sought? Not by the mere presence of a 'home-feeeling,' not by a perception which, merely at the moment of home-coming, pays the 'cash,' but by a process involving a comparison of his ideas about his home, at the moment when he reaches home, with his memories of what his ideas were while he was lost in the woods, and while he still inquired or sought the way home.

In order to consider what such a comparison essentially involves, it is not necessary to suppose that the act of comparison must take place in a form involving any high grade of self-consciousness, or depending upon a previous formation of an elaborate system of ideas about the self, the past, and similar objects. The essentially important fact is that whoever begins, even in the most rudimentary way, to take account of what seems to him as if it were his own past, whoever is even vaguely aware that what he has been seeking is the very object which now he finds, is not merely perceiving the present, and is not conceiving the past, and is not simply becoming aware of his present successes and disappointments as present facts—he is comparing his ideas of present successes or failures with his ideas of his past efforts. This comparison is essentially an interpretation of some portion of his own past life, as he remembers that life, in the light of his present successes or failures, and as he now experiences them. A third cognitive process is then involved. This comparison involves, at least two ideas: (1) the past idea or 'leading' ('e.g., this path leads me to the path through the woods'); (2) the present success

---

1 See W. James, Pragmatism, London, 1907.
or failure (e.g., the reaching home itself, or getting to the close of some stage of the wandering); and, in making this comparison, this interpretation estimates the result, perhaps in the light of one's idea of other cases (I seek no more), or perhaps in the light of one's idea of one's entire self ('I have succeeded,' or 'I am a knower of the truth,' or 'So much of the world of reality is mine'). In any case two comments need be made upon every instance of comparing two ideas and interpreting one in the light of the other.

(1) Unless such processes of comparing ideas were possible, and unless, in at least some rudimentary form, it took place, we could never make even a beginning in forming a coherent view of our own past and future, of our own selves as individuals, or of selves not our own. Our ideas both of the Ego and of the Alter depend upon an explicit process of comparing ideas. The simplest comparison of ideas—such as the case upon which recent pragmatism lays so much stress—the comparison upon which the very idea 'my success' also depends, the comparison, namely, which is expressed by saying, 'What I sought at a past moment is the very same as what, at the present moment, I meet,' is an act of interpretation, and is not reducible to the two other types of knowledge.

(2) All such processes of comparison are equally capable of critical discussion. It is true that we focus our attention upon during our explicitly and literallv social life and of the cognitive activity which is needed when we think about our relations to our own individual past and future. In brief, neither the individual Ego nor the Alter of the literal social life, neither past nor future time can be known to us through a cognitive process which may be defined exclusively in terms of perception, of conception, and of the ideal 'readings' of the pragmatists. The self, the neighbour, the past, the future, and the temporal order in general become known to us through a third type of cognition which consists of a comparison of ideas—a process wherein some self, or quasi-self, or idea interprets another idea, by means of a comparison which, in general, has reference to, and is more or less explicitly addressed to, some self or idea.

4. The relation of the three cognitive processes to our knowledge that various minds exist and to our views about what sorts of beings minds are.—The use of the foregoing classification of the types of processes appears of special importance as soon as we turn to a brief outline of some of the principal theories about the nature of mind which have played a part in the history of philosophy. Nowhere does the theory of knowledge show itself of more importance in preparing the way for an understanding of metaphysical problems than in the case of the metaphysics of mind. No attentive student of the problem of mind can easily fail at least to feel, even if he does not very explicitly define his feeling, that in dealing with the philosophy of mind both common sense and the philosophers are accustomed to combine, so indivisibly in a very confused way, a reference to different more or less hypothetical beings, while the ideas that are proposed with regard to the nature of these beings are of profoundly different types.

Thus it may be a question for common sense or for a given metaphysical doctrine as to whether or not there exists a so-called soul. Now it makes a great difference to an individual whether the kind of soul which is in question is viewed as in its essence an object of a possible immediate acquaintance or perception, as an object of a possible adequate conception, or as an object whose being consists in the fact that it is to be interpreted thus or so. Unless the three kinds of cognition are clearly distinguished, the one who advances or tests a given theory of the soul does so without observing whether he himself is speaking of the soul as a possible perception, or is treating it as if it were, in its immost nature, an object which can be known only through some adequate conception. If one has called to his attention the fact that he is speaking in some conceptual and now in conceptual terms of the mind or soul which his theory asserts to be real, he may then attempt to solve his difficulties in the way which recent pragmatism has emphasized, i.e., he may declare that his doctrine is of necessity a 'working hypothesis' about the nature of the soul, that it is, of course, in part stated in conceptual terms, but that the concepts are true only in so far as they prove to be somewhere directly verifiable in terms of immediate percepts.

Yet nowhere does recent pragmatism, in the form in which William James left it, more display its inadequacy as a theory of knowledge than in the case where it is applied to an effort to define the truth of hypotheses concerning mind, or to test such truth. For, as a fact, nobody who clearly distinguishes individual ideas from his own expectations, or can consistently anticipate, that his neighbour's mental states, or that anything which essentially belongs to the inner life or to the distinct individual mind, which becomes, under any circumstances, a direct perception of his own. For, if my neighbour's physical pains ever became mine, I should know them by immediate acquaintance only so far as they were mine and not my neighbour's. And the same holds true of anything else which is supposed to be a fact essentially belonging to the individual mind of my neighbour. As best I can hope, with greater or less probability, to interpret correctly the meaning, the plan, or some other inner idea of the mind of my neighbour; but I cannot hope to go beyond such correct interpretation so far as to perceive my neighbour's mental states. For, if my neighbour's states became the immediate objects of my own acquaintance, my neighbour and I would so far simply melt together, like drops in the ocean or small pools in a greater pool.

The relation of the three cognitive processes to our knowledge that various minds exist and to our views about what sorts of beings minds are.
its conceptual constructions are capable of immediate verification in terms of certain facts of immediate experience. But my neighbour’s inner states of mind can never become for me objects of immediate acquaintance, and they become states of mind and not his, precisely in so far as he and I are distinct selves.

The hypothesis that our mental lives are similar may thus be suggested by analogy or may be stated in terms of a theory of truth which is in essence conceptual and realistic. One can, of course, assert that in actual fact the mental states of my neighbour really exist and are in a certain relation which makes it true to say that they are analogous to mine. This real relation may be asserted to be as much a fact as any other fact in the universe. If this fact of the real analogy is granted, then it may be asked what depending on it, that my neighbour’s mind is a reality is actually true. This, however, is precisely the type of truth which William James’s pragmatism undertakes to verify. A very different appearance is assumed by the whole matter if we recognize that there is a third kind of knowledge, which is neither conceptual nor perceptual, and which is also not the sort of union of conception and perception which is completely expressible in terms of the favourite metaphor of Bergson and the pragmatists, namely, the metaphor of the conversion of conceptual credits into perceptual cash, i.e., into immediate data of experience. For interpretations are never verified merely through immediate data, nor through the analysis of concepts. This is true whether we adopt any own interpretation or my neighbour is in question. If we seek for metaphors, the metaphor of the conversation, already used, furnishes the best means of indicating wherein consists the relative, but never immediate, verifiability of the truth of an interpretation. When I interpret (whether my own purposes or intents or the ideas of another man are the objects which I seek to interpret), what I first meet in experience is neither a matter of acquaintance nor a mere ‘knowledge about.’ What I meet is the fact that, in so far as I now understand or interpret what I understand, and I do understand immediately but in the temporal process of my mental life, that ideas have come to me which are not now my own, and which need further expression and meaning which are thereby partially expressed through signs. Under these circumstances, what happens is that, as interpreter of these signs, I offer a further expression of what to me they seem, and I, on the basis of this hypothesis that this expression makes more manifest to me both the meaning of this sign and the idea of the mind or self whereof this sign gave partial expression. It is of the essence of an expression which undertakes to interpret a sign that it occurs because the sign already expresses a meaning which is not just at the present moment our own, and which, therefore, needs for some interpretation, while the interpretation which at the moment we offer is not complete, but requires further interpretation.

In literal conversation our neighbour utters words which already express to us ideas. These ideas so contract with our own present ideas that, while we find this analogy interesting, we therefore, view them as expressions of a mind, we do not fully know what they mean. Hence, in general, our neighbour having addressed us, we in reply ask him more or less incidentally or on the point, whether or not this is what he means—that, we give him back our interpretation of his meaning, in order to see whether this interpretation effects a new expression which is in substantial agreement with the expression which we expected from him. Our method in a conversation is, therefore, unquestionably the method of a ‘working hypothesis.’ But since this ‘working hypothesis’ refers to our neighbour’s state of mind, it is never concrebly capable of direct verification.

Nor does what the pragmatists are accustomed to call the main basis of the hypothesis consist in the discovery of any perceptible fact with which we get into merely immediate relation. Our interpretation of our neighbour’s demands satisfies our demands, precisely in so far as our interpretations, which are new, are not made for new expressions and for further interpretations, lead to a conversation which remains, as a whole, essentially ‘coherent,’ despite its endless novelties and unexpectations derived from it.

Our whole knowledge of mind, in so far as by this term we mean intelligent mind, not only depends upon, but consists in, this experience of consistent and endless series of interpretations obtained, not merely by turning conceptual ‘credits’ into the ‘cash of immediate acquaintance’, but by seeking and finding endlessly new series of ideas, endlessly new experiences and interpretations. This never-ended series of ideas, in so far as we can hold them before our minds, tends to constitute a connected, a reasonable, a comprehensible system of ideal activities and meanings. The essence of mental intercourse—what we may at once say the essence of intelligent mental life and of all spiritual relations—not only depends upon, but consists in, this coherent process of interpretation.

Or, again, we may say that the so-called conceptual hypothesis which can be converted into ‘perceptual knowledge’; it is a hypothesis which leads us to anticipate further interpretations, further expressions of ideas, novel bits of information, further ideas not our own, which shall simply stand in a coherent connexion with one another and with what the original interpretation, as a hypothesis, had led us to expect. When I deal with intimate nature, I may anticipate facts of perception, and then my hypotheses about these facts ‘work’ in so far as the expected perceptions come to pass. But when I deal with another mind, I do not merely anticipate what are not necessarily true, but I anticipate what is that mind; I expect that mind to give me new ideas, new meanings, new plans, which by contrast are known at each new stage of social experience that I enter we either is itself or is opposed to my own and in many respects repellent to me. But it is essential to the social intercourse between minds that these endlessly novel ideas and meanings should, through the further novelties and surprises, retain genuine coherence. Thus, in dealing with other minds, I am constantly enlarging my own mind by getting new interpretations, both of myself and of my neighbour’s life. The contracts, surprises, conflicts, and puzzles which
these new ideas present to me show me that in dealing with them I am dealing with what in some respects is not my own, is with the coherence of the whole system of interpretations, ideas, plans, and purposes which shows me just as positively that I am dealing with a mind, *i.e.* with something through which reasoning consciously interprets itself, while, as I deal with it, I in turn constantly interpret it, and even in and through this very process interpret myself. It will and must be obvious, I think, that I have this same kind of deal, both in reflecting on my own mind and in seeking for new light from my neighbour, is never a merely single or separable or merely detached or isolated individual, but is always a being which is of the nature of a community, a 'many in one,' and a 'one in many.' A mind knowable through interpretation is never merely a 'monad,' a detached self; its unity, in so far as it possesses genuine and coherent unity, tends, in the most significant cases, to become essentially such as the unity which the apostle Paul attributes to the ideal Church: many members, but one body; many gifts, but one spirit (I Co 12):—an essentially social unity, never to be adequately conceived or felt, but properly the object of what the Apostle viewed, in its practical and religious aspect, as the spiritual gift of charity, in its cognitive aspect as interpretation. Nor may we say that this is the case in the former part of it, where one says, 'that ye may interpret' (I Co 14).

5. Metaphysical theories of the nature of mind.

(a) Predominantly perceptual theories. — The nature of mind may be defined by a given meta-

physical theory mainly in terms which regard mind as best or most known through possible 'perceptions' or through possible 'acquaintance' with its nature. Such theories have been promi-

nent throughout the whole history of human thought. They depend, first, upon ignoring the fact that what is most essential to the mind is known through the cognitive process of interpreta-

tion. They depend, further, upon making com-

paratively light of the effort to give any abstract conceptual description of what constitutes the essence of mind. They depend upon turning to what is sometimes called 'introspection,' or, again, 'intuition,' to bring about an immediate acquain-

tance with mind.

Since, in general, any one who forms a pre-

dominantly perceptual theory of mind is of what we may call, in a certain (but not necessarily in a natural) there is not depending solely upon his own personal experience, but upon the experiences which he supposes other minds to possess, these perceptual theories of the nature of mind actually make a wide use of the reports of other people and so, more or less consciously, of arguments from analogy.

The simplest and vaguest, but in some respects the most persistent, of all theories of mental life appears, upon a largely perceptual basis, and also upon a basis of an argument from analogy, in countless forms of so-called 'animism.' Leaving aside all the historical complications, we may sum up the animistic theory of mind thus. We per-

ceive, within ourselves, certain interesting processes which include many of our feelings, embody many of our interests, and characterize many of our activities. These activities, which in ourselves we more or less directly observe, are closely con-

nected with the whole process of the life of the organism, *i.e.*, of the body in whose fortunes each one of us is so interested. That which produces all these feelings, awakens in us all these interests, vitalizes our own body, and forms for each of us a centre of his own apparent world—this is the mind. The mind, then, the ideas and emotions, the feelings and pleasures. It prospers as the body prospers, and suffers as the body suffers.

Analogy shows that other people have such minds. These minds are as numerous as the organisms they resemble, and differ from one another, much as the organisms resemble and differ from each other. An extension of this analogy, on the basis of many motives, leads us to regard about three-quarters of the human species as having many minds which are not connected with human bodies—at least in precisely the same way in which our minds are connected with our bodies. When the vast number of such constituents which have made use of such analogies and such experi-

ences can be more effectively controlled through the advances of the human intelligence, this primitive animism tends to pass over into theories of which we find some well-known examples in early Greek philosophies. These early Greek theories of mind appear, on a somewhat primitive and already philosophical level, as 'hylomorphic.' The world, or, at all events, the organic world, has life principles in it which vary as the organisms vary, and which are also of a nature that feeling and desire reveal to ourrelatively immediate 'knowledge of acquaintance' with our own minds.

The theories of mind of this type have played a great part in the life both of philosophy and of religion. As a general theory, animism has proved very persistent, and that for obvious reasons. One of the Hindu vedanta school accepted both the origin and the logical basis—such as it is—of these theories when, in an analogy, it represents the question arising within the body as to where and what the soul must be. The question is put up to the various bodily organs, each asserting itself to be the principal seat of life and also of mind. To discover which view is true, the members of the body take turns in leaving the organism. When the eyes go, blindness ensues, but life and mind continue, and so on with various other members. But, when the breath starts to leave the body, all the other members together go, 'like with us! You are the life, you are the soul, you are the self or Atman.'

This analogy sufficiently indicates how primitive, how vague, and how stubborn is such a perceptual theory of mind when defined in terms of immediate intuition, and of a more or less pragmatic testing of various views about the physical organism.

Later in its origin, but continuing in its influence to the present day, is another perceptual theory of mind, which the later Upanishads present at length, and which, in another form, is exemplified by a notable assertion of H. Bergson in his *Introduction to Metaphysics*—namely, that of one object at least we all have that the object being the self. The entire history of mysticism, the history also of the efforts to discover the nature of mind through introspection, can be summarized by means of these instances in the Hindu *Upanishads* that discover the true self through the experiment with breathing, and of the latest vision of Bergson, who defines the nature of mind, and also its con-

trast with body, in terms of the *elam vital*; for all these views emphasize, in various more or less primitive, or in more or less modern, forms, essentially the same theory of mind: the essence of the mind is to be known through immediate acquaint-

ances. That which Schopenhauer calls the will, to live, that which Bergson characterizes in the terms just mentioned, that which the shamans and medicine-men of all the more intelligent tribes have sought to know, is, in every case, mind viewed as an object of possible perception.

In the history of thought such perceptual theories of mind have become more highly developed and diversified, and have assumed other and very widely influential forms, by virtue of an insistence that we have an immediate perception of what is variously called 'mental activity,' 'the active soul,' or 'the principle of individual selfhood.'

Motives which as a fact are not storable in purely perceptual terms have joined with this fondness for defining mind in perceptual terms to make emphatic the assertion that this theory of mind ought to be stated in expressly ‘pluridisciplinary’ terms. It has, consequently, been freely asserted that we ‘immediately know’ our own self to be independent, to be distinct from all other selves, and thus to be unique. Since it is also sometimes asserted that empirical theories are tene tively, upon occasion, the fact that we can never be directly acquainted with the conditions of our neighbour’s mind, such perceptual theories have given rise to the so-called problem of ‘Solipsism.’ For, if we know mind by perception only, and if we are sure of it only when we perceive it, and if each of us can perceive only his own mind, then what proves for any one of us that there is any mind but his own? The analogy which primitive animism so freely and so vaguely used becomes, for the critical consciousness, questionable. In consequence, the problem of Solipsism has remained in modern times a sort of scandal of the philosophy of mind.

The solution of the problem of Solipsism lies in the mind, upon which is based our claim that no one of us has any purely perceptual knowledge of his own mind. The knowledge of mind is not storable, in the case either of the self or of the neighbour, in terms of merely immediate acquaintance; nor is this true only of this proposition by one understood, the entire theory of mind, whether for metaphysics or for empirical psychology, is profoundly altered. Until this inadequacy of knowledge in which acquaintance and intuition meet the beginning of human knowledge is fully grasped, it is impossible to define with success either the mind or the world, either the individual self or the non-individual self.

(b) Predominantly conceptual theories.—As is the case with every highly developed doctrine, the conceptual form is very naturally assumed by a philosopher, i.e. ‘the abstract or rational’ metaphysical theories; and (2) those most indiscernible conceptual theories based upon the more or less highly developed ‘empirical psychologies’ of the period in which these theories have flourished. We need not enumerate these theories, but only give the results of their work.

Of principal importance in their history have been (1) that type of vitalism whose most classical representative is the Aristotelian theory of mind; (2) the monistic theory of mind, which often depends not so much upon the general metaphysical tendency to define the whole universe as One, but rather upon the effort to conceive mind and matter by regarding them both as the same in substance, and (3) the various types of monadology, which are characterized by the assumption of the existence of many real and more or less completely independent minds or selves, whose nature it is either to be so conceived as to be the embodiment of the divine being, or to be so conceived as to be the self upon which more modern forms of monadology have depended.

Of these various important theories which are expressed in the predominantly conceptual form of that of Aristotle is very deeply and interestingly related to primitive animism on the one hand, while, on the other hand, it looks towards that development of the idea of the distinctions between beings which under certain conditions can assume the form of persons.

Of these various important theories which are expressed in the predominantly conceptual form of that of Aristotle is very deeply and interestingly related to primitive animism on the one hand, while, on the other hand, it looks towards that development of the idea of the distinctions between beings which under certain conditions can assume the form of persons.

Whatever special forms the conceptual theories of mind may assume, the well-known problem

---

1 See Bayes, Problem of Christianity, ii.
known through interpretation, while its manifestations lie not merely in the fact that it possesses or controls an organism, but in the fact that, whether through or apart from an organism, it expresses its purposes to other minds, so that it not merely has or is a will, but manifests or makes comprehensible its will, and not merely lives in and through itself, as a monad or a substance, but is, as it were, a more or less self-expressive subject, progressively makes itself known either to its fellows or to minds above or below its own grade.

That theories of mind which are based upon subjective or personal theory of the mind of primitive times, is manifest wherever in the history of religion a consultation of oracles, discovery of the future or of the will of the gods through divination, or, in fact, any such more or less superstitious appeals to other minds, and readings or interpretations of these appeals, have taken place. Primitive belief in magic arts has apparently, on the whole, a conceptual type of formulation. Therefore magic has been called the physics of primitive man. It depends upon the view that man is subject to laws which, if he could discover them, he could use for his purposes, just as we now make use of the knowledge of industrial purposes. The supposed realm of magic arts is thus analogous to our present realm of industrial arts. The view of pragmatism—that primitive magic is a hypothesis regarding how to cause rain or how to cure diseases does not 'work'—is in this case fairly adequate to express the situation both epistemologically and metaphysically.

Moreover, as we have seen, animism, in its more primitive forms, expresses a predominantly conceptual theory of mind, and whether such a theory, either of mind or of the relations between mind and the physical world, is held in some simple form by the medicine-man of an obscure tribe or is impressively reiterated in a Hindu Upanishad, or is fantastically placed in the setting of a modern evolutionary theory by Bergson, makes comparatively little difference to the essential views of the philosophy of mind which are in question. But that view of the nature of mind which gained, apparently, its earliest type of expression when men first consulted, and hereupon more or less cautiously interpreted, the oracles of their gods has (as behoves a theory which is founded upon a fundamental cognitive process) persisted throughout the history of philosophy. The way of viewing mind has, in fact, persisted in a fashion which enables us to distinguish its expressions with sufficient clearness from those which have had their origin either in the conceptions of primitive magic or in the perceptions which guided primitive animism.

From the point of view of the cognitive process of interpretation mind is, in all cases where it reaches a relatively full and explicit expression, equally definable in terms of two ideas—the idea of the self, and the idea of a community of selves. To an explicit recognition of what these two ideas involve first contributed, and hereupon more or less conscientiously interpreted, the oracles of their gods has (as behoves a theory which is founded upon a fundamental cognitive process) persisted throughout the history of philosophy. The way of viewing mind has, in fact, persisted in a fashion which enables us to distinguish its expressions with sufficient clearness from those which have had their origin either in the conceptions of primitive magic or in the perceptions which guided primitive animism.

The fortunes of the idea of the community have been analogous. In religion this idea has proved one of the most inspiring ideas with have gradually transformed tribal cults into the two greatest religions which humanity possesses—Buddhism and Christianity. In ancient philosophy the community, numbered as the 'spirit large,' inspired some of the most fruitful philosophical interpretations of Plato, Aristotle, and the Stoics. In the general history of civilization loyalty, which is identical with the practically effective love of the essential communities as persons, the mind on a level higher than that of the individual, is, like the Pauline charity (which is explicitly a love for the Church universal and for its spirit), the chief bond and the soul of primitive communities, without which all the others are but 'sounding brass or a tinkling cymbal.' Yet, in the history of thought the idea of the community has greatly suffered, less frequently from the attempt to view it as the proper object of a direct mystical perception than from the tendency to reduce it to a purely conceptual form. As a conceptual object the 'mind of the community,' the 'corporate mind,' has tended to be thought of as an entity possibly significant in a legal or in a sociological sense, but difficult, and perhaps unreal, in a metaphysical sense.

Experience shows, however, that the two ideas—the idea of the individual self and that of the community—are peculiarly adapted to interpret each the other, both to itself and to the other, and that the theory of the religion of Israel first made central in what undertook to be a world religion, and which the apostle Paul laid at the basis both of his philosophy of human history and of his Christology.

Modern idealism, both in the more vital and less formal expressions of Hegel's doctrine and in its recent efforts at a social interpretation of the self, of the course of human evolution, and of the problems of metaphysics, has already given a partial expression to a theory of which we tend to become clearly aware in proportion as we recognize what the cognitive process of interpretation is, and how it contrasts with, and is auxiliary to, the processes of conception and perception. Only in terms of a theory of the threefold process of knowledge can we hope fully to express what is meant by that form of idealism which views the world as the 'process of the spirit' and as containing its own interpretation and its own interpreter.

LITERATURE. The epistemology of Charlie Peirce is discussed at length by the philosopher T. H. Broadhead in The Emergence of Christianity, London, 1913, ii. (In Index, v.e. 'Peirce,' references will be found which will serve as a guide to the contributions of Peirce's knowledge of philosophy, and its relation to the metaphysical theories of the nature of mind).

MINIM. —Certain persons of Jewish origin mentioned in the Talmud and contemporary Rabbinical literature, usually with severe disapproval, are called Minim. Considerable difference of opinion has existed upon the question who the Minim were; but the view is now generally, though not universally, held that they were mainly Jewish-Christians. This theory has the support of Graetz, Jost, Weiss, Bacher, and Lei; the chief opponent is Moritz Friedländer. The writer of this article, from an independent study of the Jewish-Christian interpretation, while admitting a wider denotation in a few passages. The evidence, consisting of the whole of the passages (so far as they are known to him) where mention is made of the Minim, is presented in full in the writer's work
Christianity in Talmud and Midrash, to which the reader is referred for details which cannot be given in the short space of this article.

The book Sippur, §115, p. 35*, quoting Na 150*, 'And ye shall not walk after your heart,' says, 'This is Midrash.' — Vanishing that this is the state of mind, or principle of conneût, characteristic of the Minim. This is the earliest attempt at a definition of the term, though the word itself was in use earlier. It adds further to saying that a 'Min' (singular of Minim) was one who followed the dictates of his own selfish nature as against those of the lawful authority. The result of doing so is, indirectly, the rejection of beliefs and practices enjoined on those who hold the true religion. A Min, accordingly, disregards the authority of the Rabbis, as teachers of religion and exponents of the Torah both written and unwritten, and also maintains doctrines and practices which are not those of the true religion. Tos. Sanh. xiii. 4 f. has the following censure on the Minim:

'The sinners of Israel, and the sinners of the nations of the world, descend into Gehenna, and are judged there twelve months... But the Minim, and the Apostates, and the heretics, a. [Oschanna is shut in their faces, and they are judged there for generations of generations.' If the term Minim denoted all unfaithful Jews, there would be no need of four descriptive names. The distinction between the four is as follows. The betrayers (M'sôrôth) are political informers, 'delators.' Apostates are those who wilfully and openly take part in 'some part of the law, thereby proclaiming their disloyalty. Apôlôgënes are 'Epicureans,' free-thinkers, whether Jewish or Gentile. The Minim are those who are false at heart, but who do not necessarily proclaim their apostasy. They are the more dangerous because more secret; they are not an open enemy, but the foe within the camp; and it is in accordance with this that the Talmud refers to the Minim more frequently and with more hostility than to the other classes of unfaithful Jews. The Min might be an apostate or a delator, and could hardly fail to be a free-thinker; but the real nature of his offence was moral rather than intellectual.

Why was the name Min given to such persons? Various derivations of the word have been given, some of them more fanciful guesses. The best explanation seems to be that proposed by Echler (in REJ xxxviii. 45) and accepted by A. Löw (ib. p. 205), according to which min (pc) is at first the ordinary word for 'sort,' 'kind,' and is translated in the LXX, Gn 13, by γένος. Figuratively the word was used to denote, and more particularly the sect of the Sadducees (ς Σάδδουκαῖς γένος, Jos. Ant. XIII. x. 6, where Σάδδουκαίας αἵτωρ is also used). Gradually the term lost the meaning of 'sort' and took on that of 'sectary,' the Jew who separated himself from the community and adopted false doctrines. If this explanation is correct, it throws light on the fact that in the Rabbinical texts the rending sometimes varies between Min and Sadduck (Sadducee). It is also said that the latter word is due to the Christian censor, who objected to the word Min, but in some cases the reference is certainly to the Sadducees, while yet the word Min, or possibly both words, may have been read. The writer of this article proposed another derivation of the word Min (op. cit. p. 362), but now surrenders it in favour of the one just set forth.

The Minim, then, were Jewish heretics of some kind. The question is, Of what kind? The answer resolves itself into a choice between Jewish-Christian heretics and Jewish heretics who were Jews beyond dispute, for a Gentile is never called a Min, unless in one or two instances through ignorance or inadvertence. The only conspicuous advocate of the Gnostic interpretation is Friedland (Der vorschrifliche judische Gnosticismus: cf. also a defence in reply to criticism in REJ xxxviii. 194 f.), but it is a serious defect of Friedlander's book that the argument is based on Rabbinical texts from which he strikes out, as interpolations, passages of crucial importance, without mentioning the fact. By this method any hypothesis could be proved. Bacher and Lévi, in articles in REJ (xxxviii. 38, 204) have severely handled Friedlander's hypothesis, showing that a passage of proof, and Lévi elsewhere refers to it as 'cest échantailage de propositions puériles' (RHR II. [1906] 412). The evidence for the view that the Minim were Jewish-Christs may be brieftly summed up as follows. In many of the passages where they are mentioned there is nothing distinctive, certainly nothing definitely Christian; but in a few passages a connexion between Minim and Christianity is so distinctly stated that it cannot be excluded from neutral passages except on the ground of equally definite statements to the contrary. Such contrary evidence is not to be found, and even Friedlander does not produce any. (1) In a famous passage, Bab. 'Abhôdâh Zârâh, 10b (and in three other places), it is told how a certain Rabbi Eliezer (end of 1st cent.) was arrested for Minim. He accounts for this arrest as follows: 'As I had once met 'one of the disciples of Jesus the Nazarene, by name Jacob of K'phar Kshanya,' who told him the exposition of a text and added, 'Thus hath Jesus the Nazarene taught me.' Also, in the same treatise, p. 27a, the same Jacob is called 'Jacob the Min,' and it is said that he offered to cure a sick man, while in Tos. Hull. ii. 22f. the same Jacob proposed to work his cure 'in the name of Yeâhâ ben Pandorâ,' i.e. Jesus.

(2) In Bab. Shabb. 166a there are mentioned, in close connexion, the books of the Minim and the Evangelion, i.e. the Gospels. (3) The characteristic doctrine of the Minim, which is in Heaven—is closely allied to, if not identical with, the teaching of the Ep. to the Hebrews, and is not the Gnostic doctrine of the Demiurgus. The connexion of this doctrine with Christianity is shown by a passage in Pesqta Rab. xxii. 100b: 'If the son of the harlot saith to thee, "There are two Gods," etc., where 'the son of the harlot' denotes Jesus.

The combined force of these arguments, which could be multiplied in the same manner, makes it appear that the Minim held a doctrine which was distinctlyetical in favour of the Jewish-Christian interpretation; and this view is strongly confirmed by a passage in Jerome:

'Utile hodie per totas Orientis synagogas inter Judæos hæresis est, quae Mhnétermum et a Pharisæis numque damnatur; quos vellege Nazaraeos nuncupat, qui eruditi in Christianismo, illum, scilicet, nomen de virginitate Virginis Jesu, quae est qui sub Pontio Pilato passus est et resurrexit, in quem et nos ordinamus; sed dum velut et Judæi esse et Christiani, nec Judaei sunt nec Christiani (Ep. ad Ursin. [xix. 18]) (PL xxii. 949).

The general conclusion to be drawn from the evidence, of which the foregoing is the most important, is that, wherever in the Talmud and Midrash a mention is made of the Minim, the author of the statement intended to refer to Jewish-Christs. At the same time it is possible that the Rabbis attributed to Minim actions or opinions which, in fact, were not those of Christians; and, further, that the Rabbis occasionally applied the term Min to Gentiles as being enemies of Judaism.

The references to the Minim in the Rabbinical literature are few and fragmentary. The passages where they are mentioned amount to about 120, most of which contain either polemical dialogues between a Jew and a Minim or else such interpreta-

cal interpretations of texts, although a few are anecdotes of events in connexion with the Minim. It is not possible to construct a history of the Minim; the material is sufficient only to give a few glimpses.
MINISTRY (Early Christian).—An attempt will be made in this article to collect the more important facts in connexion with the ministry as far as the first five or six centuries are concerned. About the facts themselves there is general agreement; but the interpretation of the facts has been disputed. A summary will be made, as briefly as possible, of the theories that have been deduced from the facts as to the institution of a ministry by our Lord, and its development in subsequent ages. But a discussion of these theories is not part of the scope of this article.

i. The Apostolic Age.—In Acts and in the Epistles of the NT we find in active operation a ministry of two kinds, Itinerant and Local.

1. The Itinerant Ministry.—We read of apostles, prophets, and evangelists, all of whom came under this heading. The first of these terms includes at least a few (even in the early ages) who were not of the Twelve (see below, § 2). The qualification of an apostle seems originally to have been that he should have seen our Lord, and have been His "witness" (Lk 24:48, Ac 1:1). Thus, when the vacancy in the number of the Twelve has to be filled up, the qualification mentioned by St. Peter is that the person chosen should have "companied with [the Eleven] all the time that the Lord Jesus went in and went out among men," or (over, εὐώνυμον) them, beginning from the baptism of John, unto the day that He was received up from them; so that he might become a witness with them of Jesus' resurrection (Ac 1:18). St. Paul received his qualification, though in a different way, at his conversion (cf. Gal 1:14). An apostle, not from men, neither taught, nor known of men, but from God through the Lord Jesus Christ, and God the Father). That St. Barnabas and the others mentioned below (§ 2) had seen Christ is not stated, but is quite probable. Irenæus says that Barnabas, H.S. 18, was one of the Seventy. This qualification may have been waived in the sub-apostolic period.

Hort (Christian Ecclesia, p. 28) thinks that the word 'apostle' is of comparatively rare occurrence in the Gospels, referred originally only to the mission to the villages, though such passages as that about judging the twelve tribes (Mt 16:19, Lk 22:29) were indications of the extended significance of the name which we find in Acts. 1 It is clear, however, from Lk 6:22 (the reading in §§ 542 is doubtful) that our Lord gave them the title; and that He intended more than a mere mission to the villages by the designation appears almost certain from such passages as Lk 12:24, where He speaks of a commission for future ages (see below, § 9). St. Luke certainly uses the name without reference to the mission to the villages.

Christian prophets are frequently mentioned in the NT—Agabus and others (Ac 11:28; 21:11); those at Antioch, 'prophets and teachers,' including

1 The name 'apostle' for the Twelve derives from Westcott and Hort's text, only in Mt 16:16, Mk 3:14-19, Lk 6:18, 28, 29, 24 and not at all in Jn, though 15:16 seems to be an allusion to the title.
MINISTRY

(Early Christian)

Barnabas and Saul, also Symeon Niger, Lucas of Cyrene, and Manaeu (Ac 13:2); Judas and Silas (10:25); and an unstated number in 1 Co 1:11 (see § 2) 143–33. Prophets are mentioned as a class in Eph 2:7–8 41 (see § 2), possibly in 1 Th 2:1; also in Rev 1:16 232. They are compositions of Eph. and Rev. with apostles. They are also mentioned as receiving the Epistles of the New Testament and of which gives regulations for 'prophets' as for those who have already been mentioned in the Epistle; and of Tit 1:8 with v. 7 (appoint presbyters in every city ... for the Lord's sake must be blameless); also from 203. St. Peter of Alexandria comments on speaking of presbyters (see above, and 1 P 5). The same thing is apparently found in Clement of Rome (Cor. 42, 44), where the local ministers are called 'bishops' and yet 'presbyters' are spoken of, and their 'episcopate' (ἐπισκοπεῖ). He says that the apostles knew through our Lord Jesus Christ that there would be strife over the name of the episcopate. In the Didache (§ 4) the local ministry consists of 'bishops and presbyters,' Perhaps 'prophet' expressed the rank, and 'bishop' the function.

Hort (pp. 96 f., 193–212) takes a different view. He holds that the words 'bishops' and 'deacons' are used in a non-technical sense in the NT as meaning 'those who have oversight' and 'those who minister.' He thus interprets the words in Ac 10:22, 1 Ti 5:16, and deduces the conclusion that the same holds good in 1 Cor. 1, where πρεσβύτεροι and διάκονοι have no article. He does not deny that 'deacon' may have become the name of the officials before the Pastoral Epistles were written, but he does think that St. Paul uses the word in a non-technical sense.

(b) Presbyters.—The name was perhaps taken over by the Christians from the Jews who gave it to the members of the Sanhedrin and others. But inscriptions show that the heathen Greeks used it for members of a corporation, and the same thing appears from Clement of Alexandria's use of the title (Bible Studies, Eng. tr., Edinburgh, 1901, p. 154 f.) that the Christians of Asia Minor may have adopted the term, not from the Jews, but from the Greeks. For a Greek inscription in which he thought he had seen force at an earlier time. This theory, however, is very doubtful (for Robinson's earlier view see his Com. on Ephesians, London, 1904, p. 98 ff.).

The function of the itinerant ministry was evangelistic. (cf. 1 Th 2:7, 1 Ti 2:1). The itinerants might settle for a time at a place, as Timothy settled at Ephesus, Titus at Crete, and St. Paul himself at various places where he founded churches; but this was not their normal work. In the Didache it is recognized that a prophet may settle in a place (§ 12 f. 11). 'The local ministry.—Under this heading are included in the NT 'bishops,' 'presbyters,' and 'deacons.' For other names of these officials see § 2. The functions of the local ministry were administrative and pastoral. Thus baptism seems to have been specially entrusted to it (cf. 1 Co 1:14 and perhaps Apo 18; et v. 9). In the beautiful story of St. John and the young robber related by Clement of Alexandria (Quis divae, 42), the apostle does not himself baptize the young man, but gives him over to the local bishop-priest to baptize (see below).

(a) Bishops.—During the period covered by the NT, we read of this name being given to Christian ministers only in Gentile churches at Philippi (Ph 1), at Ephesus (Ac 19:16, 1 Ti 3:1), in Crete (Tit 1:6). So St. Peter, writing to the churches in most of the provinces of Asia Minor, used the term πρεσβύτερον, 'exercising the bishop's office' (1 P 5). That the 'bishops' are the same as 'presbyters' in the Apostolic Age seems to follow from a comparison of Ac 15:21 with 20:17, where the same persons are mentioned, together with 'elders' (see below). The title, therefore, must therefore be meant. Hort (p. 165) gives good reasons for thinking that here (not in 41) the same persons are meant, both the presbyters were probably prophets, though all the Christian prophets were not apostles.
that the Seven were the prototypes both of the deaconate and of the presbyterate, and that at some time, after St. Stephen, the office was divided into those two branches. Another view is that the appointment of the Seventy (or Seventy-two) in Lk 10 was the foundation of the presbyterate. The Seventy (or Seventy-two) were appointed in the first instance for the administration of relief (v. c.), but that they were also preachers of the gospel is seen from the history of Stephen and Philip, who were both deacons before their solemn ordination with prayer and laying on of hands.

iii. The Position of James the Lord's Brother at Jerusalem.—Christian antiquity agrees in giving St. James a local ministry at Jerusalem, and yet in making him a real saned equal to the Twelve, and in ascribing to him rule or presidency over the presbyters, though nothing is said of any autocratic powers possessed by him. This account of his position is borne out by the NT writers. In Ac 12 Peter bids those who are assembled in Mary's house tell of his escape "unto James and to the brethren." In 15-18 James presides over, or at least takes a leading part in, the apostolic council, and gives the decision, i.e., interprets the evident sense of the assembly. In 21 Paul and his companions visit him assembled with the presbyters in a formal meeting (see below, p. 198); he is named by the apostle (see also § 1); he and Cephas are visited by Paul at Jerusalem. In 20 he is named before Cephas and John, and the three are "reputed to be pillars." In 2 the Jewish Christians who come from Jerusalem to Antioch are said to come "from James." Of the Fathers the earliest to bear witness to St. James's position in Jerusalem is Hegesippus, known as the father of Church history (d. 180), who chose in the latter part of the Lord, succeeded to the government of the Church in conjunction with the apostles (Eus. HE ii. 23); he describes the appointment of St. Peter as "the head of the Lord," and "the next bishop" (iv. 22). So Eusebius, who depends on Hegesippus, says (iii. 11) that they pronounced Symeon to be worthy of the throne of that diocese (συμβουλευόμενοι), and (iii. 32) that Symeon was the second bishop of the Church of Jerusalem; in the former passage he says that there was a second Apostolic Council on the occasion of Symeon's election. The last statement is very doubtful; but the tradition passed on by Eusebius, and also by Irenaeus, is the act of the diocesan Church Orders, which assign all sorts of directions to the apostles. The same supposed council has been thought by some to have decreed the establishment of diocesan episcopacy; but the latter was probably of gradual growth rather than the result of an enactment of a formal council (see below, § 4). The position of James is also spoken of by Clement of Alexandria (Hypotyposes, bk. vi. quoted by Eus. HE ii. 1): 1 Peter, James, and John, after the ascension of our Saviour, as it also preferred by our Lord, strove not after honour, but chose James the Just bishop of Jerusalem. The Lord after His resurrection imparted knowledge to James the Just and to John and Peter, and they imparted it to the rest of the apostles, and the rest of the apostles to the Seventy, of whom Barnabas was one.

The phrase about imparting knowledge to James may probably be a reference to 1 Co 15. The description of him as 'bishop of Jerusalem' is an anachronism of nomenclature, but it roughly describes his position. His office at Jerusalem is a favourite theme in the 'Clementine' literature, but the date of these works is uncertain.

iv. Angels in the Apocalypse.—The 'angels' in Rev 19-22 have been taken by some to be the chief ministers of the Church in the province of Asia Minor, and by others that the office of 'the spiritual' (των ἀγγέλων τῆς λαοῦ) of the church was not to grow old (I. 30). Pseudo- Dionysius (4th cent.) in the Life of Polycarp (§ 17; Lightfoot, Apos
MINISTRY (Early Christian)

Fathers, pt. ii., ' Ignatius and Polycarp,' iii. 447 f.) unhistorically makes Polycarp to be an old man before he is ordained presbyter. So perhaps Hermas, Vol. ii. 4 (2nd cent.), where the presbyters are the officials of the ἀρχιεπίσκοπος (aged woman), who is interpreted as the Church. Gregory of Nazianzus (Orat. xii. 11, 4th cent.) says the presbyters being 'honoured for years and wisdom.'

(c) The name 'deacon.'—In addition to the use of the word ἅγιος in the non-ecclesiastical sense of 'saint,' the Church uses 'deacon' in 3 Macc. 9:27; 13:7. The O.T. use of ἅγιος in 3 Macc. 9:27; 13:7. The O.T. use of ἅγιος (cf. Lev. 21:10) here adopted throughout, and if we were born in mind how often ἁγιορεῖον and ἁγιορεῖον are used in the NT, always in the non-technical sense of 'service' and to that service.

(d) St. Paul's list of the ministry show a great fluidity of nomenclature. But they do not give technical names to the various classes of the ministry. In 1 Cor 12 we have: apostles, prophets, teachers, pastors, evangelists, deacons, bishops, elders, ministers of the body, and shepherds. In 1 Tim 3:1 we find the names: presbyters, bishops, and deacons are mentioned in 2 Cor 11:18. This fluidity of expression would be realized by the English reader if the term 'deacon' (instead of 'minister') were adopted throughout, and if we were born in mind how often ἁγιορεῖον and ἁγιορεῖον are used in the NT, always in the non-technical sense of 'service' and to that service.

(e) Fluidity of 'hieratic' language.—In the NT and the sub-apostolic writers the word ἁγιορεῖον is not used of a Christian minister, though Christians as a body are called 'priests' and 'a priesthood' (τελεστήριον) in 1 Pt 2:9; Rev 1:6 (cf. Rev 3:22, 59), just as all Israel had been 'priests' (Ex 19). Our Lord Himself is called a 'priest' or 'high priest' (ἀρχεψετής) in Heb 3:2, 7, 19, 104, etc. Clement of Rome, Ignatius, and Irenaeus do not use 'hieratic' language. Furthermore, the Didache 1:1 says the Church of the Christian prophets: 'they are your high priests' (13). Polycrates, bishop of Ephesus, c. A.D. 190, says (quoted by Eus. ἩΕ v. 24) that St. John was a priest, wearing the mitre (or 'golden crown,' ἅγια), but the meaning is not clear. Justin Martyr (c. A.D. 150) calls the Christian body 'the true high-priestly race of God' (Dial. 116). Tertullian at the end of the century speaks of the bishop ('high-priests') and 'priests' (De bapt. 17), and, in reference to the Christian ministry, speaks of 'functions of priesthood' ('sacerdotalia munera,' de Pescr. 41). Hippolytus, who is called 'saints,' the teachers of the Christian Church, and who is in early in the Church, uses the term ἅγιος (Paul. Hymn. i. pref.): 'We being their (the apostles') successors and participators in this grace of high-priesthood,' etc. In Cyprian the bishop is frequently called 'sacerdos,' and his office 'sacerdotium.' The Older Didascalia (3rd cent.) calls the bishops 'high-priests' (Funk, Didasc. et Const. Apest., Faderborn, 1905, i. 102), and says that the Jewish priests and levites now correspond to the deacons, presbyters, and elders, and orphans. The names 'high-priest' for the bishop, and 'priests' and 'levites' for the presbyters and deacons respectively, were frequently used in the 4th cent. and onwards, and the translation Orders (for references see Maclean, Ancient Church Orders, p. 67, n.). In the ordination prayer for a presbyter in the Apest. Const. viii. 18 (c. A.D. 375) and in the Epitome of Hippolytus known as Constitutions throughout the whole world (Funk, ii. 80), his functions are called ἀρχεψετής, 'priestly duties.' Of other 4th cent. writers we may take as an example Epiphanius, who uses ἅγιος for a Christian priest (Exp. Piae Lit. 21), and who speaks of those 'priests' (mgs. ἁγιορεῖον), but not readers (ib.). Jerome calls his famous treatise on the ministry 'Concerning priesthood' (Epist leporem). At the Council of Laodicea (c. A.D. 320, can. 27, 30), 'hieratics' (ἐπαρχιάται) are the bishops, priests, and deacons, as opposed to the 'clerics' (ἐκκλησιαστικοί), who include the minor orders. In Apest. Const. iii. 15, and in the Apest. Canons, 63 (c. A.D. 400), the minor orders are included among the 'hieratics.' In the Syriac-speaking Churches the word καθούθα (which is the translation of leporemoi) is used for all orders of the ministry.

The use of this language did not mean that a new conception of the ministry was entertained by those in whose writings it is first found. It was not likely to be used as long as any Jewish priests or levites were in the ranks of the Christian ministry. As we have seen, the 2nd cent. Christian Church, it was a new nomenclature, but did not imply any new functions. It is a fallacy to describe some 2nd cent. Christian writers as unsacerdotal, and some as sacerdotal. The use of 'hieratic' language meant that the writers who employed it adhered to Christian official the ministry delivered by the Great, and in the strictest sense the Only, High Priest, our Lord Himself. The writers like Ignatius who do not use 'hieratic' language are even more emphatic about the authority of the ministry than those who do.

3. Charismatic ministry.—This term properly indicates those who are endowed with any spiritual gifts, called ἅγιορατα (gifts) in 1 Co 12:4 (or sometimes ἅγιορατομοι) (spiritual things) in 12:14, which is a word of our Lord,' in the A.D. 200, V. 25 (cf. 1 1 Pt 3:24, 105-14). It was often applied to bishop, later writers (cf. Zech. Const. II. 2). The verb ἀγιοραταω is used of the Christian ministry in 5 Ma 23, Ac 14:23, 1 Th 5:23; and belonged to the higher orders of the church. As long as extraordinary charismata continued, the two went on side by side. Yet the same person might be of
both ministries; thus St. Paul was an apostle, and you spoke with tongues not speaking hieratic (1 Ti 14:14). The charisma enumerated in 1 Co 12:8-11 include wisdom, knowledge, faith, healings, miracles, prophecy, discriming of spirits, tongues, interpretation of tongues. Clement of Rome (c. A.D. 95) is the only one of the bishops to refer to a bishop at Corinth when writing to the Corinthians. It is, of course, possible that the office at Philippi and Corinth was vacant at the dates of the letters but the evidence cannot be proved, and the deduction has usually been made that the diaconate was not established in these two places so soon as elsewhere. The position at Rome at the end of the 1st cent. has been various. Clement writes in the name of his Church (not of the presbyters), but he does not call himself its bishop, nor does he name himself at all; we have to gather information about the authorship of this Epistle from subsequent writers. Clement obviously held a prominent position in the Roman Church; and, though nomenclature and organization matured themselves more slowly at Rome than elsewhere, the testimony of all antiquity must be taken as showing that he held the first place in it. Thus Irenaeus makes Clement the third bishop of Rome, the list which gives of bishops of that city up to his own time (Hist. iii. 3. 5). He says that Linus, the first bishop, received the office from the apostles Peter and Paul, and that Anacletus succeeded him, and was in his turn succeeded by Crescens, who was succeeded by Hermas, and Hegesippus had already made a list of the bishops of Rome, as all the Greek MSS and the Syriac versions of Eus. HE iv. 22 assert (see Lightfoot, Apost. Patr., pt. i. 'Clement,' i. 154). The alternative (rejected by Lightfoot but accepted by Harnack) of παρακαταρτος for παρακατατηρημα is a conjecture based on the loose paraphrase of Runus. But, as Hegesippus's list is not exact, the question is one where it began. We notice that Ignatius, in writing to Rome, mentions no bishop there, and that, as G. Salmon remarks ('Introductory to the NT,' London, 1882, p. 519, n.), all through the first two centuries the importance of the bishop of Rome was merged in the importance of his Church. Dionysius of Corinth (c. A.D. 170) writes to the Church of Rome, not to Soter its bishop, though he mentions him in the third person. Long before the end of the 2nd cent. the diocesan episcopate was universal, so much so that writers like Clement of Alexandria, as we have seen, did not know that there could be any other rank than that of the same as the presbyters. It is therefore unnecessary to carry further an investigation into the spread of the system in the 2nd century (for detailed information reference may be made to Lightfoot, 'Dissertation,' in his Philippians). But it is desirable to refer to the concession of the episcopate which we find in the works of Cyprian, bishop of Carthage in the middle of the 3rd century. Ignatius and Irenaeus had described the bishop as a centre of unity, and Cyprian emphasizes this still more in his treatise de Unitate Ecclesiae and in his Epistles. In this connexion he dwells strongly on the idea of the bishop as the visible unity symbolized and guarded by the bishop. It has been said that 'he magnified his office,' and extended its claims to autocracy; yet no one emphasizes more than he the necessity of constitutional action on the part of the bishop, and his obligation to carry his clergy and laity with him (see below (6)). He also dwells on the election of the bishops by the people (see art. LESE, p. 64). It is on John (Joseph?) that our author. And the MuratorianFragment (c. A.D. 180?) says that John was exalted by 'his brother bishops and disciples' to write his Gospel. Ignatius speaks of bishops being established all over the world (Eph. 3). But we do not find the diocesan episcopate established in all places at an equally early date. Thus Ignatius writes to the Philippians, but makes no mention of their bishop. (Clement of Rome, cf. above §1, 22.) The first chapter of the Didache is addressed to a presbyter and to a bishop (c. A.D. 95), but there is no mention of the diocesan episcopate. Clement, it is true, alludes to the diocesan episcopate when he speaks of the 'archbishop or bishop' of the Church and to the 'prophets, though they may have done so in another capacity. It is recognized that any one might receive a revelation, and so be a 'prophet' (cf. 1 Co 14:30). Thus those whom we should call 'laymen,' as not being of the official ministry, spoke in the Christian assemblies (ibid.). But women were not allowed to do so (v. 28), though they might be prophetesses (Ac 21:11). In 1 Co 14 the charisma of tongues is somewhat disparaged as compared with prophecy.

Prophecy long continued. For the prophets in the Didache see above, § 1. Quadratus, early in the 2nd cent., was renowned for his prophetic gifts (Eus. HE iii. 37). Polycepyr is called in the letter written by the Smyrneans 'an apostolic and prophetic teacher' (Mart. Pol. 16; A.D. 155 or 156). Hermas received revelations, and his Shepherd (c. A.D. 150) is a professed prophetic writing. Even in the 4th cent. the Church Orders speak of charismata, and in particular of revelations, being expected; e.g., the Test. of our Lord speaks of the Church (in the list which gives of bishops of that city up to his own time) there was an order of bishops and presbyters, and by any Christians (i. 21, 23, 29, 31 f., 40); gifts of healing or of knowledge or of tongues are referred to as being a possible endowment of any Christian (i. 47). Such a one was not to be ordained ('a hand is not laid on him'), but to be had in honour (ibid.). See also below, §§ 6-8.

The term 'charismatic ministry' is capable of being misunderstood, as if the office or ministry considered a purely mechanical one, and only of human appointment. But St. Paul clearly recognizes the official ministry as charismatic in another sense. Timothy had the charisma in virtue of his ordination (1 Ti 4:6). The official ministry had the 'spiritual gift,' though it was not of the same nature as that of those who had extraordinary endowments; and the two ministries, as we have seen, might overlap.

4. Bishops, presbyters, and deacons from the 2nd cent. onwards.—(a) Bishops.—In the Epistles of Ignatius (c. A.D. 110) we find bishops in the later sense of the word. But we may hope to make an endeavour to collect the facts with regard to the diocesan episcopate, postponing a statement of the details that have been advanced as to its origin. The phrase 'diocesan episcopate' is perhaps the best that we can use, as it begins no question as to the relation of the bishop to the presbytery; the phrase 'monarchical episcopate,' which is used by many writers, is open to this objection. The establishment of bishops in the later sense in the Churches of the province of Asia and elsewhere is ascribed by a steady tradition to John the Apostle. Clement of Alexandria (Quis divina, 42) says that 'the last Jew, the last of the apostles, John, returned to Ephesus from the island of Patmos, and went away, being invited, to the contiguous territories of the nations, there to appoint bishops, there to set in order whole Churches, there to ordain such as were marked out by the Spirit.' Tertullian similarly says (adv. Marc. iv. 5) that 'the order of the bishops' (of the Seven Churches of Asia, or of all the Churches of the province) 'who were the first to ordain' (1 Co 14:14) 'first' says John to their author.' And the Muratorian Fragment (c. A.D. 180?) says that John was exalted by 'his disciples and bishops' to write his Gospel.
established before Cyprian's time, and was due to his dispute with Novatian (Organization of the Early Christian Church, p. 153; for an account of the dispute and of the ministry reference may be made to Gose, The Church and the Ministry, pp. 151-156, with his quotations in the footnote).

It would seem that at the first primary object of the bishop is 'ordained,' and thus the Didache, immediately after mentioning the Sunday worship (§ 14), continues: ‘Appoint (καισορωπαρη) for yourselves therefore bishops and deacons. And in the succeeding age, one of the principal functions of the diocesan bishop was to celebrate the Eucharist. In the Church Orders of the 4th and 5th centuries the newly consecrated bishop himself begins to exercise his functions by doing so, rather than the principal consecrator, as in modern times. The same idea underlies the ancient practice, still preserved in some parts of Christendom, of consecration, that is, of the newly-ordained presbyters joining aloud with the bishop who has just ordained them, in consecrating the Eucharist. (In the early ages consecration was not confined to ordinations.)

We may compare the custom, which also survives of a newly-ordained deacon reading the liturgical gospel, that being one of his functions which he immediately begins to discharge. In this connexion, the new bishop and the presbyter were the only persons allowed to celebrate the Eucharist (see art. LATTY, § 5 (a)).

The Council of Nicea enacted that bishops were not to be consecrated from one bishop to another (can. 15; A.D. 325). But this rule was almost immediately disregarded (see Athanasius, Apol. c. Ariam. 25). The Nicene Council applied it also to presbyters and deacons.

(9) Presbyters.—In early Christian literature the presbyters are frequently recognized as the councillors of the bishop. Ignatius, who says that the presbyters are the bond of the bishop to the Church, that is, the bond of the bishop to the people (Eph. 4), bids the people submit to the bishop and presbyters (Eph. 2, 20, Trall. 13), and do nothing without them (Magn. 7, Trall. 21, f., 7); he speaks of ‘the bishop presiding (συνέπεπτον) after the likeness of God, and the presbyters after the likeness of the council (συνεκληρον) of the apostles;’ (Magn. 6); in Smyrn. 8, the bishop is compared to our Lord, and the presbyters to the apostles (cf. Magn. 13). But Ignatius and later, Cyprian speaks of the presbyters as ‘your reverend bishop and with the fifty-wreathed spiritual circlet of your presbytery, and with the deacons who walk after God’). In the same way, more than a century later, Cyprian says (Eps. xiv. [v.] 4, ‘To the presbyters and deacons’) that he had determined from the beginning of his episcopate to do nothing without the advice (consilium) of the presbyters, and the concurring feeling (consensum) of the people. The presbyters are here recognized as councillors of the bishop in a higher sense than the laity. This is not quite the same position as in Ep. xxxviii. (xxxix.) 1 (‘To the presbyters, deacons, and people’), where Cyprian speaks of consulting them all before he ordained clergy. This is the equivalent of the more modern Si quis or public intimation of a proposed ordination. Origen likewise compares the councillors and ‘rule’ of the Church with those of the city, clearly meaning the presbyters and the bishop (Cels. li. 30). A similar state of things is seen in the Oder Didasc. (ii. 28, 3rd edn. Funk, ii. 108), where it is said that the presbyters are ‘honoured as apostles and councilors of the bishop, and the crown of the Church, for they are the council and court of the Church.’ The first red. post. Const. (ii. 28) use nearly the same language.

It is for this reason that the bishop had his throne in the church with the presbyters sitting round him on either side. Thus in the Apol. Ch. Ord. (c. A.D. 309; for the Syriac text and tr, see JThES iii. [1901] 59) the presbyters are appointed by the bishop, and sit on either side of him, excited on the right being the regulators of the service of the altar, those on the left the regulators of the people; and the presbyters are ‘sharers in the mysteries’ with the ‘shepherd’ (the bishop; see above, § 2). In the Older Didasc. (ii. 57; Funk, ii. 158), the Apol. Const. (ii. 57), and the Test. of our Lord (1, 19) the same arrangement is found. In the last-mentioned manuscript, excited and honoured presbyters, who ‘labour in the word,’ sit on the right, and ‘those of middle age’ (i.e. the younger ones; see above, § 28) (for the association of the presbyterate and old age) sit on the left. For an ambiguity as to the position of the bishop and presbyters when ministering at the altar, see Maclean, Ancient Church Orders, p. 37.

The presbyters were charged with celebrating the Eucharist, at least when the bishop was absent (see above), and with pastoral duties to the flock. In the 4th cent. the Apol. Const. thus sum up the functions (§ 12): ‘The bishop blesses, but does not receive the blessing; he lays on hands (καισορωπαρη), ordains (καισορωπαρη), offers (the Eucharist), receives the blessing from bishops: the bishop presides; the presbyters; the bishop exercises discipline (κατοποιησις) over every one, who does disobedience to a bishop, or presbyter, for he cannot (ἔχει) do this. The presbyter blesses, but does not receive the blessing except from a bishop or fellow-presbyter, and so he gives it to a presbyter or to a deacon; he lays on hands, but does not ordain; he does not exercise discipline, but he separates those inferior to him, etc.

An interesting feature is that the presbyter is allowed to confirm, for this seems here to be the meaning of καισορωπαρη, blessing and ordaining being mentioned as different actions. Ordinarily the presbyter baptized, and brought the neophyte to the bishop for confirmation; this is the regular practice in the Church Orders and was the earlier custom in both East and West. In the East the presbyters have for many centuries confirmed, both in the Orthodox and in the Separated communions, but he uses chrism consecrated by the bishop. The same thing is also found in the West, but only in exceptional cases. Innocent i. in his Epistle to Deceanglices (§ 2; A.D. 416) shows that Western presbyters had the power by custom, though he did not approve of their exercising it. The Council of Orange (A.D. 441) says (can. 1, 2) that in the absence of a bishop a presbyter may confirm heretics, marking them with the chrism and benediction, i.e. (apparently) confirming them. Still earlier the first Council of Toledo (A.D. 400) shows the same thing by implication. It forbids (can. 39) a presbyter to consecrate the chrism, and allows only a bishop to do so, but says that deacons or subdeacons shall fetch the chrism from the bishop before Easter. The Council of Carthage, A.D. 390 (can. 3), also forbids presbyters to consecrate the chrism. This implies a regular practice of confirming by presbyters (for further references see Duchene, Christian Worship, p. 358, n. 4). For Egypt we have the evidence of the writer known as Ambrosiaster (in Eph. iv. 12), who says that in that country the presbyters ‘signs’ (consignat) if the bishop be not present; and we read the same in Quast. Hist. der Nat. Test. § 11. In the appendix to vol. iii. of the Benedictine ed. of Augustine (another reading there has ‘consecrate,’ i.e. consecrate the Eucharist). Lightfoot (‘Diserta-
MINISTRY (Early Christian)

685

and is often the almoner of the Church (Older Didasc. ii. 57; Apost. Const. iii. 19). In the Council of Antioch, A.D. 251 (the letter is given by Eus. H.E. vi. 43), enumerates the various orders and classes at Rome as follows: one bishop (about this he is outspoken), 46 (cfr. text) presbyters, 7 deacons, 7 subdeacons, 40 acolytes, 22 exorcists, readers, and doorkeepers, and more than 1500 widows and persons in distress (for the minor orders see below, § 6). But in unimportant places the clergy were much fewer. On the Apost. Conc. ii. 39 (can. 69) there were: one bishop, 3 presbyters, 3 deacons (so the Syriac, one (?) reader, 3 widows. In the Test. of our Lord (c. A.D. 350?) we have (i. 34, besides the bishop, 12 subdeacons, 32 deacons, 2 acolytes, 13 widows who preside' (the Greek original no doubt had προκαθήμενοι). Seven was a very ordinary number for the deacons, because of the Seven in Ac 6. Sozomen says (H.E. vi. 19) that even in his day (5th cent.), in some provinces, one deacon was enough, though in other Churches the number of deacons is a matter of indifference. The Council of Neo-

Cæsarea, appealing to Acts, says that even in the largest towns there are not to be more than 7 deacons (can. 15; c. A.D. 314, or perhaps a little later). The number twelve for the presbyters in the Test. of our Lord may be due to the comparison of their order to the apostles (cfr. H.E. iii. 10), describes Alexandria in old days as having had twelve presbyters; but his evidence is quite untrustworthy (see below, § 8 (d)).

(c) Age of ordination.—At 3 Cæsarea it was enacted (can. 11) that no one was to be ordained presbyter before he was thirty years of age, because our Lord then began to teach. This became the general rule for many centuries. There was no similar rule about bishops, but the 2nd can. of Nicea says that no novice in the faith is to be ordained presbyter or bishop. The minimum age for deacons seems to have been twenty-five. The Council of Hippo (A.D. 393) says that no one is to be ordained at all under that age (can. 11); but this rule can hardly have applied to the minor orders, for the same Council (can. 18) speaks of readers who are appointed as quite young boys. So Cyril (Ep. lxxxviii. [lxxxv.] 1) and Sozomen (H.E. vii. 41) speak of very young readers. The Galli-

can Statutes (c. A.D. 500; see below, § 6 (c)) say that a bishop must be of the 'prescribed age,' but does not say what this age is.

It may be convenient to note here some later rules as to age of ordination. The Cèzanne rule is that a presbyter must be over 30, for the readers and deacons. "(Nestorius, Con-

cili, Würzburg, 1869-64, ii. 145), and a deacon must be over 21 (lit. 152). The East Syrian or Nestorian Synodical, or 'Book of Canon Law' (Vt. iv. 2; Maclean and W. H. Brown, Catholics of the East, London, 1913, p. 201), says that readers must not be ordained till past boyhood. Hence this limit is very close. The deinon age and the one for deacons a little lower, presbyters about 18, though (it looks) the ancient age was 30. (cfr. 1 Pet. v. 2, for presbyters 34, for bishops 39, and this is the usual Western custom; some relaxation of the rule has rarely been made in the case of deacons.

5. Development of the supervisory offices.—(a)

The present writer can find no good instance of 'consignare' or its Greek equivalent ἐπισήμα, or its substantive, being applied to ordination. The Greek ἐπισήμα and its oriental equivalents usually refer to baptism or confirmation, or both, or to the sign of the cross; by analogy Tertullian (adv. Valentin. 1) uses 'consignation' of admission to the Eucharistic mysteries (see also Lightfoot, Apost. Fathers, pt. 1, Ch. 1. Eusebius, 220, n. 5; Maclean, Ancient Church Orders, p. 109). In the Verona Letter (cfr. J.H. Harper, p. 119) 'consignation' is used in contradistinction to ordination, for the part played by the presbyter as a presbyter's ordination (see below, § 8 (a)).

The presbyter at the ordination (ordinatio) of a presbytery signum (consignation) when the bishop ordinates episcoporum ordinandos."

Therefore traces in our period of a very close

312 (Joest, 1856-57), gives no instance of consignation meaning 'ordination,' though he gives instances of its meaning 'confirmation.'

312 (Trümmel, 1859-69) gives one instance from pseudo-

Dionysius Areopagita (Eccl. H., v. p. 312 [PG iii. 809]) of ἐπισήμα, which our reader

2 It has been suggested that 'the young men' of Ac 5:26-29 were the six 'young' who 'died in the 1st century' (as such the names are the paradigms of the deacons). In this respect, for the epigrams, or grave-diggers (mentioned by Epiphanius, Epp. Fid. 31), and for the paradigms of the dead (see J. Wordsworth, History of Grace, p. 106.).

5:26-29, for presbyters 24, for bishops 39, and this is the usual Western custom; some relaxation of the rule has rarely been made in the case of deacons.
Metropolitans.—The name is first found in the 4th cent., before which there is no certain trace of provincial organization, the 'eparchy' in the Apos. Th. Ord. being apparently the civil province. Nicene metropolitans are mentioned by that name (can. 4, 6), and the word 'eparchy' is apparently used of an ecclesiastical province, though, as the civil province is commonly coincident, this is not quite certain. At the Council of Antioch in Eunomius (A.D. 341) metropolitans are recognized in effect, though the name is not given to them (can. 9, 19); 'the bishop presiding in the metropolis' (i.e. in the civil capital) is the phrase used, and the corresponding verb is employed in can. 19. The word 'metropolitan' is used at Laodicea (can. 12; c. A.D. 380). On the other hand, there is no mention of a metropolis in the Church Orders, and this is a cogent argument against their being dated later than the 4th cent., and for their not being assigned to any of the great centres like Alexandria or Antioch. In these manuals the neighbouring bishops come together for the election of a bishop, and the whole assembly of bishops, clergy, and laity elect, just as they do in Cyprian (Ep. liv. 9, 25) and the clergy, and the clergy alone (in Spain?); but there is no metropolitan. The title is perhaps but a faint trace of a primacy in Apos. Const. viii. 4, which speaks of 'one of the first bishops' saying the ordination prayer of a bishop; and so in the West, the Bp. of Rome is styled 'the first bishop among them'. But this is all. A rather stronger trace is to be seen in the Apos. Canons (can. 35 [also numbered 34 or 35]; c. A.D. 400). After the first bishops without metropolitans became practically universal.

Although there was no regular organization of provinces before the 4th cent., yet bishops of certain importance, e.g. the Bishops of Amasea, Vide Epp. Epiph., Antioch, wielded great influence over the neighbouring bishops. We see this in the case of Cyprian. At Nicæa the authority of the bishops of Alexandria and Rome is spoken of as an ancient custom, and no one is made bishop without the metropolitan (can. 6). Alexandria is to have, as before, authority over Egypt, Libya, and Pentapolis, i.e. over more than one civil province (ib.).

The growth of this influence was promoted by the holding of synods, when external circumstances permitted. Synods would ordinarily be held in the 'metropolis' (chief town) of the civil province of the bishops whose jurisdiction city would naturally preside. So the civil metropolis tended to become the ecclesiastical metropolis. But this was not always the case with synods. At that of the bishops of Pontus held to consider the Paschal question, Palmus as the oldest [bishop] presided (Eus. HE v. 23). Palmus was bishop of Amaseia (iv. 28). At the end of the 4th cent. the Council of Hippo decreed that a bishop of a principal see (prima sedes) was not to be called 'princeps sacerdotum' or 'summus sacerdos,' but simply 'princeps sedis episcopus' (can. 25). Thus the name 'metropolitan' was apparently not in use in the province Africa; and Hefele thinks that, except at Carthage, the metropolitan right went to the eldest bishop of the province, and that the same thing held good in Spain before Constantine's time (Hist. of the Concils, Eng. tr., Edinburgh, 1872, i. 165). At Carthage, the metropolitan right went to the eldest bishop of the province, and that the same thing held good in Spain before Constantine's time (Hist. of the Concils, Eng. tr., Edinburgh, 1872, i. 165).

In spite of his position at Carthage, Hefele affirms that all bishops are equal. Thus in de Unitate, 5, he says that the episcopate is one and that his authority is derived from it with joint and several responsibility; for this is the meaning of his phrase 'cum suis in singulis in solidum pars potestas.' So in Ep. lv. (iv. 21), 'ad Antonianum,' the bishops thus. every bishop disposes and directs his own acts, and will have to give an account that this purpose to the Lord. Cf. also Epp. vili. (iii.) 5, lix. (iv.) 14, both to Cornelius; Cyprian says that appeals are not to be carried outside the province in which the cause began.

The custom that the pallium to metropolitan hardly falls within the limits of this article (see DCA ii. 1174).

(6) Patriarchs.—The name 'patriarch' was probably borrowed from the Jews. In the LXX of 1 Ch 27:2 it is used for the head of a tribe or subdivision of a tribe. In the NT it is used of David (Ac 2:21), the sons of Jacob (7:12), and Abraham (He 7:4). In 4 Mac 22:22 (ed. W. R. Churton, Uncanonical and Apocryphal Scriptures, London, 1884) it is used of Abraham, Isaac, Jacob, and others. In the early centuries of our era a Jewish 'patriarch,' or representative of the nation, is several times mentioned—e.g., by Cyril of Jerusalem (Cat. xii. 17; a. D. 348), who speaks of the Jews' 'recent measures relative to their patriarchs as they now call them.' The Emperor Hadrian (A.D. 1541) refers to the Jewish patriarch in his letter to the consul Servianus about religion in Alexandria (see Lightfoot, 'Discussion,' p. 255). Hadrian visited Egypt A.D. 120. In Christian literature we find references to 'patriarchs' in the East and to Christians—Basil seems to use it as equivalent to 'bishop' when he says (Ep. cxlix. to Greg.) that the deacon Glycerius assumed the title of 'patriarch.' An example is Gregory of Nyssa's Funeral Oration on Melitius, bishop of Antioch († A.D. 381), where he exhales 'Behold these your patriarchs,' is perhaps purely metaphorical; he is referring to the bishops who attended the second Ecumenical Council at Constantinople. Gregory of Nazianzus explicitly uses the term of senior bishops (Orat. xii. 23): 'aged bishops or, as we say, Ga'ba.' But it came to be used of the bishops of Rome, Constantinople, Alexandria, Antioch, and Jerusalem; though not by canons of councils till long after our period—not before the 9th cent. the whole subject is treated in detail by Hatch in DCA ii. 1573 (art. 'Patriarch'). The growth of the authority of these sees is shown by the 6th can. of Nicea, the 28th of Chalcedon; the latter was rejected by the bishop of Rome. The ultimate result was the joining together of several provinces or eparchies, each of which was governed by its own metropolitan, under a single patriarch, who presides over the union, just in the same way as in civil affairs several 'eparchies' were grouped together into one diocese, which was a very different thing from our 'diocese.'

(c) Archbishops.—This term, which in the West became the customary title of metropolitans, was not so used in the East. It was a title of honour conferred on bishops of some of the greatest sees, though its application was not always uniform. In the 4th cent. Epiphanius uses the term (Her. lxxiv. 3) of Meletius, bishop of the Thebaïs, and (lviii. 1) of the bishop of Alexandria. At Chalcedon (A.D. 431) it is applied to the bishops of Constantinople, Alexandria, and Rome (cass. 28, 30; the last is not considered to be a canon proper; see Hefele, iii. 422).

(d) Chorepiscopi.—These 'country-bishops' were assistants to the bishop of a diocese, and resided in the rural districts. In the Greek-speaking Churches and in the West they were, at least normally, bishops—such is the trend of the evidence, although Chrysostom denies it in the Syriac-speaking Churches, at a later date, they were often confused with the episkopoi, or 'visitors,' and were prebendaries. They somewhat resembled the assistant ('suffragan') and conductor bishop of the present day and that they worked under the direction of the diocesan bishop, though their
functions were not entirely the same. They are first mentioned at Ancyra (can. 13 [see below, § 8]; c. A.D. 40; or a little later), Nicæa (can. 8; A.D. 325). From the 10th can. of the Council of Antioch in Encaemia (A.D. 341) we may perhaps gather that not all clergy bore the title of bishop in the sense of the episcopal office "even if they have received consecration as bishops." They are also mentioned by Athanasius (Apol. c. Arius, 85, Basil (Ep. xxiv. etc.), and other 4th cent. bishops. But they are not referred to in the Church Orders, and it is probable that they were to be found only in the busy centres, from which, as we have seen above (a), these manuals did not come. In the Edessene Canons, i.e., the Syriac Teaching of the Apostles (see Antioch. Chr. Lib., "Syriae Documents," p. 42 f.), a "ruler" is to be appointed as head over the village presbyters; and these "rulers" must have been itinerant visitors, for a reference is made to Samuel also making visits from place to place and ruling (can. 24; c. A.D. 350). The Council of Sardica in Illyricum (c. A.D. 347, or earlier) does not appear to recognize the existence of choropisci. The 6th can. says that a bishop is not to be ordained in a village or small town for which one presbyter suffices, for it is not necessary there that a bishop should be made, lest the name of a bishop and his authority become cheap (the authenticity of these canons is disputed).

Among the functions of the choropisci were the appointment and ordination of minor orders, but not as a rule of deacons and presbyters. To ordain these he must have the explicit consent of the diocesan bishop who had appointed him (Antioch in Encaemia, can. 10). He could also confirm; see the 2nd can. of the Council of Riez or Regnum in Provençe (Hefele, iii. 157; c. A.D. 430). Schismatic bishops when reconciled were sometimes made choropisci, as there could not be more than one diocesan bishop in each see (Nicæa, can. 8; Socrates, HE II. 19; Riez, can. 9). Light-foot ("Dissertation," p. 233, n.) looks upon choropisci as a survival of the "presbyter-bishops" which his theory of the origin of the diocesan episcopate postulates (see below, § 10); but there is absolutely no evidence for this survival, and indeed it is very unlikely that choropisci existed before the 4th century. A schismatic exarch was made towards the end of that century to abolish the office. The Council of Laodicea (can. 57; c. A.D. 380) forbids their appointment for the future, and says that there are to be only peristerae (apparently presbyters), while choropisci who had already been appointed were to act only with the consent of the diocesan bishop (this points to a certain self-assertiveness on the part of the choropisci). But this can did not put an end to the office. Choropisci are found frequently in the Far East (see below), and were revived in the West for a time (Hefele, i. 18). There were some of this order present at the Council of Ephesus, A.D. 431, but not at that of Chalcedon, A.D. 451.

In the East Syrian Syriac Sunhdiāus (vi. 1) there are three orders of the ministry, each with three subdivisions. In the second order (the presbyterate), choropisci or peristerae (both these names are transliterated into Syriac) form the first subdivision, and seem to be identical. Their duties were to visit the villages and monasteries as representatives of the bishop (Maclean-Brown, Catholicos of the East, p. 182). They were not specially ordained, for the Sunhdiāus says that bishops ordain all readers, subdeacons, deacons, and presbyters, but do not ordain, and say a prayer over archdeacons (ibid.).

Archdeacons.—Neither the name nor the office of an archdeacon is found before the end of the 4th century. The name is found in the Purgatorium of St. Basil (47), c. A.D. 335, and has been assigned to that date, though some place it later; but even there it is not the name of a distinct office. Neither the name nor the distinct office is found in the Church Orders. The Excerpta from the Text, of Our Lord the principal deacon has certain duties assigned to him. Some writers at the end of, or later than, the 4th cent., give to certain famous deacons the title of archdeacon; Augustine calls Laurence by that title (Serm. de diversis, cxi. [ed. Ben. ccl.] 8); so Theodoret (HE II. 25) calls Athanasius the 'leader of the chorus of deacons, though a young man.' There is no archdeacon in Concinus's list of Roman officials (above, § 4 (d)). Jerome (Ep. exvii., "ad Evagriam") mentions archdeacons as an order, and after his time they were common in both East and West. In the Ordinances of Præside the archdeacon plays a very important part in the eucharistic liturgy at Rome (e.g., §§ 18, 20, ed. E. G. C. F. Atchley, London, 1915). But this work is probably of the 6th cent., though founded on a similar document of the 6th (Atchley, p. 7). The archdeacon was at first a deacon, and in some cases the senior deacon succeeded automatically to the office; but Sozomen (HE VIII. 9) speaks of Chrysostom appointing Sarapion as archdeacon, and therefore he could not have succeeded automatically. There was only one in each diocese in the time of Jerome (loc. cit.). For the later development of this office see DOA I. 126.

In the East Syrian Church the archdeaconate is the middle subdivision of the second order, i.e., of the presbyterate (see above). The office is still used in that Church as an honorary, and an influential presbyter is appointed "archdeacon," or archdeacon. In the West the office is in frequent use, and in most Western countries each bishop has at least one archdeacon, called the 'eye of the bishop.' The archdeacon is a senior presbyter, deputed to relieve the bishop of some of his minor functions.

6. Development of the lesser offices.—At an early date we find the existence of some orders of the ministry lower than those of bishops, presbyters, and deacons. We read at various times of subdeacons, readers, singers, interpreters, doorkeepers, acolytes, exorcists. There was also a ministry of "women—widows and deaconesses. It must be noted, however, that some of these offices were not always and in all places reckoned as orders; e.g., exorcists were long considered to exercise a charismatic ministry, and were reckoned as being outside the ordinary roll of the clergy.

(a) Readers (ἀρχιευγέτης, lectoris).—This is probably the oldest of the minor orders. In Justin Martyr's description of the Euchairist (Apol. i. 87; c. A.D. 150) the reader of the lections plays an important part, though Justin may not mean that he was of a separate order in the ministry. In the Apost. C Hippolyt. (§ 19; c. A.D. 300) he is reckoned before the deacon, and Harnack thinks (Sources of the Apost. Canons, Eng. tr., London, 1895, p. 71 f.) that his office was at first a charismatic one, and that he was not originally included among the clergy. Stress is laid in the manual just named on the necessity of the reader being learned. He must be 'able to instruct' or 'narrate' (διδάσκων, and he 'fills the place of an evangelist.' This qualification is not always insisted on in the case of a bishop; this Church Order says (§ 16) that, if a bishop does not know letters, at least he is to be meek. The Text, of Our Lord also insists that the reader must have learned, according to our experience (i. 45). Probably he had, at first, the duty of expounding what he read; but, when he
MINISTRY (Early Christian)

... was limited to the mere reading of the lessons, his position fell, as it did at Rome in the middle of the 3rd century (see above, § 4 (d)), where the readers are classed with the deacons and doorkeepers, below the acolytes. In the other Church Orders the reader comes, sometimes before, and sometimes after, the deacon. In Sarapion’s Sacramentary (§ 25; c. A.D. 350) the minor orders are not mentioned. There are indications in some of the authorities that readers were not numerous. The Older Didasc. and the Apost. Const. (ii. 28; Funk, i. 108[1]) suggest that it is probable that a church in Egypt at the time of Sarapion’s Sacramentary (§ 25), in the Church Orders (but not in the Apost. Ch. Ord.), at Neo-Caesarea in Cappadocia (canon 10; A.D. 314 or later), at Antioch in Iconium (canon 10; A.D. 341), at Laodicea (canon 20—22, 25; c. A.D. 350), and in Athanasius (Hist. Ar. in Monachos, 60; A.D. 398), At Neo-Caesarea and Laodicea, and in the Apost. Const. ii. 11, and elsewhere, the subdeacon is called ἐραστής, or ‘minister.’ The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the Didascalia, where they are mentioned, is ante-Nicene; though not rejected in the Latin versions, and in the Syriac versions. Eusebius (HE vi. 6) makes their existence in most parts of the East during the Diocletian persecution uncertain. He says that a royal edict directed that the presidents (ἐραστεῖς) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (canon xxii. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons, and the omission of deacons may be a mere clerical error.

(c) Acolytes, or collats (ἐκδωροῦν, acolythi, acoliti).

These are first mentioned by Cornelius (above, § 4), and by Cyprian, loc. cit. They are also mentioned in the Gallican Statutes (as J. Wordsworth has conveniently named them [Ministry of Grace, p. 285] or Statuta Ecclesiae antigya, a collection of canons which used to be described as the so-called ‘Fourth Council of Carthage’ (canon 6; Hefele, ii. 410; their real date is c. A.D. 500). Acolytes assisted at the Eucharist, and performed various tasks associated with the priests and deacons. They are found only in the West, where they became very numerous. Cornelius says that there were 49 at Rome in the 3rd century. As there were 14 regions in that city, there would be one deacon or subdeacon and three acolytes for each region (Harnack, Sources of the Church, p. 95). The acolyte was sent by Cornelius as a messenger (Cyprian, Ep. xlix. [xxv. 3]).

(d) Singers (φάντασμα, φάντασμα, ἀντιστρατηγός, psaltes). In the earlier Church Orders singers are mentioned, but not as a separate order. There were indications in some of the authorities that readers were not numerous. The Older Didasc. and the Apost. Const. (ii. 28; Funk, i. 108[1]) suggest that it is probable that a church in Egypt at the time of Sarapion’s Sacramentary (§ 25), in the Church Orders (but not in the Apost. Ch. Ord.), at Neo-Caesarea in Cappadocia (canon 10; A.D. 314 or later), at Antioch in Iconium (canon 10; A.D. 341), at Laodicea (canon 20—22, 25; c. A.D. 350), and in Athanasius (Hist. Ar. in Monachos, 60; A.D. 398), At Neo-Caesarea and Laodicea, and in the Apost. Const. ii. 11, and elsewhere, the subdeacon is called ἐραστής, or ‘minister.’ The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the Didascalia, where they are mentioned, is ante-Nicene; though not rejected in the Latin versions, and in the Syriac versions. Eusebius (HE vi. 6) makes their existence in most parts of the East during the Diocletian persecution uncertain. He says that a royal edict directed that the presidents (ἐραστεῖς) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (canon xxii. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons, and the omission of deacons may be a mere clerical error.

(e) Interpreters (ἐραστής, ἐραστηκρατης, interpreters).

These are not mentioned in the Church Orders. They naturally are found only in bilingual countries. Eusebius mentions them in Palestine (Mart. Palest., long. version, § i. 1, tr. A. C. McGiffers, p. 342 [Nie. and Post-Nic. Fathers]); he says that Propocius was a reader, interpreter, and exorcist. Sarapion (§ 25) mentions them in Egypt, Epiphanius (Ep. Vind. 21) in Syria and Palestine, the Ep. Hieronymi ad Silvia (‘Etheria’) we know (vi. 5) that at Jerusalem some spoke Greek only, and some Syriac only, and that, as the bishop, though he knew Syriac, yet spoke only in Greek, a presbytery stood by (Lat. Patriarches, § 1). Grace, Laodicea, and elsewhere, the deacon is called ἐραστής, or ‘minister.’ In the Apost. Const. ii. 11, and elsewhere, the subdeacon is called ἐραστής, or ‘minister.’ The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the Didascalia, where they are mentioned, is ante-Nicene; though not rejected in the Latin versions, and in the Syriac versions. Eusebius (HE vi. 6) makes their existence in most parts of the East during the Diocletian persecution uncertain. He says that a royal edict directed that the presidents (ἐραστεῖς) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (canon xxii. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons, and the omission of deacons may be a mere clerical error.

(f) Doorkeepers (ἐμπυγονος, eumpygono, doorkeepers).—These are mentioned in Cornelius’s list, and in the Apost. Const. ii. 58; elsewhere, the deacon is called ἐραστής, or ‘minister.’ The existence of subdeacons in the East before the 4th cent. has been disputed, and it has been thought that the passage in the Didascalia, where they are mentioned, is ante-Nicene; though not rejected in the Latin versions, and in the Syriac versions. Eusebius (HE vi. 6) makes their existence in most parts of the East during the Diocletian persecution uncertain. He says that a royal edict directed that the presidents (ἐραστεῖς) of the Church everywhere should be imprisoned, and that the prisons were filled with bishops, presbyters, deacons, readers, and exorcists; he omits any mention of subdeacons here. In the Canons of Hippolytus (canon xxii. [ed. Achelis, § 217]) they are mentioned together with presbyters and readers, in a passage where deacons are omitted; but this may be due to the present (4th cent.) form of the Canons, and the omission of deacons may be a mere clerical error.

(g) Exorcists (ἐραστηκρατης, interpreters).—

Jewish exorcists are mentioned in Lk 11 (where ‘your sons’ can hardly mean the disciples, but must be the Jews), Ac 19, and Jas. Ant. viii. 5 (he is speaking of the time of Solomon). Christian exorcists are mentioned in Lk 10, and by Filmyr, who in his letter to Cyprian speaks of exorcists in Cappadocia twenty-two years before his time (Cyprian, Ep. lvii. [xxxiv.] 10). But the Christian exorcist of demons is mentioned by Justin (Dial. 85, Apol. ii. 6), Tertullian (de Idol. 11, de Præser. 41), Origen (c. Celio, vii. 4). On the other hand, candidates for baptism were exorcised by the bishop before Easter (Maclean, Ancient Church Orders, p. 97; T. Thompson, Office of Baptism and Confirmation, Cambridge, 1914, p. 28). The Council of Laodicea (canon 26) says that no one may exorcise in churches or houses unless authorized by the bishop. The office of an exorcist was at first entirely charismatonic, and he was not originally one of the clergy (see below, § 5 (g)). We can well understand the exorcist and the demonologists, and the exorcists of demons became a separate order, but that exorcists needed stringent regulations.

(h) Ministry of women.—It is not very easy to distinguish between the ‘widows’ who were on the Church roll for relief and those who were, in some sort, in the ministry. The widows in Ac 6 come under the former category; those of 1 Ti 5.2—perhaps underjots, ep. v. 3—seem to be engaging in ministering. A deaconess, Phoebe, is mentioned in Ro 16, though Hort (Christian Ecclesiast, p. 208)
MINISTRY (Early Christian) 669

thinks that διάκονος (fem.) is here used in a non-technical sense, and merely means that Pheobe ministered to the needs of the Church. Many things 'done' by her (as by her confession (5.1. with the following article) means deaconesses; note the qualifications for deacons which precede and follow.1 We also read of Prisca (Priscilla) joining with Aquila in his bishopric at Rome. There is no doubt that, in private teaching, as St. Paul forbids a woman to speak in church (1 Co 142d, 1 Ti 224),. In the Christian literature after the NT we find frequent mention of the Apost. Ch. Ord. 1, the Apost. Ch. Ord., one of the 'twins' is to visit the sick, while the other two are to pray and receive spiritual revelations (see above, § 3). In the Test. of our Lord the 'twins who preside' (συμπροεδροῦσιν) are an important order; they are also called 'presbyterses,' as corresponding to presbyters, while deaconesses are mentioned as corresponding to deacons: deaconesses carry the Eucharist to a sick woman (II 20), just as a deacon does to a sick man (cf. Justin Martyr, Apol. i. 65).

At Laodicea presbyterses (συμπροεδροῦσιν) are identified with those who preside (can. 11); and their spiritual duties and function in the Church is in question, though the interpretation is not quite clear. In early times, however, deacons were employed especially in the baptism of women. The deacon is sometimes called ἄρσης (Ro 163, 1 Cor. 19; Apol. Const. viii. 19; Epiphanius, Exp. Fid. 21). For further details see Maclean, Ancient Church Orders, p. 831; J. Wordsworth, Ministry of Grace, ch. v. It may be interesting to give here Epiphanius's list of clergy and other classes of Christians in Exp. Fid. 21. He mentions bishops, presbyters, deacons, subdeacons, readers, virgins, monks, ascetics, widows, 'those who marry honestly,' deaconesses (especially for baptism), exorcists, interpreters, grave-diggers (or copsiti), see above, § 4 (a), deaconesses; and he adds: καὶ τὰ γένεσιν εἰς ἐκκλησίαν.

Promotion.—It is a common, and in the West the usual, thing for a deacon and the lower officials to be in due course promoted; but it is doubtful if this was often the case in the first three centuries. The 'good step' (σαλπυγία) see § 8 (g)) of 1 Ti 314 has been interpreted by Ambrose, Jerome, and some moderns, of promotion, though this is not very probable, and does not well suit the rest of the verse. The only instance of such a course in the 1st cent. is perhaps Philip, who in Ac 6 is one of the Seven, without authority to lay on hands, but in Ac 213 is called 'the Evangelist,' that is (probably) one of the 'apostolic men' like Timothy and Titus, though not apostolic. But the apostolic office (above, § 1 (d)). But at any rate from the 4th cent., perhaps earlier, promotion from the lower to the higher offices became common. Those of readers and subdeacons are referred to in the Apost. of the Lord (I. 441), Apol. Const. (viii. 22, readers), and are implied by Basil (Ep. cannon. tert. cvxxvii. 69). Cyprian (Ep. xxxix. [xxxiiij. 5, 'To the clergy and people') speaks of promoting readers to the presbytery,—this was because they had been confessors (cf. § 7 below). The promotion of deacons is mentioned in the Apost. Ch. Ord. 29 (to the episcopate), Apost. Const. viii. 171, Ithopen. Ch. Ord. 24, and probably in the Test. i. 38; ex-oligarchy also in the Codex Canonum Ecclesiae Africana (can. 31); Hefele, ii. 470. Palympis is said by the 4th cent. pseudo-Pimenius (as above, § 15 (b)) to have been consecrated deacon, presbyter, and bishop (§§ 1, 17, 23); and the Council of Sardica (can. 10, if genuine) says that a bishop must have been a deacon, deacon, and presbyter, some time before becoming bishop.

Honourable offices. It appears from the Church Orders that confessors, i.e., those who had been apprehended in the persecutions and had con-}

fessed their religion, but had escaped martyrdom, enjoyed an honorary presbyterate. A confessor (διάκονον) had 'the honour of the presbyterate but not that of the bishop' (Eusebius, Hist. Ch. Ord. 34; EUSEB. Ch. Ord. 23; Canons of Hippolytus, vi. [ed. Achelis, 43–47], Test. of our Lord, i. 39). It is, however, enacted in these manuals that, if a confessor is chosen for a bishop, he must receive the laying on of hands, or ordination. There is no evidence that confessors were ever allowed to minister, or to celebrate the Eucharist, without ordination. Indeed the Council of Chalcedon (e. cit.) say that a confessor has not got the form of the presbyterate, but he has obtained its spirit. An honorary presbyterate was possible, as there were many presbyters in each place; but an honorary episcopate was not possible, both because there was only one bishop in each see and because the bishop had the duty of ordaining others, which an unordained person could not do. It is noteworthy, and a sign of the earlier date of the Church Orders above mentioned, that the Apost. Const. (vii. 23; c. A.D. 375), while giving honour to confessors, yet repress their undue claims. This work says that confessors, when consecrated are not to be ordained unless wanted as bishops, priests, or deacons, in which case they are to be ordained. It says nothing about the honorary presbyterate.

That confessors were in some cases entitled to an honorary office is not the same thing as saying that confessors were preferred to others for the higher offices of the Church when they became vacated. Tortullian (ad. Valentin. 4) tells us that Valentinus was indignant, when he expected to become a bishop, because another was preferred before him on account of a claim which confessorship (σταυρομανία) had given him. It is not said that the confessor who was preferred was made bishop without being ordained. Eusebius (II E v. 28), quoting an unnamed writer about the heresy of Artemon, mentions a confessor Natalius who was chosen by the heretics as their bishop, apparently because of his confessorship (early 3rd cent.). Hippolytus (Har. ix. 7) relates how Callistas, having been imprisoned in Sardina, succeeded Zephyrinus as Bishop of Rome. Asclepiades, a confessor, became bishop of Antioch (Eus. II E vi. 11). But these and other instances prove nothing as to confessors becoming bishops without ordination.

8. Transmission of the ministry.—In this section we enter on the consideration of a series of facts whose significance is much disputed. An endeavour will be made to state the whole of the facts as far as they are relevant to the early period with which this article deals. For a description of rites used in transmitting the ministry see art. ORDAINATION.

(a) In the NT we find, in the case of the Seven (Ac 64), that the people 'elect' (w. ἐκλέγοντα) while the apostles appoint (v. 3 εκλέγοντες) and set apart by prayer and imposition of hands (v. 5). In 14 Paul and Barnabas 'ordain' (εὐαγγελισταὶ) presbyters 'for' the people of Pisdian Antioch, Iconium, etc. The word used is a general one, and does not necessarily imply laying on of hands. It is used for election to a presbyterate (or here) simply for appointing. In the case of the elders (presbyters) at Ephesus, Hort (Christian Ecclesiæ, p. 90) remarks that there is no indication that St. Paul appointed them. Yet the phrase 'the Holy Ghost hath set thee' may avouch that he cannot be pressed to mean a direct authority of the presbyters received from God without human intervention, such as St. Paul himself had (Gal 1). God works through those as apostles, in which case the terminology of 6th 14th will lead us to suppose that, though
the people probably elected their presbyters. St. Paul appointed them. St. Luke is not accustomed to repeat details of this nature. In 1 Ti 4:4 the presbytery are said to have laid hands on Timothy, and in 2 Ti 1:6 St. Paul is said to have done so; probably they there have laid hands on the custom which is found in later ages of the presbyters and bishop joining in the ordination of a presbyter (see below). In 1 Ti 5:25 Timothy lays on hands, though in is done in a different manner: he is referred to. In Tit 1:6 Titus ‘appoints’ (xenarizes) presbyters in every city in Crete. We may notice, by way of analogy, another laying on of hands in Ac 10:9, which is not ordination; this is reserved for the apostles in those passages, though ordinarily they did not baptize (S^2 104^h 19°, 1 Co 11:2). For the sub-apostolic period we have very little evidence on the point which we are now considering. But Clement of Rome describes in general terms how the ministry was appointed.

*[The apostles] preaching everywhere in country and town, showed them their first-fruits, when they had proved them to be of the Spirit, to be bishops and deacons. . . . They appointed (xenarizes) the aforesaid persons § 4 in laying on hands and ordination; afterwards they provided a constancy, that if these should fall asleep, other approved men should succeed to their ministries. This was therefore done by the apostles, or afterward by other distinguished (bapto) men whose office is called presbyters. Hence these men we must consider to be unjudged thrust out from their ministries’ (Clement, Ch. 45, 4).

We have no popular election, and ‘appointment’ (xenarizes); for this word see act. ORDINATION by ‘distinguished men,’ i.e., not by the ‘bishops and deacons,’ but by such viri apostolici as Timothy and Titus.

For the 3rd cent. we have evidence that only bishops (in the later sense) could then ordain; for Novatian had to get, by a disputable trick, three bishops to ordain him (see below, § 4 in laying on hands and ordination). Firmilian of Cappadocia, writing to Cyprian about the re-baptism of heretics (Cyprian, Ep. lxxv. [lxxviii.] 71), denies that heretics can baptize, and says that ‘all powers and graces are established in the Church where the presbyters preside who possess the powers both of baptizing and of imposing of hands and of ordaining.’ Then, referring to St. Paul’s having baptized (sic) John Baptist’s disciples again, and having laid hands on them that they might receive the Holy Ghost, Firmilian goes on to say that the ‘bishops of these times’ can by imposition of hands alone give the Holy Spirit (i.e. baptism), provided his arguments against adorning heretics without re-baptism, because of St. Paul’s action in Ac 19; but his words necessarily mean that none in his day but bishops could receive heretics into communion. With regard to the words which he uses in the earlier part of the paragraph, we may remark that by ‘presiding presbyters’ he must, being himself a bishop in the later sense of the word, mean bishops, even if he alludes to the custom of the presbyters joining in the ordination of a presbyter (see below); and it is significant that Cyprian translates Firmilian’s μπερσηερεσ by ‘maiores natu’ and ‘seniores,’ not by ‘presbyters’ of the MSS. He says in Epist. 84 to Eusebius: ‘we the presbyters and prelates.’ We notice here another instance, besides those mentioned above in § 4 (b), of bishops being still called μπερσηεερεσ.

At least from these 3rd centuries onwards we find explicitly stated the rule that only a bishop can ordain; possible exceptions will be noted below. As the Canons of Hippolytus, though not in their present form of the 3rd century, refer once very faithfully the language of their source, which probably goes back to Hippolytus’s time, and may even have been written by him, it seems likely that this explicit rule also goes back to Hippolytus’s time. It is at least (see iv. [ed. Achelis. § 32]: ‘the power of ordaining is not given to [a presbyter]’).

And in and after the 4th cent. we have no earlier evidence on the ordination of a presbyter. For the 5th cent. it is still prevalent in the West, that at the ordination of a presbyter the presbyters should lay on hands together with the bishop, though he alone says the prayer of ordination is found in the Egyptian Ch. Ord. (§ 32), the Ethiopian, Ch. Ord. (§ 22), the Test. of our Lord (I. 30), the Gallician Statutes (§ 3); Hefele, ii. 411, and the Verona Latin Fragments (Haufer, pp. 108-110). These manuscripts emphasize the fact that the bishop acts as a presbyter as well as a deacon. This (as the last manual says) is because the deacon is ordained for the service of the bishop, and does not take part in council with the clergy, while ‘on a presbyter the presbyters also lay (their) hands, because of the common and like spirit of the clergy (cleri); for a presbyter can only receive, he cannot give [this spirit], and therefore he does not ordain in the clergy, but at the ordination of a presbyter he signs when the bishop ordains’ (see above, § 4 (b)).

The custom of presbyters joining in the laying on of hands when a presbyter is ordained is found in the Syriac ordination of the writer of the Apost. Const. He says (vili. 16): ‘When thou ordainest a presbyter, O bishop, lay thy hand upon his head in the presence of the presbyters and deacons, and pray, etc. He uses almost exactly the same words about the ordination of a deacon, while elsewhere he does not, as the other clergy do, emphasize the fact that a bishop acts alone in ordaining a deacon. So in other MSS (one, which is almost a like reading, for deacons were never ordained by the bishop and presbyters jointly, and moreover ‘clerics’ must here mean the minor orders. See above, § 4 (b)).

The limitation of the power of ordaining to bishops is found in a large number of writers. For the Canons of Hippolytus see above. Jerome, who energetically enunciates the closeness of relation between bishop and presbyter, yet denies that the latter can ordain: ‘What does a bishop,’ he writes, ‘that a presbyter does not except ordination’? (Ep. ci. 1, ad Evangelium). The case of Icyshyas, which happened early in the 4th cent., is important in this connexion, and is related by Athanasius (Apoll. c. Arias. 111, 76). Icyshyas had been ordained presbyter by Collihus, who was, Athanasius tells us, not a presbyter but a presbyter. When after the Meleian schism in Egypt at the beginning of the 4th cent. Alexander (bishop of Alexandria, A.D. 313-326) admitted the presbyters who had been ordained by Meletius (bishop of Ly操), Icyshyas was not even numbered among them, and therefore he did not receive ordination in that quarter (§ 11); but he was ordained presbyter by Collihus, and all ordained by that man were, after the schism, reduced to the rank of laymen; and, Athanasius adds, no one doubts it (§ 12). The same writer quotes (§ 16) a letter of the clergy of Marseots (in Egypt) saying that Icyshyas was no presbyter; that he had been ordained by Collihus who pretended to the episcopate (this is significant for the point of view of the clergy of Marseots); and that they did not ordain (since Collihus resuscitated entirely the schism) the same rank that they had before, and so Icyshyas proved to be a layman. Alexander himself, in a letter quoted by Theodoret (HE i. 3), accused Collihus of ‘making a schism for lucre,’ and says that he set up his sect before Arius’s separation. Collihus was declared by the Council of Alexandria (A.D. 323) to be only a presbyter. We must notice that the refusal to
MINISTRY (Early Christian) 671

recognize Ischiyrus' ordination was not due to the fact that Callithus was in schism (as also Meletius was), but to the fact that he was only a presbyter, and therefore could not ordain (on Callithus see also Eutychian Epitome 7). We may now consider certain possible exceptions to the above-named rule.

(b) The 13th canon of Ancyra (A.D. 314). — This canon, according to the reading, seems to say that under certain circumstances a presbyter was allowed in Galatia to ordain. It runs thus:

'It is not permitted to chorepiscopi to ordain presbyters and deacons, unless permission be given by the bishops in writing in every (ecc. lect. another) parish' [i.e. diocese].

The words left untranslated are uncertain both as to the reading and as to their signification. The dative πρεσβηρίον is adopted by Lightfoot, who translates 'nor even to city presbyters, except permission be given in each parish by the bishop in writing.' This would recognize that city presbyters might, if allowed by the bishop, ordain. On the other hand, Routh, Gore, and Ruckham read the accusative, and the last writer has gone into the readings with great care (in Studia Biblic. et Patr. Coloniae Agrippinae, iii. 577). This would forbid chorepiscopi to ordain city-presbyters without leave. If so, there is still a doubt as to the meaning of διάκονος μηδὲ μηδέν. Routh renders 'much less a deacon'; Gore follows Lightfoot here and translates 'not even' — he takes the middle clause as a parenthesis, and understands the canon to say that chorepiscopi may not ordain presbyters and deacons in another parish, not even when they ordain town-presbyters (in their own parish) without the bishop's permission. On the whole, the readings of this canon are so uncertain that no argument can safely be built upon it. It is a decided objection to Lightfoot's general interpretation that, if it were the true one, this canon would stand absolutely alone in 4th. century literature; the Alexandrian case (see below) is quite different. Another objection is that it would place the city-presbyters on a higher level as to powers of ordination (cf. 'not even') than the chorepiscopi, who at any rate were normally bishops. For detailed discussions on this canon see Lightfoot, 'Disputationes'; Gore, 'Church and Ministry,' note D., p. 333.

(c) The Canons of Hippolytus say (ii. 26. 10) with regard to the ordination of a new bishop that 'one who lays his hand on his head' is to say the ordination prayer. This canon has sometimes been quoted as if it said that 'one of the bishops or presbyters' is to do so. As we have seen, the Canons say that a presbyter cannot ordain, and therefore this is clearly not a permissible interpretation. But what does the canon mean? Gore (p. 132, n. 5) supposes that in the original (we have the Canons only in a translation of a translation) the direction was that one bishop and one presbyter were to lay on hands and to say the prayer. This would be in accordance with the close relation between these orders elsewhere hinted at in the Canons (see above, § 4 (b)). Yet this explanation does violence to the grammar of the text as we have it; for all the verbs are in the singular. Another explanation may therefore be preferred, that ' unus ex episcopis et presbyteris' means 'one who has both the episcopate and the presbyterate,' for we have already seen (in § 4 (b)) that a bishop was not considered to cease to be a presbyter when he became bishop. The rendition of the Canons make it precarious to fix certainly on any one translation of the words; but they cannot be adduced as an exception to the rule which we are considering.

(d) The succession at Alexandria. — Much more important than the above is a peculiarity said to have existed at Alexandria in the earliest ages. (The matter is full of difficulties and may be studied in detail in Eutychian Epitome 7.)

It is said that the bishop of Alexandria till the middle of the 3rd century took his bishops nominated (nominant) as bishop one of their own number, and placed him in a higher grade, as if an army were to appoint (faciat) a general, or deacons were to choose from among their number the one who knew to be diligent, and to call him archdeacon. He then goes on to deny that a presbyter can ordain, in the words cited above (a). Somewhat similarly, Severus, Monophysite patriarch of Antioch in the 8th cent. (we have his letter only in a Syriac translation), says that the bishop of Alexandria used in former days to be appointed (the Greek verb was doublet καταφέρεσθαι) by presbyters, but 'afterwards the solemn (or mystical?) institution of their bishops has come to be performed by bishops.' The word rendered 'institution,' μεταφέρεσθαι, may mean either 'election' or 'ordination' (cf. Euth. Epitome 7). This would have forbidden chorepiscopi to ordain city-presbyters without leave. If so, there is still a doubt as to the meaning of διάκονος μηδὲ μηδέν. Routh renders 'much less a deacon'; Gore follows Lightfoot here and translates 'not even' — he takes the middle clause as a parenthesis, and understands the canon to say that chorepiscopi may not ordain presbyters and deacons in another parish, not even when they ordain town-presbyters (in their own parish) without the bishop's permission. On the whole, the readings of this canon are so uncertain that no argument can safely be built upon it. It is a decided objection to Lightfoot's general interpretation that, if it were the true one, this canon would stand absolutely alone in 4th. century literature; the Alexandrian case (see below) is quite different. Another objection is that it would place the city-presbyters on a higher level as to powers of ordination (cf. 'not even') than the chorepiscopi, who at any rate were normally bishops. For detailed discussions on this canon see Lightfoot, 'Disputationes'; Gore, 'Church and Ministry,' note D., p. 333.

The Canons of Hippolytus say (ii. 26. 10) with regard to the ordination of a new bishop that 'one who lays his hand on his head' is to say the ordination prayer. This canon has sometimes been quoted as if it said that 'one of the bishops or presbyters' is to do so. As we have seen, the Canons say that a presbyter cannot ordain, and therefore this is clearly not a permissible interpretation. But what does the canon mean? Gore (p. 132, n. 5) supposes that in the original (we have the Canons only in a translation of a translation) the direction was that one bishop and one presbyter were to lay on hands and to say the prayer. This would be in accordance with the close relation between these orders elsewhere hinted at in the Canons (see above, § 4 (b)). Yet this explanation does violence to the grammar of the text as we have it; for all the verbs are in the singular. Another explanation may therefore be preferred, that ' unus ex episcopis et presbyteris' means 'one who has both the episcopate and the presbyterate,' for we have already seen (in § 4 (b)) that a bishop was not considered to cease to be a presbyter when he became bishop. The rendition of the Canons make it precarious to fix certainly on any one translation of the words; but they cannot be adduced as an exception to the rule which we are considering.

The third writer is Eutychius, an Arab patriarch of Alexandria in the 10th cent., who says that the twelve presbyters of Alexandria, when the patriarchate was vacant, chose one of their number, and the remaining eleven laid their hands on him, and blessed him, and created him patriarch, and that this lasted till the time of Bishop Athanasius (A.D. 313—336). Those who are familiar with the late ecclesiastical histories of the Eastern Churches, which are full of fables and of impossible statements, will hesitate to accept Eutychius' testimony as an independent confirmation of Jerome. He probably depends on Jerome at third or fourth hand, and it is not surprising that he flatly contradicts him.

We are, then, met with a perplexing series of contradictory statements. But they can hardly be all dismissed as entirely devoid of truth. Probably there was at Alexandria in very early times some peculiarity in the appointment or in the
ordination of bishops, whether it took the form of the presbyters electing him or of their ordaining him. A great difficulty in the way of the latter supposition is the fact that Jerome makes the church of Alexandria place bishops outside of the See of Origen. Yet Origen, who suffered much from the autocratic authority of the bishops of Egypt, and especially of the bishop of Alexandria, and who was prompt to castigate bishops for going beyond their powers, gives it as his dogma in his novella (Duchesne, p. 127 f.) that he himself never had a great clergy which he was taking place by which the Alexandrian presbyters were being deprived of their rights (on this point see, further, Gore, Church and Ministry, p. 127 f.). On the whole, the remark of C. H. Turner (JThSt ii. 618) seems just, that 'it becomes harder than ever to discover the history and character of this exceptional system in detail.'

(f) Some other exceptions which have been alleged are due to a misapprehension. Thus Paphnoutius, a presbyter and hermit in the Scetic desert in Egypt in the 4th cent., is said by his younger contemporary Chrysostom, the historian of Oriental hermits (Conferences, iv. 1), to have 'promoted' a certain Daniel to the diaconate and presbyterate. The meaning here must certainly be 'to promote,' as is often the case even with the worst constitutiorum, 'ordinaire,' and the like. We read, e.g., of kings 'ordinating' their wives to sacred function (see Constat (27)). To suppose that at the end of the 4th cent., a presbyter in Egypt laid on hands that one who made use of them elsewhere in the 5th cent., mentioned it without surprise, would indeed be an anachronism. Another instance is the statement by Cyril that Novatian ordained a presbyter in Egypt in the 3rd cent. (see Nicene and Post-Nicene Fathers, 2nd series, iii; appointed (constitutus) Policellus deacon (Ep. iii, xxviii.) at this period. Such a practice here must be one of being tested; few lines later on Cyril says that Novatian, who had 'made' (constituit) a deacon, made 'Novatianus' a bishop. But Cornelius tells us (Nos. IV. 43), that Novatian was the bishop of three presbyteri, from a remote part of Italy to Rome, and when they were drunk to ordain him through a counterfeit and vain imposition of hands. Thus 'making' a deacon or bishop here means 'getting him ordained.' (Ruske also calls Novatian 'Novatianus.' Dcin. 43, 109, iv; History of Aulian, p. 56.) Outside our period, but it may be here briefly referred to. Bede says (Ep. i. 2) that the kings of Iona, Loct, or East, made, 'ordinating' (ordinantes) Aulian bishop, sent him to their friend King Oswald to preach the gospel. Here 'ordinating' can only mean 'procuring the ordination of.' We know that the Irish and Columban monks had a bishop with them for episcopal acts, though they had no system of episcopal episcopacy. But in any case it is impossible to believe that Bede, the ardent upholder of the customs of Rome, would have accepted (as in fact he did accept) a bishop who had been ordained by presbyters only.

(g) Bishops ordained by not fewer than three bishops.—The earliest example of this rule, as a definite enactment, is at the Council of Arles in Gaul (A.D. 314), which says that ordinarily seven, but at any rate not fewer than three, bishops are to take part in the ordination of a bishop (can. 29). The Council of Nicæa says that the bishop is to be appointed (sacerdotus) by all the bishops of the eparchy (province); at any rate at least three shall meet and ordain, the other bishops giving their assent in writing. The Apatost. Const. (iii. 28) says that a bishop is to be ordained (episcopovcrêt) by three bishops, or at least by two, and is not to be appointed (sacerdotas) by one; see Apatost. Conciones, § 16. But this rule must have been in force long before the 4th cent. Cornelius was ordained by 16 bishops (Cyprian, Ep. iv. [ii.], § 24, 'ad Antonianum'). Novatian was ordained, as we have seen (e), by three; had the rule been in force, he could have been content with getting a single bishop to ordain him. Must stress is laid by Athanasius on the number of bishops who took part in his own election (see acta. 82). At the third chapter of the Council of Carthage (A.D. 397) it was proposed that twelve bishops should be the minimum; but this proposal was not carried (Hefele, ii. 408).

An exception to the rule is found at Rome, where, at least from the 6th cent. onwards, the pope acted alone in consecrating bishops (Duchesne, p. 361). And in the Celtic Church it was common for a bishop to be consecrated by a single bishop.

The object of the rule seems to have been to secure the assent of the comprovincial bishops to the election. But in the ordination itself there is a variety of usage as to what part the bishops took (see art. Ordination).

3. Apointments of minor orders.—In the 4th cent., when minor orders were developed, there was a certain discrepancy of usage as to whether certain classes of persons were 'ordained' at all, i.e. set apart by some solemn ceremony; and also a distinction was frequently made between ordination and ordination without, laying on of hands. Basil distinguishes the ministers who were ordained without it from those 'in orders' (τως ἐνστασις, Ἐπ. ευαγ. τερ. εκκλ. 31). So the Apatost. Conciones (82 [81]) speak of the χειροτονία βασίλειος, meaning 'ordination to the higher ministry.'

In the Text of our Lord (I. i. 41 f.), Canons of Hippolytus (vii. [ed. Achelis, § 48 f.], Epip. Ch. Ord. 35 f.), Ethiop. Ch. Ord. 27, subdeacons and readers are ordained without imposition of hands; and so the reader in the Const. through Hippolytus (14); and the subdeacon in the Gallican Statutes (§ 5), which take the same thing for granted in the case of the ordination of an acolyte, exorcist, reader, doorkeeper (§§ 6-9). On the other hand, the Apatost. Const. (viii. 21 f.) press the laying on of hands, and appoint it (an ordination of honor) for reader, exorcist, and reader. The Const. through Hippolytus appoint it for a subdeacon (11), but not for a reader.

In many of these manuals persons holding charismatic offices are not ordained at all, and confusion between confessor, virgin, ascetic, and exorcist. But there are exceptions, in which some of these classes receive an ordination of some sort, though without imposition of hands. In the Texts (Δημοτα), 'who preside' are ordained (i. 41); in the Canons of Hippolytus (viii. [ed. Achelis, § 53 f.]) one who wishes to be ordained because he has the gift of healing is not to be ordained until it is made clear that the gift is of God (other manuals say that one who has a charisma is not to be ordained, i.e. merely for that reason); in the Gallican Statutes (§ 7) an exorcist is ordained, and a book is given him in which the exorcisms are written. Virgins (ascetics) receive a blessing on their profession, not from presbyters, but only from the bishop, in Gallican Statutes (§ 11) and the 3rd canon of the Council of Carthage, A.D. 397.

9. The institution of a ministry by our Lord.—

We now enter upon the consideration of theories as to the origin and development of the ministry.

There are two main theories, and an attempt will be made to summarize them, without going into questions of detail, and without going beyond general principles.

(a) It is held that our Lord founded a ministry to be a means of bestowing grace on the Church and for its government. For this purpose He founded an apostolate, and gave it to us a commission apart from the Church at large. It is clear from Acts, and to a certain extent from the Epistles, that the apostles exercised an authority over the Church, and it is difficult to conceive that that authority was due to delegation from the people themselves. It could have been content with getting a single bishop to ordain him. Much stress is laid by Athanasius on the number of bishops who took part in his own election (see acta. 82). At the third chapter of the Council of Carthage (A.D. 397) it was proposed that twelve bishops should be the minimum; but this proposal was not carried (Hefele, ii. 408).

An exception to the rule is found at Rome, where, at least from the 6th cent. onwards, the pope acted alone in consecrating bishops (Duchesne, p. 361). And in the Celtic Church it was common for a bishop to be consecrated by a single bishop.

The object of the rule seems to have been to secure the assent of the comprovincial bishops to the election. But in the ordination itself there is a variety of usage as to what part the bishops took (see art. Ordination).

For subdeacon see § 6 (5). The text is used in Kus. HS III. 21 and at the Council of Ephesus (can. 1, A.D. 431) in the sense of the "position" or "order" of bishops.
passage about giving the keys of the kingdom of heaven carries a commission of binding and loosening, i.e. dispensing with guilt, a commission then given, but a promise that it will be given; and the promise was fulfilled after the Resurrection. The commission is, however, not here promised to the Twelve individually but to them as a body. At 1874 the Church (κολλεσαῖα) is spoken of as exercising discipline, and our Lord then gives (apparently to the Twelve, but this is disputed) that promise of binding and loosening which had already been given to Peter. The commission given to the apostles, the authority does inhere in the Church as a body, but the Church has (not by her own but by Christ's authority) executive officers, and it is through them that her judicial power is put into effect (Gore, Church and Ministry, p. 207). A distinct stewardship, however, apart from the powers promised to the whole flock, is foretold in the parable of Lk 19:12-26. This parable, as F. Godet remarks (Comm. 4, Eng. tr., Edinburgh, 1887, ii. 108), assumes that the apostolate will be perpetuated till Christ returns, a ministry of the word established by Christ. The same writer adds that the theory which makes the pastorate emanate from the Church as its representative is not Biblical; this office is rather an emanation from the apostolate, and therefore mediately an institution of Jesus himself, directly an institution of the Church. Whatever the power, the stewardship is appointed by the Lord (note the future: 'shall set over his household'), in order that the household may be fed, and that it will last until the Lord comes.

The ministerial commission was given after the Resurrection, but it is disputed whether it was given to the apostles or to the Church at large. The commission in Mt 20:27-28 receives the gift of the Holy Ghost (i.e. ἐξεστὶ ὑμών without the article) and the power of binding and loosening, was given on the evening of Easter Day, when only ten of the apostles were present, Thomas being absent (v. 28). It was distinctly a mission: 'As the Father hath commissioned (ἀνεστάλεξε) me, I also send (ἐστῇ) you.' But it is uncertain whether others were present on this occasion besides the Ten. 'The disciples' are mentioned (v. 4), but this often means the apostles. In the description in Lk 24:47, which seems to refer to the same appearance of our Lord, we read of 'the Eleven and them that were with them.' The whole is a general way of speaking, for Thomas was not present; in this passage there is no word of any commission. Putting the passages together, we may conclude that it is probable that others besides the Ten were present, but the indications point to the commission having been given only to the apostles. That Thomas had the commission given to him at another time can only be conjectured. In the First Gospel the commission is given when the 'eleven disciples' are assembled on the mountain in Galilee: 'All authority hath been given unto me in heaven and on earth. Go ye therefore, etc.' It has been suggested by H. Alford that others besides the Eleven were then present, because 'some doubted.' But this against the grammar. The 'some' must have been certain of the Eleven, for it is at all improbable that the apostles, or some of them, though they believed on Easter Day, yet allowed doubts to assail them afterwards. This hesitating faith was characteristic; it was finally confirmed only by the Pentecostal gift. We do not know what accounts St. Mark gave of the ministerial commission; but the author of the Appendix certainly conceived the commission as having been given to the Eleven ('Mark 16:17').

The more probable conclusion seems to be that the special ministerial commission was given to the apostles to the last generation, although the Church at large was given a supernatural authority to be exercised by divinely appointed ministers. For a fuller exposition of this view see, e.g., op. cit., ch. iv. and (in the later editions) note M.

(b) A very different view is taken by Hatch (Organization of the Early Christian Church) and Hort (The Christian Ecclesia). Hort holds that the commission was given to the Church as a whole, and that the Church as a whole appointed the apostles, whose authority was due to the spontaneous homage of the Christians in Judaea. He thinks that the apostles were not commissioned by our Lord to govern the Church, but only to be witnesses of His resurrection; that they were not, strictly speaking, officers of the Church as the Seven were (p. 230). He doubts if they had any authority outside Judaea. An indefinite authority grew up round them because they were personal witnesses. 'The Ecclesia itself, i.e. apparently the sum of all its male adult members, is the primary body, and, it would seem, even the primary authority' (p. 229). With regard to the commission in Jn 20, Hort thinks that others besides the apostles were probably present, and that, though put in the plural, the word 'apostles' was principally spoken to the apostles, yet it was spoken to them as representing the whole community (p. 324). [There is no scriptural authority for Hort's addition of 'adult male' to the narrative.]

On these various views it may be remarked that it is common ground that the apostles were the commission as representing the Church. The principal point in dispute is whether they received a commission from our Lord direct, distinct from the Church, i.e. whether they derived their authority from Him immediately or from the people to whom they were to minister.

10. The origin of the diocesan episcopate.—We may in conclusion state very briefly the main theories which have been advanced to account for the universal existence of the diocesan episcopate from the 2nd cent. onwards. (a) The first view is that the diocesan episcopate is the successor to the apostolate, but localized. The old local bishop 'Ponten' is only one of the presbyters and deacons of the later period; and the supervisory ministry of the apostles, which was formerly itinerant, by the bishops who were now settled in one place. In this view the complete commission, which was held at first by the apostles, was given to certain viri apostolici and then to bishops (in the later sense) only, and presbyters and deacons never from the first possessed the commission to hand on the ministry to others. This was the more usual patristic view. For an able statement of it reference may be made to Gore, The Church and the Ministry.

(b) The second view is that the diocesan episcopate was evolved, by apostolic direction, from the presbyterate; or, to speak more accurately, from the body of presbyter-bishops. This evolution was effected by one of the members of this body being given certain sole powers, notably that of ordaining. In this view the old presbyter-bishops had the complete ministerial commission, even as the apostles had it, but the complete commission was restricted at an early date to one of their number. This is the view of Jerome, Ambrosiaster, and some other Fathers. It may be studied in J. B. Lightfoot's 'Dissertation,' which uphold it. It is clear that either of these views is compatible with either of those described in § 9.
the one hand, the second view is compatible with the highest doctrine of apostolic succession, such as Jerome himself held. And, on the other hand, the first view is compatible with the belief that the apostles derived all their authority from the people.

Whatever view be taken of the matters touched on by this passage, it is important to notice a point on which all are agreed. The Christian ministry is not vicarious, but representative. The members of it do not form a class having authority independent of God, but the ordinary people, for every Christian holds personal communion with the divine Head of the Church (Lightfoot, pp. 151, 203; Gore, p. 76). All have direct access to God, and the minister does not perform the people's religious acts, but he addresses the people to God by acting as their mouthpiece, but the worship which he offers is the people's and not merely his own. The sacrifices of prayer and praise is offered by all, though the minister may be the only one who gives audible utterance to it. He represents God to the people, as the human instrument by whom the word is preached and the sacrifice administered. He is not a barrier between God and the people.

A. J. MACLEAN.

MINOTAUR.—I. The myths.—Minotaur (ὁ Μινώταυρος, ὁ Πατός ἢ Νίνος καλεόμενος) is a figure in Greek myth who is the offspring of Pasiphae's union with a bull, and is represented as a man with a bull's head and tail. As Apollodorus tells the story, his husband, Minos, had become king of Crete through the goodwill of Poseidon; after telling the people that the god had appointed him and would not be present until he was asked, he prayed Poseidon to send a bull from the sea that he might sacrifice it. But he broke his vow, for, when the splendid creature came forth from the deep, he added it to his herd and offered a substitute on Poseidon's altar. To punish him the god inspired Pasiphae with an unnatural passion, gratified through the artifice of Daidalos, who wove for him a cow's skin with horns. She bore a child, Asterios, the son of Pasiphae, who had a bull's head, but was otherwise like a man. Warned by a oracle, Minos imprisoned the monster in the labyrinth built by Daidalos. Men might not kill the bull, for the sea was made savage by Poseidon, and it was one of the labours of Herakles to capture it and carry it to the Peloponnesus; hence it wandered to Marathon in Attica, and ravaged the country. Androgeus, son of Minos, having come to Athens and beaten all opponents at the games, King Agensus challenged him to go forth against the bull, which killed him. Minos, overjoyed at his son's death, took the bull and exacted as a condition of peace that every year (every ninth year, according to Plutarch, Thes. 14) the Athenians should send seven youths and seven maidens to be devoured by the Minotaur. On the third occasion Theseus, who had overcome many robbers and, last of all, had captured the Marathonian bull, was chosen or offered himself as one of the victims. When he landed in Crete, Ariadne, daughter of Minos, fell in love with him, and, on his promise to return to Athens as his wife, contrived with Daidalos that he should escape from the labyrinth, giving him a clew of thread which he was to make fast at the entrance. Holding the thread, Theseus entered the labyrinth and slew the Minotaur with his fists. Then he made his way out and escaped by night with Ariadne and his companions.

Apollodorus omits the incident of Minos' ring and Poseidon's recognition of Theseus as his son. The story is further rounded off by Pherecydes; Theseus sacrifices the Minotaur to Poseidon, and the injured god at last gets his due.

In this form the story owes much to Attic dramatists, who depicted Minos as a cruel tyrant, while the general tradition saw in him a wise lawgiver and founder of Hellenic civilization. The Attic versions make it an incident in which Daidalos was almost as much the hero as Theseus. It credits Athens through him with the miracles of Minoan craftsmanship. It emphasizes Minos' v3and on Poseidon and Theseus' and his connection with the palace, the Minotaur,奔跑 the labyrinth, both figured on coins of Knossos, and the fall of the Minoan Empire in a Sicilian expedition (cf. Herod. vii. 170). The break between prehistoric and Hellenic Crete was in many respects complete, but the coins make it probable that the legend of a bull-monster clung to the pre-historic palace at Knossos, and was adopted by the Dorian settlers. A. J. Evans, the excavator of the site, has shown how the complex of ruined walls, adorned with frescoes of bull-fights, in which boys and girls took part, and processions of tribute-bringers, must have been the setting of the story. The name of the labyrinth is explained with the help of ναός, 'a sacred place, as opposed to the temple of Poseidon, visionary character which stood in shrines within the palace and was often engraved on its walls and pillars. This may have been the ancient name of the palace, placed under the protection of a deity with whom both axe and bull were closely associated (hence the frequent juxtaposition of double-axe and horns; see art. ΑΓΕΩΝ ΡΕΧΟΝ, vol. i. p. 143, fig. 6). The remarkable preservation of the ruins proved that they were respected by the Greeks and Roman inhabitants, perhaps as the remains of the labyrinth, which the ancients located at Knossos. Diodorus mentions the foundations of Rhene's house and a cypress-grove

1 Paul i. xvii. 3, describing a painting of the 5th cent. a.C. by Mykon; cf. Buxford, xvii.
2 Frag. 100 (FRG L. 97)-school. to Od. xi. 310 (Theseus is told how to surprise the Minotaur as he sleeps in the palace, evidently the central point of a conventional maze; cf. § 3 below).
3 This conflict of views is discussed in the Platonistic dialogue Minos, 811D and 220D, and in Plat. Thea. 15. Both writers remark that Minos made a mistake when he quarrelled with the city of Athens, whose tragic poets could make or interpret a reputation.
4 HES. xvii. 1901, 100 ff., ESA viii. 1901-03, 103.
5 Plut. Quast. Græc. 384A. A cognate form was the name of Labraunda, the Carian town where an axe-wielding Zeus was worshipped.
which has been hollowed since ancient times as existing there in his day; the tabus attached to such a precinct go far to account for the survival of the period, although it was a classical city. He denies that any trace of the labyrinth remained, but seems to be combating an accepted belief; Philostratus, writing early in the 3rd cent. after Chr., mentions the labyrinth as the chief gate of Minos, and the cupidian words of the tradition to the subterranean passages of a quarry above Gortys, described by P. Belon and other travellers.

2. The Minotaur in ancient art.—In the Crete art of the 16th cent. we meet with a series of hybrid monsters, combining a human body with various animal-heads, which seem to represent demons (cf. EGEAN RELIGION, vol. i. p. 140); the types may have been influenced by the animal-headed deities of Egypt or have been generated locally by ritual dances in which animal-masks were worn. Among them is a Minotaur-like figure, the most significant instance being a clay seal-­impression from Knossos which shows a seated monster with calf’s head and forelegs and a bearded man standing before it.1 Bull-headed men appear in the archaic art of Greece and Etruria, and until the 4th cent. of our era there was no trace of the standards of the Roman army.2 The earliest representation of Theseus and the Minotaur is a small gold plaque from Corinth (Berlin Museum,3 a fragment of a much larger one that was figured in Labyrinthos, by Dr. Eeinaoh, Bull-headed building plan). The Minotaur appears with black-figure vases, and, according to Pausanias, the Minotaur was twice figured among the mythological groups on the Amynian throne; (a) bound and led captive by Theseus (cf. the sacrifice to Poseidon mentioned by Pherekydes), (b) being slain by him.3 At first isolated, the killing of the Minotaur is associated on later black-figure and red-figure vases with other deeds of Theseus, a cycle which took shape at the beginning of the 5th cent., when the Attic hero was exalted into a second Herakles. The Minotaur is drawn as a man with a bull’s head and tail; his body is often spotted or brindled, and once sprinkled with stars (in allusion to his name Asterios), once with eyes, like that of Argos.4 He is naked and unarmed, but sometimes clutches one or more stones. Theseus usually attacks him with a sword, but an interesting group of vase-paintings shows him dragging the dead monster out from a building with both columns; he has a man, who suspect the influence of stage-representations. At some places too, even Minos are sometimes present as spectators. Later designs treat the combat as a wrestling-match, the finest example being a bronze relief from Pergamon now in the Berlin Museum.5 In sculpture we have a metope of the Theseion at Athens, fragments of a group found on the Acropolis (where Pausanias saw and described it), and fragments of two other groups in Rome, all representing the combat.6 Campanian wall-paintings show Theseus standing over the dead Minotaur, while the rescued boys and girls press round, and some mutilated marble groups seem to have represented the same subject.

Evans traces the origin of the Cretan type to certain Egyptian cylinders found in the Delta, which influenced Cretan sealstones from about the Vth dynasty onwards. These in their turn borrowed types from early Babylonian cylinders.7

3. The labyrinth in art.—On coins of Knossos the labyrinth is represented by a pattern of increasing complexity, advancing from a simple fret-pattern, through more or less elaborate swastika, to a developed maze.8 On several vases of the 5th cent. the scene of Theseus’s combat with the Minotaur is indicated by a panel of maccanders and similar patterns, evidently a conventional representation of the supposed ground-plan.9 The labyrinth, in fact, became assimilated to the mazes which have been familiar in most parts of Europe from antiquity to the present day,—a large subject which cannot be fully discussed here.10 In Italy, where the maze had been known as the Game of Troy (Trusa inscribed upon a maze on an early Etruscan vase), the name ‘labyrinth’ took its place, and the Minotaur was figured in the centre of several Roman mazes. Similar pavements were constructed in Christian churches; they are especially common in the cathedrals of N. France and E. Germany, as Domus Dedali or Chemin de Jerusalem, and to tread their windings was a recognized form of penance. It seems that the original use of the maze, wherever found, was to serve as the track of a ritual dance. Plutarch tells a story which was evidently intended to establish a connexion between Greek dances of this type and the Minotaur legend; Theseus had landed at Delos on his voyage home, and with his companions danced a dance which is still kept up by the Delians in imitation of the windings of the labyrinth.11

4. Explanations of the myth.—(a) Rationalistic.

According to Philochorus,12 the Cretans said that the Minotaur was a general named Taurus whom Theseus defeated at an athletic meeting; the tribute-children were kept prisoners in the labyrinth and given as prizes to the victors; or else he was a captain whom the Athenians beat in a sea-fight. A modern writer, E. Fabricius,13 who assumed that the quarry near Gortys was the labyrinth, explained its narrow entrances as a device for the guarding of prisoners by guards, and supposed that this gave rise to the story of the tribute-children.

(b) The Minotaur as an old bull-god. W. H. Roscher14 equated Minotaur = Cretan bull = Minos. E. Béthe15 has argued that Minos, son of the bull Zeus and husband of Pasiphae, who bears a bull, was originally the bull-god himself. The story of Theseus and the Minotaur is a doublet of the stories of Herakles vanquishing the Cretan bull and Theseus capturing the bull of Marathon; in each case the story is allegorical and represents

1. Baumsteiger, fig. 1575; Reinsch, S. 110.

5. For the literature see J. G. Frazer, G.E.S., pt. iii., The Dying God, London, 1911, p. 176 ff.; and Cook, l. 453 ff. Evans found maze-patterns painted on wall-plaster in the coming New Minoan Periods in the labyrinth-patterns of Crete, through the simple key-patterns of the Egyptian sign for ‘the palace in its court’ which was taken over into the Minoan system of hieroglyphs. See Fr. There. 23, 1914, p. 49, and Wehrstein, loc. cit., 49, mentions the ‘labyrinth’ in a list of Cretan dances.

6. Quoted by Plut. Thea, 16.

the overthrow of Cretan rule. Herakles, who goes to Crete to capture the bull, stands as the Dorian colonist; Theseus, who overcomes the same bull in Attica, delivers the country from a Cretan conqueror. 1 On somewhat different lines J. H. Cook has argued in a paper read before the Hellenic Society in 1914 that the slaying of the Minotaur, son of the sea-bull, expresses the downfall of Cretan sea-power; but the Minotaur was the primitive "point de repcre" round which ultimately crystallized the complex figure of Poseidon. 3

c. The solar interpretation. — Pasiphae's name connects her with the moon; 2 her bull is often held to be the sun. 2 Two recent sacrifices have been seen in the Minotaur a human actor impersonating the sun-god. 3 J. G. Frazer maintains 4 that Cnossus was the seat of a great worship of the sun, and that the Minotaur was a representation or embodiment of the sun-god, 5 and suggests that Ariadne's dance, the track of which was the labyrinth, may have been an initiation of the sun's course in the sky. 6 A. H. Cook, after showing that in Cretan religion the sun was conceived as a bull and that the labyrinth was "an orchestra of solar pattern presumably made for a ministic dance," goes on to suggest that the dance which started the sun movement in the labyrinth as a bull—the Minotaur, in fact, was the Knossian Crown Prince wearing a bull-mask, a piece of ritual borrowing perhaps from Egypt. 7

(2) The conception of human sacrifice.—The Minotaur, like the horses of Diomedes, is a man-eater; the myth implies that it was necessary for Minos to gratify this appetite. W. Helbig 1 saw in the story another version of Kronos devouring his children. Kronos was banished by Zeus to the under world, the Minotaur by Minos to the labyrinth. There was a tradition that in old days in Crete the King sacrificed his son to the Minotaur. 2 The most famous sacrifice to Kronos, and the 'feast of raw flesh' 3 which Euripides mentions in the famous chorus from his tragedy The Cretans, as part of the initiation to the service of Idain Zeus, was open to a similar amplification; in a recently discovered fragment of this play Pasiphae taints her husband in terms which leave no doubt as to the charge. 4 Euripides probably had in mind the Cretan mysteries in which the votaries tore with their teeth and tore with their hands the living body of the bull sacrificed in the way of the feast of the Olympian Zeus by the Titans. 5 But these mysteries stand in no direct relation, so far as can be seen, to the substratum of Minoan religion; they only form an catalytic element in the Euripidean story, but not the bull-form of the man-eating demon. Frazer has conjectured that in Crete, as in other parts of the Mediterranean, children were sacrificed to a Molech-like image with the head of a bull. 6

Phoenicians and Carthaginians sacrificed children to a bronze image of Kronos (= El 2), so confirmed that victims laid on its outstretched hands fell into a furnace beneath. 7 Rabbinical writers describe Molech's image in similar terms, and add that it had the head of a calf. 8 Now Talos, the brazen coast-guard of Crete, who killed strangers by hugging them to his red-hot breast, was, by some called Taoos (Apollod. i. 29), and a gloss of Hesychius makes him a by-form of the sun-god. A tradition 9

against miracles, and, though he knew of miraculous acts, he was inclined to regard them. When a magician gained an almsbowl by a display of miracles, he caused it to be broken and forbade these. Some sayings of his point to his disabilities of miracles:

1 There is no proof that a man can work a miracle by outward acts—perhaps a reference to the supposed gift of walking on air. When an orchet the implements are such that, however, he is represented as rebuking him: 'This will not conducive either to the conversion of the unconverted, or to the increase of the converted, but rather to those who have not been converted remaining unconverted, and to the turning back of those who have been converted.' He also said: 'I command my disciples not to work miracles.'

2 Muhammad also knew of miracles, but he disliked them and would not use them himself. The people demanded signs, but he denied them, usually on the ground that they are powerless to convince. In earlier ages they had been regarded as lies or sorcery, not as divine acts. God's revelation to the Prophet was the true miracle, and the Qur'an contained it.

3 Nor did any one of the great ethnical teachers lay claim to divinity. Yet, in spite of this and of their own utterances about miracles, miracles are freely ascribed to them, sometimes even in the actual works which contain such disclaimers. How soon this process began is difficult to say, yet probably not very long time was necessary for the growth of miraculous legends. Nevertheless, however, as in similar instances in Christian hagiography, it is possible to trace the growth of a miraculous story in successive versions of the same tradition and supernatural events associated with the lives of these men are either connected with their conception and birth or acts alleged to have been performed by themselves. The miracles of the former class are invariably lacking in lives contemporary, or nearly so, where these exist. There is sometimes a semi-miraculous origin (Lao-tse, Zoroaster, Buddha), but not a virgin birth, for both parents are represented as a common act of conception. The moment of birth is hailed by a great variety of portents on earth, in the sky, or in the lower regions. Unearthly lights are seen, mysterious music is heard. Prophecies of future greatness are made. The child himself speaks, laughs, stands, walks, or announces his intention of saving the world. In again, the child is miraculously saved from persecution and danger of death.

There are also wonderful signs associated with some ethnical teachers, especially at Buddha's death. For wonders associated with the birth of a bodhisattva or a Buddha (Lao-tse, Zoroaster, Buddha), see SBE xxv. 103 ff., cf. 1882.

The Buddhism of Tibet, London, 1890, pp. 347, 349; and for those connected with future beings in Zoroastrian belief, SBE xxvi. 111 ff., 137.

In the case of miracles of the second group beneficent actions are extremely rare, i.e. miracles performed to benefit others. As a rule, the miracles merely exalt their worker, and sometimes they are of a kind to force belief in him. Lao-tse is said to have raised the dead, and Buddha to have healed wounds; but these are occasional, and are in a minority compared with the great number of thaumaturgical acts. These largely consist of power over nature and complete control over its processes, and are often of a most

MIRACLES

grotesque and obviously improbable kind. Buddha made floods recede, or passed miraculously from one side to the other of a distant mountain. Levitation, flying through the air, and ascent to heavens are frequent miracles, or, as in the case of Buddha, treading on water, entering earth as if it were water, and passing through a wall. It is interesting to observe that inscriptions of this kind date at a distance of 2,700 years. The levitation, or changing of form, and invisibility occurs. Frequently the miracle-worker saves himself from accident or death.

Some of these miracles are simply repetitions of the magical arts attributed to medicine-men. They are traditional stock incidents easily fitted on to the life of any person. Others are sheer inventions. Others may be exaggerations of actual events, perhaps in some cases of real supernormal powers possessed by this or that teacher, or of great shrewdness or spiritual insight. But they are generally of a most unlikely character, and have seldom a beneficent purpose, nor is there any historic evidence for them, even if they were of such a kind as would require it.

In most of these religions miracles are commonly attributed to saints, sages and ascetics. They bear a similar character in widely distant regions and under different creeds, and often run on parallel lines. Here again these miracles bear a characteristic impress, or rather which are described too Christian saints. Taoist, Zoroastrian, Buddhist, Hindu, and Muhammadan all believe in the possibility of the miraculous in the case of gifted persons. Up to a certain point those who through asceticism and sainthood ‘rise to the Tao’ become like gods and are superior to the laws of nature. In Buddhism the cause is profound meditation. By this the arhat gains transcendent faculties—the five abhiṣīṇās (‘magical powers’) and iddhī, sthiti, but also the power of working miracles. Holy men in Islam possess similar powers as a result of their invocations. Others may be self-inflicted. They are also helped to them by the jinn and by knowledge of the divine name. The range of these wonders in the different religions is very wide. It includes a great variety of powers over nature—the production or cessation of storms or sunshine, causing the sun to stand still, drinking up rivers, superiority to fire or water (e.g., not being wet in heavy showers, or walking or passing through water); superior knowledge; the making invisible to the common Buddhist attribute, the power of invisibility, change of form or of sex, invulnerable-ability, levitation and swift passage through space, penetrating walls, mountains, earth, lengthening of beans of wood, opening doors without keys, swift transference from one place to another. Again, light is made to stream from the fingers or hands, or miraculous supplies of food are provided. Inanimate objects are made to act as if alive. Supernormal knowledge of distant events or of men’s thoughts is asserted. The power of exorcizing and dispelling demons commonly occurs. Less rarely the cure of disease and the removal of barrenness and even the raising of the dead are found. One method of curing disease by

Muhammadan wonder-workers is to pass the hand over the part affected—perhaps a species of mesmerism. As for the miracles as a whole, there is no evidence that they occurred in Buddha’s lifetime, as Burton says of the incredible miracles of Islam, collateral or contemporary evidence is never sought for. The question of supernormal powers will be discussed in another chapter of this work.

Occasionally, especially in Buddhism, Hinduism, and Islam, miracles are wrought by relics or at the graves of saints. As far as Buddhism is concerned, these are of a very dazzling kind. In Islam they are mainly, though not wholly, works of healing or the removal of barrenness. In the case of the latter the spirit of the dead saint begets the child—a form of primitive belief (see Fair, § 9, vol. v. p. 657).

Such miracles are occasionally said to cause belief. Those to be wrought in future ages on behalf of Zoroastrizianism will make all mankind believe in the good religion (e.g., causing the sun to stand still). Those wrought by Buddhists also cause conversion, especially incredible marvels in the world of trade.

4. Classical miracles.—This group, as it includes so largely miracles of healing, may be considered by itself. These were mainly the result of divine rather than human agency and they cluster around the life of sacred persons—e.g., the temple-sleep. The patient, after ritual and sacrifice, slept in the temple; in the course of his sleep he dreamed that the god touched and healed, or opened his mouth like the good of Leviticus under hypno-suggestive influences, or indicated a remedy either directly or by symbolic means. The actual healing was speedy or more gradual, and in some instances—e.g., the case of Asklepios—there were actual Orations—it was prolonged over many years, yet the god was always supposed to intervene. The stelae recording miraculous cures found at Epidauros are an obvious and customary kind of an advertisement of the shrine.

There is no reason, however, to doubt that cures of a more or less miraculous aspect did take place—the result of faith-healing or of a strong mental suggestion, aided by all the adjuncts of the place (the ritual, the dream, the medicaments). It is not impossible that in sleep the subconscious self may cause dreams about diseases, of the early indications of which it has no more notion and space, and the cure. The dream-cures may have been based on phenomena of this kind. The hero-god mainly concerned was Asklepios, who was thought once to have been a human healer, and to have raised the dead, while wonderful events—e.g., brilliant light—were associated with his birth.

Healing miracles were also wrought by images of gods, heroes, or famous persons. Other miracles were wrought by such images—they moved, wept, spoke, and gave advice—and there are numerous parallels to this in all religions, even in Christianity. Mythology and popular belief also ascribed

great wonders to relics of gods or heroes. Some of these were multiplied exactly as medieval relics. They were miraculously found, and various places disputed their possession. Healing also took place at tombs of heroes. Less common are miracles by human wonder-workers. Tactitus speaks of Vespasian’s control of blindness and lameness, 1 and the fictitious life of Apollonius of Tyana by Philostratus contains miracles at his birth and death, healings, and exorcizing of demons. He may have had this in mind, but some of the stories are modelled on the NT miracles. Others are told by none but Philostratus. 2 The emissaries of the impostor Alexander of Abonoteichos (q.v.), according to Lucian’s life of him, credited him with healing and with raising the dead.

5. On the whole the miracles of ethnic religions do not possess an air of truth. They are incidents ascribed to this or that person, some of whose dealings, on account of his greater insight or skill, may have seemed miraculous. Some, however, may be supernatural phenomena. As to the cases of healing, they are seldom ascribed of individual teachers, but rather in connexion with shrines and relics. Suggestion or hypnotism may explain such as are genuine. Whether any influx of life or healing power from another sphere was also present is a question of speculation (see §12).

6. Miracles in the OT.—Roughly speaking, the miracles of the OT fall into two groups, those connected with Moses and Joshua, and those connected with the other prophets. In describing these, there is a date far removed from the events described, and their evidential value is thus small. Some of the miraculous events are doublets of each other, and in those of Elijah and Elisha a kind of primitive tradition has been preserved. The narratives are in some cases composite, and a more or less non-miraculous substratum may be traced. Many of the miracles have a strong thaumaturgic aspect, and they suggest that, as in the case of etanic religious teachers and the Christian saints, it was not enough that the outstanding character, insight, and leadership of Moses or Elijah should be recognized, but that their personality should also be ascribed to them. While, in the case of Elijah and Elisha, it is not impossible that they had some gift of healing—which might then be the point d’appui of the legend attached to their history—it is remarkable that in the case of the greater prophets, save once with Isaiah (2 K 20 2), there is no thaumaturgic element. The idea of God which the miraculous stories reflect is not of the highest kind, but rather that of men at a lower spiritual level. The spirit animating some of the miracles resembles that which animates barbarous men. There is aggressiveness, ruthlessness in dealing with human life where men do not know or worship God, and intolerance. Few of the miracles have that beneficent aspect which we find in the majority of the NT miracles. Again, there is a certain materialism in the method of describing the miracles—e.g., in the idea of speaking face to face with God. Some of the miracles are magical, and are alleged to have been copied by means of spells. Others seem to reflect the traditional beliefs of the Semites—e.g., that of God’s manifestation in fire—or are traditional stories rather than true histories. Some, no doubt, have a symbolic value, as when a record of spiritual revelation is told in material terms (the burning bush, the revelation to Elijah—

1 Pauv. v. 12, 7; HN xxviii. 5; Herod, 1. 67 f.; Plutarch, of Genio Sot. 41, Theaet. 36; F. Dechambre, Mythologie de la Grece, in Notice historique, Hist. des religions de la grece antique, 1857-59, ii. 22.

the latter a reminder that miracles as outward phenomena parallel to thunder, fire, etc., are a lower kind of testimony to God. Some of the miracles—e.g., the ten plagues—are regarded as direct divine interpositions. It is possible, doubtless, to suppose that God made use of existing phenomena to effect his purposes. It is equally possible that phenomena coincidental with a crisis in the nation’s history have been regarded as direct Providential interpositions. Especially would this be the case with plagues, but some of the plagues had preceded them. Such answers to prayer must not be ruled out, and all such answers have a miraculous aspect. They show the superiority of spirit to matter (see below, § 16). This is also true of the event on Carmel, when Jehovah’s superiority to Baal was clearly seen in answer to Elijah’s prayer. There was some divine intervention, even if that is explained thaumaturgically or associated with rather ruthless methods. Again, we need not doubt that God led His people ‘with a mighty hand, and with an outstretched arm,...and with signs, and with wonders’ (Dt 29 2). We need not doubt that in the movements of history He does ‘make a way to His indignation’ (Ps 76 2) against the unrighteous. But whether the leading and interpositions were in the manner depicted is open to question. Whether the deliverance might easily lead to the formation of legendary accounts of it. The real miracle in the OT is the growth of the idea of God, the strong belief in the direct guidance of men, the divine guidance in the affairs of the universe and of men. The real religion of the OT lies elsewhere than in the accounts of separate miracles. It is found in the growth of a spiritual religion, in such documents as that which forms the real core of creation, in the records of spiritual experience and aspiration, in the phenomenon of prophethood.

7. The miracles of Christ.—(a) When the documents composing the Gospels are examined, it is found that even in the earliest there is no non-miraculous substratum; all alike contain miracles. By every one Christ’s teaching is admitted to be marvellous, yet authoritative. This raises the presumption that the marvellous deeds are also authentic. The date of the documents is sufficiently near to the events recorded to admit of authenticity, and the evidence is even stronger. Moreover, in cases of signed scientific evidence is likely to be. The writers were men who knew themselves to be witnesses, and had regard for truth.

(b) Christ ascribes His miraculous power to God, as He does His teaching (Jn 14 24). There is a real divine work being done (Lk 11 13, Mk 5 41, Lk 8 50; cf. Jn 9 11 14 21 14 24). So also the witnesses of the miracles regard them (Mk 2 2; Mt 9 16, Lk 7 22; 19). Yet power is inherent in Christ, as the method of the miracles shows, or the definite ‘I will’ (Mk 14 11). Here also the people recognize this inherent power (Mk 7 5). All power is delegated from God, as Christ taught. Hence the power to work miracles is not necessarily confined to Christ (Mk 12 37), though He has that power in a supreme degree.

(c) Christ as man unless is a miracle without a priori likelihood, therefore there need be no a priori objection to His miracles, which generally tend to rectify an unnatural, disorderly state in the world. Unlike Budaus, Christ had not to grope His way to perfection in an instinctual contrast. The sinless Christ was in unison with the forces of the divine will. Hence power to cure disease flowed from Him who was untouched by disease. 1 So, also, as we have seen in what precedes. 2

He was certainly more than man. His powers would thus be greater than those of ordinary men, and might therefore be miraculous.

(e) Christ’s miracles are in harmony with His personality and teaching. There is an air of naturalness and ease about the miracles not found elsewhere. He never doubts His own power to work signs or faithful or demonic healing, or ascribes this power to His name. His method, unlike that of other healers or exorcists, causes amazement, showing that it was not similar to theirs. He casts out demons with a word, or d of course these are very faith-failure cases. The mercy and love inspiring His miracles, and not the miraculous power, are spurned (cf. Mk 3:5, Mt 6:23, Lk 11:19—20, Lk 10:12—15). Mere popularity was distasteful, and silence about a cure is often enjoined.

The exceptions were those where the power of Christ was unknown in Gadara and was leaving it. What the man was to tell of was the divine mercy.

True, Christ’s compassion often overcame His dislike of mere popularity, while this popularity might sometimes indicate a genuine faith and love. But, if Christ works miracles at all to evince faith, it is not the faith of a fickle crowd, but the faith of the individual. Such an individual or those who intervened for him would already have faith, and that faith would be augmented (Jn 4:48, Lk 17:18—19). Yet even here it is an existing confidence that is rewarded rather than a divine mission that is proved.

(F) Comparing Christ with ethnic teachers or Christian saints, we find that they never claimed to work miracles, and disliked them, while Christ made such a claim. If He refused to work a sign from heaven (Mt 3:4), it is really a proof of His power to work signs of a kind, but not of the kind so liberally allowed to ethnic teachers. Christ’s miracles are beneficent, never egotistical like those of Jewish or Grecian teachers; they are not found elsewhere. Their setting is different from those of the ethnic religions; they are harmonious with the character of the work; they have invariably a moral and spiritual quality not found elsewhere; and a confession of belief is made (Mt 4:48; cf. Mt 14:30). The miracles, however, were not wrought primarily for these purposes, but to quell fears or to confirm existing confidence. Even the lesson of the withered fig-tree is not that of the power of Christ, but of faith in God and of what faith can do (Mt 21:21). The true attitude is seen in Jn 21, when recognition follows the miracle. The act is consonant with a personality already known and loved. The cumulative effect of miracles was no doubt to quicken understanding of Christ, and we remember that the great miracle of the Resurrection was changed into a sign of Christ’s true nature. Still, on the whole, the miracles were not meant to force belief or to act as credentials. They were part of a divine mission, and had their value, but it was rather that of contributing to a better understanding of a personality, not as a proof of it, and that because they were signs (eukpia) of a divine compassion. As for the people, their amazement was at the authority, ease, and naturalness of Christ’s method, seen also in His teaching (Mk 1:21—27; cf. Mt 28:19). Signs are part of a revelation which confirms itself, for, when as thamaturge displays they are sought, refusal follows, or a symbolic answer, or some piece of spiritual teaching.

There is no real contradiction in Jn 19:36, for elsewhere the works are a witness to divine love (Jn 8:12; 10:27—30; 14:8—9), not as a mere proof of it, but because they are done out of love. Men who do not see such love are spiritually blind, and to that degree in sin (cf. Mt 11:27; Mk 10:21). In the miracle on the paralytic, which is said to witness to divine authority, Christ’s authority had been proved, and proved worthily. In the case of the raising of Lazarus, this is done that ‘they may believe’ (Jn 11:41). Many bystanders did believe; others did not. Yet Martha’s existing faith is the condition of this miracle (cf. v. 35, with v. 20).

MIRACLES

Here and elsewhere in this Gospel a theory of its author that miracles carry belief is at work (Ch. 3: 11). In this miracle belief of a specific kind—in Christ’s power over death—is to be taught to those who believed in Him already.

Christ’s reward of faith, the healing of the sick, is the reward of faith, Christ’s power working with the person’s faith. There is thus more than subjective faith-healing, for with Christ there is “power to heal,” obvious enough where the nature of the person healed is in question. Where there was no faith, but conscious opposition, miracle was naturally impossible (Mt 6: 6). Christ could have forced a miracle, but this was against His method, though even here He did heal “a few” who believed. A writer who recorded this was not one who was likely to invent or imagine miracles. Christ also Himself had faith in God, as His words show (Mt 9: 28-29; Lk 11: 28; cf. Mt 14: 34).

The miracle in Mk 5: 36 shows a crude way that power to heal was in Christ, and was made effective by the patient’s faith. In Mt 8: 6 the woman thought that by merely touching the garment hanging would follow (cf. Mk 5: 25, 36; Mt 14: 10, Lk 6: 9). Christ was sometimes aware of this, and, regarding her faith, healed her. Mary and Luke suggest that He was aware of the woman’s touch by power going out of Him. This would seem to reduce the miracle to magic.

(b) Possession. Not all but only certain kinds of sickness were regarded by the Jews scientifically or colloquially as possession. Only once does Mark explicitly connect epilepsy with possession (16: 18); Matthew and Luke do so on three occasions. In Mt 17: 18 a dumb spirit is mentioned; Luke (8: 39) makes it a case of possession, Matthew (17: 19) of epilepsy (ελευθεροδομία, ‘epilepsy’), though later the demon is said to come out. Epilepsy was a kind of intermittent possession (cf. Mt 4: 36), as well as lunacy (Mt 5: 20; cf. Jn 10: 20), or any apparent eccentricity. The recorded cases are eight in number, with a few general indications. Whatever be the explanation of possession, the fact of the cure is not in question. Christ’s healing of it was thorough, masterly, immediate, probably permanent, and sometimes a distance. His method was not that of mere exorcism, as has been insisted. Both the manner of the cure and its result show that it differed in degree, if not in kind, from that of the exorcist. Yet Christ taught that others or did use it, if they had faith (Mt 17: 19, Mk 11: 4). Serious cases are healed by a word, and the superlative nature of the cure is recognized even by hostile witnesses (Mt 26: 55; cf. Lk 18: 2). It had thus a miraculously holy quality; it was the “finger” or the “spirit” of God (Lk 11: 11, Mk 12: 28). Possession by a demon is a world-wide savage explanation of sickness, and, as a survival at higher levels, of man himself. Disease, where such symptoms seemed to suggest the demon’s movements or his speech in a voice different from that of the patient. But was the disease more than epilepsy, lunacy, hysteria, clausism, or such a psycho-pathological state as that of alternating personality, temporary control of the organism by a widely divergent fragment of the personality, self-suggested in some dream-like manner into hostility to the main mass of the personality? In such cases the person may believe himself possessed by the devil, or he may speak in another voice, simulate another personality, or develop automatic writing. As to cure.

1 Mt 11: 18, Jn 7: 40;即使是; cf. Mk 5: 28.

“No demon could by possibility produce more fearful results by entering into a man than I have often seen resulting from epilepsy."

Supernormal knowledge is often a characteristic of those believed to be possessed, knowledge of which the ordinary self could not match. It is ascribed to the demon; rightly it should be ascribed to the subconscious self or the fragmentary personality. In the NT the demons show knowledge of Christ’s power which He wishes to be kept secret, or they assume that He has power over them. The fragmentary or subconscious self, identifying itself with a demon, speaks in accordance with the belief that Messiah would destroy demonic power and asserts that Jesus is Messiah. Yet these men, in lucid intervals, may have heard that He was so regarded. Thus their knowledge would not be supernormal. Phonetics often deafen one particular person.

A man’s belief in his possession by a demon is paralleled by the belief that He is in a way. Both are pathological states, and where the belief in transformation disappears, levity is apt also to disappear. This is more or less true of the belief in demons and the supposition of possession (see Locutionary). 3 Demon-possession as a belief continued after, as it had existed before, Christ’s time. It is not explained, therefore, by saying that demons were a case to torment which they were not. Christ lived, so that His power might be seen. If Christ then accommodated Himself to an existing belief, yet He did not accept it in all its current forms, and some at least of what is asserted, may be the thoughts of His reporters. 4 Christ could hardly have cured the patients save by sympathetically accepting their point of view. So also for the sake of refuting an argument He accepts the point of view by His Parsons, without categorically saying that He actually casts out demons (Mt 12: 29), Lk 11: 20; cf. Mt 12: 24, Lk 10: 16). An accurate explanation would not have been understood, and might even have gone beyond present-day science. Or, with power to heal, was Christ’s knowledge here limited? Did He believe in possession? In any case there is no doubt about His healing this strange disease instantly and permanently, and differently from exorcists, or from modern physicians in the cases of apparent possession. Of course it is a large assumption to say that there are no existences which might not take possession of a human personality and act through it. 5 Psychical research tends to admit that there are such existences in the case of dissimulate human spirits, but has no evidence of diabolical or hostile possession. Thus, of course, does not exclude such possession—e.g., by some alien power at the centre of man’s being where consciousness and will reside. Yet an unexplained mental disease is not necessarily possession. In a sense, it is true, there was possession if disease was caused by sin or vice, disease being objectively regarded as evil, but there is no clear proof that the cases cured were directly the result of sin.

For alleged demon-possession in modern China and elsewhere see J. L. Nevius, Demon Possession and Allied Themes, London, 1907, though it is doubtful whether the cases are not explained on other grounds. Much of the evidence comes from Christian natives, whose earlier belief in demons was still strong. Healthful and life-giving influences of Christian teaching enter the cases where pagan methods failed, as Justin long before asserted (Apology, ii. 6) and also J. Jastrow, in Thoogia cases (The Life of a South African Tribe, Neuchâtel, 1912-13, ii. 405). On Nevius’ theory see W. H. Newbolt, Proc. of Soc. for Psychological Research, VI. 1897 p. 622.

(h) Healing. Christ’s miracles of healing are not explainable by M. Arnold’s “moral therapeutics,” i.e. the cure of neurotic diseases by mental influence.

The demons, if they existed, were not necessarily like the horrible figures of later imagination.

5 Myers, p. 195.
MIRACLES

cases. Many of these diseases were not neurotic, and were such as do not yield to mental treatment, while the evidence for their cure is as good as that for neurotic cases. Occasional miracles at Lourdes are also wrought on more than neurotic diseases, and they suggest an influx of healing power from without. But Christ's miracles of this kind are more than occasional. Here surely some healing power—the power of faith—wrought through Him. It was neither variable nor uncertain, and it enabled the patient to throw off disease immediately. It was communicated to the sick by an act of will, a word, a touch, or sometimes a distance, perhaps by telepathy. To use this of such a power there is no authentic parallel. If it be said that Christ had merely superior access to an element, to which others might have access, yet His access was so superior as to be miraculous. His faith in the power awakened faith in the patient, so that in a sense there was suggestion both from without and from within. There was more to it than mere faith-healing,"a word which is apt to be used loosely. If it is used as mere auto-suggestion, there was obviously more than that. Diseases which apart from scientific diagnosis were plainly normal, and whose possibility of cure is improbable, Christ merely did what one day may be generally possible, at least He did act perfectly in a way as yet undiscovered.

Other cases of this are so few in number as to raise a presumption of their truth, for here is exactly where miracles would probably be exaggerated in a fictitious narrative. The possibility of category or trance cannot be excluded, yet we may assume that Christ would know the truth. To Him, indeed, death was no more than a sleep (Mk 5:41, Jn 11:11-15), from which the sleeper might be roused in the presence of the Lord of life, who could command the return of the principle of life to the lifeless body, whenever He was beside the dead.  

[k] The nature group.—The evidence for these miracles is as good as for those of healing. Here again their small number—six (or, admitting duplicates, five)—suggests genuineness, as do generally the narratives which relate them, as well as the manner of the relation. The attempts to interpret them as symbolic teaching related as miraculous action do not command respect any more than the various rationalistic methods of explaining away. The questions are concerned with their adequacy to the occasion, with the power involved—was it one accessible to others?—with the method of its use—to excite wonder or to minister benefit? Was there again a real breach of the order of nature—a statement which no one is competent to assert (§ 15).

For, though it is easy to assume a 'reversal of the natural physical order,'° some of the miracles of healing are just as contrary to our experience. If Christ's was a unique personality, we must take account of what may be proper to Him either in or out of nature. Such a one on occasion may act easily walk on the sea as on dry land. These miracles suggest the superiority of the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personal identity of the worker. The question of adequacy to the occasion may be safely answered

3 Contrast the large number of raisings from death by the reign of St. Stephen alleged by St. Augustine, de Civ. Dei, xiii, 5.

4 Little touches of exaggeration in the story of Lazarus need not detract from the essential fact.

5 W. Sunday, Bishop Gore's Challenge to Critics, pp. 19, 231. The question of working these miracles in answer to any demand for a sign.

6 In the affirmative as regards stilling the tempest, walking on the sea, and feeding the multitudes. In the first two, lessons of faith were immediately taught, but they also have a permanent value in this direction, as well as a suggestive power of spirit to matter. In the third the adequacy is seen in the beneficence of the action involved. It is more difficult to prove adequacy in the case of the two to which we refer, but it is probable that such a great miracle would be wrought to enhance the joy of a wedding-feast. Yet the narrative has an air of genuineness, though, if it were performed for, in the reasons also, they are not hinted at. As to the power involved, it is certainly beyond that of men in the cases of stilling the tempest, changing water to wine, and multiplying food. Yet, in a universe of a divine will, was it impossible for one in whom that will was supreme to use it to still a storm, or to perform such probably creative acts as the other miracles involved? No breach of the order of nature is involved, for in the first two there is but a quickening of natural processes—the storm would sooner or later have ceased; a change is slowly effected in the moisture taken up by the growing vines. In the third, the third difficulty is simply that one can it be said that there was any breach of nature involved? While it is not impossible that a miraculous aspect has been here given to a non-miraculous action, the narrative has a genuine air, and the numerous different rationalistic explanations suggest that there is an inexplicable fact. In the case of walking on the sea a supernatural power which might be done to others might be suggested, if the story of D. D. Home's floating in the air be accepted, or if there is genuine fact behind the numerous stories of levitation. The difference, however, is that such power was consciously and purposefully; this is not observable in the other cases.

The withering of the fig-tree presents difficulties as to adequacy, and because it is contrary to the principle that Christ never wrought miracles for Himself. The tree was destroyed because it had no fruit for Him. Is He likely to have acted thus? There is no hint in the story or its context that it is an acted parable. While we need not question Christ's power, it is open to us to seek explanations of the origin of such a story, and these are much easier to find, and have much more verisimilitude, than those offered for the other miracles.

(j) The story of the stater and those of the draught of fishes need not be interpreted miraculously. The first appears to involve supernatural knowledge of the past, and directivity of the action of the worker. The question of adequacy to the occasion, with the power involved—was it one accessible to others?—with the method of its use—to excite wonder or to minister benefit? Was there again a real breach of the order of nature—a statement which no one is competent to assert (§ 15)? For, though it is easy to assume a 'reversal of the natural physical order,' some of the miracles of healing are just as contrary to our experience. If Christ's was a unique personality, we must take account of what may be proper to Him either in or out of nature. Such a one on occasion may act easily walk on the sea as on dry land. These miracles suggest the superiority of the spiritual and moral order to the material. They, with one possible exception, are in keeping with the personal identity of the worker. The question of adequacy to the occasion may be safely answered.

---

9 Evidence is also found in the fact that this is the sole instance of such a miracle in Christ's life, unlike those of miraculous cures which have so often told of even in the life of the Virgin.
Parallels to incarnation and virgin-birth have been alleged from pagan sources, but there is no real anomaly. The idea of divinity becoming really incarnate in human flesh was alien to Jewish thought, and probably also to pagan. Hence it is really impossible to assert that the story was invented in Jewish-Christian circles at the early date involved. That it is an early story is undoubted, and the evidence for the two versions of it in Matthew and Luke must go back to Joseph and Mary. The fact that the question was faced even in Christ's lifetime that He was not Joseph's son—a knowledge apt to be perverted by hostile critics. As to the story itself, it has only to be compared with the versions of it in the Apocryphal Gospels to see how an existing story could be exaggerated without being recast. The lack of such exaggeration in Matthew and Luke points to genuineness. Comparative mythology is often relied on to show that virgin-birth is a universal myth, but examination of the instances shows no real parallel. A human or divine father regarded in a material sense, or some material means, is always involved. This is true even of the late miraculous stories of the birth of Buddha, whose human father appears all through, and also of the birth of the future saviour Saoshyan in Zoroastrianism. If the story be nearly parallel, the question should be faced—Do myths never come true?

(a) The Resurrection.—Arguments against the Resurrection and the discrepancies in the narratives. Are these more than may be looked for regarding such an event? Or do they really discredit the central fact to which all bear witness? Without discussing them in detail, let us say that there is the same evidence as good as that for the Crucifixion, and if they do not prove a real resurrection, do they prove anything at all about Christ? Certain facts are important: the empty tomb, the definite date never varied from, as well as the personality involved—no ordinary man whose resurrection to a normal human life might be rejected, as Huxley would have rejected that of the pathological ordinary man—and the vast change effected in the apostles' characters and methods of action. We may here consider the main modern explanations.

(i) In human psychology, or telepathic impressions are really inadequate to account for the story. No such experiences have ever produced such a result, and they could not have given rise to the story of the Resurrection or of the empty tomb, or have so changed the disciples. A phantom would only have made them afraid (Lk 24:32). The disciples already knew of the existence of Christ's spirit, for this was the common Jewish belief, and as Jews they also looked forward to a future resurrection. How then could such alleged communications from such a spirit have so altered them or originated such a belief in the Resurrection with the definite meaning which the word had to any Jew? If it be said that it was precisely this Jewish belief in a future resurrection that made the disciples imagine that the empty tomb and to sanction that of a Risen Christ, this is in effect to make them the most credulous and untrustworthy of men—which no one really believes of them.

(ii) The theory that the words which He uttered would constitute the story from myths and cults of slain and risen gods. It is claiming too much to

assert that the apostles were influenced by these, supposing they knew of them, which is unlikely. Was there anywhere a myth of a god who had died and risen again on earth? The revival even of Osiris took place in the Other-world. No such myth had ever been applied to the history of any man, as the theory supposes it to have been to that of Jesus. Such myths were sensuous, and had sprung out of nature-cults. How could they originate a whole new world of ethical and spiritual ideas? The theory was known of the loss with a vengeance, and sets aside every shred of historical evidence, while it has never explained why Christianity supplanted such myths and cults as it is alleged to have sprung from.1

On neither theory is the Resurrection or its vast results explainable, and each postulates a miracle as great as the miracle of the Resurrection itself. The change involved in the Resurrection is beyond our ken; yet there was a change, not merely the resurrection of a dead body. We know too little of the laws of the universe to assert that such a change is impossible, or that there is no law of resurrection of whose working Christ's resurrection is the first instance. The new theories of matter seem to make the change conceivable, if the 'basis' of matter is to be found in a strain in the other giving rise to the new strain, how that strain is composed. Ether is described as sub-material, while electrons might conceivably be resolved into ether again. Matter would thus be destroyed.2 Others regard it as a transformation of material,3 and if those theories be true, might not Christ's body be resolvable without corruption into the ultimate constituents of matter and then re-formed as a new ethereal body, since ether is sub-material, and the indwelling spirit moulding it as if it were a material body, yet not subject to the limitations of such a body? At all events these theories lessen the difficulties in the way of accepting the Resurrection.

(b) The Ascension was probably a final vanishing (Lk 24:33) from the sight of the apostles, interpreted conventionally and symbolically as ascension, and, as far as the vision itself is concerned, objectively. Heaven being regarded as a place above, this was inevitable, and was in keeping with the symbolism of up and down, high and low. Christ ascended into the ethereal state, and this is the essential truth behind the descriptions, while it is the natural corollary of the Resurrection.

8. Miracle in the Apostolic Age.—The miraculous powers included in the apostolic commission may have received additions—e.g., raising the dead (Mt 10)—while some are allegorical (Lk 10). Lk 10:24 probably is a addition mingling the authority with the record in Acts and this passage in Luke. Certain it is that some miraculous power was transmitted to the apostles or made accessible by their faith. In Acts we see it at work. Faith on the part of the recipients of cure is also clearly in evidence, sometimes of a superstitious kind (52, 91) perhaps resulting in cures by auto-suggestion. St. Paul both appeals to these powers of healing and refers to them (1 Co 12:28, Gal 3). They are regarded as credentials of the apostolic mission—perhaps not a sound theory. Those who believed because they saw signs and wonders had the highest faith,

1 Pagan sceptics never tried to derive the Resurrection story from their own mythology. See, further, J. A. MacCulloch, in Religion and Modern Thought, p. 250 (1892), Primitive Christianity, Eng. tr., Edinburgh, 1913, p. 382 ff.

3 Whetham, p. 265.
unless the signs were accepted as tokens of divine love. It is obvious that St. Paul meant more than mere faith-healing, some actual miraculous gift, by which he living became converted to the faith of the Corinthians (1 Co 12:5). There was, in some cases at least, the influx of divine power into the diseased. In the case of Eutychus it is doubtful if a miraculous restoration of life was intended. In the case of Dorcas it was, and this is clearly suggested, though some unusual recovery from apparent death may have been locally exaggerated into a miracle.

The account of Pentecost and its marvels describes an insurrection of the spiritual audibly and visibly into the material world. Such an insurrection would be difficult to describe, but it is no more than what might be expected on such an occasion. A distant intelligence may be found in the phenomena of light or of a cold breeze accompanying phantasmal appearances. As to speaking with tongues, the phenomenon is perhaps no more than ecstatic utterance, and it is one which is apt to be degraded. The kindred phenomena of trance-utterance and inspirational address studied in our day have little value. Whatever might be the value of the tongues as a gift to the Church or at other times, St. Paul came to have a low opinion of the gift. The effect of a spiritual invasion would vary with the nature of the person invaded. The real miracle of Pentecost was its power shown by St. Peter and his fellows, and the spiritual results following.

The stories of release by means of an angel have been regarded as symbolic accounts of coniveness or friendly interposition interpreted as divine aid. Yet, if other orders of beings exist, they might so intervene, and might have power over matter. The real question is one of adequacy to the occasion, and we find no such intervention in the case of James (Ac 12).

St. Paul's experience on the way to Damascus is really similar to that of the Resurrection appearances, though there is much more splendour, so that he is blind for a season. If these appearances are accepted, St. Paul's vision 'at once falls into place, even if the accounts vary.' That he himself should cause blindness is perhaps no more wonderful than that he should heal. Did his words cause a temporary auto-suggestion of blindness to Elymas? The incident of the viper (Acts 26:13), though viewed as miraculous, is not necessarily so. This is also true of the death of Ananias and Sapphira. Emotional shock might account for the deaths, and this would lend itself to a miraculous interpretation.

The question as to the time when miracles ceased, if at all, used to be much debated. Some supposed that they continued down to the 3rd, 4th, or 5th cent.; others, like S. Jacob, placed the age of the apostles and characterized all later records of them with stupid and untrue. The evidence alleged for miracles is continuous to the present time; low fiction is based on fact; hence we may ask if miracles are possible at all. The miracles of some individuals in the early Church are far more amazing and numerous than those of Christ. They were wrought not only on the sick or the dead, but on nature. Miracles of the last class are of a most stupendous character, incredible on the face of them and quite beyond all adequacy to the occasion.

The age was doubtless one of considerable credulity, when miracles had to be forthcoming to rival those of paganism, in which the ecclesiastical writers believed, though attributing them to demons. Many accounts of miracles are too rhetorical to be taken seriously. The Roman deities of Chrysostom's account of the miracles of St. Babylas say that it is rhetorical and for the most part destitute of truth. In some cases, again, natural law is at work. The cases of healing, for instance, being a result of the presence of the healing waters of a hot spring. The Greek story of a miraculous restoration of life by the Emperor Constantine in an insurrection of the earthly world into the spiritual...
The folk expected miracles, and miracles were freely provided for them. Many of the miracle stories are repeated in countless Lives of saints; others, whether plagiarized freely from another, and later Lives are often more full of miracles than the earlier Lives of the same saint. Biblical miracles were freely imitated; only in any given case were the signs largely unique to the particular gifts of a saint were exaggerated into miracles. Others can be traced to a misunderstanding of Christian artificia nobis — e.g., the stories of saints carrying their heads in their hands can be traced to pictures where they were thus represented to symbolize their death by decapitation — or to the visions or hallucinations of hysterical devotees, though these were supposed to belong to the highest state of ecstasy, in which reason played no part. All these miracles may be divided into four classes: (a) miracles wrought on nature, often of a most extravagant type — arresting the sun’s course, hanging a clock on a sunshine; (b) miracles wrought by or upon inanimate objects — the numerous moving, talking, smiling images, already met with in paganism, or the opening of locked doors at the tongue; (c) miracles occurring to a saint — e.g., light streaming from his fingers, talking at birth, carrying fire, bilocating, levitation; and (d) miracles of healing, exorcism, and raising the dead.

The practice of incubation passed over to the Christian Church and was mainly associated with St. Cosmas and St. Damian, but the cure were often of a prolonged character. The methods were much the same as in pagan temples, pustulis sanctam.[2] As to healing miracles in general, what has already been said of these applies here also (cf. also § 12). 2 Possibly some miracles were actual instances of supernormal phenomena of the 2 region, so long scoffed at, but now more or less investigated by science. These instances correspond to cases of hypnotism, telepathy, clairvoyance and clairaudience, telekinesis — the movement of objects without being touched — appearances of phantasms of the living or dead (which underlies cases of bilocation), and the occasional superiority of the senses to outward effects (carrying fire). Of these as well as of levitation there has been a constant tradition through the ages, and in the mass of alleged cases there may have been some genuine instances. Such phenomena are not necessarily miraculous or even evidence of sanctity. On the other hand, if mind can communicate with mind, communications from another sphere may be made to minds on this earth, and these would have a miraculous quality — e.g., the voices and visions of Jeanne d’Arc or those which preceded the healing of Dorothy Kerin. 2 The communication may be coloured by the preconceptions of the percipient — a divine message may appear as a voice or vision of Virgin or saint, or a case of real spiritual healing may be associated with belief in a relic. Divine power might also be manifested from time to time through the supernormal phenomena referred to, making them miraculous. There should, in fact, be no cleavage between normal and supernormal and supernatural in our appreciation of the divine working.

11. Modern miracles. — These are mainly con-

nected with healing, though supernormal phenomena in connexion with spiritualism have been claimed as miraculous. 4 Typical cases are associated with seances and readings from the other side — the tomb of the Abbé Paris or by the Holy Thorn related by Pascal 2 or are accomplished by various phenomena representing every form of Christianity, or by mind-cures, faith-healing (q.v.), and Christian Science (q. v.).

The cures at Lourdes (q.v.) are associated with the vision of the Virgin seen by Bernadette Soubirous in 1858, though nothing was said to her about them. The number of plagues amounts to some 600,000 yearly, but no more than 2 per cent of the cures are regarded as ‘miracles.’ Some vouched for are of an almost instantaneous nature. Christian Science is associated with a theory of the equality of matter and mind. Disease is the result of false thinking. The Divine Spirit heals by casting out ‘mental-mind.’

All these various methods of healing are traced to the spiritual value and truth of the creed or practice with which they are associated. Yet some of them flatly contradict each other. They are rather means by which a cure is mediated, quite apart from their truth or value. A key to the problem is perhaps found in ‘spontaneous cures’ occurring in medical practice, which may be traced to suggestion. This is probably the main factor behind the cure effected by these various methods. It is the power of the unconscious as well as of the conscious self over the body, when once an idea has been accepted. 3 Existing beliefs or strengthened hopes are initiated; fears and inhibitions are removed; and the physical processes by which pathological conditions are removed begin to be affected. Thus in all the various methods the differences are subjective rather than objective, and this helps to make the mind of the sufferers, rather than in any scientific evidence as to the nature of the healing agency. 6 Susceptibility to suggestion may vary, and it should not be supposed that this may be as well as healthful suggestions. But that it is a real psychic process is undoubtedly. The suggestion may come from belief in a relic, a saint, or from the ‘hysterical optimism’ of Christian Science. The main fact is that it often works, even if the cures are seldom instantaneous, though they may occur in a quicker manner than in ordinary physical therapeutics. We are still left to inquire, however, whether any other exterior forces work in connexion with the vital healing force inherent in the organism, and set in motion by suggestion. If so, we should be in presence of the miraculous. This possibility must now be considered.

12. Mental and spiritual healing in relation to Christ’s miracles of healing. — Psychic forces affect the body in normal life, and of these suggestion is one. But is there also at times, with a high degree of suggestion as an answer to prayer, an influx of exterior, divine, spiritual power to heal? This would correspond to the exaltation of mind by spiritual influences in inspiration. It would be a particular and outstanding instance of what we find everywhere, if all life is dependent for its energy on some all-enveloping life. It might not be regarded as miraculous or supernatural, for, if miracle is part of the process of the universe as a sense it is natural. But in so far as the result testifies clearly to processes outside our ken, to the power of a divine person thus making Himself known.

7 Myers, p. 534.

8 It is accepted by medical science; see British Medical Journal, Supplement, July 15, 1911, p. 211.
known, the current of whose energy is entering our life for a particular purpose, this is a sign, or miracle. The spirit has let loose ‘life-giving foci’ which sweep before them the evils of sickness and disease. 

129. Vie assumes all God. Disease^ as miracle. Hence they have tapped a divine source, and it has aided the unconscious mind. That this has never taken place cannot be affirmed, though a leader of the modern physician’s ‘scientific’ school was persuaded that it was true. 

'The result was swift and certain. That existed as healer differs in degree and kind from all media of occasional cures. That cannot find such cures where perfect faith exists is not credible. 3.

13. Hostile criticism of miracles. — Though the Schoolmen were probably refuting current objections to miracles, no serious criticism appeared until the 17th. cent. with Spinoza’s attack. The laws of nature are the decrees of God. Miracles cannot happen because they violate the order of nature. God would be equivocating Himself, for nature is fixed and changeless. Miracles would tell us nothing of God, for they surpass our powers of comprehension. 4.

5. Hostile criticism of miracles. — Though the Schoolmen were probably refuting current objections to miracles, no serious criticism appeared until the 17th. cent. with Spinoza’s attack. The laws of nature are the decrees of God. Miracles cannot happen because they violate the order of nature. God would be equivocating Himself, for nature is fixed and changeless. Miracles would tell us nothing of God, for they surpass our powers of comprehension. 4.
events' happening, would widen its view of nature. All that would thus be shown would be that all experience, as nature, is not philosophically complete. There would be no necessary divine power behind such a wonderful event.

But, while science might investigate any 'wonderful event,' has it yet explained even one event? Christianity regards all events as expressions of divine will, direct or indirect. In short, all miracles are mere evidences of that, not just because they arouse wonder, but because of their appeal to what is ethical or spiritual in us. They witness to the presence and power of God over matter (§ 15).

On the whole, the scientific attitude to miracle is less hostile now than it once was. Many scientific men are also religious men, and the new vistas open to science have made a spiritual interpretation of the universe more possible.

14. The defence of miracles. — The Apologists generally connected miracles with prophecy, and showed that they fulfilled predictions of such deeds made long ago. They are by no means the sole evidence for Christianity, though, as the Greek Fathers maintained, they might help those who through sin could not see God in His works. Origen pointed out that Christ's miracles were not done for show, like a juggler's wonders, and that, unlike a juggler, He demanded a new way of life. 1 The Fathers commonly appealed to the miracles done in their day, and Arnapundus directed much attention to miracles as proving Christ's divinity. Augustine first gives a philosophy of the miraculous. God's will is the ultimate source of all things, and nothing can be contra naturam which happens by God's will. Everything is natural, not to us, but to God. Miracles are part of an established order. They are not contra naturam, but may be contrary to what is known to us of nature. 2 The Schoolmen start from this idea of uniformity, forestalling the ideas of science, but not on experimental grounds. There is a higher and a lower order of nature, the former at once natural and supernatural, God's ideal plan. In it are causae rationis et primordiales of miracles. In the actual order, known to us, with its chain of causes and effects, miracles could not originate, but these have the capacity for higher powers being inserted in them—all parts of God's original plan. Miracles are not such to God, who can interfere with the ordo secundarum causarum which is subject to the order of nature. — The Schoolmen — the order known to us—but not contra naturam. 3 Again, as the course of things can be changed by creatively power, so God's power may bring an event to pass otherwise than in the usual course, so that men may know His power. This is equivalent to the view that there may be guidance of forces in nature to a particular result which may appear miraculous to us (§ 15). Later the idea came generally to be held that miracles were a real suspension or violation of the laws of nature, the view attacked by Spinoza and Hume, both sides arguing as if all nature's 'laws' were known to them. Bishop Butler wisely points out that, while we see nature carried on by general laws, God's miraculous interpositions may have also been by general laws of wisdom. Nature is plastic to Him! All these laws are known to us. There may be beings to whom the miraculous is as natural as ordinary nature is to us. Butler was arguing against the Deists, but he sometimes forestalls Hume's objections, as when he points that miracles should be compared not with ordinary but with extraordinary events in nature. With the Schoolmen he tends to regard miracles as part of the ordinary plan of things. He again forestalls Hume when he argues that fraudulent miracles do not disprove those of Christianity, but he is on less sure ground when he says that Christianity was offered and received as the ground of miracles publicly sought to attain its truth. J. P. Mozley continued Butler's position that miracles are necessary to revelation, but argued, with him, that to accept anything contrary to moral or true religion. There is order, cause, in nature, but the mechanical expectation of recurrence which would keep out miracle cannot be proved. Anything contradictory to experience might be either some case, and so in accordance with the order of nature or a direct divine interposition, spirit prevailing over matter. Such a miraculous event, as the act of a Personal Being, would show moral will and intention and be evidence of a higher world. The order of nature might be suspended, if there was use in suspending it. But the laws of nature would be suspended, not the laws of the universe, which would be a contradiction. Suspension of the laws of nature is possible, and it happens—e.g., where the laws of matter are suspended by the laws of life. If spirit be regarded as above matter and capable of manifesting it, miracle becomes possible.

In opposition to German rationalism Schleiermacher, in his Der christliche Glaube (Amsterdam, 1830–31), maintained that nature admitted of new elements, consonant as it was to God's will and work, even if constrained by it. He就够了 to the neat cause of the miracle, but it appears only when God calls it forth. Christ had a supernatural origin and, as sinless, was a moral miracle. Yet the Virgin-birth, Resurrection, and Ascension were set aside along with many of the miracles, though miracle was admitted, since God has complete power over nature. Our belief in Christ, according to him, does not depend on miracles. Thus, though Schleiermacher still opposes certain miracles, he offers a constructive theory of miracle. Later A. Ritschl refused to regard miracles as contrary to natural law, and held that they were akin to Providential action. J. Kofian argues from the same side that 'laws of nature' are unreal, a mere formula allowing us to grasp the course of nature. Miracle is such an unusual event as will awaken us in a special manner to God's living government of the world. He works in all things, but can use special means to enable faith to trace His presence. 4 Hermann Lotze also refuses to regard a miracle as such an anomaly of nature. The miracle-working power, by virtue of its internal connexion with the inner states of things, can alter these and so modify the result of the law. Law is thus turned to account. Even if there be mechanical necessity, this change in the internal state of things subject to it causes it to produce an external miraculous phenomenon. The elements of the universe are not 'solipsistic and void points of attachment for unalterable forces,' but living parts of the living One. No law is altered when miracle occurs, but the bearers of the forces obedient to these laws are altered. The conditioning cause of miracles is in God and nature, hence there is no arbitrariness in miracles. Yet Lotze sets aside Christ's miracles, partly because the change in man's conceptions of nature has made them dubious. 5

1 Eight Lectures on Miracles. Miracles, far from being a decisive proof of revelation, have now themselves to be proved!
3 Microcosms, Eng. tr., Edinburgh, 1885, i, 450 f., II, 478 f.

1 Schleiermacher, in his Der christliche Glaube (Amsterdam, 1830–31), maintained that nature admitted of new elements, consonant as it was to God's will and work, even if constrained by it. He regarded to the neat cause of the miracle, but it appears only when God calls it forth. Christ had a supernatural origin and, as sinless, was a moral miracle. Yet the Virgin-birth, Resurrection, and Ascension were set aside along with many of the miracles, though miracle was admitted, since God has complete power over nature. Our belief in Christ, according to him, does not depend on miracles. Thus, though Schleiermacher still opposes certain miracles, he offers a constructive theory of miracle. Later A. Ritschl refused to regard miracles as contrary to natural law, and held that they were akin to Providential action. J. Kofian argues from the same side that 'laws of nature' are unreal, a mere formula allowing us to grasp the course of nature. Miracle is such an unusual event as will awaken us in a special manner to God's living government of the world. He works in all things, but can use special means to enable faith to trace His presence. 4 Hermann Lotze also refuses to regard a miracle as such an anomaly of nature. The miracle-working power, by virtue of its internal connexion with the inner states of things, can alter these and so modify the result of the law. Law is thus turned to account. Even if there be mechanical necessity, this change in the internal state of things subject to it causes it to produce an external miraculous phenomenon. The elements of the universe are not 'solipsistic and void points of attachment for unalterable forces,' but living parts of the living One. No law is altered when miracle occurs, but the bearers of the forces obedient to these laws are altered. The conditioning cause of miracles is in God and nature, hence there is no arbitrariness in miracles. Yet Lotze sets aside Christ's miracles, partly because the change in man's conceptions of nature has made them dubious. 5

On the whole, modern theology tends to regard the universe as plastic to God and miracles as the evidence of will. Even man can produce effects in nature not producible by nature itself. Such a view is elaborated by H. Buschmell. 6 Again, as by
J. R. Illingworth, divine immutability is made the ground of miracle. There is unity rather than uniformity in nature; it is due to spirit which uses matter for its purposes. The moral aspect of miracles is also emphasized by him and by other writers. Christ's miracles do not interfere with law, but restore laws which were broken. Disease is here regarded as due to sin. As to the Resurrection, there is no reason why a sinless soul should not resume at will a sinless body. The supremacy to an extraordinary degree of spiritual force over the mere material is also emphasized by A. C. Headlam. 4

From a spiritualistic point of view A. R. Wallace argues for miracles on the ground that intelligent beings, unperceived by us, have power over matter, producing supernatural phenomena, the occurrence of which has been noted in all ages. By this view he claims that Christ's miracles as well as answers to prayer find a natural explanation.

15. The question of the miraculous.—Miracles are not fortuitous events, breaking in upon a fixed order of nature. Both they and that order are evidences of divine will. The more the nature of the universe is revealed to us, the more impossible is it to believe that it all merely happened, that there was no guidance or control to produce such a vast complexity. And this impossibility is only the more increased by recent discoveries in science. If there is an infinite number of ultimate elements all of precisely the same form, it is most unlikely that all the laws that happened upon the same form. Neither matter nor energy possesses the power of automatic guidance and control. Hence some form of guidance is essential, some order of arrangement. It is outside the categories of matter and energy; yet it can use both, guiding and controlling them in accordance with the laws which govern them. Such guidance should be regarded as a supreme and self-sufficient will and source of all life. But, if such guidance is granted, then miracles—particular instances of that guidance—become possible. A fixed order of nature does not necessarily mean that nature is self-contained and self-sufficient or subject to ineradicable mechanical necessity. We do not know all of that order, nor is it likely that it is the only possible order. We cannot assert that a limit has been set to every combination of matter and energy, to every method of guiding these, to every possible result.

If so, a miracle is not a breach of the order of nature, which, modifying St. Augustine's formula of the work of God's hand and the work of God's word, becomes more like the words of the Lord "Where there is a will, there is a way." Where there is a God and a purpose, there are means by which the purpose is to be reached. For the laws of the universe are the means, the instruments of the purpose. Where there is a will, there must be a way. Where there is God, there is a plan. Where there is a law, there is a controlling agency. Where there is a will, there is a way of carrying out the will. Where there is a plan, there is a plan of how to carry out the plan. Where there is a law, there is an agency to control the law.

Science might investigate this result, might even conceivably reproduce it. Could it explain the process? Could it tell how Christ could do such miracles? In a pre-existent universe, there must have been some influence working with Him or in Him to produce such purposeful, intelligent results.

Science might create life, say, out of certain chemical combinations of dead matter. But could it explain why precisely that combination, that arrangement of forces or conditions, produced life? There would not be an act of creation, but the setting in motion of certain forces already regarded as one of the explanations of life. Why or how they possessed this would remain unexplained.

As there are physical so there are moral and spiritual facts, not explainable in terms of the former, though they interpenetrate. Miracles, as such, are not isolated physical phenomena or prodigies. They are not unrelated to any moral or spiritual sequence. They have a moral and spiritual purpose, a clear relation to surrounding circumstances. Unlike the vast majority of ethnic miracles, Christ's miracles have that moral and spiritual quality which differentiates them from physical prodigies. They are distinct revelations of God or of God's nature in relation to the universe and man. In a less degree in all His miracles, so in a higher degree in the Resurrection, there is a union of physical and spiritual, such as is seen also wherever mind and life control matter and energy. Matter is here completely controlled, spiritualized, and such an event could scarcely have been imagined or invented. All miraculous actions to Him, either because of what He was or because He was in perfect harmony with that supreme spiritual power.

It is easy to hold a wrong idea of the uniformity of nature or, rather, its unity, to adopt Illingworth's dictum. Theology has been apt to insist upon miracle as a sort of catastrophic gap in an existing uniformity. Science has tended to forget the possibility of the occurrence of a small variety in that uniformity. Such variety is only the more in evidence with the new discoveries of science, which now postulates either an energy as the only physical reality or a sub-matter basis of matter with a psychical significance. But, apart from that, how endless is the diversity even in a uniform nature, not even two blades of grass precisely the same? Nor is life explainable in terms of mechanical uniformity. It uses and controls matter and energy, and may exist apart from them. Unity, with endless variety, is a better description of the universe than mere mechanical uniformity. In the interaction of the forces of the universe a slight increase of one force will produce a different result. And, if the forces, the interaction, the result, are controlled, this would not extract from but only augment, the theory of science that this is an orderly universe. Such guidance and control are not occasional but continuous, for a true theology can never postulate a God outside of the universe that happened upon the same form. He always does what is best for, and all that the universe contains—not merely its physical contents—is utilized for definite ends. Thus, if a slight increase in one force or a re-arrangement of forces—a re-arrangement of forces—will produce a different result from what is generally produced, miracle becomes possible. The result would show more definitively His will and benevolence in the process. Science might investigate this result, might even conceivably reproduce it. Could it explain the process? Could it tell how Christ could do such miracles? In a pre-existent universe, there must have been some influence working with Him or in Him to produce such purposeful, intelligent results. Science might create life, say, out of certain chemical combinations of dead matter. But could it explain why precisely that combination, that arrangement of forces or conditions, produced life? There would not be an act of creation, but the setting in motion of certain forces already regarded as one of the explanations of life. Why or how they possessed this would remain unexplained.

2 The Resurrection and Modern Spiritualism.
3 Miracles and Modern Spiritualism.
system of the universe as a whole. So again many alleged supernatural phenomena are not miracles; they do not show a direct moral, purposive action on the part of the real unsexpected and unexplained human powers. If God directs the whole universe, miracles are in no sense a rectifying of His own mistakes. They are instances of the overcoming of evil and disorder in a universe where these exist and where evil may have been necessary to the world-process, a stage on the way to perfection. Yet that perfection is being brought about, and miracles are an instance of this process; they are not the cause, purpose, more clearly perhaps than the more quickly-working process. They show, as Lotze says, that God is so related to matter that it cannot resist Him at all. So Christ's healing miracles show that spirit and will are superior to the causes which produce disease. Thus in no sense is miracle contra naturam; rather is it an expression of divine action in ways which may contradict our ordinary experience, i.e., our real ignorance of the universe.

The unchanging nature of radium might have been regarded as evidence against the claimed power of science, which takes 3,000 years for an atom of radium to change} would show that this was in striking agreement, a possible of our knowledge of the laws of the universe.

The divine will, acting normally in certain ways, may act in different ways, perhaps in our limited vision or capacity to understand; so as to be as natural as a slower process, or the turning of water to wine as natural as the slower growth of the vine. In either case there is a quickening of a natural process, and yet to God that quickening may be perfectly normal. Does this take away the miraculous from what we call 'miracle'? In a sense it does, for we tend to draw too straight a line between natural and supernatural. All events, inasmuch as they express the divine will, are natural, yet they are supernatural in so far as they all end for us in mystery. What constitutes a miracle is its quality, its instant suggestion of divine power and goodness. Even a spiritual vision is clouded, and he does not always see these in the event, not that is always the fullest revelation of God. All things speak of God, but sometimes we are not aware of these; they are not always obvious to us.
MIRACLE-PLAYS, MYSTERIES, MORALITIES.

The physical world may be different from what it would have been had we prayed. Prayer is energy, and earnest prayer cannot be useless, even if its result is not just what man wants. If God's plan for man is the best, his will is, by means of man's misuse of free will, how speedily will that plan be accomplished when man's will is at one with God's? It is His will that we pray, and every answer to prayer, as a manifestation of His will, is far miraculous, and yet, like all miracle, quite natural. God foresees all that will happen in the universe; therefore He foresees whether we shall pray, and whether any particular prayer will be answered in one way or another. If the occurrence of certain things in God's plan depends on prayer, then we must pray. Are we then not free? Still we have the feeling of acting as free agents, and feeling is perhaps here truer than reason.

MIRACLE-PLAYS, MYSTERIES, MORALITIES.—I. Introduction.—As was indicated in the introduction to the art. DRAMA, the origin of the medieval drama, like that of the Greek, is to be found in religious observances. It is true that from the earliest reigns of Norman kings in England secular pageants were common features of any day of special rejoicing; but these were not strictly dramatic in their nature, nor did they contribute to the essential development of the form. The true beginning of the long course which leads up to Shakespere and Racine is found in the Churches; the most striking fact in the history of the medieval drama is its evolution from the simplest gerns in the responses of the liturgy into an elaborate new form without the influence of either an ancient drama or a contemporary material. Though many steps and many dates in the history of the Miracles and Moralities are still to be discovered, and their due place to be assigned to many incidents and facts, there can be little doubt of the drama in the Middle Ages from its origin in the antiphonal tropes of the liturgy to its final expression in the great Passion-plays, ‘Mysteries,’ and ‘Miracle-cycles.’

The probability of some survival of classical influence in the medieval drama has led some writers to trace all possible ancient dramatic and mimetic traditions in the period between the closing of the theatres and circenses in the 6th cent. to the establishment of the liturgical drama in the 10th and 11th; but, notwithstanding the efforts of the modern Greek scholar K. N. Sathas (Iscourov for tov l'Met'ov kai tov mpaiov tiv Vavov, Venice, 1878) and his followers to found the medieval religious drama on the ruins of the ancient Greek, preserved in Byzantium and carried to the west by the returning crusaders, it is the opinion of most scholars that no more can be said than that there was possibly a continuity of the mimetic tradition, kept alive by wandering, outlawed entertainers—a tradition that may have helped the development of the play by aiding the survival of the liturgical drama, and may later have had a part in the secularization of the religious drama. (For the Byzantine stage see K. Krumbacher, Geschichte der byzantinischen Literatur, Munich, 1897; and for the views of Sathas, J. S. Tunison, Dramatic Traditions of the Dark Ages, Chicago, 1907; for the subject in general, Chambers, The Medieval Stage, l.c.)

2. The liturgical drama.—The antipost, of Eastern origin, introduced into Italy by St. Ambrose, was the germ from which the medieval drama developed. Certain antiphonal services had doubtless begun in Italy which were or were unconscious began to take form in the tropes, or interpolations in the liturgical text for certain feast-days. The most important from the standpoint of dramatic history were the tropes of the Easter mass, the earliest dramatized form of which is the ‘Quem quaeritis.’ This, assigned to about the year 300 and ascribed to the trope-writer Tutilo of St. Gall (card Young, ‘The Origin of the Easter Play,’ in Publications of the Modern Language Assoc. of America, March 1914), seems to have developed into a considerable play as a trope of the liturgy, and has branches which, combining with other ceremonies, such as the Visitation sepulchri, and other dramatic forms, such as the ‘Prophete,’ grew into the great Passion-plays and Miracle-cycles.

This word Querietis is: ‘Querietis.’

Latterly the word, ‘Resurrexi,’ is the first word of the Easter introit. By textual accretions, partly by additions from the Vulgate, but more often by ‘free composition,’ and by the development of a dramatic setting (the ‘sepulchrum’) and truly dramatic personalities (the three Marys, the angel at the tomb, etc.), this trope grew into a well-developed though brief liturgical play (MS Brescia, 15th cent., quoted by Young), and attained a much larger development as a ‘Visitatio sepulchri’ at the end of Easter matins, as a symbolical representation of the burial and resurrection of Christ.) This second
and dramatically more fruitful use of the 'Quem quieritis' grew by textual additions, such as the sequence 'Victimae paschali,' and by additions of incident, a careful retelling of certain details of the Biblical story (e.g., the visit of the three Marys to the tomb, and of Peter and John); secondly, secular imaginative details (e.g., the visit of the Marys to the 'unguentarius,' or dealer from whom they bought the necessary spices; this character later became popular in the vernacular Passion-plays).

Though there was a considerable dramatic development of the 'Quem quieritis,' it remained strictly a liturgical ceremony, and parts were taken by churchmen, there was little real dialogue, and the setting was of the simplest. In certain late forms there are introduced motives that do not belong to the events of Easter morning, such as the kiss of peace accompanying the greeting 'Surrexit Christus,' or the 'Tolite portas' ceremony prescribed by the ritual for the dedication of a church. These, however, to the possibility of a development of the Easter play which, however, was not to take place in the 'Quem quieritis' proper. This matter will be considered in speaking of the Passion-play, but the 'Quem quieritis' was not the only drama of Easter-week. The 'Peregrini,' attached to the vespers of Easter Monday, established in the 12th cent., was known in England, France, and Germany. The Passion-play of Herod was the Emanuel and the supper there ('Petit de Jullieville, Les Mystères, i. 67; Chambers, ii. 37'). In others Mary Magdalene appears, or the Virgin and the other Marys greet the risen Christ; or a new scene is made the material for a Passion-choir; or there is even a merging of a developed form of the 'Quem quieritis,' the 'Peregrini,' and the Easter morning ceremony of the 'Elevatio crucis.'

Parallel with the plays of the Resurrection, other liturgical plays developed as parts of the office of other feasts. The Christmas season was the most productive; but there were plays for Epiphany and certain saints' days, particularly that of St. Nicholas. Though evidence of their existence has been found, the plays for many occasions have entirely disappeared. A Christmas drama, the 'Pastores,' commemorating the visit of the shepherds, grew out of this trop and, modelled on the Easter 'Quem quieritis.' It begins 'Quem quieritis in præsepe, pastores, dicite.' It is purely liturgical, very simple in form, and is an elaborate and careful setting of the story with certain words, and is of interest for its connexion with the ancient and still popular representations of the crib, or crèche, of the infant Christ (see BAMBINO), and for its influence on the more fruitful dramatic forms into which it was absorbed. The essence of the play is the visit of the shepherds, a crib with images of the Virgin and Child, the announcement of the birth of Christ by a boy in similitude of an angel, the singing of the 'Gloria in excelsis' by the angels and a hymn by the shepherds, a dialogue between the shepherds and two priests 'quasi obsequiis,' the adoration of the shepherds, and a final hymn.

A more common form of Christmas drama was the 'Stella,' a play of the visit of the Magi, originally consisting of antiphons and simple prose dialogue, representing the following of the star, the visit to the Infant, the offering of gifts, and the warning to the Magi (Creuzenach, Geschichtc des neueren Dramas, i. 60; Chambers, ii. 45; Petit de Jullieville, Les Mystères, n. 51; text for Méril, M6ril, and in Conzecker, Dramen liturgiques). The simplest and probably the earliest examples are from Rouen and Limoges. This form of liturgical play developed early. Dates are uncertain, but MSS. of the late 14th cent. have the play in a well-developed form. As the Easter 'Quem quieritis' centred about the 'Sepulchrum' and that of Christmas about the 'Pastores,' the 'Stella' had as its starting-point the star. A gift star, the points sometimes holding coins, was lowered through a hole in the ceiling or held up by an assistant. Like the Nativity plays, the 'Stella' developed partly from dumb show, and the simpler forms continued parallel with the expanded forms and outlived them.

The dozen or so complete extant versions of the play vary considerably. The drama developed by the representation of an itinerary, starting from the scene of the visit to Jerusalem, by the addition of various scenes in which Herod plays a part, as, e.g., his anger at the escape of the Magi and his order for the massacre of the innocents, and even the actual representation of the massacre, and finally the lament of Rachel, which had received independent dramatic treatment. As Chambers puts it, 'the absorption of the motives proper to other feasts of the Twelve Nights into the Epiphany play has clearly begun' (ii. 48). This absorption was to result in certain larger and more complex plays made up by the joining of the 'Pastores,' the 'Stella,' and the lament of Rachel. It was the result of the fusion of certain parts that the 'Stella' is of great importance for the later history of the drama. The part of Herod grew later, and could not take the place in the English Corpus Christi cycles.

More important for the future of the medieval drama than any of the forms thus far considered was the 'Prophetes,' which is the first studied by Seert (Les Prophetes du Christ). It was based on the apocryphal Sermon contra Judaeos attributed in the Middle Ages to St. Augustine, but really of later origin, and used in many churches as a lesson in the Christmas offices. In the passive so employed, the author invokes thirteen witnesses to the divine mission of Christ and calls upon them to predict His coming. The prophets invoked are Isaiah, Jeremiah, Daniel, Moses, David, Habakkuk, Simeon, Zacharias, Elisabeth, John the Baptist, Vergil, Nebuchadrezzar, and the Sibyl. The dramatic growth of this sermon has been extensively investigated, but the growing evidence is for its connexion with the ancient and the Sibyl. The dramatic growth of this sermon has been extensively investigated, but the growing evidence is for its connexion with the ancient and the Sibyl. In later examples from Rouen and Rouen the dialogue is expanded, the 'preceptor' is replaced by two 'appellatres' or 'vocatores,' and the Sibyl is added to the prophets. More remarkable is the little added drama of Balaam and his ass, which has been considered by many writers the origin of the notorious Feast of the Ass, but which is perhaps more probably a reaction from the disturbing festival. In the Rouen text the part of Nebuchadrezzar is also expanded into a miniature play; Shadrach, Meshach, and A bed-negar refuse to worship the image, are cast into the fiery furnace, and escape all harm, the king testifying to the might of the coming Saviour.

It will be seen that at this stage of development the 'Prophetes' necessitated a much more complex setting than was usual with liturgical drama—the throne of the preceptor, the fiery furnace, distinct costumes (described in the rubrics), Balaam's ass. This was a beginning of the complexity that was to characterize many medieval plays.

This complexity and the fusion alluded to above may be seen in a Latin play preserved in a 13th cent. MS. (Royal Library, Munich; text in du Mélé). It is a combination of most of the Christmas dramatic forms. St. Augustine sits with the
prophets at his right, the chief of the synagogue and the Jews at his left. The prophets foretell the Messiah; the head of the synagogue is angered at their blasphemies. A new character, the "bishop of the children," interposes the suggestion that St. Augustine shall be the shepherds (the 'Pastores' element). The devil hints that the angels has deceived them, but they are convinced by the chanting of the "Gloria in excelsis" by a heavenly choir, which-they are worship Christ; they meet the Magi bearing gifts. The Magi are warned not to return to Herod, who orders the killing of the innocents. The mothers lament their lost children (the "magistram remittit"). Herod falls dead, and is seized by demons. An angel sends Joseph into Egypt. The king of Egypt advances, accompanied by a choir singing "hebess" fortissimo. The Holy Family arrives in Egypt; they falls sick, and the people can not rest in the place. The choir chants a conclusion against Herod and the Jews. The last part is free and individual in composition. Petet de Juvelle thinks it unlikely that it was played in church (because of the 'episcopus puerorum'), and that more likely it was given in a monastery school.

matched in the liturgical drama through the combination of types and free composition, certain plays founded on the stories of Daniel and Lazarus represent another and later stage of the problem. Sometimes the scenes in the older plays into independent dramas. Most interesting, because the first liturgical play attributed to a definite author, is the 'Daniel' of Hilarius, a cosmopolitan Gallarde scholar, disciple of Abelard. The abakus of the 12th century. (text in J. J. Champollion-Figeac, Hilaris versus et usi, Paris, 1888, and in de Mélis). The 'Hystoria de Daniel represents' opens with the feast of Belshazzar; the mystic words appear, and Daniel interprets them; Darius enters with his army and kills Belshazzar; Daniel appears at court, refuses to worship the king, and is thrown to the lions; the angel brings Habakkuk to him; Daniel is again in favour. The play is expanded by choruses in honour of the various personages, 'conducatus Danielli,' 'conducat' Allon', 'conducat' Balth., 'conducat' Beelzebul. In the similar play from Beauvais is a hymn in honour of the birth of Christ. This, as well as the rubrics, indicates the connexion of the play with the liturgy to the end. 'Done, if the play has been given at matins, let Daniel sing the Te Deum, if at vespers the Magnificat,' indicates that it was not a regular part of the office. In this partial detachment from the liturgy because of the beginnings of liturgical drama which was to take the drama entirely out of the hands of the clergy.

3. The secularization of the drama.—The indications of a tendency to make the liturgical drama more popular that we have seen in the expansion of certain themes in the 'Prophets,' in the freer and more poetical composition of many of the later liturgical plays, in their comparatively independent position in relation to the Church offices, are emphasized by the following. The 'Hilarist' on the one hand, an anachronistic and pedantic work argues the impossibility of the Virgin-birth, and St. Augustine answers. The argument is taken up by the choirs of prophets and Jews, the one singing 'Res miranda,' the other 'Res neganda.' So far the play is an expanded 'Prophet,' still mostly liturgical in feeling and form. The prohets take their places in the church, and a play of the Annunciation begins abruptly. This part is brief. The Scriptural dialogue between the Virgin and the angel is followed by the visit of Elisabeth. The next direction is that Mary 'vadat in lectum suum . . . et partit solum.' The choir halls His coming, and immediately the 'Stella' begins. A star shines forth, the three kings follow it, and appear before Herod; an angel announces the coming of Christ to the shepherds (the 'Pastores' element). The devil hints that the angels has deceived them, but they are convinced by the chanting of the "Gloria in excelsis" by a heavenly choir, which-they are worship Christ; they meet the Magi bearing gifts. The Magi are warned not to return to Herod, who orders the killing of the innocents. The mothers lament their lost children (the "magistram remittit"); Herod falls dead, and is seized by demons. An angel sends Joseph into Egypt. The king of Egypt advances, accompanied by a choir singing "hebess" fortissimo. The Holy Family arrives in Egypt; they falls sick, and the people can not rest in the place. The choir chants a conclusion against Herod and the Jews. The last part is free and individual in composition. Petet de Juvelle thinks it unlikely that it was played in church (because of the 'episcopus puerorum'), and that more likely it was given in a monastery school.

occasionally, as in the 'St. Nicholas' of Hilarius, the vernacular is found only in the refrains. In other plays it is a translation of the preceding Latin lines; others are new refrains in the language, but there is no discoverable rule; the same character may speak Latin in one passage, French in another. One of the earliest cases of the two languages is that of 'Belshazzar,' a 12th century play of the wise and foolish virgins from Limoges (text in Romania, xxii. [1883]; du Mélis). Here a considerable part is in the 'langue d'o;' the angel 'vadant in lectum suum . . . et partit solum' the coming of the bridegroom speaks only French, the Virgin both languages. The refrains are in French. The final words in which Christ condemns the foolish virgins are first Latin and then French, ending thus, perhaps to make the lesson clear and impressive to the congregation:

Amen dico
Vos ignoscite,
Nam caritas honest;
Quod quia perdit (MS peregrinat)
Procul peregrinat
Hujus anima limine,
Alia, chativae
eut, malavere
At tota mens vos penas livres;
Et sine ore servitutiam.

gradual secularization of the spirit of the plays. The last part of the composite Munich play referred to above will illustrate this point. Though written in Latin, one part is an original secular poem in praise of spring, filled with pagan allusions and with no liturgical or Biblical connotation. The introduction of the comic element and of the occasional dramatic episode relating to Balmaum's ass and Herod points to an equally strong secular influence, one that was to lead to some of the most striking and unfortunate developments of the play at the end of the Passion-plays took on in the 14th cent.; so that henceforth, to be understood with any clearness, the special literary types that developed must be studied by countries. Furthermore, the influence of particular authors and of particular methods of representation makes itself felt.

4. England.—The early dramatic history of England is difficult to trace, for much of the number of plays have been destroyed. The development of the liturgical drama in England must be partly guessed at from that of France. Only the slightest indications of what it originally was can be gathered. This is not meant to imply a lack of importance, gradually brought the plays under the control of the laity. It is a long way from the simple sepulchrum or presepe, the two chanted parts, the lack of appropriate costume, of the sepulchrum to the plays or the Quem quieritis! The characters, the costumes of the Conversio Paulli (Petit de Jullielle, i, 69; text from Fleury MS, mentioned above, in du Méril, and in Consemaker, no. 367) with its several sedes for Saul, Judas, etc., its two scenes, Jerusalem and Damascus, its armed men, and its lectus for Ananias, or the Munich Prophetce described above, with its 'sede' for the prophet, its lectus for the Virgin, its shining star, its mouth of hell, its many characters. Henceforth the change in setting was one of degree rather than of kind; the elaboration merely followed the increasing complexity of the plays as they added one incident after another. Within the church, the crucifix, the altar, the sepulchrum, the rood-loft (representing heaven), and the crypt furnished the chief scenery, whilst the new plays which were the result of the introduction of the church and the choir, were probably added in the more elaborate plays sedes, donum, and loca extending down the nave. This natural arrangement was apparently followed when the drama left the church, as in the 12th cent. Norman resurrector! Chambers (ii. 83) suggests such an arrangement of the lius, mansions, and estals required by the prologue, following the analogy of a Donnerschewing Passion-play of the 16th cent., the plan of which is extant (given in Froning, Das Drama des Mittelalters, p. 277). The prologue gives the order of the required sets: the crucifix, the monument (sepulchrum), the gold, heaven, hell, Emmanus, Galilea, and six estals or sedes. The only other extant French religious play of the same period, the Adam, shows even better how far the drama had outgrown the simplicity of the Quem quieritis! The Latin rubrics indicate not only a complex setting, but great care in stage management, even extending to the gestures and voice of the actors.

For instance: 'Let there be built a paradise in a higher place; around this there be draperies of silk. There shall be sweet trees and foliage; various trees from which shall hang garlands. Before them the Saviour shall be clothed in a dalmatic; before him shall be placed Adam and Eve, Adam in a red tunic, Eve in a woman's white robe and a veil of white silk.' (Chambers, ii. 80.)

The rubrics mention not only the costumes for all the characters, and the localities—paradise, hell, a cultivated field—but also 'properties'—a cascade, a rako, a rack, an oven and wear, cauldrons for them to best upon, flames.

The development of the liturgical drama was practically complete by the 15th century. Thereafter after the growth was mostly outside the church, secular and more vernacular, much more rapid and national. The liturgical drama was much the same in different countries, but the vernacular religious plays took on great variety in the 14th cent.; so that henceforth, to be understood with any clearness, the special literary types that developed must be studied by countries. Furthermore, the influence of particular authors and of particular methods of representation makes itself felt.

MIRACLE-PLAYS, MYSTERIES, MORALITIES.
and the minor instances of dramatic activity can hardly be mentioned. Generally the English Miracle-plays were represented in separate scenes, each by a different trade, and, on its own 'pillage.'

A high scaffold with two rows, a higher and a lower, upon four wheels. In the lower they assembled them selves, and in the higher rest they played. . . . They became first at the aby gate, and when the first pageant was played it was where the justices of the peace were met, and so to every streets . . . to se which was greata resort, and also scaffolds and stages made in the streets in those places where they decided to play their pageanes' (Archdeacon Rogers' description of a play at Chester, 1394, quoted by Pollard, English Miracle Plays, p. xxxiv).

The plays of the cycle were not the work of one author, but an 'organic growth.' The number of guilds having played; hence there was also a variation in the number of plays or scenes. The play for each guild was often slight in subject—e.g., 'Adam and Eve, an angel with a spade and a distaff assigning them work,' played by the armourers at York. An over-estimate of the subjects of the York cycle (probably composed towards the middle of the 14th cent.) will give an idea of the wide range of the plays:

the Creation, the Temptation, the Fall, Noah and the Ark, the Sacrifice of Isaac, Moses in the Wilderness, the Propheties of Christ, the Annunciation of the Shepherds, the Magi, the Slaughter of the Innocents, Christ in the Temple, the Temptation, the Woman taken in Adultery, the Raising of Lazarus, Judith and Holofernes, the Crucifixion, the Marrying of Bell, the Resurrection.

Although this list is incomplete, we can see it all the elements that we have found in the Continental liturgical plays, and may be permitted to suppose that the Miracle-cycles developed by the extension and amalgamation of liturgical forms such as the 'Prophecies,' the 'Stab,' the 'Pastores.' Though, like their French and German contemporaries, the authors allowed themselves considerable freedom in expanding the Biblical text (as, for example, the part of Herod), the characters most freely drawn are almost exclusively those of persons to whom neither Scripture nor legend ascribes either name or individuality. Such personages as Cain's wife' garcelo, or servant, Noah's wife's shepherd, are introduced for the sake of relief—often inappropriately, it seems to us, as in the Crucifixion scene.

The purpose of the dramatic relief that we owe the story of Maf and his sheep-stealing in the Coventry cycle—our first English comedy' (Pollard, p. xii).

In the Coventry cycle there are various characters that link the Miracle with the Morality, the dramatic form more characteristic of the later years of the pre-Elizabethan drama. Such characters appear as Death, Veritas, Misericordia, Pax. The earliest known English Morality is lost. It was a 14th cent. play, 'setting forth the goodness of the Lord's Prayer . . . in which the angels and devils and sins were heaped up to scorn, and the virtues were held up to praise' (J. Toulmin Smith, English Drama, London, 1874, p. 137).

The earliest Morality that has survived is 'The Castle of Perseverance.'

Its purpose was 'to trace the spiritual history of Humannman Grace . . . from the day of his birth to his appearance at the Judgement Seat of God, to personify the foes by whom his path way was obstructed, and the confessor he rests on, and the ordinances of Confession and Penance by which he is strengthened in his conflict' (Pollard, p. xvi).

The play is poorly but interesting; it has logical development and unity of purpose. The stage directions show that it was elaborately presented.

The most famous morality is 'Everyman,' composed in the 15th cent.; it is thoroughly dramatic in language and treatment.

The great Moralities were followed by shorter ones dealing with narrower subjects—didactic interludes,' Pollard calls them. From these are derived most of the common notions regarding Moralities. One of the earliest is 'Hycke Sooner.' Some are written in the character of religion, others in praise of learning (e.g., the 'Interlude of the Four Elements'). Some of the later interludes are real plays, in the modern sense—e.g., 'A New and Pleasant Enterlude; or, the Earl the Martian, and the Science of Maim.' The amusing lines, the act-division, and the characterization make the play modern rather than medieval. John Heywood's plays illustrate still better the change that was taking place in dramatic art—a change which was to lead rapidly to the splendid Elizabethan drama.

5. France.—The development of the liturgical drama outlined above carried us into the 12th century. If there are few plays known of the 12th and 13th centuries, the period when the drama became thoroughly secularized. Of the 12th cent. two plays are known, Jean Boitel's 'Jean de Saint Noe' and Brulart de S. Theophile.' In the 14th cent. the French drama first acquired its national character. Petit de Julleville says that forty-three plays of the period are extant, 'the Miracle of St. Martin and Notre Dame.' Here we have a form not found generally in other countries. That there must have been other forms of plays in this century is certain; the derivation of the dramas of the 15th cent. from the 12th and 13th makes this clear. Forty of the plays of the Virgin are in one MS in the Bibliothèque Nationale. These plays, however, they vary in style and in source, all have as a central theme a miraculous event brought about by the intervention of the Virgin—always a mechanical and unexpected intervention. In other respects—in style, stage-management, songs—the plays are so similar to ours that we can discern the work of one author, at least the répertoire of one company; and this is the more likely as such plays were performed by societies, called 'Puys,' formed for the purpose.

In the 15th cent. for the first time the word 'Mystère' appears as a dramatic term, and in this century it meant a representation of either Biblical story or the lives of saints. The NT was more used than the OT, as we have seen; the history of the Middle Ages in the OT was chiefly in the fore-shadowing of the redemption of mankind. This view accounts for the inequality and lack of dramatic feeling in the use of OT story. Furthermore, the medieval drama was not original; it did not build up a play from a situation as did Corneille or Racine, but transcribed Scriptural narrative regardless of dramatic effect.

Though the French 'Mystères' seldom approach the completeness of the English cycles, they are often cyclical in form and extremely long. The famous 'Passion' of Arnaud Gremelin is about 65,000 lines, a length attained not merely by prolixity but by following the career of each of the apostles after the Crucifixion. The French Passion-plays, the most notable of the 'Mystères,' control, of course, around the Passion, which they developed in a painfully realistic manner; but they were extended at the pleasure of the author by the addition of any scenes preceding or following the narrative proper. Hence the legends of the saints, also popular in this period, had often a local interest.

*Many were composed for a certain province, city, or brotherhood, in order to celebrate a patron saint, to commend a relic, or to give sanction to a pilgrimage* (Petit de Julleville, 1: 390).
6. Germany.—The early texts are scarce in Germany, but from those that are extant it appears that the liturgical play had much the same history as in other countries, and that the translation from the Latin to the vernacular took place in the same manner. As early as the 12th cent. the Teutonic 'Anti-christes' (text in Frowning, p. 200), then termed Spiegelspiele, is known. It was a remarkable characteristic: an ambitious plan, allegorical figures, and particularly a political motive, for it is a subtle vindication, on the one hand, of the Empire against Papal claims, and on the other of the "Teutonicorum" against the " rex Francorum."

In the 14th and 15th centuries the religious drama flourished in Germany, its most characteristic form being the Passion-play, of which numerous texts survive. There were also some cycles, such as those for Corpus Christi from Swabia (15th cent.). The Passion, which came in the 14th and 15th centuries to be the chief theme of the religious dramas in France and Germany, had seldom been represented in the liturgical drama. The nearest approach to a Passion-play was found in the dialogued versions of the Planets Marvel, such as that first published in Liège in 1527; there was also a version printed at Munich, 1525.

The earliest text is German from Benediktiner. Like other medieval dramatic forms, the Passion-play was developed by attrition; it assimilated with other forms, either 'prefigurations' of Christ or events following His Passion. By the 14th cent. the form was well developed, but its main period in Germany was from 1400 to 1515. Great 'Passions' were played at Frankfort, Aifeld, Friedberg, and other towns. Some, as at Eger and Donaueschingen, were cyclical in extent.

7. Modern survivals.—Traces of medieval dramatic customs can be found there in Europe to the present day. In general the survivals are no more than dummshow like the popular crèche, or representation of the infant Christ at Christmas, which is, however, rather a reversion to the ceremony from which the Christmas play was derived than a survival of the play. Most notable in this way are the representations of the Passion-play that have either kept alive in out-of-the-way places or revived, most famous among them being that of Oberammergau. The first mention of it is in 1633, and the oldest text, dating from about 1600, contains traces of two earlier plays. The tradition of the Oberammergau Passion-Drama originated in the 15th cent. and continued there until the 18th cent. It was further remodelled by the Benedictine Rosner after the model of the Jesuit drama, and in 1780 Rosner's more comprehensive version was simplified by Knipfelberger. Its present simple and dignified form is the work of two authors, P. O. Weiss and M. Daisenberger. The play is given every ten years, in pursuance of the original vow on deliverance from pestilence. Other versions of the Passion-play have been performed in recent times at Brixlegg and Voriedersee in the Tyrol and at Höriz in southern Bohemia (A. Hautlen, Uber das Höriziter Passionspiel, Prague, 1894). Representations of this kind occur to this day in southern Italy (T. Trode, DasGotischeSchauspiel in Süditalien, 1895).

MIRROR.—The invention of the mirror seems to coincide with the beginnings of the higher civilization, following the rise in institution of metalurgy. It is clearly an instance of the polished reflecting surface of metals. The Egyptian mirror apparently set the mode for all subsequent developments of the instrument, at least in the Western world.

1. Mirrors of the ancients.—These were almost invariably hand-mirrors for ladies' toilette purposes. The Egyptian mirrors were made of bronze (not brass, as is often stated), one mixed alloy from six to eight inches in diameter, they were elliptical in shape, with the long axis at right angles to the handle, which also served as a stand. The polished surface was extraordinarily fine, and in some cases still remains.

Mirrors are not mentioned in Homer, but were used in classical Greek times, and borrowed by Rome. Few Greek mirrors are extant, but their shape suggests derivation from the same that of the Roman mirror from Greece. Both Greek and Roman artificers preferred the absolutely circular form, with the handle as in the Egyptian original. They were usually made of bronze, with 20 to 30 per cent of tin; some specimens are silver or silver-plated. The Romans developed the box-mirror, consisting of two circular disks joined by a hinge. At the back of Greek and Roman mirrors appears the handle. The most numerous collections are from Etruria. The Etruscans were sedulous imitators of Greek art, and much of their work on mirror-backs is interesting and intelligent, though lacking the fineness of Greek technique. Piny notes the manufacture of glass mirrors backed with tinfoil at Sidon, but the invention did not succeed, and had to be repeated in the Middle Ages. The Romans made large mirrors also, similar to the modern cheval-glasses, but fixed in the walls of rooms, and working up and down like a window-sash. The mirror-case was especially developed in the 16th cent. Otherwise various forms of the mirror have been performed in recent times at Brixlegg and Voriedersee in the Tyrol and at Höriz in southern Bohemia (A. Hautlen, Uber das Höriziter Passionspiel, Prague, 1894). Representations of this kind occur to this day in southern Italy (T. Trode, Das Gotische Schauspiel in Süditalien, 1855).
by artists. Metal mirrors were known in northern India by the Christian era, 1 and they were used to some extent by the Central American peoples, 2 which the Moche of Peru, the Hittites, and with them at an early period for women's use. 3 In Greek art Aphrodite is sometimes represented as holding a mirror; and in the Indian marriage ritual a mirror is placed in the hand of the bride to enable her to dress her hair. 4 A mirror and a comb are not infrequently found on Scottish sepulchral monuments of the early medieval period, but their precise significance is still uncertain. 5

2. Medieval mirrors. — The mirror-case continued to be popular among the rich, but the mirror itself became smaller, and was usually carried on the person.

10. The largest mirror known in the Middle Ages did not exceed the size of a plate. 6

The circular shape was retained.

11. The reflect ing surface was usually of polished steel or other metal, and steel mirrors were still in use in the sixteenth century. 7 There is a reference to a "round looking glass" of Cathe- rine of Aragon, which was probably a polished metal surface with a sheet of glass over it. An arrangement of this sort had been employed since the thirteenth century, and in the inventory of the Duke of Burgundy, dating from the fifteenth century, we find a mirror "a la fenêtre" or a "looking glass." 8

This method is a noteworthy, but futile, attempt at a combination of metal and glass.

12. Considering the great quantity of glass manufactured for window panes from the thirteenth century onward, it would have been curious if the idea of employing a substance admitting of no such polish had not suggested itself to the mirror-makers of the day. But until a really satisfactory metallic looking was discovered, the advantage of a looking-glass over a steel mirror would be slight, and this fact may account for the persistence of the latter for domestic use down to so late a period. The same was true of the "looking glass" method, which gives the modern looking-glass its efficiency was not known before the sixteenth century. 9

A final improvement was effected in the middle of the 15th. century by the French invention of plate-glass. Backing for glass was known in the 13th. century, and in the 14th. there was a gild of glass- mirror-makers in Nuremberg, but it was first in Venice that mirror-making acquired commercial importance. 10

The mirror naturally has lent itself to the production of curiosities, mostly the result of experiment.

The effects of convex and concave surfaces seem to have been known at an early time in both the East and the West. The "magic mirror" of China and Japan reflects on a screen an image of its back. In medieval Europe small spherical glass mirrors were known as "Ochsenaugen." The use of reflectors to produce light and heat was early discovered, as by the Greeks and Central Americans. 11 Mirror-writing is often practiced by ambidextrous persons, as by Leonardo, and it also occurs pathologically in forms of aphasia.

3. Superstitious connections with the mirror. — The property of reflecting images naturally inspires wonder, and thus tends to produce superstitious beliefs and practices. Most of these are connected with the common idea that the reflection of a person is his soul.

12. A saying who had been made to look into a mirror exclaimed, "If I gaze into the world of spirits!" One of Darwin's children, at night, pulled to the looking-glass on his name called. 12

Two cases illustrate the connexion between

29. Loc. cit.

On the other hand, a mirror, as when set in a ring, may be used to repel demons.1

The magical uses of the mirror and the Dihing surface is an ancient and world-wide practice, its principle being that figures representing the souls of persons at the moment or in future actions may be seen. A pool of ink is a common mirror for the Inca priests (cf. art. CRYSTAL-GAZING), and a combination of mirror and pool of water was used at Deuter's sanctuary at Patre, where was a sacred spring, but its use was permitted only in cases of sickness.

'They tie a mirror to a fine cord, and let it down so far that it shall not plunge into the spring, but merely graze the surface of the water with its rim; they look into the mirror, and it shows them the sick person either living or dead.'2

It is also used, especially in German and Slavic lands, to discover one's future husband or wife.3

Divination by mirrors is a variety of a widespread method of 'seeing,' the most frequent instrument being the crystal ball. A magic mirror possessed of the power of speech is not uncommon in folk-tales; and in Shintoism actual worship is rendered to mirrors which, originally presented to deities, have come to stand for the divine beings themselves.

The supernatural associations of mirrors are chiefly the foregoing, but one or two of a miscellaneous order may be noted, as illustrating the general subject.

Pausanias describes a temple near Megalopolis, within which was a mirror fixed on the wall. "Any one who looks into this mirror beholds himself, and all things around him, but the reflection of the gods and the throne are clearly visible." The Greeks kindled sacred fire by means of the mirror or crystal, and the same was the case in China and Siuan, while in the Laccadive kingdom the new fire was kindled at the summer solstice by means of a concave mirror turned to the sun.4

4. The mirror in metaphor.—The optical properties of the mirror are so important and impressive that all civilized thought is permeated by ideas derived from them. One or two may be cited. The Hebrew paronomasiologist says: 'As in a water face answereth to face, so the heart of man to man,'5 while the Buddhist sutta6 speaks of 'a way of truth, called the Mirror of Truth.'7

Mirror was a favourite component of titles of books in Elizabethan literature, in its meaning of 'true description,' and its meaning of 'pattern, exemplar, model' is similar. Shakespeare writes 'the mirror of all Christian kings.'8 To hold 'an image of the mirror up to Nature' uses the simplest connotation of the term. An interesting metaphor is used of psychic processes; the mirror of the mind.9

Chaucer and Shakespeare are the chief sources. Among new sources of metaphor are the two remarkable biological and chemico-physical analogies to the optical fact of mirror-image (in which right becomes left and vice versa). All vertebrate animals, many invertebrates, and the leaf and other systems of plants are bilateral, one side being the mirror-image of the other, while the formation of right-hand and left-hand crystals is connected with the division of acids into right and left according to the effect produced in relation to polarized light.

LITERATURE.—With the exception of the well-known archaeological works on magic mirrors and popular folklore collections, the relevant literature is included in the article.

A. E. CRAWLEY.

MISHMIS.—The Mishmis are a tribe who inhabit the Mishmi hills, a section of the mountain ranges on the northern frontier of Assam, which shut in the eastern end of the Brahmaputra valley, between that river and the Dihing river, a typically unexplored, consisting of steep ridges, covered as a rule with tree forest, and including some peaks 15,000 feet in height (IGI xvi. 1908, 377 f.). They are divided into four tribes, speaking three distinct but probably connected languages. The most western tribe is known as Midu, Midhi, Nedu, or Chaikatka, 'hair-cropped;' they inhabit the Dihing valley with the adjoining hills. To these last art the Mishmis are called 'outcasts,' who speak practically the same language. East of the Bebijyayas are the Taying or Digaru Mishmis, beyond the Digaru river. The Mijus are still further east, towards the Lama valley of Dezayul, a sub-prefecture of Lihas. Most of these live beyond the British frontier. The numbers counted at the last three Censuses in Assam were 271, 98, and 271 (Census Rep. Assam, 1891, i. 205.; 1901, i. 139.; 1911, i. 134.).

1. Ethnology.—The Mishmis have been identified by some authorities with the Mishzas or Hmug, the aborigines of Yunnan, whose name has been interpreted to mean 'children of the river'; or as a contemptuous reference to their 'simple dirt' (J. G. Scott and J. F. Hardiman, Gaz. Upper Burma, pt. i. vol. i. [Rangoon, 1900] p. 697 f.).

So far as the means at our disposal permit us to draw conclusions, it seems most probable that these four tribes belong neither to the Hmug, to the Yunnans, to the Southern race, or to the Tibeto-Burma branch of the Tibeto-Burraan languages. They seem to be descendants of clans which, when the partition of the ways between the two branches took place, accompanied neither, but made their own way at different periods into the hills overlooking the Assam valley from the south' (G. A. Grierson, Census Rep. India, 1910, i. 223).

2. Relations with the British Government.—The British first came in contact with the Mishmis in 1825, when Liot. Burton reported that the 'Mishmah' were inhabited by tribes 'who were very averse to receive strangers.' Other officers visited them between that time and 1831, when M. Krick, a French missionary, was murdered by them. Then followed a succession of outrages. In 1885 one of their headmen was taken to visit the Calcutta Exhibition. Soon after his return he died, and the tribe, holding the British Government responsible, wore memorial tatters and proclaimed that the head of a British subject should be buried with him, in order to propitiate his spirit. So they slew a British subject and carried off his head. An expedition was sent after the head, and by a commission, and since that time they have given little trouble. But they are keen tappers of rubber, and it has been found expedient to prevent them from crossing the Brahmaputra into British territory for that purpose (B. C. Allen, Gaz. Lokbikyoor, 1905, p. 55 f.).

3. Religious beliefs.—The best account of their religious beliefs is that by E. T. Dalton, Descrip- tive Ethnology of Bengal, Calcutta, 1872, p. 16 ff.:

'The religion of the Mishmis is confined to the propitiation of demons whenever illness or misfortune visits them. On these occasions the sprig of a plant is placed at the door to intimate to strangers that the house is for the time under taboos. They apply to their folklore collections, there are so many stories preserved in connection with the priests, but they are few in number and have to be brought from a distance when required. M. Krick describes one that he saw at a funeral ceremony. . . . For several days previous to the arrival of a priest, an attendant was employed in singing a devotional chant to the accompaniment of the bell. There was also a preliminary sacrifice of a red cock and hen, the blood of which was received in a vessel con- taining some offered milk, and alms were given, as it is supposed to indicate if the result will be fortunate or otherwise. At last the priest arrived, dressed like an ordinary chief, but he wore a rosary of steel, and, stashed
MISSION (Inner)

to the front of his headdress, two appolettes like horns. For two days, at intervals, the priest and his son employed themselves in drawing chalks, marking the time by waving a fan and ringing a bell; on the third day he put on his characteristic dress and cap, and he regarded his pontifical dress—a tight-fitting cost of colored cotton, a small apron, a deer skin as a mantle; from his right shoulder descending long grey hair, and bright red, as over his left shoulder he wore a broad belt embroidered with four gloomy white cross, and having attached to it, four small bells. On his head he placed a bandeau ornamented with shells, and round the knot of hair at the top of his head a movinam from which turned the weakest thread. This was followed by a wild demonical dance; but whether a schoolmistress or a wife people generally joined, we are not informed. The object was, however, to make as much noise as possible to frighten the devils. After this, lights were all extinguished, till a man suspended from the roof obtained a fresh light from a flint. He was to be careful not to touch the ground as he produced it, as the light thus obtained was supposed to be fresh from heaven [see p. 70].

Among the Mishes being polytheists, though of the lowest order, it is not strange that they make us understand the existence of one Great Spirit above all" (p. 197). "The Mishes, he said, 'are very unfortunate. We are everywhere sur-rounded by devils, that live in the mountain, and trees; they walk about in the dark and live in the winds; we are afraid of them and do not come near them.' He, however, to a question as to which deme he thought the strongest, after some hesitation he said that the demon of fire was the strongest and most dangerous, as he dried up the water and burnt the mountains; he was also good-natured, as he warned them not to look for fire (p. 169).

"As to religion, their notions are very vague. Polytheism, accompanied with all frightful ceremonies and sacrifices of fetishism, is their true creed. The yearly sacrifice and feast in honour of their deceased parents shows that they have some idea of a future state, but I could not find out their particular ideas, as death is a disagreeable subject of conversation among them; and Chowsam always declined to interpret questions relating to it" (p. 238). "The two most important ceremonies of the Mishes are undoubtedly those attending deaths and marriages. In the case of sickness a second thought is called in, and he generally prescribes the sacrifice of fowls or pigs, according to the degree of sickness. These sickness he orders as a preparation and as a propitiation of the demon who is supposed to be instrumental in causing sickness. When death ensues, particularly in the case of a male, it is said that the relations (bit-)

The movement originated after the close of the Napoleonic Wars when orphan houses were established for children whose parents had lost their lives in the war (Johannes Falk, Graf Aladbert von der Riecke, C. Heinrich Zoller). A number of societies and institutions arose organized on a large scale for the care of the poor, the nursing of the sick, and the saving of destitute children. This grew out of the pietist movement (see 1848) and was largely inspired by the efforts of Great Britain in the foreign missionary field, the foundation of the Bible Society, the work of Mrs. Elizabeth Fry, and the City Mission. Competitors to these leaders were Johann Hinrich Wichern (1809-81), who in 1833 founded at Hamburg the Rauhe Haus (a reformatory institution built upon the household system with a training home for day-workers), and Bodo Flieder (1806-93). In 1826 founded at Kaiserwerth the first society for prison-visiting in Germany, in 1833 the first refuge for discharged female prisoners, and in 1836 the famous Deaconessinstitut for the training of nurses and infant teachers.

The name 'Inner Mission' was first employed in a narrower sense by Friedrich Lübeck, of Göttingen, in Die zweifache, innere und außere Mission der evangelischen Kirche (Hamburg, 1843), to mean work among the lapsed members of the different Christian communities and the fortifying of a weak church with the help of a strong, while Wichern broadened the meaning of the term to include all practical Christian work in the homeland and among Germans in foreign lands (Diapora).

It was Wichern who first organized the movement on a comprehensive scale in 1848. The revolution of that year roused the Church from its apathy, and opened its eyes to the glaring evils of heathendom which had grown up in the midst of the nation. A Church Diet was summoned at Wittenberg, where 500 representatives of Protestant German Churches assembled. Standing on Luther's grave, Wichern delivered a memorable address, picturing the wide-spread power and the spiritual paganism which had arisen in their midst and the fruits which it had produced, and calling upon the
Churches to join hands in remedying these evils. He sketched on large and state map-like lines the program of the remedial activities needed, and pronounced the formation of a central committee (Centralausschuss), consisting of ministers and laymen, to make a survey of the fields of work, place the various societies already at work in touch with one another, and thus to save every effort, point out the need of new effort and help such effort to succeed, guide the movement as a whole, and, above all, make it clear that all the several ministries were united by the one divine spirit of redeeming love in Christ. Thus was established a free confederation of all the activities of the Protestant Churches, so far as these were extra-official. The object of the Inner Mission, as defined in the first report of the Centralausschuss, is ‘that the Christian Church with all its resources, and through all its agencies, may fill and quicken the whole life of the people in all ranks of society, inspire all social arrangements and institutions with the might of a love energizing heart and life—and through all its living members labour to save the neglected and the poor.’ The Inner Mission was to be a tribe of practicing doctors in the great hospital of the people. Its programme and policy are set forth in full in Die innere Mission der deutschen evangelischen Kirche, eine Denkschrift des roten Ausschusses. Frittern by Wichern at the instance of the Central Committee and published April 1849. This book sets out the scope of the work and the relations of that work to the existing home and church, as well as to the Inner Mission. For twenty years Wichern remained practically the directing spirit. Pamphlets (Fliegende Blatter) were published annually at the time giving reports of the various agencies carried on.

The most comprehensive survey of the work is given in two Jubilee publications of the Centralausschuss in 1899 (Statistik, Fünfzig Jahre). These contain reports by different authentic contributors on the work done in each of the following departments:

1. The care of children, creches, infant schools, care of crippled, Sunday schools and children’s services, refugees and orphanages, country holidays for city children.
2. The care of adolescents, associations and homes for apprentices and journeymen, schools of domestic economy, homes for bereaved children (Chorikretes Leben) (analogous to Christian Endeavor Societies).
3. The care of tramps and the homeless, colonies for unemployed, homes for girls, railway-station missions, women’s friendly societies and lodges, missions to soldiers and sailors, river and boat population, railwaymen, navvies, brickyard-workers, waiters.
4. The quickening of the Christian spirit, city missions, men’s brotherhoods, support of weary Churches, Christian art associations, lectures.
5. Work among emigrants and Germans in foreign lands (Diaspora), pastimes at holiday resorts.
6. Care of the poor, sick, and infirm, district nursing associations, red cross work in war, homes for imbeciles, epileptics, inebriates, blinds, deaf and dumb.
7. Countering of social evils, Sunday observance, housing reform, prison missions, temperance work, savings banks, anti-gambling work, friendly societies, building co-operatives.
9. Orphanages for orphans, asylums, unemployed colonies, nursing, etc., courses of instruction for social workers.

As the result of the Inner Mission the whole of Germany has been covered with a network of philantrhopic agencies, imbued with the Christian spirit; the social conscience has been quickened and enlightened, and the efforts of the Churches have been made simpler and more wisely directed. The State has co-operated. In 1852 the brothers of the Rote Haus were allowed to act as warders in Prussian prisons, and Wichern was commissioned to visit the prisons, investigate their conditions, and suggest reforms. Later, Wichern was appointed Councilor of the Ministry of the Interior and made a member of the Evangelischer Oberkirchenrat.

The work of the Inner Mission paved the way for the social legislation with which Germany was flooded during the Bodelschwingh (b. 1831), who founded at Bielefeld a colony for epileptics and unemployed, and organized, with the help of the Government, the national scheme of relief stations for tramps.

In the Church the Inner Mission has given the laity, and especially women, a sphere of service; it led to the official institution of the diocesan in the Evangelical Church in 1856, and gives material expression to the universal priesthood of believers. It has filled a place in the educational system by caring for orphans and infants, and counteracting the movement for the secularization of schools.

The movement has affected other countries—especially Switzerland (J. A. Bost), Denmark (Wilhelm Beck), Norway (P. Haram), and Holland (O. G. Heldring). The English Inner Mission, organized by her first training at Kaiserwerth. The work of Thomas Guthrie (Ragged Schools), William Pennefather (Milllany Conference), and John Brown Paton (Lingfield Mission) is typical of the work of the Inner Mission. In 1873 J. B. Paton and Francis Morse summoned a conference at Nottingham to consider the practical relations of Christianity to the social wants and evils of our time, at which Paton expounded the Inner Mission of Germany, and a union of all existing Christian charities and societies working for social ends was formed at Nottingham. W. T. Stead took up the same idea in his agitation for a Civic Church. The nearest approach in England has been the organization of Civic Leagues (or Gilds) of Help (beginning 1906), which represent an attempt to adapt the Eberfeld system to the conditions of English city life and bring all the social activities of the civic community into touch with each other.

MISSIONS.  

Buddhist (M. Anesaki), p. 760. 

Christian— 

Zoroastrian (L. H. Gray), p. 746. 

MISSIONS (Buddhist).—I. In China.—Buddhist missionary enterprises outside of India were started by K'iuin Asoka in the latter half of the 3rd cent. B.C. On the other hand, a later Chinese record informs us that in 217 B.C. (in the reign of Shih-Huangti of the Ts'in dynasty) eighteen Buddhist monks were brought to the capital of the empire. The authenticity of the information may be questioned, but, when we take into account the facts that Chinese Buddhists used to ascribe the 7th cent. B.C. to Asoka's reign, and that, in spite of that, the date of the story almost agrees with the historical date of Asoka, the tradition seems not to be a mere forgery. About one hundred years after that event, as stated in an official record, another contact of Buddhism with the Chinese took place. An expedition sent to the Western regions by the Emperor Wu, the most ambitious sovereign of the former Han dynasty, in 121 B.C. brought back Buddhist gospels and missionaries; and in the 2nd B.C. the Yuechi ambassadors are said to have brought some Buddhist scriptures. These stories point to the spread of the Buddhist missions in Central Asia in the centuries immediately after Asoka's missionary enterprises. 

Historical records agree in assigning to A.D. 67 the first official introduction of Buddhism into China. The Emperor Ming, stimulated by a dream, sent an expedition in search of the golden man of whom he had dreamt (A.D. 64), and, when the expedition returned in 67, it brought not only Buddhist statues and scriptures, but also two monks, both of whom were named Matanga and Dharmaraksya by name. The first Chinese Bud-

hist book, containing the forty-two sayings of Buddha, was written by Kaśyapa, and translations of several texts are said to have followed it. The Pai-ma, or White Horse Temple, was built in Loyang, the capital, and soon after the emperor's brother built another temple. Conversions en masse are said to have taken place in 71, many nobles and Taoist priests being among the converts. The new religion was received with open arms and heart; the way must have long been prepared for it. 

There is a gap of about eighty years between the mention of the first missionaries and the advent of two other monks, one of whom was Shih-kao of Parthia, who came to China in 148 and worked till 170. He is said to have been of royal blood and to have left his country because of the fall or decline of his own royal family. This is one of the evidences that Buddhism had a foothold in Parthia and Central Asia. It is quite conceivable that Chinese Buddhism had its source close to China's western borders at that time. Shih-kao's works are mostly texts from Agamas, the counterpar
tparts of the Pāli Nikāyas, and some of them treat of hygienic matters, connected with the practice of counting the respirations, or anāpāna. Perhaps we may see here the first of the medical works of the missionaries. 

For a century after the great Parthian translator we have only scanty records of missionaries, yet we have reason to suppose that missions were going on slowly. The Buddhist propaganda in this period consisted chiefly in translations of the scriptures and in miracle-working. Certainly the works of art, in particular, were performed by elaborate rituals and music, were great attractions; the Pai-ma temple is said to have been decorated with mural paintings representing Buddha and his saints; but the worship of Buddha's relics and the miracles worked by them are mentioned oftener than the works of art. The relics (sāriya, Chin. shōli) were represented by pearls of mysterious origin, and the miracles and works of art were attributed also to the mists and fogs which enveloped the relics. Little is heard of works of charity, though they are sometimes mentioned later in the 4th century. That the translations played a great part in the Buddhist mission is proved by the work done during the five centuries after the first undertaking. This was quite natural, because the Chinese already had rich literatures, both Confucianist and Taoist, and another, Buddhist, came to China, and the new religion found it urgent to confront them with scriptures of its own. 

Besides the translations, the first apologetic writing is ascribed to A.D. 195, a series of apologetics and polemics followed. This literature continued throughout the whole history of Chinese Buddhism. Its most flourishing period was in the 4th and the 5th centuries, during which Taoism was a powerful rival of Buddhism. These polemics were mostly carried on by native teachers, while foreign missionaries were occupied with translations. 

Though polemics do not belong properly to missionary works, we may here consider one instance, in order to throw a side-light on our subject. In 165, Hsū-tu, a Confucianist convert, wrote 37 sets of questions and answers in defence of his new faith. These questions may be divided into two groups: (1) those from the Confucianist side, asserting that Buddhism's ascetic religion was against humanity, and (2) those from the Taoist side, asserting that immortality (or, rather, physical longevity) was attainable only by Taoist practices, not by Buddhist teaching. Mou-tau defended his religion with abundant quotations from Confucian and Legalist works, which were at variance with which he confronted the attacks were really Buddhist. The transcendental idealism of supreme enlightenment was the position which he assumed against Confucianist positivism, and the teaching of impermanence of physical life was his standing-ground against Taoist atheism. This position has been taken as a typical example of the apologetic writings of the period. 

The fall of the Han dynasty in 220 and the subsequent division of the country into the Three Kingdoms were of great significance for the history of the nation, both politically and religiously. From this time down to the close of the 6th cent., the country was divided into many contending dynasties and kingdoms, and in a country like China, where the ruler's will determines everything, the fate of the Buddhist mission was always influenced by the vicissitudes of the ruling dynasties. Copies of missionaries were taken by the residences of dynasties, and the missionar
dies were expelled by rulers who preferred Taoism to Buddhism. Under these circumstances the missionar
ergave up the ground that the polemic literature flourished not earlier than the 4th cent., but we omit discussion of the question and follow the legend. 

1 There are collections of these writings; see Nanjo, nos. 1471, 1472, 1479, 1590, 1581. 

2 The question occurs with 'Who is Buddha?' The answer to it shows that the author was acquainted with Buddha's life through information which is very similar to the Lādakhtsthā. Some critics doubt the existence of this person, on the ground that the polemic literature flourished not earlier than the 4th cent., but we omit discussion of the question and follow the legend.
(1) Ch'ang-an (the modern Sing-an), (2) Lo-yang (on the Huo-ho) in the north, and (3) Chien-ye (the modern Nanking) in the south. During the first half of the 3rd cent., the last two were the respective capitals of two of the Three Kingdoms, while the third was situated far in the west, beyond the reach of Buddhist influence. After a short interval of under 100 years (294–305) these three places remained as the three centres of China in all the vicissitudes of rulers and States. Thus the missionaries who came to China by land routes worked hard, but did not succeed in spreading Buddhism from Central Asia or the north-west of India, though some went further to the south.

The 4th cent. was a period of confusion in China, caused by a hopeless division of the country and by intrusion of invaders from the north. Yet Buddhist missions proceeded to cover the greater part of the land, and many of the contending rulers welcomed missionaries from Central Asia. One of these men, Fo-n'ung, who came in 310 to Lo-yang from a 'western country,' laboured not as a translator but as a social worker. It is said that he was 'well versed in magic formulae and saved many people from diseases and sufferings by his supernatural attainment.' No fewer than 895 monasteries and sanctuaries were established by him, and his 'disciples' numbered 10,000. But his contemporaries, Tso-an and Hui-yen, were more in his having educated one of the most powerful thinkers, Tso-an, than in his actual works; though he laboured mostly in the north, his influence was later propagated to the south by his disciples.

The demarcation between north and south became more conspicuous when, at the beginning of the 5th cent., two comparatively powerful dynasties divided the country into two. While the northern, the Wei dynasty, patronized those who came from or through Central Asia, the southern, the Sung dynasty, invited missionaries from S. India, who came by the sea route. Moreover, the repeated persecutions of Buddhists by Taoist rulers of the northern dynasties drove many missionaries and Chinese monks to the south, and it was through them that a start was made in establishing groups of men of similar tendencies, which became the origin of sectarian division in Chinese Buddhism.

Among these, who worked in the north the most prominent was  the Kuma-rājiva, a native of Karachi. He came to Ch'ang-an in 401, having been invited by the prince of the Ts'in dynasty, and, being highly patronized by the latter, he worked there with great success for more than ten years. His lectures were attended by crowds from various classes of people, and his work of translation was assisted by the best scholars and men of letters. It is no wonder that the translations ascribed to him are ranked as classical Chinese, and that his translation of the Lotus of the True Law (g.v.) Saddharmapundarika remains the most valued and revered of the Chinese Buddhist scriptures. Kumārājīva was apparently a monk, but his conduct was highly irregular, for he lived with many concubines; yet his talents were so appreciated and his fame so high that his patron and the people honoured him, despite his neglect of Buddhist discipline and in spite of attacks heaped upon him.

A powerful rival, however, appeared in the person of Buddha-bhadra, who was invited to Ch'ang-an in 498. He is believed to have arrived at the coast of Shantung by the sea route, having once failed to come by land. In contrast to Kumārājīva, he observed austere rules of monastic life, and instructed his followers in discipline and in meditation. At last a critical rupture between the two great schools broke out, and Buddha-bhadra took refuge in the south, where Tso-an's disciples were living secluded in a monastery on Mount Lu-shan, in the modern province of Chiang-hsi. The leader of the group was Hui-yen (+ 410), and its members were those three centres of China, who were disgusted with the troubles of the world and devoted themselves to meditation and conversation with one another. Here Buddha-bhadra found men with their seats the southern sea, the north, and instructed them further in the secrets of Buddhist mental training. In this group of thinkers we see Chinese Buddhism quite accentuated to the native soil, especially to the poetic and transcendental mood of the southern Chinese, and preparing for further union of Buddhist meditation with Chinese quietism. It was on this ground that a definite school of meditation, known as Shan-fo (Skr. dhāma), later established itself and further impressed Buddhism with the poetry of the valley of the Yang-tzu. Although the followers of the Shan-fo school trace their origin to Buddha-bhadra, it appears that they did not have to come to China by sea in 529, the further source is to be found in the group of recluses at Lu-shan who welcomed Buddha-bhadra. After all, we can assign to China a school of Buddhism, relatively apart from foreign missionaries, to Tso-an and Hui-yen. Yet, parallel with this native movement, missionary work was proceeding, both in the north and in the south.

As we have mentioned, the south welcomed Indian missionaries, many of whom came by sea, and we find a sudden growth of sea-communication with India from the dawn of the 5th century. The pioneer of the sea-voyage from Ceylon to China was the famous pilgrim Fa-hian, who arrived at Shantung in 414, and who was followed by a series of Buddhists who sailed to China and worked mostly under the patronage of the southern dynasties. The most eminent of these was Gunavarman, who came to Canton from Ceylon, via Java, in 424. He laid the foundations of two monasteries called Chao-to (Chchena) and Jetavan (Jetavana) in Nanking. Here he instructed his followers in the strict discipline of the Vinaya and instituted the system of ordination, as an imitation into Buddhist mysteries, by establishing a special centre for the purpose, after the example of Nalanda (g.v.). The arrival of a number of Sinhalese monks in 434 under the leadership of a certain Tissara (Tisa) was probably connected with his institutions and intended for starting monasteries under the model of Sinhalese Buddhism. Another group of monks came from Ceylon in 438. Among those who followed the footsteps of Gunavarman are to be mentioned Kālayasas and Dharmamitra, both translators of Mahāyāna texts; Buddha-bhadra, the translator of the Saddharmapundarika; and Sangha-bhadra, the translator of the Pāli Sāvanatthassa-sīkha, a commentary on the Vinaya written by the famous Buddha-bhadra. The last of these is said to have come together with his master, a Tripiṭaka-chhārya.

In the 6th cent. we have two notable instances of sea-journeys. One was the journey of Buddha-bhadra, mentioned above, who is said to have remained silent for nine years after his arrival in China, but who yet succeeded in impressing his spiritual influence and in opening a powerful stream of meditative naturalism in China and Japan.
The next instance was the voyage of Paramârtha, who arrived in China in 546 and was invited to Nanking in 548. To him owe the translations of many of Asanga's and Vasubandhu's works and some other books. He was the first propagator of the Yogâchâra Buddhism in China, even before Yuan-chwang, the great translator of the 7th century.

Thus the Buddhist missionaries came to the Middle Kingdom from two sides by two routes, one via Central Asia and the other via Ceylon.1 Their labours, and the further development of their religion in the East, and have given us a rich store of information. On the other hand, we must not forget the pious zeal of the Chinese pilgrims who went to the West in search of truth and scriptures, the most prominent of whom was Fa-hian. It is related that the missionaries coming eastward and the pilgrims going westward met one another everywhere in the 5th and 6th centuries. By the joint labours of these men were completed the translations of the four Agamas, together with several of their single parts; the Vinaya texts in various versions coming to China; the religion of the Lotus; and the Flower-garland (Avatârakâra), etc. From these works we can see how Buddhist ideas and expressions became a part of the Chinese language, which is totally of different structure from the originals. These books and expressions now form an integral part of the Chinese language and literature.

In the 5th cent. Buddhist missions in China consisted chiefly in the work of translation, though we may suppose that popular propaganda was not neglected. Besides these, the monastic institutions were an integral part of the Buddhist religion. The first translation of the Pratimoksa (Pâli Pâtimokkha) and the regular monastic discipline based on it were carried out by Dharmakâla, an Indian, who came to Loy-yang in 520. In the 5th cent. we see a further establishment of the regular method of ordination under the government's patronage and supervision, carried out by Gunagamitrya. The sustenance of these ordained monks and nuns was eagerly patronized as a deed of great merit by rulers as well as private persons. We hear that, when, in 446, Emperor Ta-wu of the northern Wei dynasty sent Buddhist missions to the south, one third of these monks and nuns in his territory alone. This may be an exaggeration; but it is quite conceivable that there were 83,000 ordained persons in the time of the Liang (southern) dynasty, the great protector of Buddhism, and himself an ordained monk. Besides these regular monks many ascetics were revered as saints by the people, and they contributed much to the propagation of the religion, but as much to the dissemination of superstitions. They formed an eclectic element in Buddhism by adopting Taoistic and Indian ways of living and practices, but there were some who were really saintly, or at least beyond the world. Their lives are described in the Book of Saints and Miracles (Nanjio, no. 1454), and many of them are hardly to be distinguished from the Taoist 'men of mountains.' The people accustomed to look upon

1 According to Nanjio, App. B., among 73 translators who worked between 67 and 429, there were 10 Indians, 7 Yuehchi, 5 Parthian, 7 t'ou-Khâna, 21 from the western countries and 17 Chinese; among them 22 worked in the south, of whom 5 were Chinese. Among 42 workers who worked between 430 and 544, 16 were Indians, 19 from Kucha and other western countries, 4 Sinhalas and Indo-Chinese, and 5 uncertain. Among them 27 worked in the south.

2 For the whole extent of the work done up to 520 see Nanjio, App. xli-xvii; for the Agama texts see Anesaki, op. cit.
told only of the actions taken by the rulers and their ministers. Certainly the propaganda proceeded to engage them with new objects of worship and new methods of cult, but the most important factor in determining the fate of the new religion was in the hands of the rulers. The triumph given by the Tibetan conquests of Strong-ltsen Gam-po caused him to send his able minister Thunmi Sambho to India, where he performed a great service for Buddhism and for Tibet by inaugurating a Tibetan alphabet after the manner of the Skr. Devanagari. Translation of Buddhist books, partly from Chinese, but much more from Sanskrit, was made possible by this system of Tibetan letters. A decisive step in the work of translating Buddhist books into Tibetan was taken more than a century later, in the reign of Khri-Srong-de-btsan (reigned 740-786), who was a successful conqueror of borderlands. It was he who invited learned Buddhists from India and gave a decided turn to the nature of Tibetan Buddhism, because those Indians mostly advocated occult mysticism based on the belief in the efficacy of dhāraṇī, or mystic formulae, and magic practices. Among these agents of mystic Buddhism we mention two names: Padmasambhava or 'Lotus Growth,' with an allusion to the lotus as the womb of the cosmos, who introduced into Tibet the disciple, Pagur Vairochana, the 'Great Translator.'

The 9th cent. was a period of confusion in Tibet, and the fate of Buddhism passed through various vicissitudes in association with the inclination of the rulers and with their rise and fall. From the latter part of the 10th cent. we see fresh streams of N. Indian Buddhists and a firm establishment of mystic Buddhism. Besides the translations, many original writings, historical and doctrinal, were composed in Tibetan; and the missionary stage may thus be closed in this period. After all, accessible material concerning Buddhist missions in Tibet is scarce, and what is known relates only to political support by the government, and to translations produced by foreigners and Tibetans.

The 15th cent. was an epoch-making period in the history of Tibetan Buddhism, in connexion with the conquest of Asia by the Mongol Kublai Khan. Buddhist missions seem to have been active in this time in Mongolia, and the Mongol conquerors were quickly converted to Tibetan Buddhism, though all of them were ecclesiastics of promiscuous nature. Tibetan Buddhism was definitely established as a theology by the energy and ability of Phags-pa, the ally of Kublai Khan, and its influence was extended to the northern countries and even to China. The definitely independent, and totally isolated, growth of Tibetan Buddhism is to be dated from the latter part of the 14th cent., when the Mongol dynasty in China fell and the Tibetan reformer Tsong-Kha-pa arose.

3. In Korea.—When, in the 4th cent., Buddhism was being naturalized in Chinese culture, its propagation farther eastwards began. At that time Korea was divided into three kingdoms and several minor States. Of these three Koryo (or Kokuryo) was situated in the north, and first came into contact with Buddhism. In 374 two monks, Ato and Sauntao, both of whom are said to have been foreigners, were invited from N. China to the capital of Koryo (the modern Pien-yang), and in the next year two temples 1 were built for them, while in 384 a certain Malananda was welcomed by the court of Pō-kkōyó, which was situated in the middle of the country. Historical records tell of 1 The names of these temples, Syo-mun and Jpal-luian, sound neither Chinese nor Korean.

the construction of temples and of the arrival of missionaries, both Indian and Chinese, from China, but little information of them with us. In their propaganda, this fact being partly due to the circumstance that these records were compiled by the Confucianists of the anti-Buddhist dynasty of the 18th cent. The Buddhist propaganda advanced to the southern extremity of the peninsula in the middle of the 5th cent. An ascetic, nicknamed the Black Foreigner, 2 preached the Three Jewels in the south and came to be accepted in the Silla kingdom by means of incense and alms. He was followed by some missionaries who came to the south and gained hold of the people's minds. The worship of Buddha was received officially by the king of Silla in 528, and this monarch and his successors were not less zealous in the Buddhist cause than the rulers of the north. The construction of temples and organization of Buddhist rites came into vogue. A king who ruled in 540-576 became a monk, and his consort became a nun; and the propaganda advanced so far in his reign that a Korean priest was appointed archbishop of the realm of Silla.

4. In Japan.—In nearly a century and a half Buddhism had converted the whole of Korea, and it was quite natural that the tide of the mission should also rush down to Japan, which had no direct communication with the peninsular States and had introduced Chinese learning in the beginning of the 5th cent. The religion was first advocated by the Korean immigrants, and then by some natives. After these preparations, it was presented officially by the king of Pō-kkōyó to the Japanese court as a sign of homage and friendship in 583 (the date is usually but erroneously given 552). The presents consisted of a gilt statue of Buddha, scriptures, banners, and other ritual instruments, 3 and the message which accompanied these presents said:

This teaching (dhārma) is the most excellent of all teachings. It brings infinite and innumerable fruits to its followers, even to the final enlightenment (siddhi). Just as the Chintamani 4 jewel is said to give inexhaustible wealth to its possessor, so the jewel of this precious Law never ceases to give response to those who seek for it. Moreover, it has come from Korea, far distant, and the people of the countries lying between these two are now all adherents of it, etc.

These words, accompanied with a fine image and works of art, were a marvellous revelation to a people who knew only how to invoke spirits supposed to be little better than demons, and who looked upon the newly-offered deity was more powerful than the national deities or not. The hidden motive of the difference, however, was the political clan strife, intermingled with the difference of progressive and conservative policies. During fifty years strife the fate of the new religion seemed always wavering. But the present were followed by an incessant influx of priests, monks, artisans, and physicians, as the guards of the religion. It was natural that elaborate rites and the practice of medicine should be most effectual means in the conversion of a rather primitive people like the Japanese at that time. Though the religion was not yet generally accepted by the people, the sovereigns cherished it as their faith, and the Saga family, the head of the processionists, became its zealous advocates. They built temples and temples, and we hear of a monastery founded by the family in 684. The fall of the conservative party in 687 marked a decisive step in the progress of Buddhism, and to commemorate this event a temple was built,
for the first time at State expense. The erection of these and other Buddhist buildings caused constant importations of Buddhist statues, utensils, etc., accompanied by missionaries and artisans, and these displays of art were associated with works of charity. Three institutions—an asylum, a hospital, and a dispensary—were attached to a temple built in 593, and similar institutions were founded throughout the country in the subsequent centuries.

In the regency of Prince Shōtoku, the Constantine of Japan (reigned 593-622), the new religion became the State Church. Not only were missionaries and learned monks invited from Korea, but direct communication with Chinese Buddhism was opened (605), and Japanese monks were sent to China for study. The number of the Korean missionaries who worked in this period was considerable, and their achievements in preaching religion, in teaching science, especially astronomy, and in other matters, were a great credit to them; but the new religion found native teachers in less than a hundred years after its introduction. The prince himself gave lectures on Buddhist scriptures and organized various institutions. In short, the first half of the 7th century consisted first in the display of forms, then in works of charity, chiefly medical practices, and lastly in teaching. The mission, however, did not extend very far from the capital in Yamato. The acceptance of Buddhism was closely connected with the diplomatic relations with the Korean States and China, on the one side, and with the efforts to centralize the government and to unite the States by religion, on the other. The development of religious institutions and the management of State affairs assisted each other.

After the decisive step of the adoption of the Buddha by the prince, and the progress of the religion was sure and steady. Its influence was propagated gradually from the capital to the provinces. Many Korean immigrants, some of whom were noble men, and monks, were offered homes in various provinces, and the number of native workers increased, some of whom studied in China or Korea. The donations given not only to large monasteries and to clergy of higher ranks, but also to the poor and aged monks and nuns, show how numerous were the ordained natives and immigrants. Besides these Korean and Japanese priests, a certain number of Chinese, Indians, and of Europeans, mainly Graeco-Bactrian Buddhist missionaries, were sent, many to the Buddhist propagated provinces, the most famous of whom were Kanjīn, a Chinese, and Bodhisena, an Indian. The former founded the central institution for ordination and monastic discipline, and was appointed abbotship (754-763 in Japan). He was also an organizer of medical practice and founded a botanical garden. The Indian was of the Brahman family Bharadvaja. He came to Japan in 730 with his Japanese and Chinese followers, some of whom were musicians, and worked as a bishop till his death in 760, being known as the 'Brahman bishop.' These missionaries brought many useful arts and things Indian, which contributed to the influence of the religion, such as musical instruments, Indian harps, and the bas-relief in the Graeco-Bactrian style, preserved in the Imperial treasury, dating from the 8th century. Among the native artists there were some learned men, who laboured mostly in the capital as teachers and bishops; others were practical men who worked in the provinces in bridging rivers, draining marshes, digging roads, opening mountains, and ponds, opening mountain passages, planting avenues, etc. We do not know how or where these men learned their arts and crafts, but their works were nearly all miracles to many, and innumerable stories are told of them even to this day. The mention of some Ainu monks, whom the court favoured with gifts in 689, shows the advance of the propaganda to the far north-east.

The elaborate system of ritual, medical work, etc., which had been the chief means of the propaganda, remained in vogue for a long time. The distribution of medical stores and the dispatch of combined kanji there are many remains of these provinces are constantly mentioned in the 8th century. In addition to these methods, religious ceremonies for the welfare of the ruling families and for the tranquillity of the country became the order of the day in the court as well as in the temples, and were patronized by the government and by the nobles. These pious deeds were extended to the provinces, and scriptures were distributed wherever there were any priests. The founding of provincial cathedrals (kokubun-ji) was followed by the founding, near the capital, of the central cathedral, which was dedicated to the great statue of Lokanna Buddha, now known as the Daibutsu in Nara, and was completed in 754. These works and dedications converted the whole of Japan into a Buddhodom before the close of the 7th century. It is obvious that the Buddhist mission was not merely by the mysterious efficacy of the worship and ceremonies that the security of the throne and the tranquillity of the country were maintained and increased; the Buddhist mission in the provinces during these two centuries was at the same time a political mission.

By the 9th cent. the unity and centralization of the national government was complete. From that time Japanese Buddhism began to stand on its own feet, even though the Japanese Buddhists were still indebted to their co-religionists on the continent. The two brightest stars of the Buddhist history of Japan, Dengyō (+ 822) and Kobō (+ 835), were once students in China, but these two men opened the way for the development of Japan's own Buddhism. Thus the beginning of the 9th cent. may be taken as the end of the Buddhist mission in Japan.

One thing remains to be added, viz. a new influx of Chinese influence in the latter half of the 13th century. The introduction of the Zen (dhyāna) Buddhism, which was produced by Bodhidharma in China, as mentioned above, necessitated a fresh influx of monks and artists, whose great influence upon Japanese art, literature, and social life in the 14th and 15th centuries must be recognized. Tea, tea, kakemono, and similar things, now known in the West as 'things Japanese,' Japan owes to these communications with Chinese Buddhism.

Taking a general survey, we see a remarkable contrast between the Buddhist missions in China and those in Japan. In China works of charity seem to have played a rather insignificant part and translations of scriptures an important part; the opposite was the case in Japan; no Japanese translation of the Buddhist scriptures was made till quite recent times. Chinese has remained the sacred language of Japanese Buddhism almost throughout, though there have been some original writings in Japanese. This antithesis is due to the different ideas prevalent at that time and Japan stood at the time of the introduction of Buddhism.
MISSIONS (Christian, Early and Medieval).

1. From the close of the Apostolic Age to the conversion of the Empire (c. A.D. 102-323). Missions were the main external activity of the Christian community in the earliest time. Before the middle of the 2nd cent. (c. 140) Justin Martyr claims for them a very wide field of operations—not merely over the Hellenic-Hellenic but beyond the confines of that race.

'There exists not a people, whether Greek or barbarian, or any other race, by whatsoever title or manners they may be marked out, however ignorant of arts or of agriculture, whether they dwell under tents or wander in covered wagons, among whom savages are not offered in the sense of a crucified Jesus to the Father of all things' (Iud. c. Tryph. 117).

Much to the same effect, but more guardedly, Ireneaus tells us (c. 180) that even then many barbarian nations held as part of the doctrine of Christ a faith not with pen and ink, in books or papers, but by the Holy Spirit in their hearts (Adv. Haer. ii. iv. 2).

Tertullian likewise (c. 200) boasts of the rapid spread of the Church.

'We are a people of yesterday, and yet we have filled every place belonging to you ... year very camp, palms ... for we have not left your temples empty. We can conquer your armies; our number in a single province will be greater' (Adv. c. Marcion. ii. 6).

Britons beyond the Roman pale, Sarmatians, Germans, and Scythians are among the more distant races that he reckons as already touched by the Christian movement. Justinian (c. 230-240) declares the gospel not merely to have won myriad of converts among 'all nations,' but, more precisely, to have penetrated into many parts of the barbarian world (c. Orig. i. 27, ii. 18); while Arnobius (c. 320-330) we hear of the ex-Stoic Panthenu of Alexandria, undertaking a missionary journey to India about 180 (HE v. 10); here Panthenu is said to have found a Gospel of St. Matthew in Hebrew which had been left there by the apostle Bartholomew. Even if by this 'India' is understood the 'Lesser' or 'Third India' of some early geographers, including parts of the S. Arabian shore-lands and of Abyssinia, this is a noteworthy journey. Origen again, about 216, was induced to teach the Gospel in Persia (Adv. c. Cels. i. 16, ii. 5). From Eusebius (c. 230-320) we hear of the ex-Stoic Panthenu of Alexandria, undertaking a missionary journey to India about 180 (HE v. 10); here Panthenu is said to have found a Gospel of St. Matthew in Hebrew which had been left there by the apostle Bartholomew. Even if by this 'India' is understood the 'Lesser' or 'Third India' of some early geographers, including parts of the S. Arabian shore-lands and of Abyssinia, this is a noteworthy journey. Origen again, about 216, was induced to teach the Gospel in Persia (Adv. c. Cels. i. 16, ii. 5). From Eusebius (c. 230-320) we hear of the ex-Stoic Panthenu of Alexandria, undertaking a missionary journey to India about 180 (HE v. 10).

Edessa in N. Mesopotamia, where the Church was firmly settled by 150, Christianity was propagated in the Persian kingdom, even to Bactria, Bishop John, 'of Persia and Great India,' attended the Nicene Council in 325. Armenia, which may, however, be reckoned as usually within the Roman Empire, or at least within its sphere of influence, till the disasters of the later 4th cent. was won by the Church, shortly before the winning of the Empire, at the end of the 3rd century. Gregory the Illuminator was the leading person of this mission (c. 302), and Armenia was the first country in which Christianity was adopted as the national religion. In the early days of Constantine (c. 311) Bishop Hermon of Jerusalem sent missionaries (Epiphanius and Basil) to 'Scythia' and to the Crimea, part of which at least may be considered Roman. About A.D. 100 St. Clement, the fourth bishop of Rome, had been martyred at Kherson, representing the modern Sevastopol.

The Imperial line of power was the rise of Islam (c. 323-623). Important extensions of Christianity followed the conversion of Constantine.

(a) Africa.—Among these one is African. The Abyssinian Church was founded, or at least Christ-
MISSIONS (Christian, Early and Mediæval)

other lands east of the Euxine (see bks. iii. and xi. esp. p. 178 f. of B. de Montfaucon's ed. [Novis Patrum, et Script. Græc. Paris, 1706, ii. 113 ff.] = PG iii.xxxviii. 198 f.). At no time, perhaps, till the Russian occupation of North Asia was Christianity more strongly supported in Eastern lands than at this time.

(c) Europe.—St. Patrick's conversion of Ireland (from c. 430) opened to Christendom a land that had never known Roman, and practically unknown to Continental Europe, after Honorius withdrew the legions from Britain. The full discovery of Ireland was the work of Christian missionaries, of a movement which reached its highest prosperity at home. Its followers preached with remarkable success among the English who had overrun Eastern Britain. They carried the gospel further into Caledonia than Agricola had ever carried Roman conquest. Some of their pioneers reached the Orkneys, the Faroes, the outermost Hebrides, and even Iceland (of the last Irish monks were the first discoverers, in 1096).

Despite the fictions with which the early history of Scotland is overlaid, it need not be questioned that some progress was made by Christian missions beyond the Firth of Forth even in the 6th century. St. Columba, founded, at Columba's Isle (Canna), in the Orkneys, who was apparently working in the south-west and central parts of modern Scotland about 500-550, is specially associated with these enterprises.

The mission dispatched by Pope Gregory I. to England in 597 was concerned with a country lying within the Old Empire, and so outside the proper field of this article. It was, however, the conclusion of a movement which in course of time penetrated to non-Roman lands—Scotland, Ireland, Central Germany, the Scandinavian kingdoms—and played a great part in winning them to Christianity, or in turning them from their native Church to Roman allegiance.

3. From the rise of Islam to the Crusades (632-1056).—The vigour, or at least the extent, of Nestorian missions in South Asia in the first age of Islam is evident from a letter of the Nestorian patriarch from the Nestorian patriarch to the bishop of Fars (or 'Persia' proper) about 650. It was owing to his neglect, the patriarch declares, that the people of Fars, and also that of India, 'from Fars to Colon' (Kulun, or Qulan, near Cape Comorin), was now being deprived of a regular ministry. We find the same patriarch writing to the Christians of Sistan and of Balkh, and undertaking to provide a fresh supply of bishops for his spiritual subjects of the Upper Oxus. His successor, in order to appease an old quarrel between the Christians of Bactria and the metropolitan of Persia, visited Balkh about 681.

But the crowning achievements of early Nestorian enterprises were in China, and of these we have an account in the famous monum. of the St. Thoma, written in the 9th century by a monk of a monastery which appears in the Chinese Record as 'Olopan (Rabban), entered the 'Flowery Land,' and reached Si-gan Fu, the capital of the Tang dynasty, He had come, we are told from the 3rd great China (the Roman Empire); he was received with favour; his teaching was examined and approved; his Scriptures were translated for the Imperial library; and within the three years missionary, he declared Christianity a tolerated religion. With the speculative fairness of his race (and of one of the greatest Chinese rulers) T'ai-sung welcomed any religion whose spirit was 'virtuous, mysterious, and pacific.'

The radical principle of the new faith, he thought, 'gave birth to perfection and fixed the will.' It was exempt from 'vice, and suffered only good results.' It was "useful to man, and should be published under the whole extent of the Heaven. . . . And I command the magistrates to erect a temple to this great city, and twenty-one religious men shall be installed therein.'

T'ai-sung's successor was no less friendly.

He fortified the truth, and raised luminous temples (Christian Churches) in all the provinces: till they "died a hundred cities. . . . The households were enriched with marvellous joy."

'Olopan' himself became a 'Guardian of the Empire,' and 'lord of the Great Law.'

Then followed, from about A.D. 685, a time of disfavour and oppression. Chinese conservatism rallied against the new worship.

'The children of the (Buddhist) resorted to violence, and spread their calamities; low-class men of letters put forth jests.'

But after a time the Nestorian Church in China, as in India (and about the same time), revived. Fresh missionary enterprise was one cause of this, in both fields.

In A.D. 744 there was a religious man of Great China named Khbo, who travelled for the conversion of men; on his arrival in the Middle Kingdom, illustrious personages of the fallen Laws, ordered the new emperor to bring both the venerable images to the Temple of Felicity, and firmly raised their altars; with his own hand he "wrote a standing testament to the great church of the capital." His three successors all 'honoured the luminous minister.' One observed Christmas by burning incense; another 'insisted nine rules for the propagation of the doctrines'; various high officials of the court, a member of the council of war, the five nobles of the province 'rendered perpetual service to the luminous gate.' The inscription closes with words of thankfulness; never had the mission been more prosperous than when 'in the year of the Greeks 1095 (A.D. 763), in the days of the Father of Fathers, the Patriarch Hanzan-Yeshush, this marble tablet was set up with the history of the . . . preaching of our fathers before the kings of the Chinese.'

Hanzan-Yeshush died in 775, but news of his death would naturally take a considerable time to travel from Baghdad to Si-gan Fu.

The general truthfulness of this record (the most remarkable witness that we possess of Christian activity in the Farther East before the 15th cent.) is supported by what we know of the Chinese mission from other sources.

Between 714 and 728 the Nestorian patriarch appointed the first metropolitan for China; in 745 the Chinese emperor decreed the name of 'Roman temple' to the Christian churches of his empire; about 790 the patriarch dispatched to the Far East a metropolitan to Si-gan Fu, and after his murder at the hands of robbers a successor was dispatched, with six other bishops and a party of monks.

Like the Christian faith, the mission survived in the middle of the 9th century. About 745 a party from Baghdad, Nineveh, and Jerusalem, with orders from the arch-priest of Edessa, arrived in India, with the message of Thomas — the 'Armenian merchant' of Gibbon (Decline and Fall of the Roman Empire, ed. J. B. Bury, London, 1896-1900, v. 150).

In 774 the Hindu ruler of the Malabar coast granted a charter, graven on copper, to the Christians of his dominions. A famous inscription discovered in 1547, on St. Thomas Mount near Madras, probably of the 5th cent., but perhaps even earlier, another charter, of the Christian missionaries, which appears in the Chinese Record as 'Olopan (Rabban), entered the 'Flowery Land,' and reached Si-gan Fu, the capital of the Tang dynasty, He had come, we are told from the 3rd great China (the Roman Empire); he was received with favour; his teaching was examined and approved; his Scriptures were translated for the Imperial library; and within the three years missionary, he declared Christianity a tolerated religion. With the speculative fairness of his race (and of one of the greatest Chinese rulers) T'ai-sung welcomed any religion whose spirit was 'virtuous, mysterious, and pacific.'
Cyril and his brother formed a Slav alphabet still prevailing in Russia, Serbia, and Bulgaria, and in Moravia down to the 19th century. Greek formed the basis of the 'Cyrillic' letters in most cases; but some were entirely Greek creations; others were adapted from various Oriental writings. By the diplomacy of Pope Nicholas I. Cyril and Methodius were brought into close relations with, and dedicated to, the Eastern Church. Central European work turned to the profit of the Roman Church. By the end of the 9th cent. the victory of Latin Christianity among most branches of the Czechs may be accepted as complete. The conquests of Charlemagne brought Frankish Christendom into close proximity to the Scandinavian peoples and the Slavs of the North European plains, and soon after the death of Charles the conversion of these races was seriously commenced. Ansgar or Anskar, the 'apostle of the North,' was born about 801, and about 826 left the monastery of Corbie for the 'Northern mission.' First he worked (with his helpers) in Nordalbingia (or Holstein) on the Danish border, and in Schleswig; obliged to quit this field by a pagan reaction, he made his way even to Sweden in 829, preached before the king, won a new success, and in 831 was consecrated the first archbishop of Hamburg. He was driven hence by a Scandinavian invasion about 845; but in 848 he was appointed to the vacant see of Bremen, with which the missionary, converted to Nestorian Christianity, became, by his administration. He resumed his work in Denmark (848-853), won the favour of the Danish king, converted a large part of the people, and again opened his campaigns in Sweden (c. 853). At his death in 865 Danish, Swedish, and perhaps even Norse Christianity had been securely founded, though complete triumph was not reached for more than a century.

In Northern Europe, beyond the limits of the Old Empire, the Roman missions advanced rapidly. In the 8th cent. after success in England had once been achieved, and largely as a result of the reflex action of that English mission. The movement that Gregory had started flowed back upon the Continent with new force from the converted island. In Friisia, Thuringia, and Bavaria the tribes beyond the Rhine were gradually converted by Frankish, Irish, and English missionaries in the obedience of Rome; chief among these was the church-statesman and martyr St. Boniface or Winfrid of Crediton (680-755), who became the 'apostle of the Germans,' the first bishop of Mainz and the prince of Germany, the reformer of the Frankish Church. Charles the Great's very forcible conversion of the Old Saxons, between the Ems and the Elbe, again attracted the attention of Christians on the North (772-804). The same emperor compelled the prince of the Slav Czechs of Moravia to receive baptism (804); but the real conversion of this people, as well as of the neighbouring sister-race of Bohemia, was done by the Byzantines Cyril and Methodius of Thessalonica, the 'apostles of the Slavs,' from about 885. Cyril had already worked with great success among the (Turkish?) Khazars of S. Russia. Like Ulphilas with the Gothic script,
The Hungarians, whose attacks on Germanic and Italian Europe were finally ended by the defeat on the Lechfeld in 955, at the hands of Otto the Great, were rapidly won to the Western Church by mission enterprise. By about 975 considerable progress had been made in converting Hungary. Prince Geiss (972-997) was a nominal, if semi-pagan, Christian; but the complete victory of Christianity was gained by the first king, Stephen ('the Saint'), baptised at Adalbert of Prague about 993. Stephen was called to succeed his father Geiss in 997; he took the royal title in 1000; he put down the pagan opposition; and before his death in 1038 he had completed the establishment of the Latin Church in a kingdom in which came Galician, or 'Blue Tooth,' a century after Angar, from about 900. Yet even after this there was a pagan reaction, accompanied by persecution (1000-04), under Svend, or Swegen, 'Forkhead,' the conqueror of England, who traced his descent to the old heathendom and the new faith, but finally embraced the latter, after his triumph in the West. Conquered by the Great, Svend's son and successor (1014-44), was a remarkable man. Like his father he was a Danish Clovis, and identified his policy with the work of the Christian Church in all ways.

Christianity in Sweden, likewise founded by Angar, was at first of the Councils and the governing classes till the end of the first millennium, under Olaf the 'Lap-King' (955-1022). Pagan reactions still occurred till far on into the 11th century, a final one on the Eve of the First Crusade—but the battle was really won by 1029.

The first faint beginnings of (Liturgy) Christianity in Norway may also be traced back to Angar's time. Under Hakon I. (935-98) it began to struggle for recognition; for a long time it was hampered and side-tracked, but from the church of the 12th century onwards it steadily extended, until it finally broke out with the Hanseatic League. The 11th century was one of progress, and the 12th of achievement. The spread of Christianity among the heathen and the gradual decay of the old heathenism were remarkable. The first Christians were mostly in the West, but the influence of the Crusades was in the East, and the first mission to the East was to Russia, in 1065. The work of Olaf Tryggvason was more important, for he established the Church in Norway, and made it the state Church of the country. The work was completed by Olaf the Saint, the godchild and third successor of Tryggvason (1015-30).

From Norway Christianity was carried to the Norse colonies of Iceland and Greenland. The German priest Thangbrand, a truly militant missionary, who killed opponents in single combat, was sent to Iceland by Olaf Tryggvason in 997; in 1000 the new faith was accepted (with some reservations) by lceland (hence leinheim) in a National Assembly; and at the same time the gospel reached Greenland, where it soon won the allegiance of the colonists.

Leif Ericson, probably the first discoverer of America, was commissioned by Olaf Tryggvason in 1000 to proselytize his countrymen, on his return from the court of Norway to his home in Greenland. The mission was interrupted by storms, which drove Leif to Vinland (Nova Scotia). Russia was not really won to the time of Vladimir the Great ('St. Vladimir,' 988-1015). The patriarch Photius, it is true, claims (c. 887) that the fierce and barbarous Russians had already been converted by the missions of the Eastern Church, but even a century later the mass of the people were thoroughly heathen. Decisive Christian success begins with the conversion of Olga, the princess-regent of Kiev, and widow of the grand-prince Igor, who visited Constantinople in 955, and was there baptized into the Greek Church. The full triumph of Christianity among the pagan generation by the refusal of Olga's son Svyatoslaw to abandon his heathenism. The work was finished by Vladimir, son and successor of Svyatoslav, and the most effective and powerful head of the Russian people (989-1015) and at last appeared, under whom Russia gave premature and deceptive promise of playing a first-class part in the world, in the 10th and 11th centuries. After his capture of the Imperial (Byzantine) dependency of Kherson in the Crimea (on the site of the later Sevastopol), and his marriage with an Imperial princess in 988, he accepted the Christianity of the Eastern Church; and his convert and the mass of his people followed the example of the grand-prince of Kiev. The progress of the faith was both rapid and deep; no part of Europe became more intensely attached to its Christendom than to his. Successful work was done to spread the Christian faith, as it has under- stood the same. Vladimir died in 1015, but under Yaroslav the Lawgiver (1019-54), who with his father must rank as the chief Russian statesman of the early Middle Ages, the foundation of the Church and the establishment of the Church was completed.

4. From the First Crusade to the end of the medieval time (1095-1539).—Thus, before the close of the 11th century, nearly all Europe had been won to Christianity of the Roman or the Greek allegiance, and the borders of Christendom had been extended, to North and East, far beyond the limits of the Western Church. The Crusade, which was an enterprise, it is probable, had by 1098 carried the religion as well as the trade of that great Republic into some of the regions and among some of the tribes of the furthest North and North-East—in the White Sea, in and in the valleys of the Dvina and Pechora.

A little later, in 1121, the bishop of Greenland undertook what was probably a missionary journey to America,—he 'seeks Vinland'—but we hear no more of him.

Christendom, as thus constituted, included some pagan enclosures, mainly along the South and East of the Baltic, such as the countries of the Lithuanians, the Finns of Finland (and N. Russia), the Old Prussians, and the Wends and other Slavs of Pomerania and other lands afterwards included in Eastern Germany. In the 12th century much of this land began to be won. The Finns of Finland were conquered by the Swedes in a war which had something of a crusading character (c. 1157-58), and the profession of the Roman Catholic faith was gradually extended, while appearing temporarily in the far North and East by its foundation of the St. Michael's monastery, on the site of Archangel (in the 12th cent.), and of the important Novgorod colony of Vyatska, north of Kazan (1174). Latin Christianity accompanied the early victories of Germanism beyond the Elbe in the 10th century. The pagan and anti-Slavic spirit of the day was doubtless reflected in the injuries to Teutonic Christendom and Empire, and much of the new mission ground was lost. Polish and German attempts to convert the Pomeranians led to small result till well in the
12th cent., when Otto of Bammberg (in 1124–28) became the 'apostle' of this country, on the time when the main German advance beyond the Elbe was permanently resumed, about 1130, the progress of Christianity was rapid between the Elbe and the Oder. The bishops of Magdeburg, Oldenburg, and Ratzeburg witnessed to this, German colonization followed German conquest, and, as the colonists were at least nominal Christians, the Church grew steadily stronger.

German Christianity (accompanying German colonization) was planted as far east as the Duna or Western Dvina (the river of Riga) in the later 12th cent.; some Bremen merchants formed a settlement on or near the site of Riga about 1158, and about 1168 Meinhard, an Augustinian canon of Holstein, headed a mission to Livonia. The work was difficult, for the Livonians were a faithless race who procured the proper sentiments when advantage was to be gained from them, but turned upon the mission with mockery and insult when they no longer needed its help (Meinhard built them not only churches, but fortresses). An eclipse brought the missionaries into peril—they were accused of swallowing the sun. Their danger was hardly less when they were justly suspected of a more complete success than was then usual in Livonia. Baptisms were constantly 'washed off' in the Dvina by lapsed converts. Meinhard, consecrated bishop of Livonia in 1170, died in the Battle of the March successively. His second successor, Albert of Apolzendorf and Riga, had superior fortune, tact, and abilities. He organized a Livonian Crusade (permitted by Innocent III. to rank as a fulfillment of the vow for the Holy War in Syria); he enrolled considerable forces of warriors and missionaries; in 1200 he founded, or re-founded, the city of Riga as a new base for conquest and proselytism, and as the seat of the bishopric; and in 1202 he started the Fratres Militiae Christi, the 'Knights' or 'Brethren of Christ', or 'of the Sword', the Schwert- trierger or Port-glaives of German and French historians, an important element in the Teutonic Order and a main source of its dominion on the Baltic. Pope Innocent gave the 'Sword-Brethren' the statutes of the Templars. Albert's mission-crusading enterprise, the great achievement of Livonia, was baptized before the close of 1206.

A mission in Estonia was commenced a little earlier than this by Bishop Fulk, formerly a monk of La Celle; and Dietrich, Meinhard's chief tentant in Livonia, became bishop of Estonia in 1213. He was killed in 1218, and the next bishop transferred the headquarters of the mission (now thoroughly German) to Yuryev, Derpt, or Dorpat, in 1224. A Danish mission in Estonia, at this time largely in Danish hands, was organized from Reval, which became a bishopric in 1218. Even in Lithuania a Roman mission appears to have started in the first half of the 13th cent., but its progress was slow, and general or definite success was not attained till the first Union of Poland and Litva in 1386.

In 1226–37 the 'Sword-Brethren' united with the Teutonic Knights, founded at Acre in 1190, and summoned to help in the conquest and conversion of Old Prussia in 1226. They had much in common—an origin from Bremen, a constitution on the model of the Templars, the patronage of the Virgin, the protection of the emperors, the 'unity of fighting for the Cross,' the championship of the German race and German interests against all other. The result in Prussia was a Teutonic and mission. The early unsuccessful attempts at proselytism in Old Prussia, mainly under Polish patronage, have been noticed. In 1297 the Polen began again, with better appearance of success. In 1295 a heathen reaction soon followed, accompanied by massacre, and by the destruction, it is said, of 250 churches. The supporters of the mission now fell back on the idea of a holy war and in 1215 Pope Honorius III. allowed a Prussian Crusade as a substitute for the Syrian. In 1226 the Teutonic Order, already despairing of much permanent effect in the Levant, though its nominal headquarters remained at Acre till 1291, was invited to take the terms were made between the grandmaster, Hermann of Salza, and the Poles, mainly represented by duke Conrad of Mazovia. The emperor Frederick, the intimate friend and patron of Hermann, gave the fullest support in his power, be-stowing on the Order the sovereignty of all such territories as they had acquired by gift or should win by conquest. A long, bloody, and desperate struggle of over fifty years brought about (by 1238) the complete submission of the Prussians, the partial extermination of the race, the enforced conversion of the remainder, and the German colonization of a great province which was to become one of the most Teutonic of lands, and to give name, by union with Brandenburg, to the chief German State of modern times, the creator and core of the present German Empire.

The opening of intercourse in 1245 between Western Europe and the new Mongol masters of Asia, through the embassies sent by Pope Innocent IV. to the 'Silk Road' through success to the opening of an important and romantic chapter of mission history. Among the distant enterprises of the Christian Church, or the forgotten incidents of past intercourse between remote civilizations, there are few more interesting than the early Roman missions in Further and Central Asia, and in the border-lands of Eastern Europe. We have seen how, in the earlier Middle Ages, Nestorian missionaries carried the gospel to China, Turkestan, and the Indies. Almost to the close of the crusading period, their creed was practically the sole representative of the Nazarene faith in Asia, outside the narrow limits of the shrunken Byzantine Empire and the crusading principalities. But in the 13th cent. the Church of Rome began to be heard of in the depths of 'Tartary,' and between 1245 and 1255 the great overland travelers of the first generation, the Friars John de Piano Carpini, William de Rubruquis or Rubruck, and Andrew of Longmost, appeared in the Mongol courts, on the Volga, or in the Balkal or Baku Basin. Yet their work was primarily that of diplomats, of envoys from the pope or the king of France, in their capacity as Christian leaders; the missionary was not prominent in their work; Rubruquis alone, of this famous group, seems to have spent time or energy in doctrinal discussions or proselytizing efforts, and even he does not claim in any way to have founded a mission church in Asia or in Russia.

The Polos, again, who represented Roman Christendom among the Mongols from 1260 to 1295, and gave us our first good account of the Chinese and Indian worlds and of so much of Central Asia, cannot be considered active propagandists. But in 1264 Khan expressed a desire for official Christian instructors; but his wish remained unfulfilled. Marco Polo and his relatives were primarily merchants, adventurers, men of the world. No mission work can be credited to them.

But, while the Polos were still in China, the founder of the Latin churches both in Cathay and in India started life on Corvo, a Franciscan like Carpini and Rubruquis, and a man of uniting energy, courage, and patience, began his life-work in Asia about 1275, and
in 1292 was sent by Pope Nicholas iv, with letters to the great men of the Tartar empire and of neigh-
bouring lands—the supreme Khan in Cathay, the
Ilkhan in Persia, the 'emperor of Ethiopia,' and
others. Corvino reached Cathay in 1292 or 1293,
apparently by the South Asiatic sea-route from
China, making a long haul by the way in the
Madras region (or 'St. Thomas's country'). He
achieved conspicuous success in the Far East; he
was repeatedly reinforced from home; and his work
long continued to be peculiarly Roman in char-
acter, with at least two bishoprics, in the 'Middle King-
dom.' He was even credited, by one tradition,
with the conversion of a Mongol-Chinese emperor.
To him is due not only the first planting of Western
Christianity in China and in the Indies, but the
earliest noteworthy Christian account of South
Indian climate, people, manners, and customs, and
some valuable evidence upon the overland and
oversea routes which connected the Far East, as
well as upon the association of Western traders and
Western missionaries in the European penetration of Asia.
Corvino seems to have made his way into Persia
by much the same route—through Sivas, Erzerum,
and Karas— as merchants then took between the
Gulf of Scanderoon and Tabriz. At Tabriz, how-
ever, he joined a large caravan to the Ilkhan,
'the faithful Christian,' Peter of Lucalongo, and
with this companion he turned aside from the
continental main track and made his way south into
India, by the way of the Ilkhan's Peking ship for
Cathay (1291). Some time, however, was yet to
elapse before the friar committed himself to the
frail barks of the Indian seas—'clumsy and un-
comely, without sails, woven together with twine like clothes, without caulk, having but one mast, one sail of matting, and
some ropes of huck' (cf. München gelehrte
Annalen, 1825, p. 153). In the
sacred region of St. Thomas's shrine, near
Madras, he remained eighteen months, and here
died his comrade, Nicolas of Pistoia, 'on his way
to the Court of the Lord of all India.' He was
buried in the Church of St. Thomas, while Corvino
was permitted to live at court; in 1304 he
joined, as Khan merchant and 'a great
merchant and a faithful Christian,' Peter of Lucalongo, and
with this companion he turned aside from the
continental main track and made his way south into
India, by the way of the Ilkhan's Peking ship for
Cathay (1291). Some time, however, was yet to
elapse before the friar committed himself to the
frail barks of the Indian seas—'clumsy and un-
comely, without sails, woven together with twine like clothes, without caulk, having but one mast, one sail of matting, and
some ropes of huck' (cf. München gelehrte
Annalen, 1825, p. 153). In the
sacred region of St. Thomas's shrine, near
Madras, he remained eighteen months, and here
died his comrade, Nicolas of Pistoia, 'on his way
to the Court of the Lord of all India.' He was
buried in the Church of St. Thomas, while Corvino
transmitted to Europe (22nd Dec. 1292) a quaint
and memorable sketch of the Deccan and its people
from his own observation—one of the earliest pic-
tures of the life of the country by a Roman Christian
or Western European—which seems to have
awakened the papacy to the possibilities of Hindu
conversion. Meanwhile, while Friar John was
writing, the Poles were off the Coromandel coast
—on their return to Europe—and here Messer
Marco Millione may have met the man who was
to represent Christendom in the 'Middle Kingdom'
during the next thirty years, as the Venetian
merchants had done for the past thirty.
We next meet with Corvino in China itself—at
the Imperial city. His second letter (of 8th Jan.
1305) is dated from Peking, or 'Cambaluc,' and tells
how for eleven years, from 1293, he had laboured
in Cathay; how he had struggled against pre-
judice and calumny; how brilliant successes had
followed dismal failures; and how, in 1304, he had
seen it proved by the example of a Friar Arnold of
Cologne, 'probably he landed at the great port of
'Zayton,' or Amoy, in Fo-kien; apparently he
made his way immediately to Peking. In any
case, he failed to see the splendid triumphs of the
Order of the Knights of St. John of Jerusalem in
India, and the brilliant successes of the
'Nimis inveteratis in idolatria,' as Corvino puts it. But he was
not long without a triumph. In his first year at
Cambaluc he won the Nestorian Prince George, 'of
the family of the great King Prester John of India'
(Wadding, Annales Minorum, vi. 69). George
died in 1299, but before his death he found
time to build a fine church for his new allegiance,
'called the Roman Church,' at a spot twenty
days' journey from Peking,—perhaps at Tatsung
in Shan-si, just east of the great Ho-ang-ho river,
where Friar Odorico seems also to fix the capital
of Prester John' (ib. vi. 70). The 'Prester John' and
Prince George were the direct successors of the
royal house of the Kerait Tatars, of the Baikal
basin, apparently converted to Nestorian Christi-
nity in the 11th century (cf. above, p. 707). Nor
was this all; as winged prelates were being
ordained, a translation of all the
Roman service-books was ordered and begun;
many Nestorians embraced Corvino's faith.
With the death of King George, however, the
sky was again overcast; apostasy succeeded con-
version; there was no more translation of the
Latin ritual; and Corvino was left alone to endure
the slanders of the Nestorians—a community professing
Christian faith, and now so powerful in Cathay
that they would tolerate no Christian rivals (ib.
vii. 69).
At last the prospect brightened; a leading
enemy confessed; in 1305 the friar was at last permitted to live at court; in 1304 Brother Arnold
joined him; with a little more aid the emperor
himself, 'a great merchant and a faithful Christian,'
was convinced that the writer was now old and grey, more with toil than with years, for he was but fifty-eight; yet he was
now building a second church in Peking; New Testament
and Vulgate were probably of 'language most used among the Tatars.' For
one thing he still yearned—news of Europe, of the
Church, of his Order. Twelve years had passed
in silence, without any sort, even news of the
Venetian merchants had done for the past thirty.
Six months' journey to King George's natives, the
other
wise in 1302 or 1303. Brother John, therefore, on
every account was anxious for fresh help; but,
warned by his own troublesome sea-voyage, he laid
down the best route for subsequent travellers—by the
Crimea, through Constantinople, and by Russia. By
this
overland path, travelling along with the Imperial
messengers, a man might get through to Peking in
six months.
Corvino's third letter is also from Peking, and
was written on Quinquagesima Sunday, 13th Feb.
1306. Its tone is hopeful; its record is one of
steady progress. In 1305 a new church and
adjoining mission house had both been
completed 'at Cambaluc'; the emperor had sanctioned the
'altars' at his court; and, like Kubla, his
ancestors, he desired earnestly to see the
senders from the see of Rome and the bishops of
Western Christendom. With such a soil to work
upon, the writer joyfully anticipated the harvest
that might reward the friars who had lately arrived
in Persia and the Crimea.
In a postscript Corvino tells of yet another
triumph. Some time previously, either during his
stay in India or after his arrival in the Flowery
Land, an embassy from Ethiopia had waited on him
with entrences to come over and help them, to visit
their country himself, or to send good preachers
there. Since the days of St. Matthew and his
disciples, they declared, they had never seen a
Christian teacher. It is with Kubla's Christianity
that tradition especially associated St. Matthew;
the local Church, though long doomed, was not
onally extinct; and the earlier 14th cent. saw
not more than one effort to re-establish the
Roman see to win this difficult and dangerous
country.
Corvino addressed these letters to the Brethren of the Franciscan and Dominican missions in Persia
and the Steppe lands of Southern Russia. His
appeal was not heeded; and the authorities of the Church, fired with his own enthusiasm, took up the mission that he had begun with something of the spirit that he desired.

A new conquest seemed now to open before the Church of Rome. Friar John was created archbishop of Cambaluc (with exceptional powers) in the spring of 1307, and seven bishops (of whom three only persevered) were dispatched to consecrate the king and queen of the Chagatai. In 1308 these three suffragans—Gerard, Peregrine, and Andrew—reached China, and carried out the consecration of Corvinus. Each of them appears successively in the history of the mission as bishop of 1258, 1325, and 1342. 

The lengthy mission of the Church to China, which was rendered possible by the fact that the kneeling of the Mongol Gaun, put an end for centuries to Western Christianity and to European trade within the Middle Kingdom. When this calamity befell it in 1328, that is said that the friars, flying across Asia from Peking to Sami and the Volga, carried with them the relics of the Grand Khan converted by Corvinus.

In Persia, Mesopotamia, Armenian, and Caucasian lands the religious explorations of the Western Church began about the middle of the 13th century. The Dominicans penetrated to Tiflis about 1249; in 1255 Rubruquis found several friars-preachers in Armenian towns, and tells us of their travels to Tabriz as well as to Tiflis; yet it was only with the Tatar conquest of Baghdad, and with the overthrow of the khalifate, in 1258, that Roman Catholic influence assumed real importance in Persia. From this time to the early years of the 14th cent., Latin missions and Latin trade played an important part in the empire of the Ilkhans; several of Hulagu's successors seem to have been 'sufficiently wedded' to the form of Nazarene faith; not till about 1304 did they definitely end their religious hesitation by embracing Islam. Even then, for more than half a century, Rome struggled bravely against the current—though her cause might be declared at times to maintain the air of a conqueror—foundling bishoprics, creating provinces, at this missionary period, of the Middle Ages. Yet the death of Ahsa Said, the last true Ilkhân, in 1336, Roman proselytism seems to have only lost touch of the governing classes among the Mongols of South-West Asia; in the age of Timur (1380-1405) the Islamizing of the latter was fairly complete. The Middle, like the Farther East, though less completely, shut its door on Christian enterprise before the age of Henry the Navigator.

The first trace of a Roman Catholic mission in India is the visit of Monte Corvo to the Madras region in 1201-92, an incident of deep significance in the history of the Indian kingdom of Delhi, for it is generally supposed that he arrived at Almali, the modern Kulja, now on the Central Asian frontier of China and Russia, that he received good treatment there, and that in 1338 Pope Benedict XII wrote to the Chagatal Khan (June 13), thanking him for his kindness to Nicholas.

Meanwhile, a little earlier (1338), an embassy from the Great Khan then reigning—Timur UKHAGAT—had appeared before Benedict XII.; and with this embassy letters had arrived from certain Christian princes of the Aryan nation in the East, asking for a bishop and legate worthy to replace Corvinus. In reply to these communications, four Franciscan envoyas and a large company of less important representatives carried the papal briefs from Avignon, by way of Naples, Constanti- nople, Kaffa in the Crimea, and Almali-Kulja, to Peking, which they reached in 1342. After four years in China they returned, like the Polos, by the Silk Road, their mission to the Great Khan making a lengthy stay in Southern India, and finally re-appearing at Avignon in 1353. The historian of this embassy, John de Marignolli, draws a glowing picture of the prosperity of the Roman Catholic mission in the Far East; but of the mission history after this time we know almost nothing. Of one thing we may be certain: the Chinese national reaction which broke out in 1368 set the Ming dynasty upon the throne, and expelled the Mongol Yuen, put an end for centuries to Western Christianity and to European trade within the Middle Kingdom. When this calamity befell it in 1328, that is said that the friars, flying across Asia from Peking to Sami and the Volga, carried with them the relics of the Grand Khan converted by Corvinus.
MISSIONS (Christian, Early and Mediavsal)

be established—are among the curios things of mediaval literature.

The 14th cent. we also hear of the progress of Russian missions, the pioneer or attendant of Russian colonization, in the more remote regions of North-Eastern Europe. About 1376 the monk Stephen, afterwards canonized as the apostle of Perm ('Stephen Permsky'), founded the earliest Christian church on the Upper Kama. It was a remarkable instance of a foreign idea taking root in this country which had been flayed by the natives, 'while they were yet but infants in the faith.' Before his death (in 1396), however, Stephen had confounded the heathen idolatry of the Krimmer tribes. But of the latter enterprises we have a slenderer record, and what we know of them is frequently incidental to the larger story of Roman Catholic proselytism in the Celestial empire or in Iran.

Before the great Tatar invasion of Eastern Europe, in 1237-43, Dominican missionaries had penetrated into the countries lying east of the Middle Volga, even if the expeditions of Caprini and Rubruquis in 1245-55 had not to any large extent the character of proselytizing ventures. It was apparently in the early part of the 14th cent., and especially under Uzbek Khan (1291-96) that India exerted itself against the Mongol power. In the winning of the North-Western Mongols, and that the mission stations at Astrakhan on the Lower, and at Kazan on the Upper, Volga, at Torki, and other places, the Christian Church of Khiva, near the Lower Oxus, at Samarqand, and at Kulja in the Balkh basin, by the Russio-Chinese frontier of to-day, came into being. Even more, perhaps, than in China or India, these Latin outposts, from the Caspian to the Kama, from the Caspians to the Altai, represent the exploring spirit of the European at this time in its most daring form, where could the enmity of nature and man be defied more mercilessly? Where in all the known world could distance, barbarism, sterility, and fanaticism present a more formidable combination of obstacles?

Even as late as 1392 we find traces of Roman Catholic effort in Northern Tartary. But about this year the Latin missions in Central Asia may be supposed to have ended in a final storm of persecution; and before Timur's death, in 1405, European missionary activity had really withered away in other Western Mongol lands.

In Europe the later 14th cent. witnessed the conversion of the last pagan people amongst the still professing heathenism. The 'Litva,' or Lithuanians, whose central region is the Vilna country, had become an important power by conquest from the Russian nation, now lying, for the most part, helpless and crushed beneath the heel of the Mongol Tatars. Most of Western Russia had fallen into their hands (some valuable districts had become Polish), and the Lithuanian dukes aspired to a great position in the world. In 1382 the Polish throne was left to a woman, the daughter of Lewis the Great; and Jagielo (or 'Jagellon'), the 'Litva' prince, hoped that by marrying with this heiress (in spite of her strong antipathy for his person) lie might become one of the chief European sovereigns. His hopes were realized; and a Roman Catholic Polish-Lithuanian State was thus founded in 1386 by the 'Litva' and conversion-treaties of 1386. This State gradually became a Polish empire under one faith and one sovereign, with one (terribly defective) constitution and administration (1601; Leslie W. Vines, 'Vinit'; O. W. Volz, O. Vinit') of the last great 'Litva' conqueror, ended the brief hope that Lithuanian conversion might after all turn to the profit of the Eastern Church.

We owe What the eminent annalistinent, 'had previously been a Christian ... but he renounced the Orthodox faith, and adopted the Polish, and perverted the holy characters, with the word to service hateful to God' (Chronicle of Novgorod, A.D. 1390).
MISSIONS (Christian, Roman Catholic)

When Jesus Christ, the Son of God and the Redeemer of mankind, had fulfilled His divine mission in the world, had sealed it with His death, and endorsed it by His resurrection, He empowered His apostles, and through them, His Church, to continue the same in His name and by His authority. That apostolate of salvation was to be catholic, or universal in space, doctrine, and time, to teach all things at all times, (Mt 28:18-20). Mindful of the Last Will and Testament of Christ, the Church has always looked upon missionary work as an essential and solemn obligation belonging to every Catholic, and insisting upon the obligation of every Christian. In the Church of the East it was due to the Pope, to the Patriarch of Constantinople, to the heads of the Oriental Churches. In the Western Church, it was due to the Pope, to the heads of the Western Churches. In the case of the three Eastern Churches, it has to be mentioned the Theatines (1524), Capuchins (1528), Barnabites (1533), Oratorians (1575), Carmelites (1565), Augustinians (1588), Lazarists (1624), the missionary seminaries of Rome (1698) and of South India (1692), and lastly, the Société des Missions Etrangères of Paris (1693). For the sake of unity and conformity all these various missionary organizations were finally centralized from Pope Gregory XIII. (1572-85) to Gregory XV. (1621-25). By the brief of 32nd June 1622 (Inscrutabilii) the latter, with the help of the Carmelite Thomas a Jesus and the Capuchin Giralmo da Narri, instituted the Congregatio de propaganda fide, or Propaganda, whose sphere of jurisdiction has recently been circumscribed by Pius X. (23th June 1908). The Congregation consists of 25 cardinals with a central prefect, 3 secretaries, 10 consultors, and some 50 consultants. Their chief work is to establish and circumscribe the boundaries of the missionary jurisdictions or districts, i.e. mission, prefecture, vicariate, diocese, etc., to entrust it to apostolicapostolic missionary societies, to appoint the missionary superior, etc. Thus from the beginning of the 18th century, the Roman Catholic Church carried on her apostolate throughout the world in N. and S. America, in Africa and the adjacent islands, in Asia, China, India, etc. On the other hand, the struggles and the storms which she had to endure in the 19th cent. from the tyrannical absolutism of European rulers, from the crippling tutelage of the State, from a false philosophy, the Encyclopedists (q.v.), and finally from the French Revolution and the subsequent suppression of almost all the religious orders and missionary societies, brought her apostolate to a temporary standstill, till it was revived between 1820 and 1830.

The 19th and so far the 20th centuries are witness to the unswerving fidelity of the Church to the command of Christ and a pledge of her vitality and energy in the mission field. Unsupported by emperors and kings as her protectors and promoters, she may, hampered in her efforts by Roman Catholic governments and anti-Christian legislation, she has carried on the work of reconstruction and reorganization, of Africa, the Far East, of Spain. Franciscans went to Chile and Bolivia, to the Indians in the Pampas of Argentina and in Gran Chaco, and in 1538 they landed in Southern Brazil. When in 1661 Narvaez undertook an expedition into Florida, five Franciscans went with him, and from there they extended their work to New Biscaya, New Mexico, Arizona, Texas, and California. French Franciscans were the first missionaries in Canada (1615) and Nova Scotia, while in Africa they continued their work in Morocco, Tunisia, Tripoli, Egypt, and Abyssinia.

The Society of Jesus, founded by St. Ignatius Loyola (1556) in 1534, placed itself from the very beginning at the disposal of the Church for missionary work. St. Francis Xavier inaugurated in 1542 the Roman Catholic apostolate in India, Ceylon, Malacca, and Japan. Under Francis Borja (1555-72) Jesuit missionaries were sent to Florida, Mexico, Peru; under Aquaviva (1581-1615) to Canada, Chile, Paraguay, the Philippines, and China; under Vitelleschi (1615-40) to Tibet, Tungking, Marshan, etc. What the suppression of the Society of Jesus (1773) meant for the Roman Catholic apostolate may be best realized by the fact that by one stroke of the pen the Church was deprived of 3300 Jesuit missionaries alone in that year.
taken up their work in the field, new missionary societies have been founded during the course of the century, training colleges have been established, and religious orders of women, formerly almost excluded from the missions, are now to be found everywhere, about 20,000 taking their share in the educational, charitable, and industrial work. To supply the missionaries and to missions materially, the Association for the Propagation of the Faith (1822) and the Society of the Holy Childhood have done good work, while Pope Gregory XVI., Pius IX., Leo XIII., and Pius X., as well as the Roman Catholic hierarchy throughout the world, have given their support to promote the revival of missionary work among the heathen.

According to H. A. Kroese (Katholische Missionssstatistik, Frankfort, 1908), the total result of missionary work on the part of the Roman Catholic Church in the 19th century amounted to 8,821,963 converts from paganism. This flock is attended by 12,265 missionary priests, of whom 8,389 are natives, 4,893 brothers, and 17,284 sisters, with 30,414 stations, 22,736 churches, 17,824 schools with 791,578 pupils. When we add the results of the Roman Catholic missions since the time of the Reformation, we have in the Roman Catholic mission field 30,000,000 native converts.

According to Karl Streit (Katholischer Missionsleitfaden, Leipzig, 1900), the Roman Catholic missions since the time of the Reformation have included Mongolia, Manchuria, and Tibet, (3) Indo-China, with Siam and Laos, and (4) the Japanese Empire, with Korea. The early history of missions in this continent has been confined in which the 'Early and Medieval' section above.

1. British India.—British India and Ceylon, with an area of 1,500,000 sq. miles and a population of 350,000,000 souls, is one of the most important and probably one of the most difficult mission fields of the Roman Catholic Church owing to the belligerent tribes (120), the many non-Christian religions (Hindu, Brahman, Bodhist, Muslim, pagan) and Christian denominations (40), and the prejudices of the highly developed caste system.

In 1608 Vaso de Gama landed in Calicut, the capital of Malabar, accompanied by the Trinitarian Pedro do Covilhao, who in 1500 became the protomartyr of the missions in India. In the same year eight secular priests and eight Franciscans arrived with Pedro Alvarés Coelho, three of whom were put to death by the Muhammadans. Yet, in spite of persecution and death, the Franciscans, and after 1593 the Dominicans, went forth to India with the object to sow the seeds of Christianity in Cochín (1505) and Goa (1510), and gradually extended their work to Bombay, Madras, Cochin, Bencoolen, Agra, Ceylon, Malabar, etc., under Fathers Antonio do Lusa (1530), do Coelho (1533), and de Lencastre (1535) with whom firm footing Pope Paul III. erected the bishopric of Goa (1534) with Bishop John of Albuquerque as its first occupant; the sea was raised to an archbishopric by the bull of Pius XII. (1557), Cranganore (1609; archbishopric 1605), and Malabar (1600).

Two Franciscans, James of Borhees and Vincent of Lagos, founded the college of St. Paul at Goa for the purpose of training a native clergy.

In 1641 the Jesuits entered the mission field of India and, at the request of John III. of Portugal, St. Francis Xavier, accompanied by Paul of Camerino and Francis Mansilhaes, set out to inaugurate a new period of missionary labours. From Goa, Galle, Dondi, and Malabar, these Roman Catholic Franciscans with the support of the Portuguese East India Company, Trasquaaro (1544), Cochins, Quilon, and Ceylon. His Jesuit successors took up and carried on his work: de Nobili among the Brannam of Madura (1505-16), Padre Ferreira, de Gama, de Figueiredo, and de Perestrello, the supply of missionaries became limited. The Holy See, with so many missionary labourers in the Indian mission field, hopes of a speedy conversion of Indians were entertained, and, to some extent, had been realized to some extent, had Faith been fulfilled to the duties and sacred obligations that she had promised in connexion with the Padroado —the right of patronage—which the Holy See saw in 1792 and 1799 put 100,000 Christians to death, forced 40,000 into apostasy, and sold 30,000 as slaves to Muhammadan dealers. The dispute regarding concessions to Hindu natives of Malabar rite, commencing with de Nobili and ending with the bull of Benedict XIV., Omnimus sollicitudo, greatly divided the missionaries to the disadvantage of their work, which suffered a heavy blow by the suppression of the Society of Jesus in the Portuguese dominions in 1755, in the French possessions in 1702, and throughout the world in 1773. There were at this time 150 Jesuits in Goa, 47 in Malabar, and 22 in Pondicherry. True, their places were partly filled by Capuchins, by the Missionary Seminary of Paris (1776), and by some native priests, who were ordained without a vocation or an adequate education. Thus the missions in India, which in 1700 numbered some 1,500,000 or even 2,500,000 Roman Catholics, were only ruined and wreckage (500,000 or even less) in 1800.

The archbishopric of Goa, with its three suffragans, of Cranganore, Cochin, and Malabar, numbered 340,000 members with 400 priests, and outside the Goanese jurisdiction there were four missions—Agra, with 506 converts under the care of 10 Capuchins, the Carmelites with 42,000 and 6 priests, the Carmelite missions of Malabar, with 88,000 converts and 5 priests, and Ceylon, with 1 missionary and 20 native priests for 30,000 members. This was due to the anti-Christian policy of Poubal and the neglected obligations of Portugal's right of the Padroado. The Holy See,
ROMAN CATHOLIC RELIGIOUS ORDERS AND MISSIONARY SOCIETIES, AND THEIR FIELD OF WORK.

recognizing the inadequacy and the unwillingness of Portugal, began to provide for the neglected field of India. Hitherto only missionaries of Portuguese origin had been allowed, and these by way of Lisbon and Goa. For years Portugal left the bishoprics vacant and in 1827 withdrew all material subvention. The misery was too evident, and Gregory XVI. took matters into his own hands, and the closing of the mission schools of Portugal. India was opened to all Roman Catholic missionaries irrespective of nationality or religious orders. In 1857 the French Jesuits entered Madras, and the English, followed by the Germans (Bombay and Poona 1854, 1857), the Belgians (Calcutta 1859, Galle 1895), and the Italians (Mangalore 1878). The Missionaries of Paris took up their work in Malacca (1840) and Burma (1857), those of Milan in Krishnagar (1855), Hyderabad (1863), and F. Burma (1866), the Oholates in Jaffna (1847) and Colombo (1855), etc. In 1832 the Propaganda asked Portugal either to fill the vacant see or remonstrate the Padroado. As no answer arrived for two years, Gregory XVI. began to institute vicars-apostolic in Bengal and Madras (1854), in Ceylon and Pondicherry (1856), etc. But this action was now challenged by the Portuguese Government protested against sending missionaries into India and against the establishment of new vicariates without the consent and the agreement of the Pope and of the diocesan Roman Catholic Government of Portugal, of the patriarch of Goa placed himself at the head of a schism in India—the Goanese schism—which was maintained under the patriarch of Goa, Joseph de Silva y Torres and Joseph de Matta. Pius IX. tried in 1857 to come to a settlement, but this was accomplished only by Leo XIII. on 23rd June 1886. A million and a half of native Christians were then under the allegiance of the Holy See when on 1st Sept. 1886 Leo XIII. established the hierarchy in India—8 archbishoprics: Goa, Verapoly, Colombo, Pondicherry, Madras, Calcutta, Agra, and Bombay, to which Simla was added in 1916, the patriarch of Goa holding the dignity of primacy, and twenty-five dioceses, etc. For the furthering of the mission work Leo XIII. also established a papal delegation for India in 1884, which since then has been administered by the titular archbishops Agiardi (1884-87), Ajuti (1887-92), and Zaleski.

The first thirty years of the Indian missions after the reorganization under Gregory XVI. was a period of tremendous growth of the hierarchy, and the strengthening in the faith of the remnants of the old Roman Catholic congregations. With the decline of the Goanese schism and establishment of the hierarchy a steady flow of conversions began, and since then remarkable progress has been made, more conspicuously among the Tamil races in S. India and Ceylon, less so in the Aryan lands of the north. In 1887 the numbers of Roman Catholics in India were:

According to the Census of 1911 (including Burmah):

- Native Roman Catholics of the Latin Rite: 1,294,900
- Native Roman Catholics of the Syriac Rite: 413,142
- Eurasian and European Roman Catholics: 97,144

Total: 1,804,246

Ceylon (native Roman Catholics): 222,163

Total for India and Ceylon: 2,026,409

To complete the survey of the Roman Catholic missions in Britain, we subjoin the general statistics taken from the 'Annuaire Universel des Missions Etrangères' (1903): the hierarchy consists of 9 archbishoprics, 22 dioceses, 3 vicariates, and 4 pretrechures, with 180 foreign and 1250 native priests, 636 brothers, 3808 sisters, 5776 catechists and 1348 native coadjutors. In Ceylon there are 203 Catholic churches, 5300 native clergy, 1000 native religious, 87315 Catholic families, with 500000 Catholic children, 37000891000 Catholic poor, 36000000000 Catholic books, 20000000000 Catholic pamphlets, 200000000000 Catholic newspapers, 200000000000 Catholic societies, 200000000000 Catholic charitable institutions.

2. China.—The revival of Roman Catholic missionary activity in China after the close of the mediæval period dates from the time when the Jesuit Father Ricci came to Peking and the China Temple in 1601. Ricci and the Jesuits set about the work of proselytizing among the Chinese (1653). Science was to pave the way for religion and missionary work. In 1600 Ricci went to Peking and with the help of his Jesuit brethren started missions at Canton, Nanking, and Kian-si, receiving converts to the faith by the interest of the population, till his death in 1610. The persecution which broke out in 1617 was brought to a speedy end by the invasion of the Manchu Tartars. In 1628 the Jesuit Adam Schall arrived in Peking, gained great influence by his learning, and turned it to the advantage of religion. In the meantime the Dominicans, who in 1625 had established themselves on the island of Formosa, had opened missions in Fu-kien. One of these Dominican missionaries, the native priest Gregory Lopez, or A-lo, known as the Chinese Bishop, the first and the only Chinaman who has been raised to the episcopate, rendered the greatest services to the Roman Catholic Church in his native land (1654).

At the request of Bishop Pallu, Clement x. divided China, which had hitherto been under the jurisdiction of the Roman Catholic missionaries, into two territories—Kiao-chou and on the north part to Gregory Lopez, consecrated bishop at Canton in 1685. About this time the emperor K’ang-hi, a pupil of Father Schall, and Father Verbiest, another learned Jesuit, who arrived in China in 1660, became the favourite of the Mandarins, and K’ang-hi appointed him president of the faculty of mathematics and gave the missionaries permission to preach the gospel throughout the country.

Through the influence of Verbiest and his learned successors Christianity made great progress within a century, and when he died the Roman Catholic Church was in a flourishing condition, honoured at Court, professed by the highest mandarins, and numbering about 300,000 members. Since, however, the Roman Catholic religion was not officially recognized, and the natives were forbidden by law to embrace the faith, the local mandarins put many obstacles in the way and caused many a local persecution, till Father Gerbillion, in 1692, obtained an edict from the emperor giving full liberty to all Chinese to embrace and practise the Roman Catholic religion.

But whilst the Church was enjoying peace from within, it was sadly disturbed from within by a controversy about the Chinese rites, i.e. the lawfulness of taking part in the Chinese ceremonies in honour of Confucius and of using the word Tien ('heaven') to express the idea of God, and whether the prostrations and sacrifices in honour of Confucius and of the ancestors were merely civil ceremonies or connected with idolatry and superstition. Instead of preaching the gospel, converting the infidel, and applying their abilities to other elegant duties, the missionaries of the first class wasted their talents, time, and work in useless and fruitless discussions, for Jesuits and Dominicans were divided in their opinions. Father Ricci, as well as the other Chinese bishop, Gregory Lopez, and most of the Jesuit missionaries, considered the Chinese rites as merely civil ceremonies, while the Dominicans strongly objected to this view. In 1653, however, the controversy became so intense that by the action of Bishop Matteot, vicar apostolic of Fu-kien, who condemned the rites and threatened with interdict all the missionaries who refused to conform to his command. To settle the dispute, the papal legate was sent to China in order to know by tact, only offended the emperor.
In 1706 K'ang-hi made all the priests in China promise that they would teach nothing contrary to the received usages in China, and in the following year, expelled all those who preached against the rites. Alarmed lest the Government should be provoked to harsher measures, the Jesuits appealed to Rome, asking for instruction. A new papal legate arrived in China in 1721 with letters to K'ang-hi, assuring him that the Holy See would ask nothing more than that the Christians should be allowed to pay their devotions, free from all religious obloquy, and that they retained full jurisdiction to their religion. In spite of this decision the controversy continued till 1742, when Benedict XIV. condemned the rites and forbade the Christians to take part in them. After peace was restored, Jesuits and Dominicans, Franciscans and Augustinians, priests of the Society for Foreign Missions of Paris and Lazarists worked hand in hand for the evangelization of China. Some shed their blood, while others, such as Gerbillon, Bouvet, and Parenin, became the scientific advisers to the Court or wrote learned books and treatises or published works of piety for their converts. The living in the long reign of the emperors of sixty years, treated the Christians with justice, revoked all the edicts against them, raised them to the highest offices in the empire, and made the ministers of the Christian religion his companions, friars, and confessors. Meanwhile, from 1721, the Jesuits, turned towards embracing Christianity, although he desired to be baptized in his last illness.

After the death of K'ang-hi, a reaction took place. His son and successor, Yung-chih (1722-35), drove the missionaries from the Court, and ordered them to leave the country, with the exception of Father Parenin and three of his colleagues. A general edict of persecution was issued in 1724, and the missionaries were seized and banished, and 300 churches were destroyed or turned into pagan temples, while 37 Manchu princes who had become Christians, and 500 of their servants, were sent into exile (1724). The accession of Kien-long (1735) to the throne of China mitigate for a time the severity of the anti-Christian laws, but in 1745 a new persecution broke out in Fu-kien, where, in the following year, Bishop Sanz and four Dominicans were tortured and beheaded, and soon the flame spread to other provinces. All the hatred was turned against the priests, who were obliged to fly to Macao or Canton.

Scarcely had the Church recovered from her trials when a new misfortune overtook her. The Jesuits, who from 1833 to 1773 had worked in China as elsewhere, were suppressed. At the request of the Propaganda, the Lazarists took charge of the Jesuit missions in China—i.e., four large churches in Peking and the missions in 13 out of 18 provinces—in 1738. For many years, however, the Lazarists were unable to send a sufficient number of missionaries to continue the work of the Jesuits; seven missionaries seem to be all that were sent from 1773 to 1793. Finally the French Revolution cut off the supply of missionaries from France, and for over thirty years the Lazarists were unable to send a single priest to China. The Roman Catholic Church in China, which in the reign of the emperor K'ang-hi is said to have numbered 850,000 members, was reduced at the beginning of the 19th cent. to 220,000, divided among the Lazarists at Peking and Nanking, the Franciscans in Shan-si, the Dominicans in Fu-kien, the Missionaries of the Sacred Heart in Szech'wan, and the Portuguese secular priests at Macao and Canton.

Yet, in spite of the bloodshed and persecution, of cruel edicts issued by the emperors, and the anti-Christian movement fostered by the literati and carried into effect by members of secret societies, the Taiping and Boxers, the Roman Catholic Church has made good progress during the century since it received its final revocation. From the beginning of the 20th century, the Franciscans and Dominicans, the Jesuits and Augustinians, the Lazarists and the Missionaries of Paris who had been in the Church institutions for the last two centuries, have strengthened their ranks and extended their work, while new missionary societies founded in the 19th cent., such as the Schuettveld, the Steyler, and the Oblates, have opened up new fields, and all the European missionaries engaged in China have strengthened their ranks with a large number of native priests.

True, the opening of the 19th cent. did not promise a bright future, for Kia'k'ing (1793-1820) proved to be one of the greatest persecutors, having revived the old anti-Christian laws. Bishop Du-fresse was beheaded in 1825, Father Olet in 1829, and Father Perboiye in 1840. But China was shaken to her very foundations when in 1842 Britain declared war on her and compelled her to open certain ports, while she also opened up to the Roman Catholic missionaries in 1844. The Chinese Government acceded, and in 1844-45 two edicts were issued by which Christianity received legal recognition in the empire, and in 1846 a third edict ordered the religious withdrawal from all the churches which they had lost since the reign of the emperor K'ang-hi. The eighty missionaries who at this period were at work in China were strengthened in 1841 by the arrival of the first missionaries of the Society of Jesus, who were once more entrusted with one of their former fields of labour, the vicariate of Kiang-nan.

Though religious liberty was granted by the edicts of 1844, 1845, and 1846, they remained a dead letter in many of the provinces in the interior. In 1851 the emperor Hien-leng revoked them, and renewed those against the Christians. The murder of Father Chapdelaine (1856) brought matters to a crisis. France joined Britain in a war against China, and the result was the Treaty of Tientsin (1858) and the Convention of Peking (1860); the churches were restored as well as the religious and charitable institutions, the missionaries obtained free passports throughout the empire, the faithful were guaranteed unrestricted exercise of their religion, and all legal restrictions on the edicts against them were abrogated. Yet the Christians were not safeguarded from local persecutions, which broke out in Kiang-si, Kwang-tung, Sze-ch'uen, Hu-nan, and finally in Tientsin in 1870. After the accession of Kwang-su in 1873 the Roman Catholic Church enjoyed a long period of peace, and, though the emperor Ts'ao Hsi was not favourable to Christianity, yet she did nothing against its progress and development. In 1873 and 1889 the French minister in Peking obtained new concessions for the Christians, among them the privilege that the Roman Catholic missionaries were put on an equality with the Chinese local authorities—a privilege which was cancelled a few years later.

The political plunders of Europe in China, by taking Kiao-ho (Germany, 1897), Taliwen (Russia, 1898), Wei-hai-wei (Britain, 1898), and Kwang-chou-wan (France, 1898), resulted in the Boxer riots, which brought sad days for the missions. Bishops, priests, and sisters lost their lives; churches, schools, and hospitals were levelled to the ground; missions were wiped out, and the Boxer Peace was restored only when a strong international army entered Peking on 14th Aug. 1900 and ten foreign Powers dictated their terms in the Chinese Capital on 7th Nov. 1901. From that moment towards the Roman Catholic Church then began, a great
number of Chinese entering the list of the catechumens, and it has steadily advanced since the Boxer rising. The overthrow of the Manchu dynasty in China and the proclamation of a Chinese republic induced the missions to renew their missionary work. Yuan-Shi-Kai, the first president of the new republic, promised absolute religious liberty, mandarins and governors enacting the law of the Republic in 1913, which placed the Christian and non-Christian sects on an equal footing. The spiritual power of the Church through the missionaries is living examples of the poverty, zeal, and heroism of apostolic times.

During the flourishing period of the Roman Catholic Church in China, from 1583 to 1773, the hierarchy was not developed, though the Propaganda had resolved in 1651 to appoint a patriarch, two archbishops, and twelve bishops. In 1577 Gregory XIII created the diocese of Macao for China and Japan, which was divided into two, viz. Macao and Fumay (Japan) in 1587. In 1595 Alexander VII erected within the vicariates of China, but, in 1676 such vicar-apostolic, missionary bishops being sent to China, missionary dioceses (Shan-si, Fu-kien, Szechuan, and Sze-chuen). In 1800 there were in China five missionary districts divided between the Franciscans (Shan-si), the Dominicans (Fu-kien), the Missionary Societies, and the Jesuits (Peking, Nanking, Fu-nan, Hu-peh, Liang-si), and the secular priests (Macao) with 200,000 members. Fifty years later the number had increased to 18 dioceses, with 1,700,000 members. In 1890 to 40 ecclesiastical jurisdictions with 601,000 members; in 1905 we find 43 vicariates with 931,000 members, and in 1911-12, 48 vicariates and prefectures with 1,945,776 members (1913 = 1,421,000; 1914 = 1,905,107) and 456,915 catechumens.

According to the Annales Hierarchici, we find for China and her dependencies, Mongolia and Manchuria, the following statistics: 49 missionary dioceses or vicariates and prefectures, 1325 European and 721 native priests, 247 European and 66 native nuns, 35 European and 1129 native sisters, 4077 male and 5700 female catechists, 7919 native teachers, 1,106,629 native Christians and 813,022 catechumens, 1442 principal and 12,000 secondary stations, 2414 churches and chapels, 64 theological seminaries with 1650 students, 6974 elementary schools with 129,226 pupils, 187 higher schools with 6232 pupils (8000 (?) girls, 305 orphanages with 29,180 inmates, 97 hospitals, 427 dispensaries, and 21 printing presses.

3. Indo-China.—Indo-China, the bridge between India and China, one of the three peninsulas of S. Asia, is politically divided into Upper and Lower Burma (British), the Malay Peninsula (British and Siemens), Siam (independent), French Indo-China (British), which consists of Cochin China, Annam and Tonking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsula are—ecclesiastically—only included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

The area of French Indo-China has been estimated at 152,000 or 200,000 sq. miles with a population of 16,000,000 or 21,000,000 inhabitants. The first attempts to preach the gospel in French Indo-China were made in the 16th cent. by a French Franciscan, Fr. Bellenger, who visited Cochin China, Amam and Tonking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsula are—ecclesiastically—only included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

The area of French Indo-China has been estimated at 152,000 or 200,000 sq. miles with a population of 16,000,000 or 21,000,000 inhabitants. The first attempts to preach the gospel in French Indo-China were made in the 16th cent. by a French Franciscan, Fr. Bellenger, who visited Cochin China, Amam and Tonking, Cambodia and Laos, covering a total area of some 735,000 sq. miles with a population of 35,000,000 or 40,000,000 souls. As Burma and the Malay Peninsula are—ecclesiastically—only included in British India, we have to deal here only with French Indo-China, Cambodia, Laos, and Siam.

Cochin China: 1 vicar-apostolic, 5 missionary and 15 native priests, 50,000 native Christians (Missionaries of Paris).

Tongking W.: 1 vicar-apostolic, 6 missionary and 65 native priests, 120,000 native Christians (Missionaries of Paris).

Tongking E.: 1 vicar-apostolic, 4 missionary and 41 native priests, 140,000 native Christians (Dominicans).

3 bishops, 15 missionary and 119 native priests, 310,000 Christians.

In the meantime a political movement had taken place in Indo-China which at first seemed very favourable to the spread of Christianity, but which in reality became the cause of serious hindrances, obstacles, and persecutions. During the war of 1857-1877, Nguyen-anh, the ruler of Cochinh China, impelled the help of the European
Power against the rebellions Tai-Shans, Britain, Holland, and Portugal willingly offered their help, but Pierre-Joseph Picqueux de Bélaine, since 1771 vicar-apostolic of Cochinchina, and as plenipotentiary of the Annamese king, signed a convention on 28th Nov. 1787, with which France was to assist Nguyen-anh to recover his throne. But to his dismay the bishop, on his return to the East, found that France had abandoned the project, and, therefore, he persuaded the enemy officers and 200 men of Pondicherry to come to the rescue of the king, who defeated his enemies and in 1802 proclaimed himself as emperor of Indo-China and Annam under the name of Gia Long.

Owing to this success Gia Long was favourable to Christianity, which made splendid progress throughout the Annamese empire. This period of peace (1802-20), however, was only a preparation for future trials. In 1819 the Christian community included 4 bishops, 25 European and 180 native priests, 1000 catechists, and 1500 sisters. Gia Long was succeeded by his son, Minh-mang (1821-41), a fanatic, that was to prove a bitter enemy of Christianity and foreigners. He dismissed his father's trusted friends, summoned all the missionaries to appear at court, and resolved to obliterate the memory of his reign. Though his object was defeated for a time, he issued a new edict in Jan. 1833, ordering all Christians to renounce their faith, to trample the crucifix under foot, to raze all churches and religious houses to the ground, and to punish all the missionaries with the utmost rigour. Hundreds of Christians, 20 native and 9 European priests, and 4 bishop's vicar-fellvictims to this tyrant—Fathers Gagassin (1835), Marchand (1835), Cornay (1837), de la Motte (1840), Mgr. Bori (1838), and Mgr. Delgado (1838), 84 years old. The persecution abated under Minh-mang's successor, Thiéu-tri (1841-47), who did not possess the energy of his predecessor, and was afraid of Britain's successes in China and of a threatened interference of France. Instead of being annihilated, the Church's missionaries and converts increased year after year in spite of all the edicts and tortures of Minh-mang. In 1846 we found:

Cochin China: 1 vicar-apostolic, 1 coadjutor, 10 missionary and 27 native priests, 50,000 Roman Catholics.

Tongking: 5 vicar-apostolic, 8 missionary and 76 native priests, 160,000 Roman Catholics.

Kiai: 4 vicar-apostolic, 6 missionary and 41 native priests, 100,000 Roman Catholics.

For the sake of the work of the missions in the Annamese empire, Gregory XVI. in 1844 divided Cochín China into two vicariates, Eastern and Western, and W. Tongking into Western and Southern in 1848, while in 1850 Cambodia and N. Cochín China were also raised to vicariates.

Though King Thiéu-tri did not shed the blood of the priests, yet he did not cease imprisonment; such were Fathers Gali, Berneau, Charrier, Mico, and Duclos, who were set free by Captain Levêque of the Héroïne in 1843. This and similar interferences by the French in 1847 and 1856 provoked the resentment of King T'ou-ti (1847-52), whose reign of 36 years is one uninterrupted period of persecution of the bishops, priests, and Christians. In 1848 he issued an edict setting a price on the heads of the missionaries, and in 1853 he ordered the European priests to be cast into the sea and the native priests to be cut in two; Fathers Schiiffer (1851), Bonnard, and Minh (1852) were martyred.

In 1855 a unival Christian of Christians followed, and in 1857 Bishop Pellen, vicar-apostolic of N. Cochín China, appealed to Napoleon III. to intervene. In August 1858 France and Spain, roused by the slaughter of their countrymen, took joint action, and, at the Convention of Tourane (1858) and Saigon (1859). The persecution meanwhile raged with unabated vigour. Bishops Diaz, Hermoule, García, Cuenot, etc.—altogether 5 bishops, 28 Dominicans, 3 missionaries of Paris, 116 native priests, over 100 native catechists and Christians were put to death, 100 towns, all centres of Christian communities, were razed to the ground, 40,000 Christians died of ill-treatment, and all the possessions of the religious parties were restored. It was restored in 1862, when Annam ceded to France the southern provinces of Cochín China and guaranteed freedom of religious worship. That peace, however, did not last long; it was broken by the interference of the French freebooters Dupuis, Dupré-Garnier, and Philastre, and Mgr. Puginier, vicar-apostolic of W. Tongking, became involved to the detriment of the missions. A new treaty was signed between France and Annam on 10th March 1874, which again guaranteed religious freedom and the safety of the missionaries, and from 1874 to 1882 the Christians enjoyed a period of peace. The Annamese mandarins disregarded the treaty and compelled France to interfere. Hué was captured on 25th Aug. 1883, the Annamese were defeated, and the treaty was signed on the sandbank and on its ratification, 23rd Feb. 1886, Annam became a French protectorate. Yet, before this was accomplished, the Christians, who were considered as friends of France and enemies of Annam, had to suffer severely. At the close of the year 1866 Tongking, Cochín China, and Laos had to mourn the loss of 20 European and 30 native priests, and 50,000 Christians; in Cochín-China alone lost 8 European and 7 native priests, 60 catechists, 270 sisters, 24,000 Christians, 17 orphanages, 10 convents, and 225 chapels, etc. Yet the blood of the martyrs has been here as elsewhere the seed of Christianity, and surely during the 20 years of peace the Roman Catholic Church has made marvellous progress in Indo-China, and has never been in so flourishing a condition as she is to-day. Of this the statistics given below are a fair proof.

Siam.—The first Roman Catholic missionary who entered Siam was the French Franciscan, Bonfer, who preached the gospel there from 1550 to 1554, but without result. He was succeeded by two Dominicans,Datum, one of the Franciscan Fathers, is still in Siam, and his principal work is still the conversion of the Siamese, who converted some 1500 Siamese from 1554 to 1569, when they were put to death. The Dominicans were replaced by Jesusits in 1606 and 1624, and in consequence of a persecution the field was abandoned till 1622, when Alexander VII. made it a vicariate and in 1669 entrusted it to the Missionary Society of Paris with Mgr. Lanneau as its first bishop. The Siamese king, Phra Narai, in 1687 signed the treaty of Louvo with Louis XIV. of France, by which the Roman Catholic missionaries obtained permission to preach the gospel throughout Siam. This was done till 1727, when a serious persecution broke out which lasted without interruption for the rest of the century. After the Burmese invasions and wars were over, the 12,000 Siamese Christians were reduced to 1000 with Bishop Florent and 7 native priests in charge. In 1826 and 1830 fresh European missionaries arrived, among them Fathers Bouchot, Barbe, Pallegoix, and Courvey. In 1834 Courvey was appointed bishop. He ordered the native priests and the Bishop of Pallegoix (1840-42), the best Siamese scholar and the most successful missionary among the Laos, induced Napoleon III. to renew the French alliance with

King Mongkut of Siam (1856). Thanks to the broadmindedness of Mongkut (1851–68) and Chulalongkorn (1868–1910), the Roman Catholic missions in Siam enjoyed peace under Palaeoix’s successors, Bishops Dupont (1862–72) and Vey (1875–1900). In 1875 there were in Siam 11,000 Roman Catholics, 17 European and 7 native priests, with 30 churches; in 1913 we find 24,000 Roman Catholics, 45 European and 21 native priests, 35 European and 87 native sisters, 23 principal and 35 secondary stations, 56 churches, 76 elementary schools with 3740 pupils, and 4 high schools with 835 students under Bishop M. J. Perros.

The missions in Laos, which were commenced in 1876 and formally opened in 1883, were separated from Siam as a vicariate in 1899. In 1913 we find there 32 European and 4 native priests, 8 European and 14 native sisters, 12,500 Roman Catholics with 23 principal and 56 secondary stations, and 64 churches and chapels with 53 elementary schools.

4. JAPAN.—The existence of the island empire of Nippon, or Ji-pan, ‘the Land of the Rising Sun,’ was first revealed to the Western world by the Venetian traveller Marco Polo (1295–98), under the name of Cipangu, but was not visited by Europeans until three centuries later. Famous among these was the Portuguese Mendez Pinto, who, on 23rd Sept. 1543, landed on Taneoshima and became instrumental in the conversion of three shipwrecked Japanese. Anjro and his six companions. In 1549 St. Francis Xavier, accompanied by the Jesuit Cosmo de Torres and by Brother Fernandez, set out for Japan and landed at Kagoshima, whence he returned. He founded his work in Hirado, Hakone, and Yagamachi, then formed by the Spanish. Before his departure to China in 1551, St. Francis had obtained new helpers from Goa, such as Fathers Balthasar Gago, Gaspar Berse, Edward da Silva, and Peter de Alcavan, who were later on joined by Gaspar Coelho, Vilela, Louis Frest, Melchor, and Antonio Diaz. For forty years the Jesuits remained in sole charge of the missions in Japan, and their work progressed under the protection of Nobunaga, then actual ruler of Japan (1573–82). Torres is said to have baptized 30,000 converts and built 50 churches from 1549 to 1570. Thirty years after the death of St. Francis, we learn from Coelho’s annual report for 1582 that at that time the number of all Christians in Japan amounted to 200,000 with churches great and small, and 200 in number. Down to the year 1583 there had never been more than 9, down to 1577 only 18, and to 1582, 72 members of the Society engaged in the Japanese mission-field. In 1582 a Japanese embassy, consisting of four Japanese princes and a Japanese Jesuit, went to Rome and were received in audience by Gregory XIII. In the meantime Nobunaga had died that same year, and his successor, Hideyoshi Taikosama, became a fierce persecutor of the Christians, ordering the destruction of all the churches and the immediate expulsion of all the Roman Catholic priests (1567). The return of the Japanese embassy from Rome in 1590 and the arrival of Father Valignani with new European Jesuits effected a change, however, and the Japanese Christians began to breathe more freely. In 1590 the Japanese missions numbered 56 European Jesuit priests, 11 European scholastics, 87 Japanese Jesuit brothers, 5 Japanese and 3 Portuguese novices with 23 residences, and about 300,000 or 400,000 members. The Viceroy had appointed the Jesuit Antonio Ovidio bishop of Japan with Melchor Carnero as his coadjutor, but the latter died at Macao, and his successor, Sebastian Morales, who was appointed by Sixtus V., came only as far as Mozambique. Bishop

4. JAPAN.—The existence of the island empire of Nippon, or Ji-pan, ‘the Land of the Rising Sun,’ was first revealed to the Western world by the Venetian traveller Marco Polo (1295–98), under the name of Cipangu, but was not visited by Europeans until three centuries later. Famous among these was the Portuguese Mendez Pinto, who, on 23rd Sept. 1543, landed on Taneoshima and became instrumental in the conversion of three shipwrecked Japanese. Anjro and his six companions. In 1549 St. Francis Xavier, accompanied by the Jesuit Cosmo de Torres and by Brother Fernandez, set out for Japan and landed at Kagoshima, whence he returned. He founded his work in Hirado, Hakone, and Yagamachi, then formed by the Spanish. Before his departure to China in 1551, St. Francis had obtained new helpers from Goa, such as Fathers Balthasar Gago, Gaspar Berse, Edward da Silva, and Peter de Alcavan, who were later on joined by Gaspar Coelho, Vilela, Louis Frest, Melchor, and Antonio Diaz. For forty years the Jesuits remained in sole charge of the missions in Japan, and their work progressed under the protection of Nobunaga, then actual ruler of Japan (1573–82). Torres is said to have baptized 30,000 converts and built 50 churches from 1549 to 1570. Thirty years after the death of St. Francis, we learn from Coelho’s annual report for 1582 that at that time the number of all Christians in Japan amounts to 200,000 with churches great and small, and 200 in number. Down to the year 1583 there had never been more than 9, down to 1577 only 18, and to 1582, 72 members of the Society engaged in the Japanese mission-field. In 1582 a Japanese embassy, consisting of four Japanese princes and a Japanese Jesuit, went to Rome and were received in audience by Gregory XIII. In the meantime Nobunaga had died that same year, and his successor, Hideyoshi Taikosama, became a fierce persecutor of the Christians, ordering the destruction of all the churches and the immediate expulsion of all the Roman Catholic priests (1567). The return of the Japanese embassy from Rome in 1590 and the arrival of Father Valignani with new European Jesuits effected a change, however, and the Japanese Christians began to breathe more freely. In 1590 the Japanese missions numbered 56 European Jesuit priests, 11 European scholastics, 87 Japanese Jesuit brothers, 5 Japanese and 3 Portuguese novices with 23 residences, and about 300,000 or 400,000 members. The Viceroy had appointed the Jesuit Antonio Ovidio bishop of Japan with Melchor Carnero as his coadjutor, but the latter died at Macao, and his successor, Sebastian Morales, who was appointed by Sixtus V., came only as far as Mozambique. Bishop
Pedro Martinez, also a Jesuit, appointed in 1591 and consecrated at Goa in 1595, arrived in Japan in the following year. In 1593 four Spanish Franciscans, Fray Juan, Juan, Bello, and tholomeu Ruiz, Francis de Parilla, and Gonzalves —arrived in Japan and started work at Menko, Nagasaki, and Osaka, thus trespassing upon the privilege granted by Gregory XIII in 1586 to the Jesuits. Christians accused the Bonzes, who accused the Roman Catholic missionaries of being only political agents of Spain and Portugal, and Hideyoshi gave the signal for a cruel persecution. At least 10,000 Franciscans, 15 Japanese Tertians, 3 Japanese Jesuits, and 2 servants, known as the '26 martyrs of Nagasaki,' were put to death on 5th Feb. 1597. Instead of destroying Christianity, however, the persecution only helped to make it known. Hideyoshi died in 1598, and his successor, Jeyasu Daitusama (1605–16), left the Church in peace, which was then governed by the Jesuit Bishop Luis Susqueyra. In 1602 the Jesuits were reinforced by Franciscans, Dominicans, and Augustinians, and by the year 1613 we find in Japan 130 Jesuits and some 30 priests belonging to the other missionary societies. The actual number of Catholics is probably much smaller. Between 1549 and 1598, 500,000, between 1598 and 1614, 152,000, and between 1614 and 1630, 25,000 adults were baptized, and we are told that the actual number of Christians at this time amounted to 1,800,000. But the peace and prosperity were the prelude to one of the most terrible persecutions begun by Jeyasu for some unknown reason. In 1614 Bishop Susqueyra died and was succeeded by the Franciscan martyr, Bishop Louis Sotole, who was burned alive in 1624. In order to weaken the Christians the Shogun arrested 117 Jesuits and 27 other missionaries, together with the Roman Catholic Leaders, and transported them to the Philippines (1614); but many of them returned.

Jeyasu died in 1615 and was succeeded by Hidehata, who removed the effects of his father, and from 1617 to 1640 the persecution went on without interruption. The 'Great Martyrdom' took place at Nagasaki on 2nd Sept. 1622, when 10 Jesuits, 6 Dominicans, 8 Franciscans, and 22 Japanese nobles were put to death. Jemttes, the following Shogun, is said to have killed about 20,000 every year from 1623. Over 200 of the missionaries, some 800 native catechists, and 200,000 Christians were martyred. From the year 1638 Christianity appeared to be extinct in Japan; though sporadic efforts were made by Jesuits in 1642 and later, all these failed. Father John Sidotti was the last Roman Catholic priest who entered Japan (1708), and he was put to death on 15th Dec. 1715.

The blood of so many martyrs, however, was not destined to be shed in vain. When in 1832 Gregory XVI erected the vicariate of Korea, Japan was included. In 1844 Father Forcada and Ko, a catechist, landed on Liu-Kiu Island, and they were joined by Father Leturdu in 1846. In the same year the vicariate of Japan was erected with Father Forcada as vicar-apostolic. But Japan was still a forbidden land till, in 1853, the United States broke down the barriers by a treaty, which was followed by others with Great Britain, Russia, etc., and Father Petitjean was able to build a Roman Catholic church at Nagasaki, which, on 17th March 1855, became instrumental in lining the Philippines with Roman Catholic missions. In Christian villages with several thousand Christians who for 200 years had kept the faith. In 1866 Petitjean was appointed vicar-apostolic. Though some minor persecutions broke out, the Church made progress, and in 1873 the laws and edicts against Christianity were abolished. In 1876 Japan was divided into two vicariates, and under Leo XIII, two more were added in 1888 and 1901, till on 15th June 1901 Leo XIII re-established the Missionary Vicariate of Japan, i.e. the archdiocese of Tokyo with three suffragan sees of Nagasaki, Osaka, and Hakodate, which were placed under the care of the Missionaries of Paris, to which have since been added the provinces of Shikoku (1904) and Niigata (1912) under the care of the Dominicans and the Missionaries of Steyl. The number of Roman Catholics, which in 1579 amounted to 16,000 with 13 priests, reached 25,000 in 1623, 44,000 in 1891 with 82 European and 15 native priests, 63,000 in 1910 with 150 European and 33 native priests, and 89,755 in 1915.

Korea.—From 1636 to 1578 Chosen, 'the Land of the Morning Calm,' was known only under the name of the 'Hermit Kingdom of the Far East' on account of the rigorous enforcement of her policy of isolation against all foreigners. Yet Roman Catholic missionaries made their way and found their faithful children in Korea, whose very name became known in Europe as the symbol of persecution and martyrdom. When, in 1592, Hideyoshi sent his soldiers to Korea, the Jesuit Gregorio de Cespechez accompanied the troops as chaplain to the numerous Roman Catholics in the army, and in his spare time instructed the children in the Faith; on his return to Japan in 1593, some 300 Korean prisoners of war. Nothing, however, is known of the fate of his converts in Korea, as in the beginning of the 17th cent. all traces of Christianity had disappeared from the land. In 1783 Seng-hun-i, one of the Korean literati, joined the annual embassy to Peking and interviewed there Alexander de Goves, the Franciscan bishop, who baptized him by the name of Peter. On his return he was joined by two friends, Piiki and Il-sini, who became the pioneers of Christianity in Korea. From 1784 to 1794 they received some 4000 neophytes into the Church, who were persecuted by the Bonzes from 1785 to 1791. An attempt made by de Remedios in 1791 to penetrate into Korea failed. In 1794 Father Jacob Tae (alias Padre Jayme Vellozo), a Chinese priest, succeeded in entering, and for six years continued the apostolate, during which time he baptized 6000 converts and thus increased the flock from 4000 to 10,000 souls. In 1801 new edicts were published ‘against the foreigner’s faith,’ among the martyrs were Peter Seng-hun-i, Father Tae, and 300 of his flock. For thirty years the Christians in Korea remained without a pastor in spite of repeated requests both to Peking and to Rome, owing to persecutions in China. In 1827 the mission field of Korea was entrusted to the Société des Missions Étrangères of Paris, and on 9th Sept. 1831 Korea was made a vicariate with Bruguère as its first bishop, Fathers Chastan and Malamúnt being his only assistants. The bishop died in the sight of Korea, while Fathers Malamúnt and Chastan reached Seoul in 1836 and 1837 respectively. At the end of the year the newly-appointed bishop, Imbert, arrived and found the flock reduced from 10,000 to 6000, which was increased to 9000 two years later, when the bishop and the two priests were put to death (1839). In 1845 Bishop Perroté, accompanied by Fathers Daveluy and Kim, the first native Korean priest, took over the field, but the latter died the death of a martyr in the following year. From 1846 to 1866 the Church in Korea struggled for compensating peace, during which numerous converts were made both under Forstél and under his successor, Bishop Berneux—from 11,000 to 25,000. This was the most flourishing period in the annals of Christianity in Korea, in which there possessed 2 bishops (Berneux

VOL. VIII.—46
and Daveloy) and 10 priests. In 1866 the persecution raged again, and during it the 2 bishops with 7 priests were put to death and 3 priests had to leave the country. In 1867 attempts were made to reopen the mission, but failed. In 1899 Ridel was appointed bishop, but was not able to enter Korea until 1874, was expelled in 1877, and died in 1884. The treaties of Korea with Japan, the United States, Britain, France, and America in the end opened the gates of the Hermit Kingdom. Bishop Blanc found on his arrival in 1883 only 13,000 Roman Catholics out of 25,000 in 1866, but the flock numbered 16,500 at his death in 1890. During the long reign of Bishop Mutel (since 1890) the missions in Korea, which was declared an independent kingdom in 1893, a Japanese protectorate in 1905, and a Japanese general residency in 1910, have enjoyed freedom. In 1897 we find 2 European and 3 native priests with 32,217 members in 497 stations, in 1899, 46 European and 10 native priests with 68,016 members. At the request of Bishop Mutel, Korea was divided into the vicariates of Seoul and Taiku, and numbered, in 1913, 58 European and 17 native priests with 59 principal and 978 out-stations, and 150 churches with 50,500 members.

II. AFRICA.—There is hardly a more glorious chapter to be found in the annals of the Roman Catholic Church than that of Africa. After the death of Jesus Christ and for a few centuries, the remnant of the converted people wandered from tribe to tribe. The desert was their home, and God's work was done by the power of the Holy Spirit. In the 7th century, the Arabs began to cross the Sahara, and the African coast was opened to the Moslem world. In 978 there was a large merchant expedition into the African interior, but little more is known of the Moslem work than that which is recorded in the diaries of the explorers. In the 15th century, the Portuguese, under the leadership of Henry the Navigator, son of King John 1. of Portugal, began their discoveries and expeditions along the west coast of Africa, passed Cape Bojador (1433), reached the Rio de Oruro (1444), and doubled Cape Verde (1444), they unfurled the banner of the Cross. In 1471 they crossed the equator, Diego Cam discovered the Congo (1484), Bartholomew Diaz doubled the Cape of Good Hope (1487), while Vasco da Gama came as far as Mozambique, Malindi, and Mombasa (1497). Pope Alexander VI. in 1494 assigned to Portugal all the lands discovered or to be discovered 570 miles west of Cape Verde Islands, and to Portugal all the land to the east, with the one obligation to further the propagation of Christianity and to support mission work in the east.

The Dominicans and Franciscans, Augustinians and Jesuits, Capuchins and Carmelites, supported by secular priests, vied with one another in carrying into effect the command of Christ 'to teach all nations.' Bishops were founded on the adjacent islands of the Dark Continent, viz. Las Palmas in the Canary Islands, Funchal in Madeira (1514), São Thomé on Cape Verde (1522), São Thiémot (1534), etc. King Emmanuel of Portugal took a special interest in the evangelization of the Congo, and from 1505 to 1512 sent annually some small number of different religious orders (Dominicans, Franciscans, and Augustinians), who, supported by the native King Alphonso, made good progress. The bishop of St. Thomas (Gulf of Guinea) was the first to accept the title of bishop of the Congo, transferred his see to San Salvador, and erected a chapter consisting of 28 canons. As the missions already engaged in the Congo did not suffice for the growing number of converts, and in 1590 the king of Portugal, sent some Jesuits—among them Fathers Vas, Rivera, Díaz, Several, Noguera, Gomez, etc.—who founded a college at San Salvador. From 1544 to 1592, 8 bishops occupied the see of San Salvador, and, when in 1592 the bishopric of Angola was united with that of the Congo, the see of San Salvador was transferred to St. Paul de Loanda. With the growth and expansion of Portuguese power in the E. and W. Indies, however, Portugal again opened a field to the Church with a sufficiency of missionaries, so that in 1857 we find only 12 priests for thousands of Christian villages. King Alvaro II. therefore applied to Rome for help in 1598; but it was only in 1640 that an Italian Carthusian and 4 Franciscans of Pamplona were sent, and these were strengthened between 1648 and 1833 by Italians and Portuguese, such as Dionysius Mareschi, Bonaventure Carrilgo, Joseph of Anguera, Jerome of Fuebla, Francis of Monteleone, and Anthony Zucchi, as well as by Carmelites who arrived in the Congo in 1636. It seems that these earlier missionaries extended their work as far as Stanley Pool and to the valley of the Kasai. Carmelites, Franciscans, Jesuits, and secular priests also started missionary work in Senegambia, Sierra Leone, the Gold Coast, Benin, Angola, and Upper and Lower Guinea. Among these pioneers we may mention the Jesuits Barreiva (? 1612), Fernandez, Barros, Almeida, Netto, and Alvarez, and the Capuchins Bernardino Renard and Angela Daveluy. Except for the missions in the Congo, missionary work was commenced soon after its discovery—in Mozambique by the Jesuits Sylveira (martyred 11th Aug. 1601), Acosta, and Fernandez; at Sofala by the Dominicans (1616) John dos Santos, John de Pietate, and Nicholas de Rosario; in Madagascar by the Lazarists (1648) Nacequart de Champmartin, Gondron, and Bourdais (1657). In Egypt the Franciscans continued their work among the Copts, and the Jesuits among the Ethiopians (Bermudez, John Nuñez, Andrew Oviedo, Melchior Carneiro, etc.). The various wars waged between the Dutch and the Portuguese, the slave-trade which was encouraged by the Christian European Powers, the civil feuds among the natives, the more promising colonies in the east and in the west, and the decrease of Portuguese power in Africa soon made the Portuguese forget their solemn obligation, and, instead of furthering the welfare of Christian civilization, they only became a standing obstacle to the work of evangelization, since they would not allow any rivals to establish themselves in the new colonies. Unable—or, rather, unwilling—to support the missionary work, the flourishing churches on the west and east coasts of Africa became weaker and weaker, and social, political, and religious disturbances, such as the sectarian policy of Pombal, the anti-Roman Catholic attitude of Holland and England, and, finally, the French revolution, brought every missionary enterprise in Africa to a standstill. According to Louvet (Les Missions catholiques au XIXe siècle), the total number of Roman Catholics of continental Africa at the beginning of the 19th century, including the Uniate Copts and Abyssinians, amounted to 47,000.

With the formation of the Society for the Propagation of the Faith in 1822 we perceive the first signs of a change for the better. The country of Algiers by France in 1830, which broke down the ramparts of Muhammadan fanaticism, and the re-opening of the missions among the Copts in Egypt and their re-establishment in Abyssinia in 1858 were the preludes to the Christian awakening of the Dark Continent. The son of a Jewish Rabbi was destined to take up anew the Roman Catholic missions in Africa and to inaugurate the magnificent apostolic enterprise. Pius IX. Libermann became the founder of the Missionary Society of the Holy
Heart of Mary and the Holy Ghost, usually called the Congregation of the Holy Ghost, whose members (since 1546) have devoted themselves to the evangelization of the heathen in the regions of the Congo and Guinea (1544) Sierra Leone (1564), the Portuguese Congo (1587), French Guinea (1578), Timbuktu (1579), Kandahar (1582), Loango (1588), Lower Nigeria (1586), and the plantations of the Guinea Coast. The Lazarites (Abissinia, S. Madagascar), the Jesuits (C. Madagascar, Kwango, Zambesi), and the Missionary Seminary of Verona (C. Africa), the Benedictines of St. Ottulien (Dar-es-Salaam, Lindi), the Trappists (Natal, Congo), the Belgian, English, and German missionary societies of Scheut (Congo Free State), of Mill Hill (Upper Nile), of St. Togo, the Oblates of Mary Immaculate (Natal, Transvaal, Orange, Kimberley, Lower Cimbebasia, Basuto, etc.

Besides these three African Missionary Societies *per excellence*, work is also carried on by the orders which in days gone by were pioneers in Africa, such as the Franciscans (Egypt, Tripoli, Morocco), the Capuchins (Erythrea, Gallia, Somaliland, Seychelles), the Trinitarians (Benadir), the Lazarists (Abissinia, S. Madagascar), the Jesuits (C. Madagascar, Kwango, Zambesi), and the Missionary Seminary of Verona (C. Africa), the Benedictines of St. Ottulien (Dar-es-Salaam, Lindi), the Trappists (Natal, Congo), the Belgian, English, and German missionary societies of Scheut (Congo Free State), of Mill Hill (Upper Nile), of St. Togo, the Oblates of Mary Immaculate (Natal, Transvaal, Orange, Kimberley, Lower Cimbebasia, Basuto, etc."

The missionaries, if they do not precede the explorers or conquerors, accompany them nowadays, they are nothing. They get from the valleys of the basin to the highland plains of Abyssinia, from the Sudan to the Cape, on the great rivers and lakes, in the desert plains and in the equatorial forests, in the heart of the continent and in the islands, the Cross of Calvary is found to-day set up as the sign of redemption. Where the missionaries have been able to labour they have laboured, and where they could only die they have died. According to the *Katholische Missonen*, Oct. 1912, Africa, as far as it is a missionary country, consists of 6 dioceses, 44 vicariates, and 28 presbyter apostolic, 1 prelate nullius, and 7 independent congregations, with 1,100,000 native members and some 600,000 catechumens. When we add the dioceses of Africa and her islands which are not under the jurisdiction of the Propaganda, and, therefore, do not fall under the heading of the African mission field strictly speaking, we find the total number of Roman Catholics amounting to 3,742,000—insignifi- cant as compared with the 180,000,000 or 180,000,000 even 200,000,000 souls.

11. N. AND S. AMERICA.—When, in 1542, Christopher Columbus and Bartolomeu Dias found a brown-skinned people whose physical

appearance confirmed him in his opinion that he had at last reached India, and he called the inhabitants, therefore, 'Indios,' or 'Indians.' Subsequent navigators and explorers found that the same race was extended over the whole continent from the Arctic shores to Cape Horn, and that the people were more or less everywhere alike in their main physical characteristics, whence they extended the name of 'Indians' to the native tribes in both S. and N. America with the exception of the Eskimos in the extreme north. Much has been written about the atrocities and cruelties of the white invaders—Spanish, French, Portuguese, Dutch, and English—committed against the Red Men, the original inhabitants and owners of the soil. The Roman Catholic Church, from the very outset of the political conquest of S., C., and N. America, has acted as the protectress of the downtrodden Indians, and her missionaries—Francis- cans, Dominicans, Jesuits, and Hieronymites such as Las Casas, Montesinos, Nolos, and Anchiceta—have taken up their cause of liberty and religion. Lopez de Vega, one of the greatest Spanish poets, unfolds the whole aim and purpose of the Spanish conquerors in S. America in two lines:

*At riesce e tieni
Y a dies infinitas altas,*

i.e. 'to extend the boundaries of the Spanish empire over the vast territories of the new world and thereby to gain an apostolate for God.' Religion was her great end and aim, her all-pervading motive. The soothing influence of the Roman Catholic missionaries in S. America is still to be seen in the splendid churches and colleges and the thousands and millions of devoted converts; and, as long as Spain remained faithful to her solemn obligations, she was successful and prosperous. The destruction of the Indian missions, in which the Roman Catholic missionaries had worked for two hundred years, was due to the anti- Roman Catholic policy and legislation of Spain and Portugal; the revival is to be ascribed to the efforts of Pius IX., Leo Xll., and Pius X., who worked in harmony with the rulers of the different States and republics through their apostolic delegates. To describe the Roman Catholic missionary work among the Indians in S. and C. America would mean to write the history of the Roman Catholic Church in the colonial period of these countries from 1520 to 1820. It may suffice to note the work of the Franciscans and the Jesuits during this period.

Franciscan missionaries accompanied Columbus in 1493, and they were followed by others to the Antilles in 1500, to Mexico or Nova Hispania (Peter of Ghent, Martin of Valencia, Molina, Ribeira, the famous Zumarraga (1548), the first archbishop of Mexico, and Martin of Coruña), to Yucatan (Dideaus of Landa (1579), Guatemala and Honduras (Peter of Betancour and Maldonado, Nicaragua and Costa Rica. In S. America the Franciscans had missions in Colombia and Venezuela (John a S. Philiberto [1527], Louis Zapata, and Ferdinand Drees) with some 200,000 baptisms, Indians in Peru (Mark of Nizza and Jodokus Ryko), in Ecuador and Ucayali (Philip Luyando, Dominic Garcia, and Francis Alvarez (1696). At the request of the king of Spain, Franciscans went to Chile (1550) (Martin of Robleda and Angelus of Espinera (1773)), to Bolivia (Andrea Herrera (1583) and Antonio Conmenos (1814)), and into the Pampas of Argentine and to Tucumán (Francis de Saldanha), etc. The Indian missions of St. Bonaventure (Bernard Armenta, John de los Barrios (1547), Bernardine of Cardenas, and Louis Bolaños (1629). Between 1565 and 1572 Jesuit missionaries went to Florida, Mexico, and Peru. In 1603 the Jesuits, with Acquaviva (1681-1615), the second successor of St.
ignorant, to Chile and Paraguay, and later on to Maranhão. Names such as Núñez, Correa, Norregia, and Anchieta have become household words among the Indians in S. America, while the name of Azenedo, who, with 30 of his fellow-missionaries, spent 14 years in Brazil (1570) is associated with his loyalty to duty. At the time of the suppression of the Society of Jesus the Jesuits were represented in Brazil by 445, in Maranhão by 146, in Paraguay by 184, in Peru by 311, in New Grenada, Chile, Peru, and Ecuador by 192, 242, 236, and 209 members respectively.

Equally famous among the defenders of the Indians are I. Damián and the Las Casas, Louis Bertrand, Antonio Montesino, Dominicus de Betanzos, Dominicus Ortiz, the Augustinian Francs John de Medina. With the suppression of the religious orders and the downfall of the Spanish supremacy in S. and C. America came also the destruction of the flourishing missions. The Christian Indians and Negros were allowed to drift, may, were often driven back into paganism, were slaughtered by their cruel white taskmasters, their plantations were destroyed or ruined, their schools and churches were reduced to ashes, and the missionary work which had been accomplished before the suppression and the subsequent upsurge of Christianity among two hundred years with the greatest outlay of money and valuable lives was destroyed. The political upheaval and the masonic inquisition, in the beginning of the 16th cent., with the subsequent scare of priests in the S. American Republics, scarcely allowed the missionaries to resume their work among the remaining Indians and Negroes. In recent years the Propaganda has once more appealed to willing workers among the various religious orders and missionary societies for help to establish missionary work among the Indian tribes. It remains a difficult task to obtain a precise record of their work, since most of them are at the same time engaged among the numerous European colonists in the S. American Republics. In the following we give only the names of the vicarates, prefectures, and missions in the various States, the dates of their erection, and the missionaries engaged.

Colombia: V. Guajira (Capuchins), 1800; V. Casamayor (Augustinians), 1856; V. Llanos (Society of Mary), 1903; P. Casquet (Capuchins), 1904; P. Choco (Immaculate Heart of Mary), 1893.

Guiana: V. Deenara (Brit. Guiana) (Jesuits), 1837; V. Surinam (Dutch Guiana) (Redemptorists), 1825 (1839); Cayenne (Cayenne Province of the Holy Ghost), 1846; in Ecuador: V. Oriente y Mecas (Dominicans), 1838; V. Mendes (Guayaquil) (Society), 1829; V. Nara (Jesuits), 1849; V. Zambos (Franciscans), 1836.

Peru: V. Trujillo (S. Leo) (Augustinians), 1900; P. Ucayali (Franciscans), 1900; P. Uruambala (Dominicans), 1901; P. Pumomayo (Franciscans), 1912.

Brazil: P. Bonfim (Franciscans), 1802; M. Rio Branco (Benedictines), 1897; P. Araguaia, 1911; P. Rio Negro, 1911; P. San Roque (Capuchins), 1916; P. Trava (Congregation of the Holy Ghost), 1910.

Argentina-Paraguay: V. Patagonia N. (Salesians), 1884; P. Patagonia S. (Salesians), 1883; Gran Chaco and Pampas (Franciscans).

Chile: V. Antofagasta (Secular priests), 1903; V. Tarapaca (secular priests), 1894; P. Arica (Capuchins), 1810.

Saxion: V. Chiloe, 1874.

Central America: V. Gerona (Honduras) (Jesuits), 1888 (1893).

Antilles: V. Coracao, 1842; V. Janina (Jesuits), 1837.

Kroo (sp. etc.) reckons the number of the unbelieving Indians in America at 1,500,000 or 3,750,000, i.e., Brazil, 600,000; Paraguay, 100,000; Argentina, 250,000; Chile, 50,000; Peru, 250,000; Bolivia, 100,000; Mexico, 300,000; Guatemala, 150,000; Venezuela, 60,000. To these must be added some 200,000 or 250,000 Coles, Negroes, and Chinese. In these missions European colonists live side by side with the Indians, etc. According to Kroo there are 500,000 negroes in S. America, and allowing some 150,000 as being heathen, the remainder are Roman Catholic Indian and Negro population of 650,000 souls. In the whole missions there are 175 priests, 250 brothers, 126 deacons, 413 stations, and 349 churches. In C. America and the W. Indies there are 350,000 or 600,000 Natives, among whom 50,000 Jesuits, Dominicans, Redemptorists, and Lazarites are at work, some 180 missionaries among 330,000 native Roman Catholics.

The United States of America are composed of former British, Spanish, and French colonies, and their population—91,972,556 (Census of 1910)—consists of a small remnant of the original American Indians (270,000), according to some, 530,000 or 444,000, according to others, Negro slaves and their descendants (9,827,765), of yellow or Asiatic immigrants (146,863), and of white or European settlers and their descendants. In California and Colorado the Colorado (New Mexico) and French (Louisiana) colonies the Roman Catholic missionaries have worked for the conversion and Christian civilization of the Indians, the beginning of the colonizing decades. Dominicans entered Florida in 1566, and they were supported in 1568 by the arrival of 12 Franciscans, 5 secular priests, and 8 Jesuits, among whom we may mention Fathers Martinez, Segura, de Quiros, and de Solis. In Texas and New Mexico Spanish Franciscans—Marcos de Nizza, John of Padilla, and Louis of Escalon—had commenced in 1539, but made little progress. In Arizona Francis of Porras (1683) and in California Juniper Serra (1784) commenced missionary work among the Indians, and along the Mississippi we find Father Marquette. The conquest of N. America by the white immigrants drove the Indians, their 'spoliation, outrage, and murder' were the orders for almost one hundred years. According to H. G. Game (The Indian Mission Problem, Past and Present, 1914), there remain in the United States some 270,000 Indians, of whom 100,000 are Roman Catholics, 40,000 Protestants (74,000?), 110,000 Negroes, 20,000 of whom have no church affiliation. According to Struth (Atlas Hierarchieus, 1914), there are in the United States 440,031 Indians, of whom 64,741 (67,285) are Roman Catholics. These are attended by 306 churches, and are attended by 103 priests (Benedictines, Franciscans, Jesuits, etc.) and 391 sisters; 10 schools are attended by 7359 children. Famous among the Indian missionaries in the 19th cent. are Father de Smuet and Bishop Marty.

The Negro population in the United States (one-tenth of the whole population), descendants of the slaves who for two hundred and fifty years had been imported from Africa, and for the last fifty years been emancipated, but are still treated as outcasts. Owing to hostile legislation, the Roman Catholic Church had for many years a poor chance to convert the millions of the Negroes, since baptism was considered inconsistent with the state of slavery. After the emancipation of the Negroes (1863) and the second Plenary Council of Baltimore (1866), Archbishop Spalding raised his voice for their conversion. The same course was pursued at the third council (1884) by Archbishop (Cardinal) Gibbons, who established a commission for Roman Catholic missionary work among the Negroes and the 'Catholic Board for Mission Work among the Colored People.' It is difficult to obtain the exact number of Negroes professing the Roman Catholic religion in the United States; since some live in the South while others are mingled with the white population, and of the latter a report is hardly ever made. The Catholic Encyclopedia (xii. [1911] 629) gives the number of them professing in 200,000 or 250,000, while, according to the Atlas Hierarchieus, there are only 103,436 scattered in 33 dioceses, with 109 churches, 162 priests (Josephites, Missionary Society of Lyons, Congregation of the Holy Ghost, Mission of Stell), and 175 schools with 14,181 pupils.

The 'Catholic Board for Mission Work among the Colored People,' in its semi-annual publication, Our Catholic Missions, 1914, gives the following statistics: churches, 72; priests, work.
In Canada the descendants of the aborigines are divided into four families: (1) the Huron Iroquois, (2) the Innuits or Eskimos, (3) the Dénés, (4) the Algonquins. In 1905 their total number amounted to 107,857, of whom 85,535 lived inside, the others outside the reservations. In the earliest days of the French colonial period Franciscains in 1615, Jesuits in 1625, and Sulpicians in 1657 devoted themselves to the conversion of the Algonquins and the Huron Iroquois — some 100,000 souls. Famously among these missionaries are d'Oleme, Le Caron, Viol, Sagard (Franciscains), Bérenger, Lallemant, Lejeune, Garnier, Chabane, Daniel, Jogues, Joliet, and Marquette (Jesuits). In 1659 the ecclesiastical hierarchy was established in Canada, and the Church entered from the missionary to the colonial period among the immigrants.

Of the 107,637 Indians to-day 25,060 are Roman Catholics; the remainder, with the exception of 10,906 who are still pagans, belong to various Protestant denominations and are divided in 27 dioceses. The Roman Catholics are attended by some 160 priests in over 110 stations, with 104 schools, and 300 sisters.

OCEANIA. — The southern realm of islands which stretch from the Pacific Ocean has been named Oceania, and for convenience of reference has been divided into four districts, viz.:

Australias with Tasmania.
Micronesia (Marianne, Carolines, Marshall, and Gilbert Islands).
Polynesia, comprising all the smaller islands between Hawaii in the north and Easter Island in the east.

Discovered in the 16th and 17th centuries by Spanish and Portuguese admirals, such as Balboa, Magellan, Mendana, Quiros, and de Torres, who were followed by Dutch, French, English, and German explorers — Roggeveen and Tasman, La Perouse and Dampier, and others — the maritime nations of the sea remained more or less in obscurity till the beginning of the 18th and even the 19th century. That Roman Catholic missionaries set their foot in the islanders long before their discovery, although only occasionally, is certain. Padre Pigafetta accompanied Magellan to the Ladrone Islands in 1521, another priest landed on the Marquesas in 1595, two Spanish missionaries visited Tahiti in 1774, and Abbé de Quinzi converted a few natives in the Hawaiian group in 1819. As Spanish and Portu- guese supremacy declined, the discoveries were of little consequence to Christianity, and, owing to the political and religious revolution in Europe, the suppression of religious orders, and the scarcity of missionary vocations and pecuniary support, the Roman Catholic missions were to a large extent neglected in the Pacific. The Marianne and Caroline groups were the only ones where progress was made. The former was visited by the Jesuit Diego de San Vittor, who landed with four other Jesuits on Guam in 1668, and these were followed by no more in 1870; but nearly all the Spanish missionaries were killed in 1670, 1672, and 1684. From 1700 to 1766 the Marianne missions were entrusted to German Jesuits, who in 1724, after a long interval, were restored to the Carolines. After the suppression of the Jesuits the Marianne Archipelago was handed over to Spanish Augustinians in 1756, and the latter were replaced by German Capuchins in 1897.

Several attempts were made by the Jesuits on the Philippines to open a mission in the Carolines Islands in 1700, 1708, 1709, and 1721, but all of them failed, till Father Cantova succeeded in 1731. Owing to the serious loss of life, however, the Jesuits abandoned the field, and it was only in 1868 that twelve Spanish Capuchins were able to resume missionary work once more in the Carolines; they remained in charge till 1904. In 1911 the German Marianne and the Carolines were united into one vicariate-apostolic with Wallersee as its first bishop, while the United States possession of Guam was made an independent vicariate in charge of Spanish Capuchins. The vicariate of Guam numbered, in 1915, 12,000 Roman Catholics, and that of Marianne-Caroline had 5,595 in 1914. With the exception of these two island groups, the beginning and development of Roman Catholic missionary enterprise in the Pacific belong to the 19th and 20th centuries. It was on 7th July 1827 that Alexis Bouchot, accompanied by Abraham Guerin, Patrick Sorin, and Robert H. Pepeus, landed in Honolulu (Hawaii) to resume the apostolate in Oceania, the whole of which was placed under the ecclesiastical jurisdiction of Solages, then prefect-apostolic of Mauritius (1839). Three years later the vicariate of Oceania was established, and in quick succession the Roman Catholic missions were extended to the various island groups and entrusted to the two pioneer missionary societies in the Pacific, viz. the Missionaries of the Sacred Heart (Pepeus) and the Society of Mary (Marists). From 1827 to 1845, under Cardinal Prefect Capellari of the Propaganda and under the pontificate of Gregory Xv, the Society of Pepeus sent its missionaries to Hawaii (1827), the Gambier Islands (1834), the Marquesas (1838), and Tahiti (1841), while the Marists went to Wallis, Tonga, New Zealand (1837), New Caledonia (1840), Fiji (1844), and Samoa (1845). Gregory Xvi divided Oceania into two distinct vicariates: Eastern (1833-44) and Western Oceania (1836-48), from which Central Oceania was separated in 1842. These three vicariates form, so to speak, the roots of the ecclesiastical jurisdictions in the Pacific. From the Eastern vicariate were separated those of Hawaii, Marquesas, and Tuamotus, and from the Central those of New Caledonia (1847), Samoan (1851), and Fiji (1863-87), while W. Oceania was divided into the vicariates of Melanesia (1844-80) and Micronesia (1844-97). From Melanesia were separated New Guineas and New Pomerania (1889), and from Micronesia the Gilbert (1897) and the Carolines (1866). Some of the groups were again divided and subdivided, such as New Guineas and New Pomerania, from which were separated the Solomans (1897-98) and the Marshall Islands (1905). The Marianne group depended upon the diocese of Cebu (Philippines), till it was made an independent vicariate. The divisions demanded new helpers in the ever-expanding field, and during the colonial period of Oceania (1882-1903) three other missionary societies were engaged. These were the Society of Jesus, the Missionaries of the Sacred Heart (1886 and 1904) and the Marianne Islands (1907), the Pious Society the Cook or Hervey Archipelago and Kaiser Wilhelmland E. W. (1915), to the Society of the Divine Word (Liberty) Kaiser Wilhelmland W. (1897). In 1906 the Marists the New Hebrides (1887) and the Solomon Islands (1889), and, finally, to the Congregation of the Sacred Heart (Issoumn) New Pomerania (1892), New Guinea (1892), New Pomerania (1902), the Gilbert (1888) and the E lite
### STATISTICS OF ROMAN CATHOLIC MISSIONS IN THE PACIFIC OCEAN, 1913.

| Mission districts | Year of Foundation | Missionary Society | European priests | Native priests | European brothers | Native brothers | European sisters | Native sisters | Chinese catechists | European catechists | Chinese Catholic converts | Native Roman Catholics | Non-Roman Catholics | Principal stations | Secondary stations | Churches and chapels | Catechetical seminaries | Pupils | Catholic schools | Elementary schools | Pupils | Higher schools | Boys | Girls | Orphans | Orphanages | Blind and deaf | \[400\]

* According to *Katholische Missions*, July 1914, the Roman Catholic population of the Marianne-Carolines is 6,995, that of Guan, 12,400.
Islands (1897), and, lastly, the Marshall Islands (1960).

Where eighty years ago there were—with the exception of the Marianne group—scarcely any Roman Catholics, and no priest or bishop, we find today an established hierarchy, with 14 bishoprics, 4 prelatures-apostolic, and 1 mission with 131,000 native and 63,000 European members, 427 priests (8 native priests), 227 brothers, 418 sisters, 1,000 stations, 990 churches and chapels, and 700 schools with 30,000 pupils. The population of Oceania proper (without Australia and Tasmania) amounts to 2,650,000 or (without New Zealand, no longer a missionary country) 2,000,000, or, according to others, 1,340,000 souls. The Roman Catholic population is, therefore, comparatively small, and the work, especially in New Guinea, the Solomon group, and other islands, is little advanced. But, bearing in mind the social, moral, religious, political, ethnological, and linguistic problems of the various groups and their natives, the unhealthy climate, in many cases absolutely unsuitable for Europeans, the variety of dialects even among the inhabitants of the same islands, and, lastly, the hostile attitude of some of the European Powers that have divided the islands among themselves towards every Christian enterprise, and the fierce opposition displayed against the Roman Catholic missionaries from 1830 to 1880, the Roman Catholic Church has made slow but sure progress. She has become a Christianizing and civilizing factor in the Pacific, and as such is now acknowledged by the various European governments and their representatives, by explorers and tourists, and by missionaries of every denomination, whatever their attitude towards the tenets of the Roman Catholic Church may be.

Famous among the Roman Catholic missionaries in the Pacific are the two pioneer missionaries (later bishops), Bataillon (1843–77) of C. Oceania, the founder of the missions in New Caledonia, Fiji, Samoan, and Rotuma, and his fellow-worker, Pompallier of W. Oceania, Bishop Epalle, who was murdered in 1845, Bishop Roucoux of E. Oceania, etc. Nor must we forget Father Champe, the proto-martyr of the Pacific and the apostle of Futuna (1841), Father Damien Devenster, the leper apostle of Molokai, or Fathers Bontems of the Gilbert and Castanié of the Cook Islands, and, lastly, Brother Eugene Eyraud, the lay apostle of Easter Island.

As space does not allow of a detailed history of the interesting work of Roman Catholic missionary enterprise in the Pacific, we give on p. 726 a table of statistics which will tell the story of the heroic work which the missionaries have achieved within the years 1830–1913 under very trying circumstances of persecution, hunger, poverty, and death.

In the following table of statistics we give the summary of missionary work during the 19th cent. and the results of previous centuries since the Reformation. These statistics we borrow from Kroeze (op. cit. p. 123).

**MISSIONS (Christian, Protestant).**—**I. INTRODUCTION.**—The missions of the Reformed Churches of Christendom seem at first sight to be discontinuous from those of the medieval Church and from the post-Reformation missions of the Roman Church. While the Roman Church carried on...
extensive missions from the 16th to the 18th cent., the Reformed Churches during the same period were doing practically nothing. Indeed, their divines, when they touched the subject of the Christian obligation to evangelize the world, were mainly occupied in elaborating arguments to show that the command of Christ, "Go do this had lapsed in their day. The causes of this inaction are complex.

After the great crisis of the Reformation the Protestant countries of Europe had not only to adapt their systems in the Malay, Javan, and Chinese, but also to maintain their political existence against powerful hostile combinations. Meanwhile it was to Spain and Portugal, the great representatives of the old creed, the community of faith with other peoples of the Cape route to India had fallen. To them, accordingly, the pope had committed authority over the newly-found regions of America and Africa as well as the Indies, and this dominion they were able, to a considerable extent, to make effective. The revival of the Roman Church which followed the Reformation naturally threw much of its best force into these national undertakings sanctioned by 'holy Church.' With the armies and administrators of Spain and Portugal went the priests and friars, whose task it was to bring these new territories into the Roman see.

With the 17th cent. began the colonial expansion of England, which resulted in the Christianization of N. America, not by the labour of missionaries, but by the migration of peoples. A little later the Netherlands, freed from the rule of Spain, began to take over the dominions of Portugal in the East, and eventually founded a greater empire. Western Europe, on the other hand, lessened its activity. In the 19th cent., the missionary sphere of the Protestant nations was opened up, so that, when their religious life was effectually revived towards the close of the 18th cent., the missionary call of an open world for which they were specially responsible came to be Reformed Christendom with irresistible force.

When we have indicated the main features of the expansion of Protestant nations, we have indicated also the main lines of their missionary development as compared with that of the primitive and the medieval Church. At first Christianity was conscious in principle of its universal destiny, but was practically confined by a limited world-outlook and the lack of communication between East and West. In the Middle Ages the Church on the one side was straitened by Islam, and on the other was grappling with the problem of absorbing and training the barbarian nations of Europe. In both these periods the evangelist and the evangelized were, on the whole, of similar races and of cultures not radically different. In the modern period the world-outlook has become complete and practical, while, with the facility of intercourse, the immensely greater progress in arts and sciences since the Reformation than before has made the intellectual and social difference between the Christian and the non-Christian far greater than at any earlier time. This is once the advantage and the impediment of modern missions as compared with ancient.

Modern missions are continuous with the primitive expansion of Christianity, and in the case of Protestant missions in particular we must go back to the primitive records of the faith and to its early history in order to estimate their work. But in so doing we are at once struck by certain outstanding contrasts connected with the historical situation. Since in primitive times the missionary and his hearers belonged broadly to the same level of culture and conditions, and were members of the same or similar communities, the whole range of problems connoted by the terms 'home base' and 'foreign field' was far more uniform and less problematic in modern missions.

The propagation of the faith was the work of the Church in each place, whether through its officers or through its ordinary members, for the Church itself was the evangelizing body. Hence in the early records of expansion the professional missionary, as distinguished from the ordinary minister or layman, is conspicuous by his absence. There were great leaders in the work of evangelization among the bishopric of the Church, but for associations distinct from the Church, set apart for evangelism, there was no place. Finally, the political relation of the missionary to his hearers in the 16th cent. was either that of a different empire, or of the same great empire or that of a stranger from a land of no very different conditions.

Following on the adoption of Christianity as the religion of the Roman State, the irradiation of the barbarians, and the rise of monasticism, these conditions were modified. The missionary trained and sent apart for the work appears on the scene, more often as a member of an order than as an evangelist. The conversion and control of virile and turbulent barbarians seemed to demand a stern discipline than the Church alone could exercise; repeatedly the idea of the State was vigorously used, and orders came into existence that were half-monk, half-warrior, such as the Knights of St. John and the Order of Teutonic Knights. The Christianization of the West was largely accomplished by means of state agents, though the individual missionary was not absent. In Asia the wide-spread missionary work of the Nestorians had little of the political element, but it went down before the great onrush of Asiatic migrations—either under the military impact of Islam or under the unified forces of Buddhism. On both sides of the world the faith spread or receded amid the reciprocal contact and strife of nations whose land-frontiers were contiguously. The more stringent organization of missionary work and the training of the worker had made progress, but the political factor had deteriorated its texture.

The doctrine of the Reformation insisted on the liberty of the individual conscience and the freedom of individual access to God, together with the absolute sovereignty of the individual in the task of inscribing and training the barbarian nations of Europe. In both these periods the evangelist and the evangelized were, on the whole, of similar races and of cultures not radically different. In the modern period the world-outlook has become complete and practical, while, with the facility of intercourse, the immensely greater progress in arts and sciences since the Reformation has made the intellectual and social difference between the Christian and the non-Christian far greater than at any earlier time. This is
of free associations, working on a basis of voluntary co-operation. The missionary orders of the Roman Church have indeed a very historical organization, adding new orders, as needed, on a similar basis; but the missionary societies of Protestant Christendom are, in effect, and for the most part, the outcome of the exercise of individual freedom has been combined with obedience to superimposed organization and discipline for a common purpose. It would not be correct to say that Protestant missions are differentiated from those of Catholicism only by a lack of direct subordination to Church authority, for many of them are directly administered by the governing bodies of their Churches. There is, however, this obvious difference, that the missions of the Roman Church are all co-ordinated and guided by a single central authority which is conspicuously lacking in Protestant Christendom. On the other hand, the Protestant organizations are now systematically endeavouring to gain the benefits of unity, together with those of freedom, by voluntary cooperation and co-ordination in missionary work, not only as between Churches but also as between nations.

II. HISTORY.—1. Formation and development of societies.—Up to the 18th cent. the missionary societies in Britain and on the Continent were chiefly denominational. The Society of the London Missionary Society, founded in 1602, was enjoined by its charter to care for the conversion of the heathen in the newly-won possessions of the Republic, and it appointed preservers for the purpose, but the work was carried on mechanically under government pressure.

After a century the number of registered Christians in Ceylon was 330,000, in Java 100,000, and in Amboyna 40,000, but few were left of these myriad converts in Ceylon after English rule came in, and only a small minority in Java under Dutch rule. In New England the Pilgrim Fathers at first had to defend life and property against the Indian tribes who surrounded them, but in 1646 John Eliot, pastor of Roxbury, gave himself to work among the aborigines, learning their language, carefully teaching them, and gathering them into organized churches—the first real Protestant missionary enterprise. In 1649 the Corporation for the Propagation of the Gospel in New England was formed, and it is still extant, but its activities have consisted chiefly in the collection of funds. In 1686 the efforts of Thomas Bray, Rector of Sheldon, Warwickshire, resulted in the formation of the Society for the Promotion of Christian Knowledge. During the 18th cent. this aided the Danish-Halle Mission and other missions in India, but its principal work since 1813 has been the publication and circulation of Christian literature, both at home and abroad. In 1701 the Society for the Propagation of the Gospel was founded to provide clergy for the colonies and dependencies of Great Britain and also to take steps for the conversion of the natives; but little was done for the latter object till after 1817. These three societies are connected with the Church of England.

The revival of spiritual religion in Germany known as Pietism (q.v.) resulted in two missionary movements during the last century. Frederic William iv. of Denmark, feeling responsible for his colonial dominions, found the men whom he needed in Bartholomew Ziegenbalg and Heinrich Pietschau, followers of the great Pietist leader, Hermann August Francke. They were sent out in 1705 to the Danish settlement of Tranquebar in S. India, and there founded a work which was developed by many successors of note, especially Christian August Ehrenfels. Their work was partly maintained by the S.P.C.K. The other far-reaching missionary movement of German origin was the Moravian. Members of the Unitas Fratrum of Moravia, driven from their homes in 1722 by the tyranny of their rulers, Nikolaus Ludwig, Count von Zinzendorf, on his estate at Herrnhut in Saxony in 1722. Very soon their zeal led them to send missionaries to the heathen. In 1723 the Negros of the Spanish Guinea, who had been evangelized by the Norwegian, Hans Egede, were left after his return uncared for. This was the beginning of a world-wide work, carried on by a community never numbering more than 40,000 souls in Europe, but that converts abroad, and a roll of more than 2000 missionaries, sent out since its foundation. See, further, art. MORAVIANS.

The Presbyterian Society for the Promotion of Christian Knowledge, founded in Scotland in 1799, deserves mention, because among a few missionaries whom it sent to the Indians of N. America was David Brainerd, the evangelist of the Delaware Indians. He died after only three years' work, but his biography powerfully influenced William Marsden of New Zealand, William Carey and Henry Martyn in Bengal, and many others.

By the middle of the 18th cent. these early movements of Protestant missions had greatly slackened owing to the religious deadness which had overtaken the various Churches. But thearyl growth of religious life on the Continent, the evangelical revival connected on the Continent with the names of Francke and Zinzendorf, and in England with those of John Wesley (1703-91) and George Whitefield (1714-50). The inevitable result in the revival of zeal for the evangelization of the outside world became manifest towards the end of the century. The two great leaders and their immediate followers were the ministers of the Church of England, but, owing to the deadness of her leaders and people, the movement, while powerfully influencing the Church, resulted in the formation of the strongest of the Protestant bodies, the Methodists of England and America. But it was another dissenting body that the missionary call first came effectively. The great pioneer William Carey and his followers founded the Baptist Missionary Society in 1702. In 1795 followed the second society, at first called simply the Missionary Society. It was founded by Church of England, Independent, and Presbyterian ministers. In 1796 two Scottish associations were combined, known as the Edinburgh and Glasgow Societies. In 1799 Evangelical members of the Church of England decided to establish the Church Missionary Society, and the undenominational society already mentioned became known as the London Missionary Society. Though others are not excluded, it has since then practically remained the organ of the English Congregationalists. The British and Foreign Bible Society was set on foot in 1804 by the joint action of churchmen and dissenters. The Wesleyan Methodists had already been carrying on missionary work in East and West since 1786 under the personal guidance of Thomas Coke, but after his death in 1814 they established their own society. The societies named, together with the revived operations of the S.P.G., represent the formative beginnings of Protestant missionary work in Great Britain. The American Board of Commissioners for Foreign Missions, formed mainly by Congregationalists in 1810, and the American Baptist Missionary Union (1814) were the earliest societies in America. Before sketching the development of these and indicating the minor societies, it is desirable to mention two outside movements which greatly influenced the history of missions in Africa and Asia. It is reckoned that the African slave-trade during the hundred years preceding 1786 conveyed
no fewer than 2,000,000 Negroes into British colonies, chiefly the W. Indies and British N. America; but even in England Negroes were sold and bought till the judgment pronounced by Lord Chief Justice Mansfield in 1772: 'As soon as any slave sets his foot on English ground, he becomes free.' This formed the starting-point for the campaign against the slave trade, which possessed, carried on within and without Parliament by William Wilberforce from 1789 till its victorious climax amid the throns of the Peninsula War in 1807. The abolition of the slave-trade had not as yet done away with slavery in British possessions outside the United Kingdom, nor with the slave-trade carried on by foreign nations. But it gave a powerful impulsion to missionary work among Negroes, and arrangements were made at Sierra Leone for the reception of liberated slaves, of whom many thousands were settled there under the care of C.M.S. missionaries, the same thing being done later on the E. African coast near Mombasa. Meanwhile, the agitation against slavery in the British dominions was continued by Wilberforce and his successors till it was crowned by the Emancipation Act of 1833, which liberated 1,000,000 slaves in the W. Indies at a cost to the State of £20,000,000 paid to the owners as compensation. Slavery in the United States, and the trade that fed it, continued till the Peace of Paris (1814). Since then what remained of slavery under Christian rule has been abolished, and slavery in Muslim and pagan lands has been greatly limited. As a result of the abolition, or rather more correctly, of the slave-trade there are now some 12,000,000 Christianized Negroes in the United States and W. Indies, apart from those who have been brought in through missionary effort in Africa.

The East India Company dates its charter from the year 1600, but for 150 years little was done for the spiritual benefit of its European servants, and nothing for the evangelization of the natives of the land. After the battle of Plassey in 1757 things improved somewhat among Europeans, but, when Parliament, on the motion of Wilberforce, in 1789 was ready to afford facilities for missionary work in India, the opposition of the E.I.C. threw out the clauses, and for the next twenty years Christian missionaries were rigorously excluded from its territories. In 1813 the E.I.C. charter was once more revised, not only was the entry of missionaries conceded, but an ecclesiastical establishment was provided for Europeans, the representatives of which have done not a little to forward the cause of missions.

1. BRITAIN.—The later development of British societies, especially Anglican, was strongly influenced by several religious movements. The Irish Revival of 1839 affected England in 1840 and gave an impetus to the formation of undenominational societies, such as the China Inland Mission. In 1875 Dwight L. Moody's first revival in London and at the first Keswick Convention marked the beginning of a movement which resulted in an immense growth of missionary zeal, both in offerings and in service on the part of university men, especially in connection with the C.M.S. The Tractarian Movement had influenced one side of the Church of England for a generation before it began to appear extensively on the mission-field during the last half of the century. It was pronounced by Lord Bishop C. H. Cobbold of the Anglican.—"The Society for the Propagation of the Gospel in 1817 was supporting a few clergy and schoolmasters in the N. American colonies and churches that were established in its mission-field to non-Christians (1823) by sending men to Bengal and to S. India, where Robert Caldwell was distinguished as linguist and bishop. It has carried on all its missions under the direct superintendence of the diocesan bishops in the mission-field, and it has included in its activities the provision of ministration to white men in the colonies and on the continent of Europe. Its work among non-Christians has steadily increased and now absorbs £165,000 out of the entire £250,000 under which India it has occupied Calcutta, Lucknow, Delhi, Bombay, Madras, Assam, and Burma. In 1821 it advanced to S. Africa, in 1845 to Borneo, in 1862 to the Pacific, in 1863 to N. China, in 1873 to Japan, in 1882 to Korea, in 1892 to Manchuria, and in 1903 to Siam. By constitution the S.P.G. is as broad as the Church of England, but as a matter of fact it has represented mainly the High Church side. It has of late in varying degree done missions of the same type as the missions of the Church. The Oxford Mission to Calcutta (1881) is now independent; the Cambridge Mission to Delhi and the Cawnpore Christ Church Brotherhood are still connected with the S.P.G. Its most flourishing missions are those to the Tamils of Tinnevelly and to the Kols of Chota Nagpur, both in India.

The principal English societies of this type are:

1. The Methodist Missionary Society, founded in 1816 by George A. Selwyn, afterwards bishop of Lichfield, and carried on by the martyr John C. Patteson;
2. The Universities Mission to the South Sea Islands, established by the General Synod of 1822, and carried on in cooperation with the Society for the Promotion of Christian Knowledge; and
3. The London Missionary Society, founded by the Rev. H. R. Selwyn, who appeared to the youth of Oxford and Cambridge to carry on his work. Bishop Edward Steere was its most distinguished scholar and statesman.

The earliest missionaries of the Church Missionary Society, like those of the S.P.G. and S.P.C.K., were Germans, and the Basel Missionary Institution, established in 1807, is one of the C.M.S. missionaries, including the Arabic scholar and writer, K. G. Pfander, and the E. African explorers, J. Reimann and L. Krapf. Its first mission was in W. Africa (1834). Its last mission was in W. Africa (1834). Its last mission was entered in 1813, when Abd-al-Math, the disciple of Henry Martyn, opened work at Agura. In 1814 Madras and New Zealand were occupied; Traversere in 1816; Ceylon in 1818; N.W. Canada in 1823; and in 1830 C. T. R. A. Smith founded a work in Tinnevelly. In 1827 L. Krapf first went to E. Africa, and in 1841 H. W. Fox and L. L. Noble began the Telugu Mission in S. India. In 1847 China was entered upon by W. H. B the E.I.C. charter was once more revised, not only was the entry of missionaries conceded, but an ecclesiastical establishment was provided for Europeans, the representatives of which have done not a little to forward the cause of missions. The C.M.S. represents the Evangelical school of the Church of England, in touch with the more pronounced Anglicanism on the one side and with nonconformist and interdenominational effort on the other. Its missionaries, after the first supply of German recruits, were drawn largely from its college at Islington, but of late years they have been furnished in increasing numbers by the universities. It is the largest of the Protestant missionary societies, with a missionary roll of 1940, an annual income of £400,000, and 450,000 adherents in the mission-field.

The Church of England Zenana Missionary Society, founded in 1860, works chiefly with the C.M.S. in India and China. In 1913-14 it had 224 women missionaries, 27,239 pupils in zemans and schools, and an income of £60,000. The South American Missionary Society has in its activities 311 missionaries on the Patagonian work begun by Allen Gardiner, and also works in Paraguay and S. Chile.
Most of these societies have associations in Ireland and Scotland, but the contributions and missionaries from those countries are not separately given.

(b) English Free Churches. — Only the chief societies can be dealt with here. The earliest is the London Missionary Society (1739). The discoveries of Captain Cook and the efforts to send their first mission to the South Sea Islands, where John Williams, after years of work, was martyred on the island of Eromanga (1839). In 1788 S. Aitchison occupied, and the labours of Robert Moffat, followed by those of his yet more distinguished son-in-law, David Livingstone, became classical. The most remarkable of L.M.S. missions was that in Madagascar, founded in 1820, and resumed, after long expulsion of the missionaries, with extraordinary fruitfulness. In N. and S. India L.M.S. work has been going on since 1801, extending to Bengal, the United Provinces, Madras, and Travancore. Robert Morrison of this society was the first missionary to enter China (1807), and missions are now planted in S., C., and N. China. C. Africa was taken up as a memorial to Livingstone by the Society in 1866, and William Yule had 216 missionaries, an income of £124,000, and 316,000 adherents.

The Baptist Missionary Society, founded in 1782, has an income of £29,000, and 25,170 Church members.

The Wesleyan Methodists had already begun work in the British W. Indies under Thomas Coke in 1786, and in W. Africa from 1811. After his death the Wesleyan Methodist Missionary Society was founded as a separate organization, and the work advanced in 1814 to Ceylon, in 1815 to S. Africa, in 1817 to India, in 1822 to Australasia, and in 1831 to China. In the last region, and in S. Africa and the W. Indies, many of the churches are no longer under the management of the society. Like the Baptists in the north of India, the Wesleyans in the south have done much for the cause of vernacular literature. In 1913-14 their missionaries numbered 965, their income was £130,000, and their adherents 307,000.

Of societies connected with the minor sects of Methodism it must suffice to mention the Methodist New Connexion (1814), working in China; the United Methodists (1837), in China, E. and W. Africa, and Jamaica; and the Primitive Methodists (1849), in Africa. The Methodist missions generally are an integral part of the Church organizations. The Welsh Calvinistic Methodists (1810) are, properly speaking, Presbyterian. They have an exceptionally successful work among the Khasis of Assam.

For convenience we may add here the Friends' Foreign Mission Association (1855), working in Madagascar, India, Ceylon, China, and Syria. Like the Moravians, though very much later in time, the Friends prosecute their missionary operations to an extent that is in striking contrast to the smallness of their community, reckoned, as it is, at some 30,000 members.

(c) Presbyterian. — The Presbyterian societies, like the Methodist, are part and parcel of the Church organization.

Scottish Churches. — The Glasgow and Scottish Missionary Societies, founded in 1766, carried on their work in the neighborhood of the influence and even opposition. In 1824, at the instance of John Inglis, the General Assembly undertook a mission to India, and the sending out in 1829 of Alexander Duff, followed by Murray Mitchell and John Wilson, marked an epoch in the history of educational missions in India, which these men opened up with marvellous ability and zeal. The work at Lovelace in Kaffraria (1841) became famous among industrial missions. At the Disruption in 1843 the missionaries in India and Kaffraria cast in their lot with the Free Church, and this new body soon greatly increased its operations, adding Natal, Nyasaland, and S. Arabia. Since the union of the Free Church with the United Presbyterians the United Free Church field has included operations in W. Africa. The W. Indies, a mission founded by the Established Church was also revived and extended in India, C. Africa, and China.

The English Presbyterian Church (1847) is working in China, Formosa, the Straits Settlements, and India; the Irish Presbyterian Church (1840) in Manchuria and India.

All these societies have their organizations for women's missionary work, in some cases distinct from the main body, but mostly as a department of it. Generally speaking, the women's societies or auxiliaries are later developments, for it was hardly practicable to send out unmarried women as missionaries till after the middle of the last century; before this, work among women was carried on by the wives of missionaries, to whom some of the most important organizations owe their foundation and development. In the figures given the women's work is included in that of the main society.

(d) Undenominational. — Among undenominational societies we notice the two most prominent. The Indien Protestant Normal School (1824) was founded for the educational purposes indicated in its name. In 1850 the majority of the Church of England members seceded, and started the Church of England Zenana Missionary Society. Under the name of the Zenana, Bible, and Medical Mission the original body has continued to co-operate with Church of England and Presbyterian missions in India, and has developed medical work. The China Inland Mission was founded in 1855 by J. Hudson Taylor, who had already worked in China as an evangelist from 1853. Vocation and spiritual preparation are insisted on, but not high educational attainments; careful training, however, is given in language-schools on the field. No direct appeals for funds are made at the home base, and no fixed salary is guaranteed to the missionary. The plan of advance has been to 'occupy' province after province by stationing missionaries in the inland provincial capitals, instead of remaining in or near the treaty ports on the coast. The sending out of seven Cambridge athletes in 1855 created great enthusiasm. The work of the C.I.M. has spread rapidly and given an impetus to advance by other societies into the rebellious box.
MISSIONS (Christian, Protestant)

Salvation Army has been doing missionary work, principally in India, since 1853; its operations have been mostly of a social kind, such as industrial undertakings and reclamation of certain criminal tribes. The North Africa General Mission works mainly in Algeria and Morocco; the Egypt General Mission as indicated by its name; the Regions Beyond and the Sudan United Missions in W. C. Africa.

(c) Missionary publishing societies.—In all Protestant missionary work the rule has been to give converts and others access to the Christian Scriptures as soon as possible. The results have, in fact, been greatly limited by this rule. It has been a great hindrance, but, as shown in the preceding pages, a translation of the Scriptures into the languages of the non-Christian world has been one of the most signifort production, and it is believed that this may have resulted in premature productions which have afterwards been the cause of misunderstanding or hindrance, but, taken as a whole, the translation of the Scriptures into the languages of the non-Christian world has been one of the most signal and fruitful achievements of modern missions. The Bible, as a whole or in part, is now printed in about 500 languages and dialects. The great bulk of this work has been done by the British and Foreign Bible Society (1804), which has issued 487 of these versions up to 1914. The number of these is being increased year by year, and it is estimated that these and other revisions of old versions in the light of the best scholarship is constantly proceeding. Many scores of these languages possessed neither book nor script before they were reduced to written form. The missionaries have now followed up the spelling-book and the school-reader with the Gospels, and gradually added the whole NT and in many cases the OT also. The B. and F. B. S. circulated, in 1914, 12,082,059 copies of the Scriptures. It received a charitable income (exclusive of sales) of £90,000. The National Bible Society of Scotland and the Trinitarian Bible Society in the same year circulated respectively 2,792,010 and 154,552 copies in 13 and 2 languages (besides those dealt with by the larger society).

For the production of Christian literature of a more general kind the Society for the Propagation of Christian Knowledge (already noticed, is the oldest society. It helps Church of England missions in all parts of the world, principally with books of devotion and theology, but also with works of a more general nature. It has published in 99 languages. The Religious Tract Society (1799), with an income (apart from sales) of £17,196, does a similar work on an interdenominational basis, and it has been a means of founding several daughter societies in India, China, and Japan. The Christian Literature Society for India was founded in 1855 as a Christian reply to the mutiny. Under John Murray (1859-1904) it developed a wide-spread activity in production, both of educational works and of religious and general literature. A similar Christian Literature Society for China has done much in producing high-class literature under the leadership of Timothy Richards and others. The Nile Mission Press at Cairo (1902) produces Arabic literature for missions to Muslims in the Near East. But the mission presses at work in the four quarters of the globe run into many hundreds.

2. America.—The American Board of Commissioners for Foreign Missions, founded in 1810, was the principal missionary organization of its time, but, owing to the hostile attitude of the E.I.C., they did not secure a footing in W. India till 1814, and in the same year they entered Ceylon. The other principal steps forward were to Oceania (1819), W. Africa (1826), S. Africa (1851), India (1844), and Japan (1869). Since the separation from this board of the Dutch Reformed and the Presbyterian missions the A.B.C.F.M. represents the Congregationalists of the U.S.A. Income, £200,000; missionaries, 615; adherents, 195,742.

The American Baptist Missionary Union came into existence in 1814, when Adoniram Judson entered Burma. In 1827 he began a remarkably successful work among the Karen tribe, which has come over to Christianity. Another Indian mission of the A.B.M.U. in the Telugu country (from 1840) has been the sphere of a large movement. The Union entered China in 1843, the Congo Territory under Hermon (1857), and Malaya (1859). The Southern Baptist Convention, an off-shoot from the main body, carries on missions in China, W. Africa, and Japan. Income, £222,885; missionaries, 701; adherents, 505,900.

The Methodist Episcopal Church represents the Wesleyan movement in the U.S.A. The larger, or Northern, branch carries on its missions to non-Christians in S. India (1859), China (1847), N. India (1856), Japan (1873), Korea (1859), and Malaya (1889). The Southern branch began missionary work in 1846, and carries it on in India, China, and Japan. The foreign work of this denomination has spread rapidly. It has already occupied missions in Syria, Persia, India, Siam, W. Africa, China, and Japan. Its educational work in India especially is of a high order. The Presbyterians of the Southern States (Presbyterian Church in the U.S.A.; 1861) work in China, Japan, Congo Territory, and Korea. The United Presbyterian Church (1839) maintains a vigorous work in China, India, and Egypt (the last named chiefly among Copts); In their Panjnad Mission accessions have been very large. The Dutch Reformed Church (1832) works in China, Japan, India, and on the Persian Gulf. The Disciples of Christ have missions in China, Japan, India, and Turkey. The first of these denominations in 1914 had an income of £261,142, 1,357 missionaries, and 370,238 adherents.

The Lutheran Churches of the U.S.A., numbering over 2,000,000 communicants (and, say, 10,000,000 adherents), are divided into six chief sects, whose first mission was undertaken in 1841. They work mainly in W. Africa and the most important mission in the Telugu country. Income, £68,907; missionaries, 81; adherents, 70,426.

The total figures for Protestant Missions in N. America amount to 6627 missionaries and 1,386,621 adherents.1

Canada has eight leading Protestant missionary societies. The principal of these are the Baptist, the Methodist, the Presbyterian, and the Anglican. In addition to the Boards connected with the various Churches, one organization, connected with no Church in particular, has powerfully influenced the missionary life of all, not only in America, but in the United Kingdom, and on the continent of Europe. The going out of the 'Cambridge Seven' to China in 1854 excited great interest among the students of America as well as among those of Great Britain. The movement continued in 1832, and in 1886 by Moody at Mount Hermon, Mass., the Student Volunteer Missionary Union was formed on the basis of a declaration by each member of his or her intention to become a foreign missionary. The movement continued in a less organized form in Britain till it was formally established there also, in Edinburgh, in 1892. It soon became evident that the appeal for missionary

1 It is impossible to estimate accurately the distribution of the income between home and foreign missions.

1 The figures given are exclusive of work among Indians or other tribes in home countries. Unless otherwise specified, they are for the year ending Dec. 31st. Generally speaking, these American Boards are part of the official organization of their respective Churches. The principal ones only are mentioned.
service could not be effective without a strengthening of the general Christian life of the student world at large, and in 1893 the Student Christian Movement for Great Britain and Ireland was started. This has now a membership of over 9000 students, including those in theological colleges, and it is affiliated to the World's Student Christian Federation, with a membership of over 190,000 students in some 40 countries. The S.C.M. has become a department of the more general work. Since 1896 it has systematized the study of missions among its members and outside by the formation of centres of training for missionary work. The Union sends out no missionaries itself, but only through the societies.

iii. Germany.—In the latter part of the 18th century a missionary movement, its missions being taken over by other societies. The Moravians quietly continued their work and celebrated their first centenary in 1832 with much cause for rejoicing; their influence was felt, too, in new undertakings. During the second half of the century the work has increased till it embraces 21 mission-fields, mostly in America, but also in Africa, Australia, and India. The income from home contributions is little more than one-third of the total expenditure, the balance being met from free-will offerings in the mission-field, government grants, and trade profits. The fields of work are largely the most remote and inhospitable lands, such as Greenland, Labrador, Alaska, the Mosquito Coast, N. Australia, and Lesser Tibet.

Other German Protestant missionary efforts began with the training of missionaries for societies outside of Germany. Johann Jaenicke from 1800 to 1827 carried on a missionary seminary in Berlin whose alumni were sent out from Holland and England. They included pioneers in Timnevelly (C. T. E. Rhewals) and Chins (J. A. Knauth). In S. Germany Christian life was strongest in Württemberg, Baden, and German Switzerland, and here missionary interest developed in the foundation of the Basel Mission and India Mission, from which 88 candidates were passed on to the C.M.S., many of whose early missions were founded or conducted by them. In 1822 the Basel Evangelical Missionary Society was founded, largely through the efforts of Christian Gottlieb Barth. Their first permanent mission was started on the Gold Coast in 1828. In 1843 work was begun on the south-west coast of India, in 1846 in China (Kwangtung), and in 1856 Kammerun, becoming a German colony, was taken over from the Baptist Missionary Society. The Industrial Association connected with the Basel Mission has taken a lead in industrial work in the Basutoland Mission, tile-making, etc., at Mangalur and other centres. The Berlin Missionary Society sent out its first missionaries to Africa in 1834, and in 1872 it took over work in S. China, and in 1891 in E. Africa. The valley of the Wupper in Rhenish Prussia was a strong centre of active Christian life, and here, after much preliminary work, the Rhenish Missionary Society was founded in 1828. This, too, began work first in S. Africa, extending in 1834 to Borneo, in 1862 to Sumatra, in 1863 to Nias, in 1846 to China, and in 1887 to Kaiser Wilhelmsland. The missions in S. Africa have attained a large measure of self-support, and in Sumatra many Muslims have been brought in, together with masses of pagans.

The year 1836 saw the foundation of three German societies. The Brethren Missionary Society has had a chequered career. It was founded in 1833 in W. Africa, where the deadly climate has carried off many missionaries. The Leipzig Missionary Society was first established in Dresden, and transferred to Leipzig, K. M., in 1851. It makes more use of university graduates as missionaries than do the other German societies, which generally employ seminarians. It also employs a higher percentage of Lutheran elements. The Leipzig M.S. in 1849 took over what remained of the old Danish-Halle Mission, and in 1892 it opened work in German E. Africa. The Goessner Missionary Society was founded by a Berlin pastor of that name. He began on his own responsibility to train missionaries in Scripture and the devotional life, and within 22 years he had sent out 175 to Australia, British and Dutch India, N. America, and W. Africa. Not a few of them proved able and successful evangelists. After Goessner's death in 1858 many of them joined other societies, but the work among the Kols of Chota Nagpur, which had been specially fruitful, was put under a board, since then known as the Goessner M.S. Notwithstanding the secession of several missionaries with their flocks to the S.P.G. in 1858, the Goessner Mission (15,000 adherents) represents the largest group of Christians in the Province of Bengal.

Another mission which belongs to the extreme Lutheran section of German Protestantism, and which also owes its origin to the enterprise of a single man, is the Hermannsburg Missionary Society, begun by Ludwig Harms in 1849. After parting with certain fields to others, this mission has work now in S. Africa and India.

Besides the eight societies mentioned above, the following have been founded later: Schlesiwig Holstein (1877), Neukirchen (1882), General Evangelical Protestant (1884), Berlin Missionary Society for E. Africa (1886), together with a number of minor bodies, including several small societies for women's work. The G.E.P. Society is the only body representing a modernist standpoint approximating to Unitarianism. It has a few missionaries in Japan.

iv. Holland.—Owing, perhaps, to the State propagation of the faith in former years, independent missionary undertakings have not been so rapid as elsewhere. The Dutch Missionary Society, founded in 1797, has worked in the Malay Archipelago, and the results of its work have largely—especially in Minahassa in Celebes—been taken over by the Established Church, which maintains 36 pastors and 26 assistants, who minister both to converted and to colonists. A number of minor societies have been formed from time to time. The Dutch missions have had considerable success among the Muslims of their colonies.

v. France.—In France the cause of Protestant missions is represented by the Société des Missions Évangéliques, founded in Paris in 1824. Its chief mission is the very successful one among the Basutos in S. Africa with which the name of Francois Collard is associated. It has also taken over work from English and American societies in territories such as Madagascar, Gabun, and the Society Islands, which had come under French domination. In French Switzerland the Mission Évangélique was founded in 1876; it works in Transvaal and Délégation Bay.

vi. Scandinavia.—In Scandinavia the Danish Missionary Society was founded in 1862, and works in S. India and China. The Norwegian Missionary
missions among the Zulus and in Madagascar. There are minor missions connected with the China Inland, the Alliance, and other societies. Sweden also has had its own Swedish Missionary Society since 1835, working in S. India and S.W. Africa. Its African members, who are mainly in Algeria, the Congo, Ural, Persia, China, and Chinese Turkistan, besides minor associations. Finland has a Lutheran Missionary Society, a Cincinnati Missionary Training School, and Free Church missions in China and India.

vii. British Colonies.—The British colonial Churches of various denominations maintain a considerable and increasing amount of missionary work. This is done partly through societies locally formed, partly by assisting the older societies in home lands. Australia and New Zealand, in addition to work among their own aborigines, send men and women principally to Asiatic countries, the S. African churches to the pagans of their own territories, the now independent W. Indian Churches to their own neighbours and to their rival-fellow tribes. In India and China, though very few churches are as yet self-supporting, various indigenous missionary societies have been formed, such as the Tinnevelly Missionary Society and the Mission Board of the church at work in various parts of India. These two had 2416 adherents, 5 missionaries, and an income of about £4000 in 1912.

2. Preparation of missionaries.—In the beginnings of societies the first step taken was frequently the establishment of a missionary seminary. As a rule, the candidates required some school training before entering on their theological course. The fact that many of them had been engaged in trades or handicrafts rendered them all the better suited to the pioneer work which largely fell to their lot, but not a few distinguished scholars developed among them. The Free Churches in England and America have drawn their missionaries mainly from the theological colleges of their denominations, but the Scottish Churches have usually sent out graduates of the universities. In the Anglican Church, missionary seminaries have a more important position, the most prominent being the C.M.S. College at Islington (797 missionaries trained) and a School of Missions at St. Augustine's College at Canterbury (307 and 5 respectively). On the Continent the great majority of missionaries are seminarians, but their training is different from that of the missionaries who seem to have produced as many scholars in proportion as the university-trained men. In America missions it is difficult to distinguish accurately between university and non-university men, but in any case, both there and in Europe the S.V.M.U. has greatly tended to bring men and women of good university attainments into the missionary ranks—a tendency emphasized by the rapidly increasing demands of higher education in the mission-field.

Till recently good theological training with a university degree was considered the ne plus ultra of missionary preparation from the intellectual side. The century to 1912 has seen the conviction has been gaining ground that the task of the missionary demands, besides these, a technical training proper to it. This opinion was voiced by Convocation of the Edinburgh Conference, which recommended the establishment of Boards of Study for the special preparation of missionaries both in Britain and in America. This was carried into effect in America. missionary Study, and Studies is working on a somewhat wider basis, taking in theological subjects as well as others, whereas the British Board of Study, by mutual agreement, as an interdenominational body, deals only with general subjects (history and methods of missions, phonetics, linguistics, comparative and special study of religions, ethnography, anthropology, sociology, hygiene, business methods, educational methods). Some colleges already give themselves more or less to the teaching of these subjects: S. America has her School of Missions at Hartford, Conn., the Missionary Department of Yale University, the Bible Teachers' Training School, New York, the College of Missions, Indianapolis, the Cincinnati Training School, and in Britain the U.F.C. Women's Missionary College, Edinburgh, and the Kingsmead Training Institution, Birmingham, take up many of these subjects, and it is in contemplate of merging the British Board of Study in a Central College of Missionary Study.

3. Missionary conferences.—The lack of unity and co-ordination in Protestant missions has long exercised the minds of their promoters, and the effort has been made to overcome this difficulty by gatherings for common counsel. The general missionary conferences thus far were held in Liverpool in 1889 (126 members); London, Mildmay Park, 1873 (153 delegates); London, Exeter Hall, 1888 (194 delegates); New York, 1900 (300 members); and Edinburgh, 1910 (1206 delegates). The bulk of the members of the member societies are now delegates of missionary societies and boards, supplemented by missionaries from the field and experts of eminence. The composition of these conferences has become increasingly international, and in Edinburgh not only did High Anglicans attend as members, but messages of greeting were received from Greek and Roman Prelates, while theological courses for Scandinavians, Americans, and Europeans of many nationalities took part. The conferences have no legislative or executive authority, but the ‘findings' which are formulated as the result of these gatherings have a great practical influence on missionary work and methods. The reports of these conferences form a valuable record of the progress of missionary life and policy and a storehouse of missionary thought and argument. The report of the Edinburgh Conference especially (in 9 vols., London and New York, 1910) is indispensable to the student of missions. Its investigations and discussions are carried on by a Committee of Communication which publishes the quarterly International Review of Missions.

The same kind of work has been carried on in the mission-field by periodical conferences of representatives from the different fields of missionary work, as at Madras and Shanghai, and in 1912–13 J. R. Mott convened a series of Continuation Committee Conferences in India, China, and Japan, the findings of which are published in a bulky volume (New York, 1913). By these and other means a large amount of practical union in work has been attained, and the tendency in the mission-field and at the home base towards closer unity has been promoted.

4. The field. — i. America. — The spread of Christianity in this continent has been mainly through immigration. Paganism is now only a fringe of the total population of 170,000,000. The work of Protestant missions has been chiefly in N. America, among Eskimos, Indians, and Negroes. For our purposes the W. Indian Islands and Guiana together with N. America. S. America has been touched in Patagonia and Paraguay.

(a) Eskimos.—The Norsemen who immigrated to Greenland in the Middle Ages had a bishopric of their own, but the bishops of Missionary Work have died out before the 16th century. In 1721 a Norwegian pastor, Hans Egede, having heard of them, repaired to the west coast of Greenland and began work among the Eskimos under great difficulties owing to their utter indifference. It was continued, how-
MISSIONS (Christian, Protestant) 735

However, by his son, and eventually taken up by the Danish M.S. The west coast population in this region is Christianized, and missionary work is going on among the pagans of the east coast. For many years the Moravians, beginning in 1733, founded the settlement of New Hermnit, and from that centre Christianized the tribes, so that in 1899 they were able to band over the territory in the care of the Danish Church. In Labrador since 1771 the scattered Eskimos have been mainly brought in by the Moravians, and they are cared for with the help of trade carried on by the mission ship 'Harmony.' On the other side of the continent the U.S. territory of Alaska contains a relatively considerable population of Eskimos, besides Aleutians, Indians, immigrant Chinese, and white men. In 1857 a Presbyterian mission was founded, followed by Moravians, American Anglicans, and others, totalling about 6000 Christians. The race, about 40,000 in number, is intellectually anathetic and feeably organized; hence its contact with white traders has been unfavourable to the development of independent Church life, but missionary work has meant their salvation from extinction through strong drink, disease, and exploitation.

(b) Indians.—These number now in the U.S. and Canada under 400,000. Over one-half live on reservations; the rest are scattered among their white fellow-citizens. From the 17th century onwards the relations of the white men, English or Dutch, with the Indians were those of perennial warfare and commercial exploitation, till the peace of the country was fully established and a more sensible and humane policy was gradually introduced. Missionary efforts were never entirely wanting. John Eliot (from 1646), David Brainerd (from 1743), and David Zeisberger (from 1745) gained for the American Indian Christians congregations of peaceful citizens, but again and again their work was destroyed by civil war. The later and more gradual settlement of Canada was advantageous to the Indian population, as the missions of all Churches were able to gain a hold, before land-grabbing and commercial greed came strongly to the fore. The first Protestant mission was begun in the Hudson's Bay Territory in 1820; it has been developed largely by U.S. M.S., and much heroic work was done by its pioneers among the sparse native population before the colonists came in. Now the whole dominion is parcelled out by the various Churches, and work among the Indians is carried on by other denominations also, Presbyterians and Methodists being specially active. Since the separation from England the evangelizing of Indians in the U.S. has been more and more taken over by the various Churches, and the still pagan Indians are a small remnant. Their assimilation as citizens of the Republic is still an incomplete process.

(c) Negroes.—These number (including coloured or mixed population), in the U.S. 9,827,765 (1910), and in the W. Indies 1,280,000. Their introduction into the latter dates from the Spanish conquest, into the U.S. up to 1640. The M.S. and Moravians among the U.S. Negroes practically began about 1800, but during their time of slavery large numbers had been Christianized, especially by the Methodists and Baptists. In the south the West Coast; the Moravians, in 1813 they contributed about $20,000 for home and $10,000 for foreign missions, besides many books, etc., are now connected with the various Protestant Churches. In 1873 they had about $50,000 African slaves been brought there, chiefly by British cruisers. In years great loss of life was experienced among the C.M.S. and other missionaries who worked there, and among the wellestablish church, and work among the Indians is carried on by other denominations also, Presbyterians and Methodists being specially active. Since the separation from England the evangelizing of Indians in the U.S. has been more and more taken over by the various Churches, and the still pagan Indians are a small remnant. Their assimilation as citizens of the Republic is still an incomplete process.

(d) S. America.—The territory of Guiana is closely connected with the W. Indies. Anglicans, Moravians, and Methodists have gathered converts amounting to 50,000. These are partly from among the E. Indian indentured coolies working on the sugar-plantations (who are also to be found on the islands). Cathedrals and clergy of Indian nationality work among the Kemos have been brought in by the Moravians, and they are cared for with the help of trade carried on by the mission ship 'Harmony.' On the other side of the continent the U.S. territory of Alaska contains a relatively considerable population of Eskimos, besides Aleutians, Indians, immigrant Chinese, and white men. In 1857 a Presbyterian mission was founded, followed by Moravians, American Anglicans, and others, totalling about 6000 Christians. The race, about 40,000 in number, is intellectually anathetic and feeably organized; hence its contact with white traders has been unfavourable to the development of independent Church life, but missionary work has meant their salvation from extinction through strong drink, disease, and exploitation.

2. Africa.—(a) W. Africa.—It is this part of the continent that, owing to the slave-trade, has had the earliest and most intimate connexion with Protestant lands, especially with N. America. The endeavour to influence Africa directly by means of the liberated slave is chiefly represented by the little republic of Liberia, founded in 1824 by the American Colonization Society. The Negroes who settled there were hardly ripe for administering the Free State proclaimed in 1847, but from this centre work is being carried on by the Free African Churches among the neighbouring non-Christians. A certain number of American Negroes have been sent as missionaries to Africa by their Churches in the U.S.A., but the effective shaping of their work is a problem that awaits solution.

The north-west coast of Africa as far as the Senegal borders on sparsely-inhabited Muhammedan territory which has scarcely been entered as yet. From this to the mouth of the Congo is the region of Protestant mission-work. At Sierra Leone the settling of liberated slaves began in 1808, after the abolition of the slave-trade, and its capital received the name Freetown. Up to 1840, 50,000 African slaves had been brought there, chiefly by British cruisers. For years great loss of life was experienced among the C.M.S. and other missionaries who worked there, and among the wellestablish church, and work among the Indians is carried on by other denominations also, Presbyterians and Methodists being specially active. Since the separation from England the evangelizing of Indians in the U.S. has been more and more taken over by the various Churches, and the still pagan Indians are a small remnant. Their assimilation as citizens of the Republic is still an incomplete process.

The German colony of Togoland, next on the
MISSIONS (Christian, Protestant)

east, has considerably developed missionary work from that country, during the last few years, among the Ewe nation. Good linguistic work has been done. The community numbers some thousands. The work in the lower basin and delta of the Niger has assumed increased importance since the constitution of Nigeria, the richest of Britain’s African possessions, as a Crown Colony, with a population of more than 8,000,000. The first mission station (from 1846 onwards) was started to look after natives of the Yoruba country who had returned from Sierra Leone to their own people. Lagos, the great port of the palm-oil trade, and the large interior towns of Abeokuta and Ibadan were occupied, and considerable Christian communities were gathered, amounting (1913) in the Yoruba province to 50,000. Economic development is going on rapidly, and the demand for education, especially in English, is increasing year by year.

After the Niger had been opened up by three voyages of exploration (1841, 1854, 1857), an African prize of the C.M.S., Samuel Crowther, was sent to this region. He planted several stations, and in 1864 was consecrated bishop. The work was carried on by Africans, with some vicissitudes but with that country’s approval. Crowther’s death in 1891, when W. Equatorial Africa was placed under an English bishop, assisted by two Africans, the wealthy churches of the Delta being granted self-government. N. N. Makoko, the most important of the stations, had been occupied in 1865, but it was not till the end of the century that an effective advance was made into this territory, where a predominantly Muslim population alternates with large patches of paganism, while the spread of Islam continues in a southerly direction. The work here is still in its beginnings. Calabar at the south-east corner of Nigeria is a Christian community of 11,000 has been gathered in by the U.F.C. mission.

Kamerun, a German colony since 1884, was originally evangelized by English Baptists, but their work was taken over mainly by the Basel Society, who were pushing inland for back country before the outbreak of the great European war. The Christians number about 15,000 out of an estimated population of 5,000,000.

The Congo River was first opened up completely by Stanley in 1876–77, and the Congo Free State, under the protection of Belgium, has been the scene of rapid missionary advance along the river. Yaundé, the northernmost town, near Stanleyville, is 1200 miles from the mouth. Among the pioneer explorers in detail were the English Baptists G. Grenfell and W. H. Bentley from 1879 onwards. Other missionaries of various nationalities followed. Owing to the difficulties of climate and the great multitude of tribes and languages, progress has been limited, but some dozen societies are now at work in this area. Indigenous churches are being formed, and elementary education is being pushed.

The characteristic problems of the W. African missions generally are presented by the constant advance of Islam from the north, the demoralization of commercial traffic by the liquor-trade, and the unsettling effects of a rapid acquisition of wealth formerly undreamt of. On the other hand, the removal of the evils connected with tobacco and, the growth of Christianity, and the creation of a Christian standard of conscience and morals, with the opportunity given to the natives of rising to a higher life, are elements of promise towards the regeneration of the Negro peoples.

(b) S. Africa.—In this we include the regions south of the river Kunene on the east and the Zambesi on the west. It contains three African races: the Bantu (including Zulus and Kaïrs), the Nuna or Hottentot, and the Bantu, the last two scarcely remaining pure, the first virile and prolific. The climate being temperate, Christianity has spread by immigration from western nations, and the white population is reckoned at 1,300,000. Hence the above problem is at its acutest in S. Africa, and it specially affects the work of missions, which aim at raising the native populations to a higher level, religious, moral, and social, and at giving them the means of self-support. They are capable of assimilating. The earliest Dutch colonists regarded the natives as an inferior class of beings whom it was both lawful and expedient to keep in subjection, and this attitude has not been confined to one section of the white races. Thus there has been a persistent prejudice against, and often actual antagonism to, the work of missions, sometimes aggravated by lack of prudence on the part of the missionary and by unbalanced policy on the part of the government. The conviction is gaining ground, however, that without the moral influence of Christianity the problems resulting from the contact and blending of two cultures cannot be thoroughly solved. Among some 4,000,000 natives there are now about 750,000 Christians, the result of the work of 30 missionary societies belonging to the three nationalities constituting Christianity, and in evidence in the ‘Ethiopian Movement,’ composed of groups of congregations who in 1892 formally seceded from their missionary connections. Some of them in Kaffrarian town of Zululand by the ‘Ethiopian Order’; the remainder do not appear to be progressive either in internal life or in external expansion.

In what became in 1886 German S.W. Africa the principal work has been done by German missionaries of the Rhenish Society since the forties. The fruits of their persevering and systematic efforts have suffered greatly through colonial wars. Protestant Christians in the colony number, by last figures, 13,000.

The largest indigenous Christian population is in Cape Colony, numbering 1,145,000 out of a total of 2,900,000; it comprises chiefly, broadly speaking, bastardized Hottentots, and, eastwards, Kaïfs of relatively pure race. The Moravians, who began work in 1757, were followed in 1799 by the L.M.S., whose missions in Basutoland are remarkable for their great pioneers, R. Moffat and, above all, Livingstone. Through the persistence of John Mackenzie and the intervention of the British Government, all attempts to block the northward progress of the first existing European settlers, and the path of the gospel was opened up to the C. African lakes and eventually from the Cape to Cairo. The converts of the L.M.S. in Cape Colony now form a Congregational Union with some 35,000 adherents. Efforts of later dates are represented by the adherents of the Wesleyans (over 90,000, now independently organized), Rhenish (16,000), Berlin M. S. (50,000), and Scottish Presbyterians (25,000). The majority of the white colonists belong to the Dutch Reformed Church, which for a long time held aloof from missionary work. Since 1860, however, it has used its parochial clergy. The Anglican Church in the three dioceses of the Colony claims over 70,000 adherents.

Among the Zulus and Swazis of Natal the work of many denominations has been greatly hindered by frequent and destructive wars, but Christian congregations have grown, and some converts have been gained from among the Indian coolies. Basutoland, blessed with a more quiet development since
it became a Crown Colony in 1884, has been worked principally by the Paris M.S., which now counts about 70,000 adherents. Among the Bechannas of the Transvaal and Orange River Colony Dutch, Anglican missions have gathered a Christian community of considerable importance. The problems of moral and social development are greatly complicated by the constant risk of abandonment by non-Christian, in the nine compounds of Johannesburg and the Rand. The thinly-populated Bechuanaland Protectorate includes Khama's Country, where a Christian mission has gathered a few people well.

Madagascar has been a land of great vicissitudes in missionary work. The first missionaries of the L.M.S. began work with considerable success among the Hova, the ruling race of the central province, in 1820. In 1839 the accession of a hostile queen brought about the expulsion of the missionaries, and for twenty-five years the Christians were severely persecuted, yet they increased considerably. In 1861 a new ruler recalled the missionaries, and, when another queen was baptized in 1869, conversions began in masses. To cope with the situation other societies, Friends, S. S., and C. M. S. of C. M. S. mission islands on the north of Madagascar was annexed by France, and Protestant mission work was so severely hampered that the L.M.S. was far to give over a large part of their work in the island. The total number of Protestant Christians in Madagascar is estimated now at 287,000, while the scholars number 44,577.

(3) E. and C. Africa.—Missionaries helped to open up these lands both from the east coast and from the interior southwards. In 1844 Ludwig Kräf, a German in C. M. S. service, landed on the island of Mombasa and began work on the mainland opposite. His plan was (1) to carry a chain of mission stations across Africa from Mombasa to Gabun; (2) to establish on the east coast a colony for liberated slaves like that in Sierra Leone on the west, (3) to found an African ministry under an African bishop. The second of these objects was accomplished at Freetown in 1874; the first and third are in process of realization now. In 1846 Kräf was joined by Johann Rebmann. After nine years Kräf was recalled and the mission held on for twenty-nine years. By their discovery of the snow-peaks of Kilimanjaro and Kenya on the equator, and of the great inland sea of Nyassa, their explorations on the Nile and the Congo, and their linguistic labours prepared the way for later workers in a fruitful field.

The greater work of David Livingstone is part of the history. From his first station of Kolobeng in S. Africa he constantly pressed northwards, crossed Africa from east to west, and opened up the lake regions of Nyasa and Tanganyika, exploring ceaselessly till he died at Inala in 1873. In his opinion the end of the geographical feat was the beginning of the missionary enterprise. He desired to uproot the slave-trade, and to open up Africa to legitimate commerce and to Christian culture with fifth achievement. After his death the Mission to Central Africa undertaken by members of the Church of England, the L.M.S. mission on Lake Tanganyika, and the Scottish Presbyterian missions in Nyasaland are the direct results of his life-work; but it affected the whole missionary enterprise of inland Africa. To Stanley it was given to complete the work of Livingstone by his exploration of the Congo valley, and in the course of it he gave the impulse which has resulted in the formation of the Virile Christian State in the centre of Africa, now the kingdom of Uganda. Stanley founded the king, Mutesa, hesitating at the claims of Christianity and Islam. Through a

Swahili Christian interpreter he put the Christian case before the monarch and straightway appealed to English Christendom to enter this open door. The result was the sending of the well-known C. M. S. mission in 1855. The murder of James Hannington and the barbarous persecution of the early converts only served to increase zeal and enthusiasm. After sundry conflicts and imminent risk of abandonment by the Colonial Office, Uganda became a British Protectorate, under which mission work has gone forward peacefully. The country now contains 96,000 Protestant Christians, with a somewhat larger number of Muslims and a smaller number of Muhammadans. The schools contain scholars up to a secondary standard. The growing Church now forms an effective breakwater against the rising tide of Islam.

The two protectorates of E. Africa, the English and the German, have each brought the country under civilized administration, and the British Government has opened up its territory by a railway, preceded or accompanied by missionaries. The English work in German territory has been partly made over to German missions since the establishment of the colony in 1884, but a group of C. M. S. and L. M. S. missionaries and another of the U. M. C. A. opposite Zanzibar. The German work is chiefly on the northern frontier and on the north shore of Lake Nyasa, and its result has been to establish a series of German and Protestant Protectorate are those of the Scottish churches, with the two industrial centers of Livingstonia in the north and Blantyre in the south—a fit memorial of the great Scottish missionary pioneer. His successors have seen the slave-trade wiped out and fierce animist tribes subdued by the influence of Christian love, exemplified in medical missions, and brought under training in civilized industry and commerce. The Anglo-Egyptian Sudan in its Muhammadan parts is closed to missionary effort by government ruling; among the pagan Dinkas, Azand, and other tribes missionary work is in its first stages.

iii. OCEANIA.—Missions in Oceania date from 1768, and owe their first impulse to the interest excited by the story of Cook's voyages in the South Seas. The major part of this area is inhabited by European colonists, and the aborigines belong to more or less primitive states of culture, in which their physical as well as mental stamina has remained weakly. Owing partly to this and partly to unscrupulous innocence by Western traders, the result of contact with the white races has been the rapid diminution, and in some cases, as in Tasmania, the entire extinction, of the native races. The work of missions has therefore largely consisted in the rescue of weaker races from extermination through contact with exponents of higher civilizations not imbued with the Christian spirit. In no part of the world have the results of missions been more rapid and wide-spread, but stability is sometimes lacking. The effects of kidnapping, strong drink, and disease have been appreciated counteracted.

Work in New Zealand was started by Samuel Marsden in 1814, and after a time made rapid progress. In 1840 the islands became a British colony; unfortunately wars broke out, and in 1864 the strong Hau Hau apostacy, a recurrence of pagan cults mixed with Christian heresies, drew away great numbers. In spite of this the leading missions of the C. M. S. and Wesleyans were able, before the end of the century, to transfer their converts to the local Church organizations. The New Zealand Parliament also has its Maori members. The Maori population of New Zealand is about 50,000, of whom some 30,000 belong to Reformed communities. There appears to be some
hope that, in place of declining, the native population is beginning to increase.

In Australia, the aborigines have dwindled to 74,000, living mostly in the northern parts of the continent. After several abortive attempts missions, with a strong industrial element, have been continuously carried on since 1851 by English bodies of various denominations, as well as by Moravians and Dutchmen. Despite the aborigines have proved susceptible to the elevating influence of the gospel, and decadence has been to some extent arrested, though independence is not yet in sight. The number of Protestant Christians is computed at 6000.

The Islands of the Pacific may be roughly grouped into Polynesia (south of Hawaii), Melanesia (west of Polynesia), and Micronesia (north of Melanesia). Among the larger islands of Polynesia, Hawaii, now a United States territory with Honolulu for its capital, was first evangelized by the American Board from 1820 onwards and Christianized within fifty years. It has sent out and supported missionaries to several other islands. Tahiti, occupied by missionaries of the L.M.S., had a short, nest-hunting, but after the annexation of the group by France it became necessary to transfer the work to the Paris M.S. Raiatea, the sphere of the famous John Williams, has remained in British connexion. In the Tonga and Fiji, islands to which the Moravians have from 1820 onwards sent their workers. Practically the entire population is Christian, and is efficiently ruled by princes of the same faith. Education is widely spread, and evangelism among the Fiji have carried the faith to many other islands.

Melanesia has a population of 475,000, of whom 111,000 are Protestant Christians. The gathering in these numbers has created few missionary lives, owing to resentment on the part of islanders who had been oppressed by traders. The missionaries are British, German, Dutch, and Norwegian. The martyrdom of Bishop Patteson in 1854 called forth much enthusiasm and service, and during his long life John G. Paton of the United Presbyterian Mission saw 20,000 natives converted in the New Hebrides and contributing £13,000 in one year for Church purposes.

On the Micronesian Islands, now under British, German, and American protection, developments since 1832 have been similar. Missionaries from Australia have had much success. For instance, the Roman Catholics claim 12,000.

New Guinea, or Papua, was first entered in 1871, when Christians from L.M.S. missions in Polynesia volunteered for the work, in which many of them laid down their lives. They had a great leader in James Chalmers (1878–1901). The Christians now number 35,000. Anglican, Wesleyan, German, and Dutch missionaries have taken part.

In various parts of Oceania, especially Australia, Hawaii, and Fiji, missionary work is carried on among the Asiatic immigrants from India, Japan, and China with the help of native preachers from those countries, not without some result. The barriers of race and social opposition are less rigid than in other parts, and the pretexts of conventional morality are also loosened.

The total population of Oceania, excluding Australia and New Zealand, is reckoned at some 6,000,000, of whom 2,000,000 are Christians.

iv. INDIA.—The impact of Christianity on India has been conditioned by certain outstanding features of the land and people. The peninsula is isolated by the desert, the land and the sea. The culture of the people ranges from the highest to the lowest, from the stationary, form. Its religion contains a similar variety of cults, ranging from spiritual adoration to cruel and obscene orgies, all bound together intellectually by a subtle pantheistic philosophy of the same by the unique system of caste (q.v.). Its contact with the outer world during recent centuries has been mainly through the immigration of foreign invaders, who have brought with them the monotheistic religion and political philosophy of the Persian, and the classical East, thus now constituting the largest Muslim nation of the world. Most recently, however, India has come into connexion with a seafaring nation of the West more intimately than any other Asiatic land.

Here, as elsewhere, the missionary has employed in the first instance the agencies of preaching and persuasion, but the form which the results of his work have assumed has mainly been determined by the conditions of the classes to whom he has addressed his message. To bring out the chief features of it, we may deal with 'mass movements,' education, and philanthropy as main channels of evangelization.

The earliest form of Christianity in India is that of the Syrian Churches of Travancore and Cochin, which probably owe their origin to a similarity of language and manner of life between the former and Phoenician traders who traded with the Malabar Coast in their early days. From about the 4th cent. a trading and looting community accepted the Christian faith, and has continued as the principal day of business. Early in the last century they were aroused to lethargy by contact with Anglican Christianity, and the work of the C.M.S., first in combination, and afterwards side by side with the Syrians, has stimulated reform and progress, both in education and in evangelizing zeal. The work of St. Francis Xavier, Roberto de Nobili, and other great Roman Catholic missionaries in the South is principally in evidence now in the masses of fisher folk and other labouring castes in the west and south of India; and in the earliest Protestant missions the same factor of community movements appears. In the Danish-Halle Mission of the 15th cent. the greatest name is that of C. F. Schwartz (lived 1750, died 1798). The 20,000 Christians whom he gathered in Tanjore and elsewhere were mainly from the village labourers. After his death the work dwindled, till it was taken over by the Anglican Church, and during the first half of the 19th cent. the work of the C.M.S. and S.P.G. in Travancore (with the Timnevelly Mission, better called Timnevelly (Catholic work), together with that of the L.M.S. in S. Travancore, yielded much more than half the entire number of Protestant converts in India, and naturally also the best organized churches. In 1831 these missions had 51,355 adherents, the remainder of the Madras Presidency 23,921, and all the rest of India 16,916. In the succeeding sixty years these missions and others in S. India have greatly developed, largely through the agency of American societies. The Protestant Christians now number 870,425 (besides over a million and a half Roman Catholics and Syrians), and they contribute £23,727 towards the support of worship and schools. The Indian ministry includes 492 ordained men as against 487 foreign missionaries, and the self-administration of the churches is on the increase. In the self-extension of the activity of more than one mission of the Indian Churches. The largest is the Timnevelly Missionary Society, with an income of 12,900 rupees, 4 ordained ministers and 130 converted people, which they carry on in the Nizam's territory. Part of their work was made over to the above of the first Indian bishop, V. Azariah of Dornakal, when he was consecrated in 1911.

In Travancore, and more recently in Kerala, a high movement has made headway in the L.M.S. and C.M.S. missions, which
now number 75,000 and 57,600 Christians respectively, still more widespread is the movement in the Telugu country north of Madras. Here, especially since the great famine of 1877-78, the out-caste village labourers have pressed into the churches in myriads. The Christians belonging to Anglicans, American Baptists, Lutherans, and others are estimated at some 150,000.

In Bengal an elder movement in the forties of the last century left a considerable church in the North. More recently the missionaries of E. Bengal are turning their hopes towards Christianity, and the B.M.S. has admitted some hundreds from among them. In the United Provinces of Agra and Oudh the Grahams (leather workers) and sweepers have been principally gathered in by the American Methodist Episcopalian, who record congregations numbering 102,000 adherents, while other Protestant missions have 22,000. The most rapid movement during the last decade was in the Panjab, where the Christians entered in the government Census returns had increased from 57,000 in 1901 to 103,000 in 1911 chiefly in the American Presbyterian missions.

The movements among the Indian village proletariat which have resulted in these large and growing congregations go back to the pre-Aryan period: one upward tendency of populations representing pre-Aryan inhabitants, enslaved by the Aryan conquerors and kept for millenniums in servitude, but now struggling for emancipation by rulers whose political and social ideals are bound up with Christianity and whose rule has been accompanied by active Christian efforts of teaching and philanthropy. The effect of these efforts in raising up the masses who have responded to them is expressed thus by the Hindu Census superintendent of the Mysore State:

"The enlightening influence of Christianity is patent in the higher standard of comfort of the converts, and their sober, disciplined and busy lives" (Census of India, Calcutta, 1915, vol. i. pt. l. p. 123).

To this we may add that evidences of spiritual regeneration and devotional life are also to be found.

The populations so far referred to are the 'untouchables' who live among the Hindus and Muslims in the plain, the number may number (accuracy is very difficult to secure) some 30,000,000. But there are some 10,000,000 more of non-Hindu aborigines, living mainly in hilly regions, among whom the Christian faith has found ready entry. Such are the Karsens of Burma, the Khilais of Assam, the Kols and Santals in Bengal. The Christian communities among these amount to some 263,000 persons. Both among these and among the out-castes the expansion of the movement appears to be limited only by the capacity of the Christian Church adequately to shepherd and educate the candidates for discipleship. The effect of education and Christian influence in raising the status of the Christian community as compared with its Hindu and Muhammadan neighbours has been very marked. Some progress has been made in improving the sanitary condition of the people in the Panjab the Christians have been recognized by Government as an agricultural tribe, and in the irrigation colonies there are several flourishing villages of Christian cultivators, holding land directly from the State.

Education of a simple kind, including that of girls, was from the first a regular part of missionary work in this part of India. The work was spread by the Scottish missionary, Alexander Duff (1830-57). He set out to evangelize the upper classes of Bengal by means of higher education, given through the medium of the English language, which through the efforts of Macanlay and others, had already been adopted by Government as the vehicle of learning for India. Duff was assisted in his plans by Raja Ram Mohan Ray, the founder of the Brahmo Samaj (q.v.). Duff's converts were counted rather by the hundreds than by the hundreds, but they included men who made their mark on the Christian Church as leaders throughout N. India. His school also had a powerful effect on the development of the Bible Samaj and other liberal movements in Hinduism, and not less did he influence the educational policy of the Government of India, which in 1854 founded departments of public instruction, and in 1857 established universities in Calcutta, Madras, and Bombay, followed later by others in Lahore and Allahabad, and recently by a Hindu university at Benares and a Muslim one at Aligarh. Duff's school soon developed into a college, and no fewer than 8 other colleges were founded in different parts of India during Duff's lifetime. The most noteworthy contemporary of Duff as an educator was John Wilson of Bombay, who founded the college which bears his name, and added to his English work a profound acquaintance with Hinduism. There are now 38 Protestant missionary colleges in India, containing, in 1913, 5,447 students, of whom 61 women, the latter practically all Christians. Of the total, 4,481 students were Hindus, 530 Muhammads, and 436 Christians. There is a fully-organized missionary college for women in Lucknow; and a college for department work in connection with a girls' high school in Lahore.

The work of elementary and secondary education was powerfully forwarded by the system of grants-in-aid which the Government introduced in 1854. The grants are made in proportion to the educational efficiency of schools, regardless of the religion of the managers. Educational efficiency being greatest among the missionaries, they have earned the chief portion of the grants, though their lead in this respect is no longer so marked as it was. Their secondary schools number 283, with 62,662 boys and 840 girls, 3,800 boarding-schools contain 22,169 boys and 17,566 girls, all Christian. In 87 theological schools 1892 students are in training, and 157 training-schools have 1904 male and 1173 female students. The boarding-schools are partly secondary and partly primary. The rate of secondary education in conversions has been small, but the influence on social ideals and practice and on religious thought has been very great. The education of the whole of the Christian community, especially the women, has made it, with the exception of the Parsis, the most literate in India, far above the average of the Hindus generally, and little, if any, behind the Brahmins. The number of Christian officials and teachers is large in proportion to the size of the community, and it is not easy to keep pace with their need for a highly educated ministry, while satisfying the wants of the large rural populations. The provision of elementary education for these is the most urgent missionary problem of the day. True, the elementary pupils in mission schools throughout India number 290,000, but the great majority of these are non-Christian. In missionary colleges and schools of every kind 576,371 persons were being educated in 1912—about one in ten of all pupils.

Christian literature took its first effective start with the work of the great pioneer, William Carey (1785-1834). Together with Marshman and Ward, he worked chiefly in the district of Chittagong and in the hilly range of the Bengal hills, converting a multitude of different languages, and also founded a missionary college in Scarpore. Most of these versions were mere baloon d'esani, but the Bengali became the foundation of all further work in that.
MISSIONS (Christian, Protestant)

Henry Martyn at the same time produced his remarkable Urdu version of the NT, and a long line of translators and authors followed, supported by the publishing societies mentioned above. Krishna Mohan Banerjee among Hindu commentators, Ismail-al-Din among Muslims, and John Murdoch among English writers and publishers of Christian literature are outstanding names. Besides Bible versions there is also an incept Christian literature in all the principal Indian languages, composed of countless hundreds. These are directed both to the training of the Christian Church and to convincing and persuading outsiders.

The practition-and philanthropic auxiliaries of the gospel message, medical work takes a foremost place. The effective prosecution of this in India dates from the middle of last century, when W. Lockhart of the L.M.S. was sent to Travancore, and Henry M. Sudder of the American Board to Ceylon. The chain of medical missions on the N.W. Frontier was begun in Kashmir in 1854, and has since then extended to Peshawar, Bannu, Derā Ismiāl Khān, and Quetta. The attitude of a turbulent, fanatical, and treacherous Muhammadan population has been greatly modified by the work of medical missionaries, while outpatient services have shown their faithfulness in martyrdom, Christian Scriptures and literature, illustrated by the example of disinterested Christian love, have penetrated far into regions otherwise inaccessible to the missionary. Since 1886, this work has been aided by the introduction of the caste-proud Hindu, and, while suffering is impartially relieved, regardless of creed or condition, the ministry of healing has brought many to the Saviour of the fallen. The first qualified woman-doctor came to India in 1880, though medical work by women had been carried on long before. Medical missionary women have led the way in relieving those once hopelessly suffering of socioindian womanhood, given over to treatment by ignorant and clumsy midwives and barber-women. Of the Indian women-doctors now serving under the Dufferin Fund and other public bodies the great majority are Christians, with a sprinkling from the Brāhma Samaj.

Closely allied with general medical work is that of the leper missions. Of the unfortunate leper community, hitherto untraced for, several thousands are under care in Christian institutions, and many of them have accepted Christianity. Christian institutions for the blind and the deaf and dumb are of recent date, and in part unpublished. Famine orphans are common, and have furnished an appreciable fraction of the Christian community, especially in N. India; these have in recent years found imitators among non-Christians, and, owing to the influence and example of mission schools and colleges, the conception and practice of social service are spreading among Indian students, as shown by the society of the ‘Servants of India,’ promoted by G. K. Gokhale.

India affords the largest and most influential sphere of work among the Muslims of the world. Its Muslim community numbers 65,000,000, and it is both specifically Indian in type and, cosmopolitan by ties of religion—a fact which gives this community a greater political importance than its numerical proportion to the Hindu population would warrant. The largest Muhammadan community of India, that of Bengal, now numbering 24,000,000, came under British rule after the battle of Plassey in 1757, but the first effective Christian work among them was done by the chaplain of the missionary Henry Martyn when he translated the NT and much of the OT into the Muhammadan lingua franca of India—the Urdu, or camp dialect of Hindustāni. His one convert, 'Abd-al-Masih, was the forerunner of many ex-Muslims who have joined the Christian ministry. It is impossible to estimate accurately the number of converts among the laity, but with their descendants they must run into several myriads. The circulation of the Scriptures, which the Muslim professedly recognizes as divine, is especially effective as a means of evangelism.

Among the Buddhists of Burma and S. Ceylon the results of work have been similar to those among the Hindus, though the results have been sporadic, occasionally in families, with here and there outstanding personalities. The Census of 1911 gave the number of Protestant Christians in India as 1,452,700, co-existing with 970,385 in 1901. The largest proportion is in S. India (252,000), where the work has been established longest and is most systematic. The distribution elsewhere varies chiefly according to the incidence of mass movements. Protestant Christians in other parts number: Bengal, 178,000; United Provinces, 135,000; Pānjbā, 155,000; Bombay, 51,000; Central Provinces and C. India, 24,000. In the native States they are generally fewer—e.g., Haidarābād, 29,000; Mysores, 9,000; Pānjbā States, 500; Kashmir, 700.

Syncretism, in the shape of reform movements, both religious and social, is much in evidence. The earliest organized body of this kind is the theistic Brāhma Samaj, founded in 1828 by Rājā Rām Mohan Rāy—a small sect, but influential owing to the man who has been its leader and philanthropic zeal of its members. The teaching of its sections ranges from a modified Hinaism to a kind of Unitarian Christianity with Indian atmosphere. The earliest qualified medical work by Dayànār Sarasvāti, represents a crude modification of original Hinaism, professing to hold to the Vedas as absolutely inspired, and accordingly formulating once hopelessly suffering of socio-Indian womanhood, given over to treatment by ignorant and clumsy midwives and barber-women. Of the Indian women-doctors now serving under the Dufferin Fund and other public bodies the great majority are Christians, with a sprinkling from the Bhāra Samaj.

These bodies, following missionary example, are beginning to interest themselves in the alleviation of the depressed classes by education, and the Arya Samaj actually admits them and also Muhammadians into the ‘Vedic religion’ by a ceremony of purification (puñâda). Modernist movement among the Muhammadians dates from the efforts of Sir Sayyid Ahmad, who began in 1838 to arouse his fellow-religionists to the imperative need for English education, which resulted in the establishment of the Anglo-Muhammadan College at Aligarh and the All-Indian Muslim Conference. It has also produced something of a school of liberal theology. A more widespread movement was inaugurated by Ghulām Ahmad of Qsidin in the Pānjbā in the year 1879. He, like Dayànār, harked back to his sacred Scriptures, and treated the Qur’ān as verbally inspired, interpreting it in a new fashion with an attitude towards the world as a whole. He, like Dayànār, is strongly opposed to Christianity, and some members of it have started a mission to England at Woking. Despite their attitude of opposition, these new sects all owe more or less of their origin to the ‘Vedic religion’ by a ceremony of purification (puñâda). The Indian national movement has a tendency to bring the reformed sects nearer to the Christian community, to which it is possible to say that the Muslim religion is better fitted for the Indian community also in a certain toughness and impatience of foreign influence. At the same time there are signs of an increased feeling of responsibility for the evangelization of
India, marked by the establishment of the National Missionary Society and other efforts.

The Dutch possessions known as Indoneisia were purchased from the 12th cent., they have gradually been overrun by Muslim chiefs, and out of the total population of 38,000,000 all but 2,000,000 are now Mahometans. The Dutch East India Company, while building up its Eastern possessions, has taken care of the civilizing of the natives after a fashion, but their condition at the beginning of the 19th cent. was very low. Since then it has improved, and the so-called permanent congregations (gevestigde gemeenten) are under the care of clergy appointed and maintained by the State; churches of later converts are from time to time placed under this organization. Modern missionary work began in the second decade of last century, and has been carried on mainly by Dutch and German missionaries on the four principal islands of Sumatra, Java, Celebes, and Borneo, as well as on some of the smaller ones. Large numbers of converts have been gathered in Java, in the Batak country on the north coast of Sumatra, and in the Minahassa district of Celebes. In the second of these an effective barrier has been erected to the Island advancement of the number of converts from Islam in these islands is estimated at 40,000.

v. CHINA.-In contrast with India, China has brought the standard language and literature, and may therefore be regarded as a unity, despite its size and diversity. Modern missionary work was begun by Robert Morrison of the L.M.S. in 1807. He baptized the first convert in 1814, and before his death (1834) he had translated the Bible into Chinese, besides writing many pamphlets. But neither he nor his colleague, Robert Milne, was able to enter the jealously-guarded empire of China; they could only reside in the Portuguese settlement of Macao or in British territory at Malacca. The opening of China to foreign intercourse, including missionary effort, was the result of a series of wars, internal and external, the first of which, while it helped to admit the missionary, did much to discredit his message. The three ‘opium wars’ of 1842, 1856, and 1860 resulted in the opening of twenty-four ‘treaty ports’ to foreign intercourse, and it was in these, especially Shanghai, Hangchow, Tientsin, and Canton, that Protestant missions first gained a footing. Up to 1856, 3 English societies, 1 German, and 7 American had been at work, and the corresponding number of converts amounted to 100. The preponderance of American workers in China became more marked as time went on, and the same is true of Japan.

The next great convulsion was an internal one, the Taiping rebellion, which lasted from 1850 to 1864, and was eventually suppressed by the ‘ever victorious army’ of a Western leader, General Charles George Gordon, himself in deep sympathy with Christian missions. The leader of the rebellion had once come under the influence of a Christian missionary, and he claimed to have received a divine revelation to destroy idolatry and to put an end to the Manchu dynasty. The second of these aims was accomplished half a century later by another great convulsion, and we may believe that the Taipings did much towards preparing the way for the first, which is yet to come; but we may also be thankful that their iconoclasm did not prematurely succeed before the constructive forces of Christian faith and practice were ready to step in. By the latter half of the 19th cent. were increasing their work, and the year after interior China had been quieted (1865) Hudson Taylor formed the China Inland Mission, which led the way to the more officials on a network of stations during the last half cent.uary, extending to the remotest interior of the Republic. This mission alone now numbers 1076 foreign missionaries, as against 475 of all societies and nationalities in 1877. In that year the number of converts was reckoned at 13,000.

The final break-up of the Manchu dynasty was first marked by the Boxer outbreak of 1900, directed, with the connivance of the Empress, against both foreigners and Christian missionaries, with 53 of their children, were killed, and some 16,000 Chinese Christians were massacred, many of them accepting death willingly rather than deny the faith. Another strong impulse was created by the refusal of missionary societies to accept a money indemnity from the Chinese Government for the missionary lives laid down freely for the gospel. During the succeeding decade the number of foreign missionaries in China increased almost 50 per cent (3785 to 4175, including wives of missionaries), and the number of converts more than doubled (294,572 to 469,538 in 1910). In 1913 the number of ‘full members’ was given as 255,363. Counting children and other adherents who are not included in their statistics by many bodies, the total may be estimated at about 200,000. Foreign missionaries, including wives, are 5186, and Chinese workers 17,879.

The revolution of 1911-12 was the final stage in the opening up of China to Western culture and Christianity. To some extent it was a reaction from the abolition of Confucianism as the religion of the State, but a stronger power than the iconoclasm of the Taipings is shaking the foundations of the old edifice, namely the re-casting of the world-old system of Chinese education in Western and 20th cent. moulds. Moreover, the official request made by the Chinese Government on 27th April 1913 for the prayers of its Christian subjects, whatever motives of policy may have inspired it, was a recognition of Christianity as a power affecting deeply the interests of the nation; and Sun Yat Sen, the leader of the Cantonese revolutionary section and almost of the Republic, is a Christian who seeks to model his political policy on the principles of the Bible. Happily, too, the establishment of the Chinese Republic has coincided with the final abolition of the Indian opium traffic once forced on China by Britain.

The situation thus created has offered to the Christian Churches unexampled opportunities of access to the educated classes of China. These had hitherto looked unapproachable, and in very few cases could master the intricacies of their literature, but now they are ready to welcome Western language, literature, and science. Great efforts have been made, especially by the American missions, to grapple with the task of providing centres of higher education on a Christian basis throughout China, and in this, as well as in general work, the tendency towards co-operation between allied bodies is strong and helpful. No fewer than 9 university colleges are in effective operation, 7 in coast provinces, 1 in the centre, and 1 in the west. In several the medical faculty is strong, and Christian missions at present lead in the training of qualified doctors for China. There are some 264 mission hospitals (1913) with 120,778 in-patients and 2,129,774 out-patients for the year. Among the agencies which have been particularly active in taking advantage of the present opportunities the Y.M.C.A. has been specially in evidence. The evangelical meetings conducted by J. R. Mott, and the large Sunday schools, with over 60,000 children were attended by large audiences of educated Chinese, sometimes up to 4000, in many of the principal towns of China. Among the hearers the higher officials of high rank, of whom one was baptized, while thousands of non-students to
MISSIONS (Christian, Protestant)

the Bible, and hundreds have actually joined the Christian Church.

The creation of a Christian literature for China has been carried on mainly by missionaries, and to this end they have represented in the Christian Literature Society for China, under the guidance of Timothy Richards and others. The rapid opening of the mind of China to appreciation and reception of Western thought has given many scholars both the opportunity and the task of providing not only religious but general and scientific literature for readers, whether Christian or non-Christian. Both the Bible and the work of Bible translation in China have been greatly facilitated by the existence of a common standard of written language, though versions of the Bible are being produced in several local vernaculars, as also in a popular form of the Mandarin. The circulation of the Bible is increasing by leaps and bounds; in 1910 a million and a half copies of Bibles, New Testaments, or single books were circulated; in 1912 two million and a quarter.

The first L.M.S. woman missionary to China was appointed in 1855. The work among women has been greatly hampered by the custom of foot-binding and by social prejudice, but these have been in great measure overcome, largely as the result of missionary effort, and the desire for the education of women is greatly on the increase; some are sent to the mission schools only to qualify for the medical and teaching professions, but also for social service. Over 600 members have been enrolled in a Student Volunteer Movement for the Mikado and have taken a full part in the training of the women in all the capital and provincial towns and in the outlying districts. The tendency in this class is to work for the formation of an indigenous Chinese Church free from Western control, and some progress is being made. The Sunday School is a chief feature of the work, and has helped to stimulate the interest in the study of the Bible.

In the outlying provinces of China work is still in its beginnings. It is farthest advanced in Manchuria, where Presbyterians and Lutherans have a community of some 58,000. The devoted work of James Gilmore (1850-91) in Mongolia left little visible result, and the societies which are following it up are gathering a few converts amidst great difficulty. The Chinese Church is struggling on, and the only quarter from which the gospel has entered that land is Little (or Western) Tibet, belonging to India, where Moravian missionaries have some small congregations, and have done much for the investigation of Tibetan language, literature, and history. Among the Muslims of Chinese Turkestan Swedish and China Inland missionarines are in the early stage of work.

vi. JAPAN, KOREA, AND FORMOSA.—Here, as in China, we have countries in which, after periods of notable success on the part of Roman Catholic missions, the native rulers have turned upon them as politically dangerous, and have violently persecuted the Christian Church, almost to extinction, till, through political changes, intercourse with the West has been resumed, but on a different footing, and with this the way has been opened for mission of the Reformed communions also. In the case of Japan this re-opening dates from the year 1859, when American missionaries were the first to settle in the country. The first Protestant Christian was baptized in 1854, but meanwhile persecution of Christians continued, sometimes with severity, till the Revolution of 1868, which once more brought the peaceful and friendly relations which have prevailed ever since. The first protestant mission station was opened in 1870, and during the period 1891-1913 numbered 182,000, over 19,000 children were under education in mission schools, and 40 hospitals and 23 dispensaries were in operation. This progress has been delayed by requirements of the government, the study of Scripture and by reformation of life.

vii. THE NEAR EAST.—Under this term we include the lands which the modern Arab world, in which Islam first arose and spread. Owing to the long dominance of Islam, the work of Christian
missions to Muslims in this region is either non-existent or in its infancy. For our present purpose, we are not dealing with missions to the surviving Abyssinian, Coptic, Armenian, Syrian, Nestorian, or Jacobite Churches. We may, however, note that the educational work carried on by and for NT to be inspired, and, if once induced to study them, he is in many cases led to see that the theory of their corruption subsequently to Muhammad is a figment of the Oriental Christian imagination, as well as their incompatibility with the Qur'an, is a powerful influence in the conversion of the Muslims. The British and Foreign Bible Society employs 120 colporteurs and has 27 depots, through which 126,926 copies of Bibles, Testaments, and portions are circulated. Individual conversions through these means are fairly frequent, but the building up of Christian communities is a slower process, hampered by special obstacles.

In Morocco, Algeria, Tunisia, and Tripoli, among a total population of about 14,000,000, work is carried on mainly by the American Baptists and other denominalional agencies. There are converts here and there. The principal agency, besides that of colportage, is schools, which are elements in Egypt work was begun in 1852 by the American United Presbyterians, principally among the Copts, and resuscitated by the C.M.S. in 1882. Considerable access has been gained among the Efiendi class, and a number have been baptized, while others have been reached through the masses, in both town and country. Schools, primary and secondary, contain 17,994 pupils (largely of Coptic faith or origin), and a scheme for the establishment of full-fledged universities is being actively promoted by American missionaries. German and English missionaries are pushing out into the Anglo-Egyptian Sudan, and, though Christian propaganda is barred among the Muslims of that region, yet in Omdurman some educational work is being done. Cairo is the chief literary centre of the Muhammadan world, and from the Christian side vigorous efforts are being made by the Nile Mission Press, an Anglo-American undertaking, to produce and circulate evangelical literature in Arabic.

In Asia Minor and Syria, Protestant work has been especially by American missions working among the ancient churches. The system of education which they have developed, from primary schools to colleges, especially the Roberts College in Constantinople, has notably affected the Muslim community in thought and attitude towards Christianity. Medical missions, in Palestine especially, have tended in the same direction. Arabia is touched on the north by the Handel and Bible Mission, and by schools, medical work, and colportage. Persia was first entered by Henry Martyn, when he completed his translation of the NT at Shiraz in 1811. In 1829 K. G. Planter visited Persia, and wrote his celebrated Balance of Truth, laying the foundation of a Persian Christian literature, built upon later by W. St. Clair Tisdall and others. In 1871 American Presbyterians organized work among the tribes of N. Persia, and in 1875 S. Persia was occupied by J. B. G. Stein of the C.M.S. Medical and educational work has developed largely, and the demand for schools on a Western model far exceeds the power of the missionaries to supply it. The modernist sect of Bahai, sprung from the 19th century reform movement, has borrowed freely from Christianity but does not so far make much return (see art. BAR, BAHAI). Throughout these missions work among women, visiting, teaching, and medical, has initiated or helped on the movement perceptible in Muslim lands for the elevation of the female sex.

viii. MISSIONS TO JEWS.—The Jewish population of the world is approximately 12,000,000. Protestant missionary work among them is carried on by 55 societies, maintaining 500 men and 350 women missionaries. The London Society for Promoting Christianity among the Jews (253 missionaries; income in 1900 £8,000) is the principal one. Statistics are quite imperfect. Some 250 of the Anglican clergy are converts or sons of converts from Judaism. J. F. de Lelo estimates baptisms during the 19th century in Constantinople at 22,749; Roman Catholic, 57,100; Greek, 74,500. The theologians Neander and Edersheim, the missionary bishops Schereschewsky, Hellmuth, Alexander, and Holle, have estimated. III. GENERAL ASPECTS.—1. Principles.—As a result of the work of missions by the Reformed Churches since the end of the 18th century, there is now a growing community of some 6,000,000 native Christians belonging to the most varied races and cultures, from the primitive aborigines of Australia to the progressive people of Japan. Yet in the age which has seen this unprecedented expansion of Christianity in every direction the question has been raised whether Jesus of Nazareth ever intended that His disciples should carry the message of His redemption into all the world, though it is fully allowed that the world mission of His birth was the legitimate and necessary consequence of the principles which He enumerated and exemplified. To suppose that the Originator of this life and teaching, which have persisted in spreading their vitalizing influence to rescued races of two thousand centuries, was Himself without desire for or intention of producing such an effect would be to face the most insoluble enigma of history. The development which we see established now and in the future is clearly the mainspring of this world-wide enterprise of missions has been the conviction that its promoters and messengers were carrying out the conscious purpose and explicit command of the Saviour of the world. At the same time it would be unnatural that the reconstruction of thought which our age is experiencing in every sphere of life should leave the conception of foreign missions entirely Undeveloped. Among the Reformed Churches more especially Zinzendorf's motto of 'souls for the Lamb' as the one goal of missionary effort has expanded, under the influence of teachers like G. Warnecke in Germany and B. R. Western in England, into the wider and deeper conception of a call to regenerate the nations spiritually, morally, intellectually, and socially, and to build up the universal Church of Christ. Moreover, the results of research into Christian origins have helped us, with a truer historical perspective, to test our contemporary missionary work by the example and spirit of the Apostolic Age. From a knowledge of Roman and medieval history, too, the Churches have been learning lessons of the manifold adaptation of the form of missionary work to the conditions and needs of different ages and peoples, and of these lessons the
whole modern development is its application. But this larger sweep of outlook and effort has by no means made the first aim of individual conversion superfluous. On the contrary, this remains the vital centre of the whole, and it is as this is expanded and co-ordinated in the larger aim that the true end of missionary work is attained.

2. Methods, apostolic and contemporary.—The radical question is raised again and again whether the close following of the methods of St. Paul is not the true solvent of our most fundamental difficulties, particularly of the lack of spiritual and economic independence in our mission churches. Were the evangelist to make brief sojourns instead of settling down to devote an authority straightway on native helpers instead of keeping them in long tutelage, to demand instead of giving pecuniary assistance, Christian congregations might, it is urged, be smaller, but they would be stronger and self-reproducing. Each of these paths has been tried in modern missions, generally with scant success, for the same end under different conditions may demand different means. Where there was a Jewish diaspora standing at the threshold of Christianity, teaching and discipline had been assimilated which may now require a generation; where habitat and civilization remain the same, the transcendent new directions in daily life practically identical, the problems now arising from disparity of civilizations and distance of abode are non-existent. Recognizing these and other differences, the bulk of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles embodied in these forms. Thus in the adventure of faith undertaken by the C.I.M., which is followed by the French, German, and Belgian missions, we have a contemporary adaptation of the Pauline method, rapidly following the main lines of communication and occupying the chief cities of an empire which has been evangelized and where it is not a question of conversion but of raising native churches and societies, offering much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions we have a useful adaptation of early and medieval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.

The modern thought on the adaptation of NT principles to contemporaneous missionary work may be traced in the development of the chief missionary methods. The mission school and college have no precedent in apostolic times, and indeed, apart from the English school of the monastic missionaries, their original purpose being to serve as a means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. The most notable effect of earlier educational work was the conversion of men of mark, who exercised great influence on the development of the Church. Within the last generation this aspect of the work has receded into the background; the conception of education as a naturally national and creating an atmosphere permeated by Christian ideals has exercised increasing influence on missionary educators, especially in high schools and colleges, and it is from this that the idea of evangelized, and they have lain mainly in this direction. The value of such preparation for the community for the eventual reception of Christ as Lord and Master is immense, and it may be hoped that much of the work which commonly falls to the lot of the evangelist also is not dissolved beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the scaffolding delay or even prevent the erection of the building. Similarly, in the now indispensable work of medical missions the physical benefits conferred were at first entirely subsidiary to the spiritual aim; but the conception of a Kingdom of God to be realized in things temporal as well as spiritual has led to emphasis upon the fact that the work of the missionary, whatever the immediate effects, is a worthy aim of the missionary. This involves the risk that the medical missionary may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for he will not allow Christian zeal to be the bane of friend of second-rate professional skill; yet he will lay the decisive emphasis of his calling on the specific aim of the missionary to carry home his message. Again, in the delivery of that message by the general missionary a comparative study of religion and sociology has modified the method of approach by the Christian messenger to non-Christians. He is less inclined to attack their observances and rites than to elicit the need latent in each human heart of something higher, less prone to enforce their doctrines and duties than to set forth Christ in life and teaching. The conviction is gaining ground among his hearers that he is no ruthless iconoclast of their national religion, but that the evangelized who is practically identical, the problems now arising from disparity of civilizations and distance of abode are non-existent. Recognizing these and other differences, the bulk of modern missionary work, we have to seek their solution not in the forms of apostolic, or any other, evangelism, but in the principles embodied in these forms. Thus in the adventure of faith undertaken by the C.I.M., which is followed by the French, German, and Belgian missions, we have a contemporary adaptation of the Pauline method, rapidly following the main lines of communication and occupying the chief cities of an empire which has been evangelized and where it is not a question of conversion but of raising native churches and societies, offering much analogy to that of Rome. Or, again, in the revival of community life in the brotherhoods and sisterhoods of Anglican missions we have a useful adaptation of early and medieval monasticism to the conditions of the mission-field of to-day. But both of these have the defects of their qualities.

The modern thought on the adaptation of NT principles to contemporaneous missionary work may be traced in the development of the chief missionary methods. The mission school and college have no precedent in apostolic times, and indeed, apart from the English school of the monastic missionaries, their original purpose being to serve as a means of conveying the message to the children of the literate, or would-be literate, classes who are otherwise not easily reached, and of bringing them into the Christian Church when they have arrived at years of discretion. The most notable effect of earlier educational work was the conversion of men of mark, who exercised great influence on the development of the Church. Within the last generation this aspect of the work has receded into the background; the conception of education as a naturally national and creating an atmosphere permeated by Christian ideals has exercised increasing influence on missionary educators, especially in high schools and colleges, and it is from this that the idea of evangelized, and they have lain mainly in this direction. The value of such preparation for the community for the eventual reception of Christ as Lord and Master is immense, and it may be hoped that much of the work which commonly falls to the lot of the evangelist also is not dissolved beforehand. But there is need of balanced judgment and steadfast will, lest elaboration of the scaffolding delay or even prevent the erection of the building. Similarly, in the now indispensable work of medical missions the physical benefits conferred were at first entirely subsidiary to the spiritual aim; but the conception of a Kingdom of God to be realized in things temporal as well as spiritual has led to emphasis upon the fact that the work of the missionary, whatever the immediate effects, is a worthy aim of the missionary. This involves the risk that the medical missionary may be merged in the philanthropist. The modern medical missionary would not, if he could, ignore the demand for the greatest possible scientific efficiency, for he will not allow Christian zeal to be the bane of friend of second-rate professional skill; yet he will lay the decisive emphasis of his calling on the specific aim of the missionary to carry home his message. Again, in the delivery of that message by the general missionary a comparative study of religion and sociology has modified the method of approach by the Christian messenger to non-Christians. He is less inclined to attack their observances and rites than to elicit the need latent in each human heart of something higher, less prone to enforce their doctrines and duties than to set forth Christ in life and teaching. The conviction is gaining ground among his hearers that he is no ruthless iconoclast of their national religion, but that the evangelized who is
4. Results and problems.—The present condition of the world-mission-field shows offshoots of the Reformed Churches in every stage of growth. Their members, as always, vary in genuineness and strength, but everywhere they include whole-hearted followers of Christ, who are giving their lives for his sake. Their work has, in some cases, been far more successful than in others, and in a few instances it has been almost a blank failure. But in all cases the progress of the missions in the world is marked by an increasing tendency towards the conversion of the indigenous peoples to the Christian faith and way of life. This is evident from the fact that the churches in the mission-field have produced no first-class heresy, implying thereby a lack of serious intellectual striving. But other causes may more reasonably be assigned for this. The intellectual training and status of the foreign teacher is a far superior, in the great majority cases to that of his converts that it would be difficult for them to maintain positions contrary to those which he has laid down—all the more so as the possible variations of the Christian religion have been fairly fully worked out by previous heresies, the weaknesses of which have been pointed out to them. Moreover, no considerable part of the effect produced by Christian missions has been confined to the change of attitude, the new beliefs and ideas of conduct, individual and social, taken over from them by the still non-Christian world. In this process the analogues of early Christian heresies are to be found in the teachings of bodies outside the Christian Church. Thus the Bhrāna Samaj, or the reformation of Hinduism, represents a kind of Arianism; the Bahá the offshoot of Islam would stand for one variety of Gnosticism, and theology for another. Generally speaking, syncretism is largely practised, and in many cases by men of noble character who are striving for a reconciliation of the old and the new, but the religion of the foreign teacher is not more likely to stand now than in the early centuries, though it is a pitfall of which the abler intellects of the young churches need to beware.

Analogous to this is the problem of unity in the Christian Church, which is marked by the division of the so-called Reformed Churches, which have sprung up in the West from local and temporary causes have naturally no meaning to the Eastern convert; and the same holds good of many other religious sects. The result is a tendency to unity in faith and practice, in face of powerful opposing forces, is healthy and hopeful. There is, however, a danger that members of the young churches should regard all distinctions in doctrine and discipline indistinguishably as mere Western peculiarities which may be swept aside in order to construct an edifice of truly indigenous Christianity. A sound attitude of the missionary teacher towards questions of race and nationality will do much to meet this danger.

Next to the essential spiritual element no factor in missionary work is more weighty than the social progress which it has initiated or stimulated. From these successes a difficulty often springs. In the contact of two deeply-separated civilizations the convert naturally assimilates that of his Western teacher, not without the exercise of wisdom and restraint he may evolve a mere caricature of Western culture without its balance and restraint, thereby repelling alike his own countrymen and the Western fellow-Christians; and among higher races he may acquire needs and habits which will involve him in economic difficulties. Meanwhile, Western culture and commerce are ceaselessly flooding into mission lands, and the change of life connected with them is affecting non-Christians scarcely less than Christians. As a result of this the efforts of the missionary to promote a simple indigenous style of living may be resisted as intended to repress the progress of the native Christian. One of the missionary’s most difficult tasks is to decide and to convince his charges what is justly due to the decencies and progress of Christian life and what is illegitimate, and to administer to extravagance and parasitic growth.

Thus social progress is intimately connected with the great difficulty presented by the economic dependence of the mission churches on their parents at the home base. The amount annually expended by home churches on the maintenance of ministers, preachers, and teachers of indigenous races is estimated at £7,000. The amount recorded as raised by the native churches in the same connection is £1,500.00. Allowing for a liberal margin of error, the disparity is still immense, even when we consider that a large number of the converts are drawn from impoverished strata of society whose financial weakness must be great for some time to come. Almost every advance is dependent on fresh exactions made by the mother churches, who may also contribute their share of the work of worship, pastoral care, and teaching. In the last resort the economic dependence of mission churches is part of the larger problem of the economic dependence of the missionary on the mother church, and in all probability the one will not be solved without the other.

 Everywhere we are brought up against the racial problem. It was there from the first, and the success of missions has been in proportion to that of the missionary in understanding and treating with wise sympathy people of a foreign race. As the races have become conscious of their common ideals, traditions, and interests, the racial question in the mission-field has developed into the national. Everywhere the missionary is met, actively or passively, by insistence on the rights of the race in its own sphere and a demand for equal opportunity, as against the old idea of the inherent superiority of the white man. The opposition thus engendered reacts against the white man’s religion, and there is on each continent a restiveness and impatience of colonial domination by the European churches such as did not exist a generation ago.

To deal with this firmly and sympathetically as a sign of healthy growth, and as a pathway to new and fruitful opportunities is the result of a premature independence and unduly delayed emancipation both have their dangers. Smartness and efficiency may be made an idol; but it is also a temptation to take the easy path of lowering the ideals of the gospel, and this leads to deterioration. The problem is to be solved only by patient, tenacious charity on the part of the missionary who understands the national and racial feeling, and whose watchword is the responsibility of the stronger.

MISSIONS (Muhammadan).—The materials for the history of Muhammadan missionary activity are much less abundant than those for the history of the propagation of Christianity. Muhammadan
historians appear to have been singularly inclusions as to the spread of their faith, and only scanty references to conversions are found at rare intervals in the vast historical literature of the Muhammadan world. The absence of a priesthood in Islam is another fact, and thelein apart of a separate body of men as exponents of the doctrines of the faith, has had its counterpart in a lack of ecclesiastical annals; there have been no Muslim missionaries in the sense in which the term is used by the Chritians of the 17th cent., no specially trained propagandists, and very little continuity of missionary effort; even the religious orders of Islam, which have at times done much for the spread of the faith, have not cared to set on record the story of the success that has attended their preaching. There is, therefore, nothing in Muhammadan literature to confirm the claim of the historians, made in the biographies of the Christian saints, the annals of the Christian religious orders, and the immeasurable journey and other publications of the various Roman Catholic and Protestant missionary societies. In fact, the fullest details as to Muslim missionary activity are generally to be found in the writings of the Christian clergy who have written about Islam in their services to the Christian people. Yet to this poverty of information from Muhammadan sources there is one notable exception, namely, the biography of Muhammad himself. Muhammadanism and Islam begin together, with the life of the founder, and the numerous biographies of the Prophet are full of stories of his efforts to win over unbelievers to the faith (xxvi. 99).

In the Quran itself, the duty of missionary work is clearly laid down in the following passages (here quoted in chronological order according to the date of their revelation):

"Saying: the way of the Lord with wisdom and with kindly warning: dispute with them in the kinder manner (xxxvi. 100)." This sentence is repeated by those who have inherited the Book after them (i.e., the Jews and Christians) are in perplexity of doubt concerning it. For this cause summon them then to the faith, and walk uprightly therein as thou hast been bidden ... and say, if whatsoever Book God hath sent down do I believe: I am commanded to decide justly between you: God is our Lord and your Lord: we have our works and you have your works; between us and you there be no strife: God will make us all one; and to Him shall we return" (xli. 14). "Say to those who have been given the Book and to the ignorant: Do you accept Muhammad as a Prophet sent from the Lord of the Worlds. If you do, then ask not of my Lord for guidance; and if they turn away, then thy duty is only praying" (iii. 10).

"Thus God clearly sheweth you His signs that perverseness ye may be guided; and that there may be among you a people who invite to the Good, and enjoin the Just, and forbid the Evil. And know that God is well-acquainted with that ye do" (xxvii. 91 ff.)." To every people have we appointed observers which they observe. Therefore let them not dispute the matter with the Quraysh: Let them say to the Lord, Whom have thou appointed our Guide: and if they dispute with thee, then say: God best knoweth who shall be deluded and who shall be guided. And if any one of those who join gods with God ask an asylum of thee, grant him an asylum in that order that he may hear the word of God; then let him reach his place of safety" (xix. 6).

Further, the faith of Islam was to be preached to all nations, and all mankind were to be summoned to belief in the One God.

"Of a truth it (i.e., the Qur'an) is no other than an admonition to all created beings, and after a time shall ye surely know its meaning" (xxviii. 76 ff.). This book is not other than an admonition and a clear Qur'an, to warn whoever liveth (xxvi. 97)." With an allusion to this: they have given us mercy that we created beings (xxvii. 107): cf. also xxv. 1 and xxxiv. 29. "He it is who hath sent His apostle with guidance and the religion of truth, that He may make manifest that wherein the peoples have been divided over every other religion, though the polytheists are averse to it" (iv. 9).

In the hour of Muhammad's deepest despair, when the people of Meecca turned a deaf ear to his preaching, when the converts that he had made were tortured until they died and others had to flee from the country to escape the rage of their persecutors, the promise was revealed: "Who does not raise up a soul among every nation" (xvi. 90).

The life of the Prophet himself presented, for succeeding generations, an example of Muslim missionary activity. When he began his prophetic career, his first efforts were directed towards persuading his own family; his earliest converts were his wife, Khadijah, his adopted children, Zaid and Ali, and some members of his immediate circle. He did not begin to preach in public until the third year of his mission, but he met only with the scoffing and contempt of the Quraish.

In the fourth year of his mission he took up his residence in the house of ‘Ali and there, for the first time, many Muslims dated their conversion from the days when the Prophet preached in this house, which was in a central position, much frequented by pilgrims and strangers. The conversion of ‘Umar b. al-Khattab about two years later was a source of great strength to the little band of Muslims, who now began publicly to perform their devotions together round the Ka‘bah. Though Muhammad continued to teach for ten years, the number of converts remained very small, and an attempt to win adherents outside Meecca, in the town of ‘At-Tali, ended in complete failure; but some pilgrims from Yathrib (or, as it was afterward called, Medina) showed themselves to be more receptive, and Muhammad sent one of his early converts, Mas‘ab b. Umair, to Yathrib to spread the faith in that and neighborhood. It was not successful; in the following year he was accompanied by more than seventy converts in the pilgrimage to Meecca; they invited Muhammad and his followers to join them. They were accompanied by a large entourage that migrated thither in September 622—a date which was afterwards adopted as the beginning of the Muhammadan era. In Medina the little Muslim community gradually developed into a political organism that spread over the greater part of Arabia before the death of Muhammad in 632, and political expediency tended to thrust purely religious considerations into the background; but the proselytizing character of the new faith was not lost sight of, and the Arab tribes that submitted to the political leadership of Muhammad accepted at the same time the faith that he taught. But of distinctively missionary activity there are only scattered notices, and for some time after the death of Muhammad there is a similar lack of evidence of distinctly proselytizing effort on the part of the Muslims during the forty years following the Arab rule over Syria, Persia, N. Africa, and Spain, though in all these countries large numbers of persons from among the conquered populations passed over to Islam, and Muslim influence was conspicuous. A notable exception in the case of the pious ‘Umayyad Khalifah, ‘Umar b. ‘Abd al-‘Aziz (717-720), who was a zealous propagandist and endeavoured to win converts in all parts of his vast dominions from N. Africa to Transoxiana and Sindh.

With the decline of the Arab empire the Muslim world was faced with the task of converting its new rulers. The conversion of the Turks proceeded very slowly; the earliest conversions appear to have been the Turkish soldiers who took service under the Khalifah in Bagdad; there are a few legends of proselytizing efforts in Turkestan, but the history of the conversion of the Turkish tribes is obscure, and Islam seems to have made little way among them before the 12th cent., when the Seljuc Turks migrated into the province of Bukhara, and there adopted Islam. The conversion of the main body of the Afghans probably belongs to the same period or a little earlier, though national tradition would carry it back to the days of the Prophet himself.

A more formidable task was the conversion of the Mongols, and here Islam had to enter into competition with two other missionary faiths, Buddhism and Christianity, both of which at the outset met with greater success. The devotions
of the Mongols had brought ruin to the centres of learning and culture in the Muhammadan countries which they overran, and it was only by slow degrees that Islam began to emerge out of the ruins of its former ascendancy, and take its place as a dominant faith. From the latter part of the 13th cent. converts began to be made from among the Mongols, and a new epoch in Muslim missionary history then commenced, in which the relations, causes, and the characters of the Muslims were distinctly prominent. In the profound disorganization which followed the Mongol conquests, the Muslim religion after the flood of the Mongol conquest had poured over them their first refuge had been in mysticism, and the pûr, or spiritual guide, who during this period began to exercise an increasing influence, became of special importance among the proselytizing agencies at work. The first Mongol ruling prince to profess Islam was Barak Khan, who was chief of the Golden Horde from 1256 to 1267; according to one account, he owed his conversion to two merchants whom he met coming with a caravan from Bukhâra; but the conversion of their prince gave great offence to many of his followers, and half a century later, when Uzbek Khan (who was chief of the Golden Horde from 1313 to 1340) attempted to force the Ayyubids aforesaid from Islam, they objected, 'Why should we abandon the religion of Jenghiz Khan for that of the Arabs?' In other parts of the Mongol empire the same language was spoken at one period or another, and more or less fluctuating, and it did not become the paramount religion in the kingdom of the Ilkhâns of Persia until 1296, or among the Chaghatays Mongols until three decades later. The first Muhammadan king of Kâshgar (which the break-up of the Chaghatay dynasty had erected into a separate kingdom) was Tuâqlu Timûr Khan (1347-68), who is said to have owed his conversion to a holy man from Bukhâra, by name Shaikh Jânuâl-Îdîn; but so late as the end of the 16th cent. a dervish named Ishaq Wall found scope for his proselytizing activities in Kâshgar and the neighbouring country, where he spent twelve years in spreading the faith.

The extension of Mongol rule over China gave an impulse to the spread of Islam in that country; though in numerous instances had been found in the coast towns from a much earlier period, the firm establishment of their faith in China dates from the 13th cent., and the settlements of immigrants from the west, which were founded from that period down into the present day, attest the close connexion of Chinese Muslims of the present day—through various causes, of which proselytism has been one. The rise of the Mongols was also incidentally the cause of renewed missionary activity in India; Islam had gained a footing in Sind and on the Malabar coast as early as the 8th cent., and in the north after the establishment of Muhammadan rule at the close of the 12th cent., but the terror of the Mongol arms caused a number of learned men and members of religious orders to take refuge in India, where they succeeded in making many converts.

To the period of the Mongol conquests—though in no way connected therewith—is traditionally ascribed the first establishment of Islam in the Malay Archipelago. Sumatra appears to have been the first island into which it was introduced—probably by traders from India and, later, Arabia; but the extension of the new faith was very slow, and even to the present day large sections of the island remained unconverted. The conversion of Java, according to the native annals, began in the 15th cent. and spread from this island into the Moluccas and Borneo. The arrival of the Portuguese and, later, of the Spaniards, in the 16th cent. checked for a time the growing influence of Islam in the Malay Archipelago, and the rival faiths of Christianity and Islam entered into conflict for the adherence of its peoples. But like its place among the Berbers in Africa, Spain, and the Moors in the Iberian Peninsula, the Spaniards and their attempts to enforce the acceptance of their religion ultimately contributed to the success of the Muslim propagandists, who adopted more conciliatory methods for the spread of their faith, internecine warfare having been partially succeeded to their manners and customs. The missionary activity of Islam has been carried on spasmodically in these islands up to the present day—for the most part by traders. From the very nature of the case, there has been little historical record of their labours, and this little is chiefly found in the reports of Christian missionaries. Legendary accounts of the arrival of the earliest apostles of Islam in several of the islands have been handed down, but they are uncreditable and of doubtful historical value.

The history of the spread of Islam in India by missionary effort is not quite so scanty, but it has largely been overshadowed by the absorbing interest of political events; for, though the Indian Muhammadans have produced a large body of historical literature on the subject, the propagandists of their faith in these histories are few. The biographies of saints, however, and local traditions contain many references to a successful propaganda, as authentic and fantastic, there is evidence of the activity of a number of missionaries from the beginning of the Muhammadan period. Among these may be mentioned Shaikh Isâlî, a Bukhâri Sayyîd who preached in Lahore in 1005, Sayyid Nâdir Shâh, the patron saint of Trichinopoly (where he died in 1029), and Abd Allah, who landed in Cambay in 1067, and is said to have been the first missionary of the Munàli Ismâ‘îlî sect (known in India as 'Bolboraïs'). Towards the close of the same century another Ismâ‘îlî missionary, but of the Khoja sect, Nûr al-Dîn (generally known as Nûr Salâqâr), carried on a successful propaganda in the Hindî kingdom of Gujarât. In 1236 there died in Ajmer one of the greatest of the saints of India, Khwâjâ Mu‘âmîn al-Dîn Chishtî, who settled in that city while it was still under Hindî rule and made a large number of converts; ten years later died one of the apostles of Islam in Bengal, Shaikh Jalâl al-Dîn Ta‘âhirî, the forerunner of a long series of missionaries in that province. Of importance in this connexion is the settlement in that part of India of saints of the Suhrawardî order; e.g., to the preaching of Bâhî al-Dîn Zakariyyâ, and of Sayyîd Jalâl al-Dîn and his descendants, many of the tribes of the Panjâb owe their conversion. These are but a few out of the long series of preachers of Islam who carried on a distinctively missionary work, side by side with the various influences, social and political, that contributed to the spread of Islam in that country.

Of the vast history of the spread of Islam in Africa it is not possible here to give more than a brief sketch. For the early period of the African conquest of Egypt and N. Africa, though conversions took place on a large scale, there is little evidence of active missionary effort. The opposition of the Berbers in the west and the Nubians in the Nile valley checked for a time the southward movement of Muslim influences. By slow degrees, however, Islam penetrated among the Berbers, and acquired to a certain extent the land remains unconverted. The conversion of Java, according to the native annals, began in the 15th cent. and spread from this island into the Moluccas and Borneo. The arrival of the Portuguese and, later,
MISSIONS (Muhammadan)

trader, to extend his influence in districts previously closed to him and to traverse familiar ground with greater security.

Throughout the course of Muhammadan history Islam has at times received large accessions of converts for missionary enterprises, wholly unconnected with missionary enterprise, at the same time it has always retained its primitive character as a missionary religion, without, however, having an effective organization to serve as a medium for its expression. Societies for carrying on a continuous propaganda were unknown in the Muslim world before the last decades of the 19th cent., and such Muslim missionary societies as are now found in Egypt and India appear to have owed their origin to a conscious imitation of similar organizations in the Christian world. The most characteristic expression of the missionary spirit of Islam is, however, found in the proselytizing zeal of the individual believer, who is prompted by his personal devotion to his faith to endeavour to win the allegiance to it of others. Though there have been religious teachers who may be looked upon as professional missionaries of Islam, especially the members of the religions orders, it is the trader who fills the largest place in the history of missionary propagandism. The confession or occupation unites the believer for the office of preacher of the faith, nor is any priestly ministrant needed to receive the convert into the body of the faith. Indeed, the social respect for their knowledge of the Muhammadan world, have gone so far as to say that every Muslim is a missionary:

"A tout musulman, quel qu'en soit le propagandiste sensible à l'examen de l'histoire, il (Staunton Sugronje, RIIR IV, [1908] 60). 'The Muslims is by nature a missionary, and carries on a continuous propagand on his own account and at his own cost.' (F. W. Münzinger, Petermann's Mittheilungen, 1887, P. 41).

However exaggerated such an opinion may be, stated thus as a universal, it is certainly true that there is no section of Muslim society that stands aloof from active missionary work, and few truly devout Muslims, living in daily contact with unbelievers, neglect the precept of their Prophet:

'Summon thou to the way of thy Lord with wisdom and with kindly warning' (Qur'an, xvi. 126).

Even the Muslim don, on occasion take the opportunity of preaching his faith to his captors or to his fellow-prisoners. The first introduction of Islam into Eastern Europe was the work of a Muslim juriscult who was taken prisoner, probably in one of the wars that took place between the empire and its Muhammadan neighbours, and was brought to the country of the Pechenga (between the lower Danube and the Don) in the beginning of the 11th cent.; before the end of the century the whole nation had become Muhammadan. In India, in the 17th cent., a theologian, named Shaikh Ahmad Mujaddid, who had been unjustly imprisoned, is said to have converted several hundred idolaters whom he founded in the prison. Women as well as men are found working for the spread of their faith; the influence of Muhammadan women is noticeable in the wives making itself felt in the conquerors, especially the wives of Christian princes, who had to pretend a conversion for the occasion of their marriage, brought up their children in the tenets of Islam and used every means to spread their faith. In the present day the Tatar women of Kazan are said to be zealous propagandists for their government and administration, and by facilitating communication by means of roads and railways, they have given a great stimulus to trade and have enabled that active propagandist, the Muslim

...
MISSIONS (Zoroastrian).—Zoroastrianism began as a distinctly missionary religion. Accord-
described as ‘desired sāra’ (dūvra-fvris-a [V. xv. 17]). On the other hand, the missionaries sometimes encountered opposition, as when Kereši sought to suppress them, but was driven from his kingdom by Hoonus, iv. ix. 9. It is, though the present writer is inclined to regard this account as an Iranian reflex of a Vedic myth, the rôle of the hero being reversed, as is the case also in certain other passages, from the point of view of older Iranian unity.  

When, in like manner, the Pahlavi Škand-gāmānīk-Vijār states (x. 67 f.), that the sons of Všaṣa ‘even wandered to Artim [the Byzantine empire] and the Hindus, outside the realm, in propagating the religion,’ the tradition of missionary activities in these countries (on which see Jackson, pp. 85-90) deserves no credence, and equally apocryphal is the statement of the Diskart (SBE xxxviii. p. xxii.) that the Avesta was translated into Greek. 

From the close of the Avestan period to the dynasty of the Sassanids (224-651), there is almost a blank in the history of Zoroastrianism, for neither Seleucids nor Parthians seem to have taken much interest in the religion.  

Nevertheless, there was considerable diffusion, if not of orthodox Zoroastrianism, then of Zoroastrian teachings. We have already had occasion to note the spread of Iranian concepts in Cappadocia as shown in the month-names of that country (art. CALENDAR [Paris, 1937]);  

And the extensive amalgamation of Semitic and Iranian religious ideas is revealed by a Cappadocian Aramaic inscription of the 2nd cent. B.C. (M. Līdzbarski, Epigraphie du Monde Orient, ii. [1892] 67-69), which runs as follows: 

‘Thou, my sister, art very wise, and fairer than the goddesses; and therefore have I made thee wife of Bīl (O).’ 

The reference to xuatu:natu:nhta (so as Markan, Zoroastrian, § 2 is also of interest.  

An inscription of Antiochus i. of Commagene (1st cent. B.C.) at Nimrud Dāgh is of much value as the expression of the religious fervour of a prince who traced his lineage on the paternal side, to the Achemenians themselves, and also as showing the character of a late Zoroastrian cult in a foreign land. The relevant portions of this text (ed. most conveniently by Dittenberger, in Numismaticzorum. Greek inscriptions, selected, Leipzig, 1905-06, no. 333 [539-543] and plates xiv.-xxiv.; also F. Camont, Textes et monuments figurés relatifs au culte de Zoroastre [Paris, 1893-95], i. 11, 253, 255, ii. 99-91, and below, p. 754)  

1 considered plu (fire-altar) not only the strongest foundation of all, but even when it was not possible to pay attention to, and held it to be the criterion of every Zoroastrian, in order that the fire should be maintained, but that the fire be preserved both of fortunate power and of blessed usefulness (apart from the spiritual irrigators and aparat rethys aparat rethys); throughout my life I was seen by all to deem holiness (kīvāra) both the most faithful guardian and the inimitable delight of my kingdom’ (1:19); and to this all his success during a long and hazardous career was due. When he ascended his ancestral throne, he appointed the king of the Persians and the king of the Indians for all the gods (kuvantu watthu vātthu [V. xvi. 20]). Dittenberger, adored the images with every device according to ancient Persian and Greek regulation, and in the presence of these Masonic lustral bathes (μασενικά μύρων έτελεῦσαν καὶ μασενικά ἤλευσαν ζεύγος μύρων τῷ Κέλαρι γραφχαίνοντα κατά τοῦ Κέλαρος ἀλατολογίον θεωρούσαν θεία καὶ παραγεγράφον τέκνα [30-31]). He was not, however, content with this. Having determined to found a mighty monument to the gods, he fixed the lustral baths (μασενικά μύρων) where, after he had sent his soul ‘to the heavenly threshold of Zoro Oromine, one of the two beings’ (μασενικά μύρων) he called upon to guide him in his eternal career. ‘If there be no spot of the common investment of all the gods, who were invested in token of his pious (54-60). He made every provision for the upkeep of the shrine, the priests of which were to wear Persian vestments (71 f.). Besides the sacrifices enjoined by old and new custom alike, he directed that the anniversary of his birth and of his coronation be observed annually, and that in each month the priests should commemorate the days—the 16th and the 10th—on which the gods had caused these two events to take place. All this is safeguarded by a law which ‘my voice spake, but the mind of the gods ratified’ (121 f.).  

At the festival the images of the gods should be clad in Persian fashion and he crowned with golden diadems (123-129); incense and perfumes were to be offered (141 f.), and an abundant feast should be provided (142 f.). The service at these banquet was performed by hvorakulu (p. xvi. i.), who, with the king and his children, were invited to partake of the banquet and the feast was also the villages, etc., dedicated for the maintenance of the shrine (190-220); and the inscription closes with the hope that the deities of the temple will follow him into his next life and bestow blessings on those who observe his will and curses on those who seek to impiously violate his monument.  

Accordingly, for the same inscription which begins in closely similar fashion see Dittenberger, v. 493 (I. 251).  

According to a section (ch. xxxvi. [cxxxix.]) of the Bhāṣya Porucā written after the middle of the 6th cent. A.D., priests called Magas were brought from Sākṣkakūla of the old Pārsi priesthood, to serve the Sākṣkakūla temple. This is scarcely to be construed as Iranian propaganda; for the function of these foreign priests see art. BAKTIAN AND MAZDAISM (iii. 3, chs. x.; H. B. Spohrer, A Translation of一部分 the Sanskrit Language, 1905, pp. 405-406.  

With the rise of the house of Sāsk Zoroastrianism not merely revived, but again developed a markedly missionary spirit. According to the Diskart (ed. and tr. F. B. and D. P. Sanjana, Bombay, 1574 ff., vol. x. p. 12); Abura Mandae, commends that the faith be spread through the world; and in elucidating the meaning of Av. frazarvnde, ‘I profess,’ the Pahlavi commentators add that every Zoroastrian endeavour to propagate the religion among all mankind, while the highest praise attaches to the qonaim non-believer who renounces his former tenets in favour of Zoroastrianism (SBE xxviii. 1882).  

1 Cf. art. Indo-Aryan and Indo-Iranian (Persian). The term ‘lustral baths’ (aparat rethys) looks very like a literal translation of Av. yâzatša, ‘purification’; panegyric, of individual deity. 

2 The Modern Sanskrit may possibly translate Av. rva sharkan.  

3 For the brief and formal inscriptions in all these Dittenberger, nos. 398-399 (604-606).
MERELY ACADEMIC ATTITUDE IS AMPLY PROVED BY THE RECORDS OF PERSECUTION OF THE CHRISTIANS BY THE SASANDI RULERS IN PERSIA. THE Pahlavi portion of the Tehran Fine Arts Museum (Tehran, Bombay, 1894, fol. 16, 17) bears witness to the admission of proselytes, and the Pahlavi Matigim-i-Hazar Dastistan (ed. J. J. Moll, Poona, 1901, p. 1; tr.談 von der Morgen, E. P. 1898, 1899) states that a slave belonging to a Christian should be ransomed by Zoroastrians from his master if such a slave embraces Parsism, though he is not to be set free if he becomes a Zoroastrian together with his master.

During the period under consideration there was some extension of Zoroastrianism in China (cf. Jackson, pp. 278-280), though no details are thus far known. A few Arab discoveries made by M. A. Stein, A. grinwedel, A. von Le Coq, and P. Pelliot in Turkestan, where Buddhist, Persian, Turki, Greek, and Chinese ruins, which were not superseded by the Christians, or their conquered auxiliaries, or even by the sect of the Christians, and he deprived them of their property and monopoly, found it impossible to be induced to become apostates by money and high rank, saying, 'Oh that you would but receive the doctrine of the Magi into your souls! Oh that you would but exchange the livery of yours souls for the true and excellent laws of our gods!' The Magi exorted him, if he would prove his gratitude for his power and his victories, to make Zoroastrianism dominant everywhere. In the course of his endeavours the Zoroastrians promised an interesting Zoroastrian state of theology, to which the Christians replied (p. 11-20). The persecution provoked a reaction. skrive all, each of whom, under different circumstances, as well as from his own point of view, has realized the need for a realization of the racial characteristics and distinctive features of their community.

In the atmosphere of which it was felt that their own safety lay in enunciating their faith in words, this was a considerable period made impracticable for them to keep up their former proselytizing zeal. The instinctive fear of disintegration and absorption by the vast masses in which they lived created in them a spirit of exclusiveness and a strong feeling for the preservation of the racial characteristics and distinctive features of their community. Living in an atmosphere well-known with the Hindu caste system, they felt that their own safety lay in enunciating their faith in words.

Nevertheless, a certain amount of proselytizing continued as late as the 18th cent., especially in the case of slaves purchased from low-caste Hindus. Such procedure, however, instead of being welcomed as extending the faith, aroused hostility on social grounds, some Parsis being unwilling to permit such converts to prepare sacred cakes (druma) for the festivals or to allow the proselytes to be exposed after death on the Parsi 'Towers of Silence.' The question was referred more than once to the Zoroastrians in Parsi, whose replies were in favour of admitting converts. From the broad view of orthodox Zoroastrianism, there cannot be the slightest question that the ruling of the Irans (Persian Zoroastrians) was right. On the other hand, it was felt by the Parsis of India that an influx of low-caste Hindus would be prejudicial to the purity of their Iranian community.

The only cases in which proselytism has been urged in recent years have been instances in which a Parsi has married a non-Zoroastrian wife, who desired to have children born by such a wife, or by a non-Zoroastrian mistress, received into the Parsi community. In all these cases admission has been granted only on the face of intense pressure.

The motives of the converts have been, in practically every instance, wholly, not religious, and the conversions have been purely nominal. Parsis hold that such proselytes are harmful to the faith, and that, if converts are admitted at all, it must be under conditions which put the sincerity of the neophytes' religious convictions beyond suspicion. The Zoroastrian community has no organization for training new converts; the matrimonial opportunities of Parsi girls are limited by the possibility of converting prospective wives of other religions; and the admission of illegitimate children of Parsis is felt to be virtually a condemnation of immorality.

This attitude—so different from that of Zoroaster and of Zoroastrianism until the migration to India—is fraught with grave possibilities to Parsism. The age of monarchy is rising, and the shadow of the iron hand is falling. There is a steady leakage towards agnosticism (not towards conversion to Christianity, Muhammadanism, or any form of Hinduism). Even among those who regard themselves as Zoroastrians there is much laxity. Theosophy (g.v.) is making a form of 'esoteric' Zoroastrianism which can scarcely be reconciled with the Avesta. Some of the radical wing of the 'reforming' party, at the other extreme, rationalize the religion until it becomes a travesty of its real content. Against all this must be reckoned many wisely conservative Parsis, both priests and laymen, but even these, so long as concessions from without are forbidden, they can advance and extend the good religion in a question for the future.

LITERATURE.—M. N. Dahla, Zoroastrian Theology, New York, 1918, together with the work of Rustani Edizzl Dastur Peshzada Sanjana to the writer (5th July 1915).

Mithraism.—The religion generally known by this name, which enjoyed a wide-spread popularity in the centuries immediately preceding and following the Christian era, centred in the worship of Mithra, a divinity worshipped in the Indo-Iranian period by the two most easterly branches of the Aryan race, as is shown by the fact that his name and worship are found among the gods of the Vedic pantheon and in that of Mithra in the early religious poetry of Persia. The name coincides in form with a common noun which in Sanskrit means ‘guardian’ or ‘friend’ and in Avestan ‘compact,’ and it would seem to follow that from the earliest times the conception of Mithra was an ethical one.

1. Mithra in Vedic religion.—In the only hymn addressed exclusively to him in the Rigveda (iii. 59) Mithra is said to ‘bring men together, uttering his voice’ and to watch the tillers of the soil ‘with unwinking eye’—phrases which suggest a solar divinity; and from the numerous hymns in which Mithra and Varuna are conjointly addressed it is abundantly clear that both divinities are manifested in the celestial light. In the Brähmanas, indeed, the view prevails that Mithra represents that light of day, especially that of the sun, while to Varuna belong the ‘thousand eyes’ of night. This seems, however, to be a later refinement, the beginning of a confusion which may be traced in the Atharvaveda, especially tv. iii. 18, where it is said that Mithra removes in the morning what Varuna has concealed. The theory of Oldenberg,1 that the group of divinities known as Adityas, who are said in Rigveda ix. xxiv. 3 to have a seat in the sky or the sun, is borrowed from the Persians by Varuna, is little supported by the facts. The original of Mithra is the sun (Mitra), moon (Varuna), and five planets, and was borrowed from a Semitic race, has little to commend it. It is more probable that Varuna was the supreme sphinx of the Zend world, who is also the sun in the Zoroastrian hymns. In a very ancient incantation, \( \text{V\text{\textordfeminine} \text{\textordfeminine}} \), Mithra the light which proceeds therefrom. Ethically the two gods were probably differentiated in the Indo-Iranian period, Varuna being the supreme upholder of physical and moral order, Mithra the all-seeing witness who guarantees good faith between man and man. This is not so clear in the Vedas as in the early religious poetry of Persia, where the place of Varuna is taken by Ahura Mazda (\( \text{\textordfeminine} \text{\textordfeminine} \) Wise Lord) the word Ahura corresponding to Skr. \( \text{\textordfeminine} \text{\textordfeminine} \) a term which in later Vedic literature means ‘demon,’ but in the Rigveda is applied to gods, more especially to Varuna and to the sun, and is placed in a category of words to have connotations of the possession of occult power.

2. Mithra in Iran.—Among the Iranian peoples the worship of Mithra assumed an importance which it never possessed in India. The early history of this worship is very obscure, owing to the uncertainties which beset the interpretation of the Avestan texts. From the inscriptions found by H. Winckler at Boghaz-keui in 1907, especially the treaty between the Hititte king Subbilius and Mattiuanu, the son of Tushratta, king of Mitanni, it appears that Mitra, Varuna, Indra, and the Nāsītya, or ‘Twins,’ were worshipped in the district of Mitanni in the 14th century B.C. Eduard Meyer (‘Das erste Auftreten der Arier in die Geschichtc,’ *SBA* iv, 1908, p. 14 ff.) regards this fact as a proof that an Aryan community existed in Mitanni in *EB* 1, xxii 290 he suggests that the Aryan in question were a caste ruling over a non-Aryan people. It is, however, uncertain whether

1 These words are connected by etymology with the base *mê/, *mâ/, *mê/s, ‘exchange,’ seen in Lat. *coniungere*, Gk. *ge-meles*, M.H.G. *gemele*, etc.; see K. Brugmann and B. Delbrück, *Grundriss*, Strassburg, 1907 B., lii. 246, and especially A. Meillet, *AJA* x. 1907-143-145.

2 *Rig Veda*, p. 150 ff.

3 Six Adityas are mentioned in Rigveda ii. xxvii. 1, and eight in x. lix. 84.

we should regard them as the ancestors of the Iranians, and even possible (as J. H. Moulton has suggested, *Early Zoroastranism*, London, 1913, pp. 7, 26) that we have here the relic of a pre-historic migration backward from India to the North-West. It is to be observed that the name Varaṇa is otherwise unknown in Iranian texts, whilst Ahura Mazda is among the gods of the Aryan origin of Zoroaster and his descendants. It is suggested, under the form Assana Mazah in an Assyrian list of divinities of about 650 B.C. (published by F. Hommel, *PSBA*, 1889, pp. 127, 138), and had, no doubt, been borrowed from an Iranian people at a considerably earlier date. To the 12th century B.C. period belongs a tablet from the library of Assurbanipal in which Mithra is identified with Shamash (R. iii. 69, 5, 1. 72). Our next evidence dates from the Achæmenian dynasty. The inscriptions of Cyrus it is true, throw no light on his worship of Iranian divinities, and Darius 1. mentions Ahura Mazda only; but the evidence of epigraphic names (*Mitra*- *Yasa*—*Herod*. i. 110, 121, *Mazda*- *Sar^s* [ib. iii. 129, 126, 127], and, earlier still, *Mazdyasna*, if this is the correct reading, in *Aesch*. *Pers*. 42) makes it plain that Mithra was prominent in the Persian pantheon, 1 which bore the same name as the Persian *Apadana*. (425-350 B.C.) as names as his divine protectors Ahura Mazda, Anahita, and Mithra (*Art. Sus. a.* 4, 4, *Ham*. 5 ff. [O. Pers. text]). The cult of Mithra with the goddess Anahita is also attested, in the inscription which proves the existence of Herodotus is guilty in the passage (i. 131) in which he describes the Persian religion, and identifies Mitra with the ‘Assyrian’ Myllitta (an appellative of Ishtar).

3. Mithra in Rome.—We have seen that there was no need to next consider the position of Mithra in the religion of Zarathushtra. Adopting the position (1) that the *Gathas* go back to the time of the Prophet himself, and that this was the original (and very possibly earlier) than the traditional date (7th cent. B.C.), and (2) that the *Yodhast*, at any rate as regards the metrical portions, are not many centuries later, we see that the Mithraism mentioned in the former, and was ignored by Zarathushtra in his reform. It may even be possible to go further, and to hold that the Prophet regarded him as a *dämag*, i.e., a demon, whose worship was to be banished from the pure faith. In *Ys*. xxii, 10 we hear of the teacher of evil who ‘declares that the Ox and the Sun are the worst thing to behold with the eyes,’ which may perhaps point to a connection to the nocturnal demon (that is to say to bull) by Mithraists; and it is also possible that the Ox-Creator (*Gûnd-i-Asaxan*) named in *Ys*. xxix. 2 was a substitute for Mithra devised by Zarathushtra. These are only conjectures; but we shall find in later Mithraic ritual abundant proofs of the survival of primitive conceptions such as Zarathushtra endeavoured to eradicate. It is not necessary here to discuss the difficult questions relating the measure of success attained by the Prophet’s reform and the origin of the counter-movement (perhaps Magian) which restored the more primitive worship. It may be worth mentioning, however, that in the Persian calendar, which there is reason to think (on astronomical grounds) was introduced into Cappadoicia by Darius 1., the names of the months are derived from divine names, which indicates those of Zoroastrian

2 A popular account of the present state of the question will be found in J. H. Moulton’s *Early Religious Poetry of Persia*, Cambridge, 1907, and for further details see the same author’s *Early Zoroastranism*.

3 Moulton, *Zoroastranism*, pp. 129, 357.

4 See exsursum, ib. p. 430 ff.
(but not Anahitta) and the six Amesha Spentas (or Amshaspands), which are among the most characteristic features of Zoroastrianism properly so called. For our knowledge of Mithra-worship among the Persians we naturally turn to the Mithraeum, which Eng. tr. in SBE xxiii, (1883), by J. Darmesteter, more accurately in German by F. Wolf, Avesta . . . übersetzt, Strassburg, 1910, pp. 198–221. The opening lines of the poem show clearly the high position enjoyed by Mithra, although, as a yazata (‘adored one’) he stood technically on a lower level than the six Amshaspands of Zarathushtra’s creed.

The Yazdah speaks with no uncertain voice either of the physical or of the ethical character of the god:

1. The first of the spiritual Yazatans, who rises over the Mountain before the immortals, sun, driver of swift horses; who foremost attains the gold-tipped, far exceeding, whom he surveys the whole dwelling-place of the Aryan, he, the most mighty (Yt. x. 10).

The sky is neither the sun himself nor any individual object, but the heavenly light in general, and it suits well with the recurring formula of the hymn:

To Mithra, the lord of wide pastures, we sacrifice, the truth, speaking, eloquent in assembly, the thousand-eared, the shapely, the myriad-eyed, the exalted, (lord of) the broad book-out, the strong, the valorous, the wise, the great, the mighty, the mighty, he, the most mighty.

2. Here the ethical and the physical are already combined; and in the second stanza of the hymn the god and the ‘promise’ or ‘compact’ over whose fulfillment his watch is almost identified: for Zarathushtra is thus addressed by Ahura Mazda:

Break not the compact (milhem), whether thou make it with the faithful fellow-believer, for Mithra stands for both, for the faithless as for the righteous.

Throughout the Yazdah the invincible might of Mithra is invoked against the mithra-drauj, which may be translated either ‘deceiver of Mithra’ or ‘promise-breaker’. It is this guardianship of truth and good faith that gives Mithra his special character; but he is also invoked, like other divinities, as the protector of the needy.

whom the poor man, who follows the teaching of righteousness, when wronged and deprived of his rights, with uplifted hands and with the (Yt. x. 34), and his aid is sought in both worlds, in this world of the body, and in the world of the spirit (40, 93).

The last stanza may remind us that among the functions of Mithra was that of assisting the souls of those departed in the faith on their journey to Paradise.

He is implored to ‘be present at our sacrifice, come to our illusions . . . hear them for atonement, lay them down in the House of the Fire’ (Yt. x. 35).

It is natural, therefore, to find as his companions Sraosha (‘obedience’) and Rashan (‘justice’), who, in later Zoroastrianism, are found beside Ahura Mazda in the Final Judgment. In the Yazdah, however, they figure as his henchmen in the great struggle between the powers of light and darkness.

Mithra strikes terror into them, Rashnu strikes a counter-terror from them, Sraosha draws them together from every side toward the protecting angels (Yt. x. 41).

Throughout the poem Mithra appears as pre-eminently a god of battles; he was, therefore, especially fitted to become, as he did in later times, the favourite deity of the Roman soldier. Of the

1. Haran beryastai is the name elsewhere applied to the peak upon which Ahura Mazda the Creator established, for Mithra a dwelling where is neither light nor darkness, nor chill wind, nor heat, nor death-dealing sickness; not polluted, nor purged by demons, nor do miseries thereof (Yt. x. 50). To the franks this meant Mt. Alburz.

VOL. VIII. 15
MITHRAISM

the purified spirit to the sphere from which it came, we may believe to be characteristically Iranian; to Chaldean we shall attribute the elaboration of the astrological dogmas connected with the beginning of the planets in the soul in its passage through their spheres, and the prominence given to the conception of Destiny as revealed in the unchanging order of the heavenly phenomena, derived on this account from the authoritative teaching of the Zoroastrians, the adoption of which was necessary corollary of these doctrines; but its acceptance in theory did not prevent Mithraism from becoming an intensely practical cult in full of stimulus for the activity of the individual.1

(b) In Asia Minor.—It is much more difficult to say what was the effect upon Mithraism of its diffusion throughout Asia Minor.2 We have no contemporary evidence for the stages by which this took place, but it is at least probable that the later Achaemenian kings, who were, as we have seen, ardent votaries of Mithra and Anahita.3 Artaxerxes Ochus is said to have erected statues of the goddess in many places—established the worship of these divinities in the outlying portions of their dominions.4 It was not long before they became assimilated to those which were indigenous to the land; Anahita was readily identified with the Great Mother whose worship was so deeply rooted in Anatolia (see art. MOTHER OF THE GODS), and thus the creed spread for Mithras and Cybele (q.v.). Mithra himself took the shape of Men in Pontus (see below), and was assimilated in art with Attis (q.v.), in spite of the profound differences of nature and function between the two. More than this we can hardly say, for the primitive features of Mithraic ritual, to be considered later, were not necessarily borrowed, but may go back to the Iranian antiquity. The taurbolium, however, is believed by Cumont (i. 334 f.) to have been taken over by Mithraism from the cult of the Great Mother. The propagation of Mithraism in the West had its political as well as its religious side. One of the earliest conceptions of Iranian religion was that of the ‘glory,’ or hvarenə.4 This was conceived as a kind of mystical effulgence or aureole derived from the heavenly light, and possibly borrowed of some of its features from the widely diffused conception of the external soul. In the story of the Fall, embodied for the Iranians in the myth of Yima, sin entailed the loss of this property; and in the Sāt Yast (the, dash-hvarenə, ‘he of evil glory,’ is the meaning who thinks that Mithra sees not all his evil deeds and lying’ (YT. x. 108). But the hvarenə was more especially the talisman of the royal house of Iran, and as such is the main subject of an entire Yast (YT. xix.), which deals with those who have or will possess it, beginning with Ahura Mazda himself and ending with Sassanian, the future deliverer of the world from evil, but giving in the main, as Darmesteter points out (SBE xxiii. 296), ‘a short history of the Iranian monarchy, an abridged Shāh Nāmāh.’ Historically, therefore, the hvarenə is of the most ancient Mithraeum and the talisman which gives victory over the Taranian. Naturally enough, the Near Eastern dynasties which sprang from the wreck of Alexander’s empire were anxious to secure this token of legitimacy, and were therefore ferve of Zoroastrians, the ‘spiritual Yasat, who rides through as the Karshu, bestowing the hvarenə’ (YT. x. 10). The prevalence of this conception is but thinly veiled by the disguise which the hvarenə attained among half-Hellenized Mithraeum,4 the coeval theory of the Univer-
sal Monarch to be established on earth (Helm. 740). It is, however, as the Onomasticon of the Hellenistic monarchs that the Hellenization of Mithraism, which was the indispensable condition of its further diffusion, was brought about. In the case of the commemorative monument is the enormous cairn set up by Antiochus I. of Commagene (60-35 B.C.) on the tumulus of Nimrud Dagh, on either side of which was a terrace with identical series of five statues.5 These, as the king tells us in his inscription, represented (1) Zeus-Oromasdes (= Ahura Mazda), (2) Apollo-Mithras-Helios-Hermes, (3) Artagnes-Hernakes-Ares (= Verethragna, ‘victory’), (4) Commagene, (5) Antiochus himself; of the last the king says that by setting up the fashion of his own form he has ‘caused the honour of ancient deities to be conferred on a new Teos.’5 The identification of Mithras and of the later Apollo ——illustrates the elastic methods of syncretism; Hermes is probably chosen as the guide of souls in the world beyond the grave, and, at the same time, it is the Sun-Pontus with whom he was assigned to him (in common with Apollo) by the Greeks, since Antiochus was a convinced astronomer and has left us his horoscope in relief on the retaining-wall of the terrace erected by Mithras is also, as so often later, identified with the sun himself. Antiochus’s father, it may be added, was one of the numerous bearers of the name Mithradates, and another of the relics of this triumph over the right-hand of Mithras, represented in Persian costume with the radiate nimbus. This grouping of the god with the ruler whom he protects is a motive which recurs in various quarters, especially, as M. I. Rostovzew4 has shown, in Scythia. On the coinage of Trapezus (Cumont, ii. 189-191) Mithras, in Persian costume, appears on horseback—in one instance flanked by the figures of Catos and Cantopes and, in another, with a cire of the zodiac and the sun.6 A notable example is the silver lytron from Kargodeouanshi,3 where Mithra, holding sceptre and drinking-horn, is faced by a Scythian prince, also mounted, who uplifts his right hand in the gesture of adoration.

5. Contact with Greece and Rome.—It was in Asia Minor that Greek art was enlisted in the service of Mithraism and created the sculptural types which were diffused throughout the West, and form the chief source of our knowledge of the cult. The group of Mithras the bull-slayer, to be described presently, though ultimately inspired by the bull-slaying cults (see below), is a new creation, and the art which sprang from it is not found, e.g., at Delos, where so many foreign cults flourished in the later Hellenistic age, its form and style of the chief source of our knowledge of the cult. The group of Mithras the bull-slayer, to be described presently, though ultimately inspired by the bull-slaying cults (see below), is a new creation, and the art which sprang from it is not found, e.g., at Delos, where so many foreign cults flourished in the later Hellenistic age, its

1 Astral theology as a system is foreign to the Avesta; the worship of Tištaya (=Siris) to whom YT. viii. is addressed forms no real exception to this rule. Of the constellations only the seven identified in the Zend texts (YT. vi. 712).

2 That Mithraism came to Asia Minor from Semitic sources is proved by the Greek-Aramaic bilingual inscriptions of Cappadocia, in one of which (from Rostovzew’s Periasth) a Persian record how he bpwymen àuioy (Compendium de Andrea, des inscriptions, 191), says this man was named in the royal list by the first names of his parents (see below), and by the fact that the form Mayuravsan is a transliteration from the Aramaic.

MITHRAISM

traces are rare (and generally of Imperial date) throughout the Hellenized East, in Syria, Egypt, etc. Even in the 2nd cent. A.D. Lucian writes of Mithras as a barbarian god, οὐδὲ ἐλληνικῷ τῷ φαντῷ (Deorum Conc. 9).

Mithras is said by Plutarch (Pomp. 24) to have been brought to Rome by Cilician pirates taken captive in 67 B.C., and there is no reason to doubt the statement; but it certainly fails to account for the popularity already attained by some other Oriental religions until almost the close of the 1st cent. after Christ, for the earliest Mithraic inscription as yet found in Rome was set up by a freedman of the Flavian dynasty (CIL vi. 732 = Cumont, ii. 101 ff.), and, although the British Museum contains a statuary group of Mithras and the bull dedicated by a slave of Ti. Claudius Livianus, prefectus praetorio in A.D. 102 (Cumont, ii. 229; cf. 106), Mithraic monuments and inscriptions do not become common in the West until the Antonine period.

6. Diffusion in the Roman world.—(a) By the army.—The diffusion of Mithraism was largely the work of the army. Pontus, Capadocia, Comagena, and Lesser Armenia—precisely those regions in which the specialized form of the cult had been developed—were already included among the provinces conquered by the Romans, even while as yet only oriental kingdoms of the empire, and still more when they were annexed and became provinces. During the Parthian wars under Claudius and Nero, Mithraism spread in the Orient very largely because of the services of the army, and, as we must assume to be the case, largely as auxiliaries, but also in the legions. Whether or not the soldiers of the Third Legion, which saluted the rising sun at the second battle of Betliracum (A.D. 69) were Mithraists, it is at least certain that the Fifteenth, which served in the Parthian wars of Nero and was transferred by Vespasian to the Danube, brought the cult of Mithras to its camp at Carnuntum in A.D. 71. Another important centre of the cult in the same region was Aquincum, the headquarters of Legio II. Adjutrix, founded by Vespasian from the sailors of the Ravenna fleet, who, as free men, were doubtless in many instances of Oriental birth. But the wide spread of Mithraism on the frontiers was largely due to the auxiliary corps—cohors and cohors—raised in the East under the Flavian and succeeding emperors, and transferred to the Danube and the Rhine or the Vallum in Northern Britain. Except for a relief found in London (Cumont, ii. 389 f.), all the Mithraic monuments and inscriptions found in Britain belong either to the legionary camps at Isca (Caerleon-on-Usk [CIL vii. 99 = Cumont, ii. 160]) and Eloracum (York [Cumont, ii. 391 f.]) or to the forts on or near the wall, such as Bovericium (Housesteads [CIL vii. 645=650 = Cumont, ii. 161, 293-306]), Amboglianna (Birdsowd [CIL vii. 381 = Cumont, ii. 162]), Breminium (High Rochester [CIL vii. 106 = Cumont, ii. 102]), Vinidadala (Rutchester [Cumont, ii. 392 f.]), and others. So, too, in the Two Germanies the sanctuaries of Mithras (with some few exceptions) are found either in legionary camps, such as Vetera Castra, Bonna, and Moguntiacum (Cumont, ii. 389, 383 f., 391-398), or in the forts along the line of marching (CIL vii. 683-685 = Cumont, ii. 161, 293-306), Amboglianna (Birdsowd [CIL vii. 381 = Cumont, ii. 162]), Breminium (High Rochester [CIL vii. 106 = Cumont, ii. 102]), Vinidadala (Rutchester [Cumont, ii. 392 f.]), and others. So, too, in the Two Germanies the sanctuaries of Mithras (with some few exceptions) are found either in legionary camps, such as Vetera Castra, Bonna, and Moguntiacum (Cumont, ii. 389, 383 f., 391-398), or in the forts along the line of marching (CIL vii. 683-685 = Cumont, ii. 161, 293-306), Amboglianna (Birdsowd [CIL vii. 381 = Cumont, ii. 162]), Breminium (High Rochester [CIL vii. 106 = Cumont, ii. 102]), Vinidadala (Rutchester [Cumont, ii. 392 f.]), and others. We have already mentioned the military sites at Carnuntum and Aquincum, the Upper Danube, as centres of Mithraism; the same might be said of practically every important post on that river down to its mouth—e.g., Vindobona, Brigetio,

Viminacium, Osessa, Durostorum, and Troesmis (ib. i. 363, ii. 329, 375, 130, 491 ff., 372), to name the principal centres. In Africa also the camp of the Third Legion at Lambesis, and several military posts, such as Massalia and Siliaef (ib. i. 165, 170, 465 f.), have furnished Mithraic inscriptions, and in the countries where traces of Mithraism are relatively rare they are often found in the colonies of veterans—e.g., Emerita (Merida) in Spain (ib. ii. 160) and Patras in Greece (ib. ii. 161). (b) By slaves.—Next in importance to the army, in the diffusion of Mithraism, came the slave population employed by the State, the municipalities, or private individuals. The first class comprises especially the employés of the custom-houses and the State-properties, such as mines and quarries. Thus in the Danubian provinces, especially Dalmatia and the Pannonias, the stations of the customs-barriers at which the vicipal Illyrici was levied have furnished a number of Mithraic dedications, due to slaves and freedmen in the public service, several of whom bear Greek names and were, therefore, doubtless natives of the Eastern provinces. Again, the presence of numerous Mithraic monuments in Noricum (ib. ii. 150-152, 335-338, 472) is accounted for, not so much by the military force as by the station of Comacina, although the station of Comacina, which clearly takes its name from an auxiliary regiment, forms a natural exception—as by the mines owned by the Imperial estate in that province. Another centre of the municipalities contributed largely to the spread of the religion. At Sentinel, which has yielded an inscription (CIL xi. 5737 = Cumont, ii. 121) giving a list of thirty-five patroni of a Mithraic congregation, the slaves and freedmen of the municipality figure side by side with ingeni; a slave employed as arcarius restored a Mithraeum (CIL ix. 410 = Cumont, ii. 120). It goes without saying that private slaves—especially in the households of the wealthy in Rome itself—played a large part in the spreading of Mithraism.

(c) By trade-routes.—We may in part trace the importation of the spread of Mithraism along the trade-routes which were in communication by sea with the Eastern Mediterranean, though doubtless the merchants themselves were often worshippers of Mithras. Thus in the African provinces, apart from the military, in the first half of the 3rd cent. the only traces of Mithraism are to be found in such coast town as Cesarea, Cirta, or Rusadice (Cumont, ii. 171, 163, 170, 400 f.); in Southern Gaul we can trace the presence of Mithraeum in the spread of the cult on the trade-route which followed the valley of the Rhone and in the towns of Narbonensis, which were always open to transmarine influence from their nearness to Massilia; and Aquileia, whence the trade of the Mediterranean found its way into Central Europe, was itself both a centre of Mithraic worship and a stage in its further diffusion. It is thus, e.g., that we must explain the remarkable prevalence of Mithraic monuments in the upper valley of the Adige and on the Brenner route to the Upper Danube, as well as on the North-Eastern route via Emona and Postumia. No province of the empire is richer in remains of Mithraism than Dacia, where all the principal sites—Sarmizegetusa, Apulum, Nopoca, Potissa, etc. (Cumont, ii. 131-139, 230-236, 308-319)—have furnished material of this kind. We can hardly explain this entirely by the influence of the army which occupied Dacia and the neighbouring Danube provinces, and are forced to conclude that among the settlers planted by Trajan in the

1 Four out of twenty-six, according to Toutain (see below, p. 780).
MITHRAISM

province and drawn 'ex toto orbe Romanse' (Entrop. viii. 6) were many Orientals who brought with them their native faiths, among which the worship of Mithras soon assumed a commanding position.

7. Geographical and social distribution.—The geographical distribution of the monuments of Mithraism may most easily be grasped by an examination of the map which accompanies Cumont's volumes, upon which the sites, when they have been discovered, have been marked. It will be seen at a glance that, except in the places and districts of which mention has already been made, traces of the cult are few and far between. In Greek lands, in Western Gaul, and in Spain, taken together, the sites where its monuments have been found may almost be counted on the fingers. Hence Toutain1 has argued that the cult of Mithras never became widely diffused in the West, outside the army and certain regions in direct communication with the East, and that the notion that it was at one time not far from achieving the triumph which was reserved for Christianity is much exaggerated. Toutain leaves out of account Rome and Italy—which makes his presentation of the evidence one-sided. But he endeavours to reinforce his argument by a consideration of the social condition of the worshippers of Mithras. At any rate, two points are unjustified; the first is the assertion that the dedicatory sculptures of the builders or restorers of Mithraic sanctuaries are very largely drawn from the official classes and professional warriors, military commanders, or procurators, etc., employed in the civil administration. As early as the age of the Antonines we find leguni and tribuni militares among the votaries of Mithras in the reign of Commodus, M. Valerius Maximianus, governor of Dacia, dedicates an offering to 'Sol invictus Mithras' (CIL vii. 1122 = Cumont, ii. 133); under Septimius Severus, C. Junius Balbinus, governor of Carthage, consecrates an altar to Mithras (CIL viii. 485 = Cumont, ii. 141), and the number of similar instances is multiplied in the 3rd cent. after Christ, while imperial procurators in Noricum and Dacia follow their example. It would be natural to infer that Mithraism was at least favourably regarded by the government; and, in fact, we learn from the Historia Augusta (cap. 9) that Commodus intended to extend the jurisdiction of the Mithras cult to the whole empire, and that Caracalla, in this was found an inscription in honour of Zeus-Helios-Sarapis-Mithras, and this unusual identification is explained by Caracalla's special devotion to the Egyptian divinity. This imperial patronage goes far to explain the popularity of Mithras-worship in the 3rd cent.; it also accounts for the fact, that, though by no means confined to the public services, military and civil, it was mainly found among their members and took no general hold on the population of the western provinces, so that the withdrawal of imperial favour was a fatal blow.

8. Origin of initiation.—Our knowledge of the doctrines and ritual of Mithraism is largely drawn from the inscriptions and monuments discovered in the Mithraeum, to the interpretation of which something is contributed by ancient texts, especially those of Christian apologists. The most important of these is a passage of St. Jerome (Ep. evii.), who describes the destruction of a 'cave of Mithras' and the 'monstrous image of the bull'; an inscription of one of the votaries, who are enumerated as follows:

Corax, Gryphus (MSS syriacus or syriacum), iocis, leo, Persos, helioudromus, pater. These names are naturally taken to indicate seven grades through which the neophyte passed in succession; and this is confirmed by other texts. The inscriptions found in a Mithraeum in Rome (CIL vi. 749 = Cumont, ii. 391) mention ceremonies described by the words 'apotelesmata,' 'retrocessus,' 'isognosia,' 'persica, heliaca, patrica'; the adjectives clearly correspond with five of the grades mentioned by St. Jerome. We find also ostenderunt (or tradi- dentur) of St. Jerome, and they correspond to the equivalent to εὐφωνος, and has been substituted for the corrupt νημύθης in the text of St. Jerome. The title pater (or pater potrnum) for the highest grade is common in inscriptions; and a passage of Porphyry refers as follows to the others:

Τοὺς μὲν μειγδότας τῶν ἁγίων ἑρμηνίας μίσχων κλητοὶ, τις δὲ-γυμνοὶ νικῶν, τις δὲ εὐθυμητρίαν κοιψών: ἐπὶ τῆς τετραγωνίας... ἐκεῖνος καὶ ἑρμηνίας αὐτοῖς προσθηκόμεθα χρῶν μιράμισι (Or. De Antro Nymp. 15). The mention of ἔφωνος is preserved by St. Jerome (cf. Bonner Jahrb. für Philologie 1902, p. 12). Porphyry, it will be noticed, speaks of the animal disguises worn by the loaves. In the Questions veteres et nosti testamenti largely attributed to St. Augustine (PL xxxv. 2438) we read how 'some flap their wings like birds and imitate the voice of the crow; others roar after the manner of lions'; and the passages quoted are strikingly illustrated by a relief found at Konjíca, in Bosnia, carved on the reverse of a slab which shows the usual subject of Mithra the bull-slayer (see below).

In the centre of the scene are two figures reclining on a couch, in front of which is a table with four loaves marked with a cross; beside the table are seen a lion and a hircinum. On either side are two figures; on the left a νημυθυς, i.e. a man wearing the mask of a crow, and a 'Persian,' distinguished by his dress; to the right a lo, wearing a lion's mask, and a figure with the upper part of which is a horse. In the centre of the table is a bull represented by a crown; and the bull, though he belonged to the rank and file of Mithraeum's soldiers, was not admitted to the mysteries. The mysteries were initiated by a ceremony described by Tertullian (de Corona, 16); a crown was set before him, interpeciand platic, and then placed on his head, but removed by the neophyte, who explained Mithra is my crown.

In the passage previously quoted Tertullian speaks of a soldier of Mithras as 'branded in the forehead!'; and the καρακτήρ φυσικῆς which Gregory of Nazianzus speaks (Orat. iv. 70 [PG cxxxiv. 652]) may refer to this. Terullian mentions a Mithraic purification 'per lavamen' resembling the rite of baptism; and it is to be noted that the Mithraeum which have been excavated either contain natural springs or have been specially laid on. Of the ceremonies which accompanied the higher degrees of initiation we know little; Porphyry (loc. cit.) tells us that the Leo had both hands and tongue purified with honey, which was also used in the 'apotelesmata,' in the initiation of the votaries, as is evident from the phrase quoted above of Gregory of Nazianzus mentions the φηραδὸς to which the initiates were sub-

1 A relief from Arden, now at Aix-la-Chapelle (ARW xxii. 1912 pl. i.), shows a knotted figure wearing the 'Phrygian cap,' cap is hidden by a veil held by two other figures. Rostowzew (p. 62) connects this with reference to the phrase quoted in the text.
dicated; and his commentator Nonnus (PG xxxvi. 989, 1009, 1012) enlarges on this topic and speaks of 'eighty punishments' by water and fire, frost, hunger, thirst, and journeying over an ascending scale of severity. These may to some extent be imaginary; but it must be remembered that the Mithar Yaddi (§ 122) speaks of abductions and stabbings. Pertullian (Hist. vii. 40) uses the phrase 'imagio resurrectionis,' which suggests a simulated death; and the biographer of Commodus tells us that the emperor 'sacra Mithracina vero hominis corporis habuit.' This hint, we know, of the Mithraic rites of initiation shows that they were of a type well known in primitive religion, and carry us back to a stage far earlier than the developed theology of later Iranian times. Nor can we say more of the rites in which the initiates partook; Christian writers found an analogy to the eucharist in the Mithraic communion of bread and water (Epístola 190 5).<sup>1</sup> Hence Zoroastrianism.

9. Sanctuaries, ritual, and monuments.—The central act of worship in Mithraism, however, appears to have been the bull, the type prototype of which was the slaying of the bull by Mithras himself, represented in relief in every Mithraic sanctuary. These places of worship were described by the term speculum (CIL ii. 4420 = Cumont, ii. 146), for which we also found eretus (CIL iii. 1096 = Cumont, ii. 132) and anumrum (CIL vi. 754 = Cumont, ii. 94), and were often established in natural caves or grottoes, as, e.g., on the north slope of the Capitol at Rome, beneath the church of Arcadi. As a rule, however, the place of the grotto was taken by a subterranean crypt, approached by a stairway; the chapels attached to private houses were naturally placed in cellars—e.g., the Mithreum below the church of San Clemente in Rome. It should be noted that the Mithraeum are never of great size and, where the adherents of the worship were numerous, the number of specula was multiplied. Thus Óstia possessed five, Aquincum at least four, and Carnuntum three sanctuaries. The more elaborate examples show a fore-court, or proemus (the term is used in CIL xiv. 61), leading to a small chamber, whence the staircase descended to the crypt in which the mysteries were celebrated. This was traversed by a central passage, on either side of which were posted the 'Shrines of the Bull.' Whether, as Cumont supposes, the worshippers knelt upon these, or reclined upon them while partaking of the ceremonial banquet, it is hard to say. At the extremity of the crypt, which often took the form of an aepia (called caezubria in CIL iii. 1096), was placed the relief of Mithras and the bull, often accompanied by other sculptures, such as figures of Cautes and Cautopates or the lion-headed Kronos.

The symbolism of these monuments is not easy of interpretation, and ancient texts help us little. In the central scene, the type of which (as was mentioned above) was certainly fixed by a Persian artist, probably in the 2nd cent. B.C., Mithras, clothed in the conventional costume which in Greek art signified the Oriental, places his left knee on the back of a bull and, seizing its horn (or muzzle) with the left hand, plunges a knife into its throat.<sup>2</sup> The scene of the action is a cave, the prototype of the speculum, which sometimes contains plants or even trees. A scorpion fastens on the testicles of the dying bull, while a dog, and usually a serpent also, drink the blood which flows from the death-wound. A crow, or an ass, in ascending columns of text.

1 Vita Commodi, i. 6. The statement of Socrates (ib. ii. 2) that he was a sacer of Mithras is only a copy of the text of a Pergamene artist, probably in the 2nd cent. B.C., Mithras, clothed in the conventional costume which in Greek art signified the Oriental, places his left knee on the back of a bull and, seizing its horn (or muzzle) with the left hand, plunges a knife into its throat. The scene of the action is a cave, the prototype of the speculum, which sometimes contains plants or even trees. A scorpion fastens on the testicles of the dying bull, while a dog, and usually a serpent also, drink the blood which flows from the death-wound. A crow, or an ass, in ascending columns of text.

The 'Alexandrian' type used by the artist was a 'romantic' creation. A crown, or an ass, in ascending columns of text.
MITHRAISM

discharge an arrow at a rock, from which a stream gushes out; a kneeling figure receives the water in his hands or represents his throat. Sometimes a serpent's head is depicted before Mithras, and implores him to perform the miracle.

The zodiac is also commonly found either as a framework enclosing the scene of the bull-slaying or, as in most of the reliefs from the Zlins speleum in which this takes place. In addition to this, the more elaborate reliefs are almost always decorated with busts of sun and moon, while many also depict the planets, or syzygies which represent them. We are convinced that the elements and the winds; and it is beyond doubt that the lion, the serpent must be combined with these last as emblems of the elements. It may be added that the sea (secessus) and the heaven (crater) are both mentioned on a stele from Hesdenheim (Cumont, ii. 156). It is clear, therefore, that in the Mithraic mysteries a complete system of cosmography was taught; nor can there be any doubt of its application to the soul and its destiny.

The doctrine of the microcosm, which pervades all the speculations of later antiquity, was popularized by the Stoics, especially by Ptolemaeus, and, together with the astrological doctrines which accompanied it, was derived from Oriental sources. It formed part of the common stock of teaching imparted to the votaries of the 'worldly' religions (of which Mithraism was one) which became diffused throughout the West from the beginning of the Christian era onwards. We should be able to give a more definite account of Mithraic eschatology if we could interpret 'Mithratismurgy' published by Dieterich from the Paris magical papyrus (Bibl. Nat. Suppl. Græc. 574) deserved that name. This document, committed to writing about A.D. 360, is in the present form part of the stock-in-trade of an Egyptian magician, and is interspersed with roots magicae and supplemented by directions for its use in the sciences of the better practitioner. It is not certain whether the compiler made use of a genuine Mithraic document; this is suggested by the opening words, which may be translated as follows:

1. Be gracious unto me, Providence and Fortune, to me, who am writing down these, the first of all traditional mysteries, and grant immortality to my only child, an initiate worthy of this mighty power, which the Great God, the Sun, Mithras, made his archangel transmuti to me, that I alone, no eagle, might soar through the heavens and behold all things.

It is to be noted that this private revelation made by the initiator to his 'only child' resembles those of the Corpus Hermeticum (the product of an Egyptian school of theosophy) rather than the ritual of a community; also that the 'eagle' is introduced into the text by a conjectural emendation of Dieterich. In the revelation itself we find nothing that distinguishes Mithraism from other theosophies, and a good deal which is definitely Egyptian; Dieterich lays stress on the 'golden shoulder of the ox', which is the Great Bear, which he would recognize in the object held by Mithras in the investiture of the sun as represented on a relief from Virunum (Cumont, ii. 336, fig. 213); but the identification is extremely doubtful; other examples of the same subject show nothing at all resembling an ox's shoulder, and in any case the conception is specifically Egyptian. On the whole, therefore, it is safer to regard the papyrus as a figure a representation of Ahriman, whose worship by Mithraists is satirized by dedications 'deo Arimano' (Cumont, iii. 86, 114). A mutilated relief at York (Cumont, ii. 205) seems to represent this figure with some variation from the usual type, and the inscription (also mutilated) contains the words of an invocation to Ahrimantos.

1 On a relief from Apulum (Cumont, i. 517) we find a series of the following four objects: (a) sacrificial knife, (b) altar, (c) patera (of the shape seen on the last two). These symbols represent the elements, and their repetition indicates that each planet contained all four.

2 Ariadne was the sacra secta of Mithra philantropus ('Prae, iii. 113).
nothing more than a synergetic product. It is likely enough, however, that the ascent of the soul through the seven stages or ‘solar paths’ in the Mithraic mysteries; Celts (op. cit. Cels. vi. 22) explicitly tells us of a ‘ladder with seven gates’ made of the seven metals assigned to the planets which was shown to the initiates; Porphyry, quoting the text of a passage of the mysteries, says: ‘Zoroaster the doctrine that the ‘cave’ was a symbol of the universe, of which Mithras was the creator, speaks of it as containing ἰστός ἀναμνήσεως ἐκ πάντων καὶ ἐνοικίων ἀναμνήσεως, and it can be no accident that in one of the Mithras at Ostia six semi-circles are traced on the floor of the central passage, while six planets are represented on the walls of the podium and the signs of the zodiac on their upper surface (Cumont, ii. 243-245). Beyond this all is speculation; and Porphyry himself probably knew little more than we do about the mysteries (de Abst. iv. 16) as his chief authority on the mysteries a certain Pallas, who explained the animal disguises worn by the initiates as symbols of the zodiacal constellations or as shadowing forth the doctrine of metempsychosis (which Babelon also stated to be Mithraic). It is not necessary to repeat the astrological speculations, confused in themselves, by means of which Porphyry endeavours to interpret the symbols of Mithras, I believe, to prove that the all-pervading influence of astrology affected Mithraic doctrine. Thus we sometimes find that the figures of Cautopates and Canopic lead the symbols of the bull and the scorpion, the signs which mark the beginning of spring and winter.

11. Final phase.—In its final phase Mithraism was absorbed into the ‘solar pantheon’ which supplied Rome with the gods of the two previous centuries with a theology reconciled with contemporary philosophy and science, and became, under Aurelian, the official religion of the Roman State. Sol invictus, as the ruler of the universe was called in a phrase of Oriental associations, was represented on earth by the emperor, and his identification with Mithras was far easier than many others which syncretism was able to effect. Thus ‘invictus Mithras,’ ‘deus invictus Mithras,’ or in (full) ‘deus Sol invictus Mithras’ became the commonest title of the god. It was with this modification that Mithraism bade fair during the later part of the 2nd century to become a world-religion. The State-cult of Sol was no more fitted than the worship of the emperor to satisfy the religious instinct; but Mithraism could supply the defect through its mystical teaching and its ties of brotherhood; and it was, besides, per excellence the religion of the army and the official classes. In A.D. 307 DIOCLETIAN, Galerius, and Licinius, meeting in conference at Carnuntum, dedicated an altar to Mithras, ‘fauitori imperi sui,’ in one of the oldest centres of his worship in the empire; but the victory of CONSTANTINE disposed him in favour of a rival creed, which had struck its roots more deeply in those populations of the empire which were less immediately in touch with the legions and the official hierarchy. It became clear that the vogue of Mithraism was in large measure an artificial one, created by the powerful machinery of the imperial government. When Mithraism sank from a position of privilege to one of tolerance and freedom, and became an object of persecution, its days were numbered. It lingered on, on the other hand, in certain less civilized outposts of empire and in the Alpine valleys, while, on the other, it became the symbol of a lost cause to the group of cults and pagans which maintained the defence of paganism in the Senate-house. The emperor Julian, whose oration, ἐπάθμα θαυμά, is a characteristic exposition of ‘solar theology,’ was a votary of Mithraism and attempted to revive the defunct creed of the pagan emperors and to give it an organization resembling that of Christianity was still-born. After his death persecution began in earnest, and, as far as the evidence enables us to judge, the destruction of Mithraism was wide-spread during the reign of Gratian. The letter of St. Jerome quoted above, which enumerates the seven Mithraic grades, describes such an act performed in Rome by Gaecadius, protetector urbis in A.D. 377. The latest inscriptions in which Mithras is named are those of the group of senators belonging to the society of which Macrobius (Sat. ii. 6. 14) speaks "in which the Vettius Agorius Prætextatus (+ A.D. 385) is called ‘pater sacram’ (CIL vii. 1779 = Cumont, ii. 95) and ‘pater patrum’ (CIL vii. 1778 = Cumont, ii. 95), and these inscriptions which the latest authorities recognize as evidences of the cult. The measures of Theodosius gave the death-blow to the practice of pagan worship; and the Mithraea at Saarburg in Lorraine was destroyed in his reign.

12. Relations with other cults.—Mithraism lent itself readily to alliances with other worship, especially those of female divinities, which supplied what it was unable to offer to worships. It seems to have been specially associated with the cult of the Magna Mater. We find their sanctuaries adjoined each other at Ostia and on the Saalburg; dedications are commonly made simultaneously to both divinities; and the lastralia, which (whatever its origin) was certainly attached to the worship of Magna Mater in the West, received an added significance when interpreted in terms of Mithraism, in which the life-giving blood of the bull became the pledge of immortality. In the Danube region a curious by-form of Mithraism is revealed to us by a series of reliefs and leaden plaques which have been interpreted by Cumont in the article (in Russian) quoted above. Here a female goddess, whose attribute is a fish, no doubt a local derivative of Anahita, is accompanied by two mounted figures, in whom we must recognize a duplication of the horseman Mithras found on the coasts of the Black Sea.

LITERATURE.—The great work of Fdbos Cumont, Textes et monuments figurés relatifs aux mystères de Mithra, 2 vols., Brussels, 1896-99, superseded all previous treatises, a list of which he gives in vol. i. p. xxii ff.; he has also published an abridgment of his larger work under the title Les Mystères de Mithra, Paris, 1913, in which the bibliography of the subject is brought up to date; the earlier editions of this work have been translated into English and German. Among recent works the most important are A. Dieterich, Eine Mithradatengekritik (ed. K. Wünsch), Paris and Berlin, 1910, and J. Toutain, Les Cultes païens du temps romain,Paris, 1906-11, vol. ii. ch. 11. ‘Le Culte de Mithra, ’ Paris, 1909; Other works on Mithraism and other works in which special points are referred to in the course of the article. For the Vedii Mira see A. A. Mardouck, Vedic Mythology, Strassburg, 1907, §§ 12 and 44, and authorities there cited, especially A. Hillebrandt, Varuṇa und Mithra, Brisens, 1877; H. Osterberg, Die Religion der Frühzeit, Berlin, 1879, 1881, and the pali artziche Goti Mithra, Dorpat, 1894. For the Avesta Mithra see especially M. N. Dadlal, Zarathustra, New York, 1914, pp. 302-11.

MOAB.—The name Moab, like that of the neighbouring peoples, Amorite, Ammon, Amalek, Edom, Aram, etc., appears to have been the name of a race rather than of a district, for, as G. A. Smith has pointed out (EBI, art. Moab, § 4), in N
MOAB

21-12 (cited by F. Brown, S. R. Driver, and C. A. Briggs, *A Heb. and Eng. Lexicon of the Old Testament*, Oxford, 1906, p. 555, as evidence that the name Moab is a territory of Moab), in v. 12 it is parallel to the Gentile Amorite; in v. 18 also it is the people. The derivation and meaning of the name are unknown. The etymology 255, ‘from my father’s brother’; whereas in v. 12 Moab is twin brother, we may conclude that at the time when these stories took shape the Israelites considered that the Moabites and Ammonites, though of kindred stock, were by no means so closely related to them as Edom. Moab is said to be descended from Lot’s elder daughter (Gen 19:37); therefore it was probably supposed that the settlement of Moab preceded that of Ammon. Whether the Moabites themselves possessed any tradition of a migration from Mesopotamia may well be doubted, the statements of Gen 11:12-12 being perhaps mere inferences from the belief that the Israelites were connected with Mesopotamia. Since, however, the expression ‘children of Lot’ (Dt 2:18, Ps 83) scarcely rests directly upon Gen 19:25, Lot was probably more prominent in early times than the Qezer kingdom was a later point than whether the Moabites and Ammonites regarded themselves as ‘children of Lot,’ or succeeded them in the districts which they occupied, cannot be determined. The late antiquarian note in Dt 29 implies that the population of Moab was not as homogeneous, while the place-names clearly show Canaanite influence.

The constant boundary of Moab on the west was the Dead Sea and the Jordan; to the north, east, and south frontiers varied from time to time. Probably the Wady el-Hasa represents the farthest extent of Moabite territory to the south and the Hijj road that to the east. The Wady Nimrin some 8 miles north of the Dead Sea, may be taken as the extreme northern limit (see G. A. Smith, *op. cit.* § 2).

Beyond the mere mention of Moab as included in the conquests of Rameses II, nothing is known of its history before the period of the Israelite invasion of Palestine. According to Nu 21:24-25, when the Israelites arrived in the land, an Amorite king, Sihon, seized the Moabite territory to the north of the Arnon. What circumstances determined the Israelite invasion of Palestine from the east is not certain, but it is not unlikely that the Israelites attacked Sihon in response to an appeal from the Moabites (as Wellhausen, *EBRS*, art. ‘Israel,’ has suggested), and that it was only after the defeat of Sihon that the Moabites discovered that their allies had no intention of giving up the fruits of their victory. There is certainly no valid reason for disputing the general historicity of the tradition. The statement that Reuben was the first-born son of Israel naturally implies that Reuben was the first tribe to obtain a settlement, while the assignment of Moabite territory to Reuben, and the belief that Moses died and was buried there as well as the tradition that the Israelites crossed the Jordan near Jericho, all point to a belief that N. Moab was occupied at east for a time by Israel. After the invasion of W. Palestine, however, the Israelites were dis-integrated and engaged in perpetual conflict with the Canaanites, Philistines, etc. (see art. *Israel*), with the result that the Moabites were able to recover their own. The tribe of Reuben, in spite of the fact that the territory was nearly exterminated (Gen 49:10, Dt 33), and Moabite rule was extended even over the Jordan valley west of the river. For a time, indeed, Moabite aggression was checked by Edom, but we find Israel and Ammon and Moab at war during the reign of David, and perhaps also during that of Saul. But, although David’s treatment of Moab is said to have been drastic enough, Moab was not incorporated in Israel. The Moabites merely became subjects of David, and perhaps also of Saul. Whether Moabite influence was strong in Jerusalem in the days of Solomon is Jacoby so doubtful that Solomon’s idolatry is described in terms of a later age. It was probably during his reign that of Rehoboam that Moab recovered independence.

Under the vigorous rule of Omri the Moabites again felt the hand of Israel. According to the inscription of Mesha (found at Dibon [Heb. Dibbon] in 1868, commonly called the Moabite Stone), the period of Israelite domination occupied forty years. It is not necessary to suppose that Mesha’s inscription is earlier than the events recorded in 2 K 3, for it is clear from that account that the campaign of the allied kings was unsuccessful. Moreover, an ancient king in recording his achievements was naturally silent about his reverses.

The Independence which Moab recovered under Mesha was perhaps lost again in the reign of Jeroboam II. It is, however, impossible to speak with certainty on this point, for the south limit of Jeroboam’s kingdom is given as the sea of the Arabah (2 K 15:18) and not the sea of the north of the Dead Sea. For the sea of the Arabah Amos (6:4) speaks of ‘the brook of the Arabah,’ which has been identified with the ‘Ardbkkim’ or ‘willows’ (Is 15), which by some has been identified with the Wady el-Hasa. These identifications are, however, by no means certain, and the order of names in the preceding verses of Is 15 suggests that ‘the brook of the willows’ is to be sought in the north of Moab. Amos (29) mentions a judge of Moab in lieu of a king, and it has accordingly been argued that at the time Moab punished his king of its own; but this cannot be decided with certainty.

During the Assyrian period Moab appears to have shown more prudence than its sister kingdom in accepting no tribute north of the Wady el-Hasa exacted tribute, and, although in 711 B.C. Sargon mentions Moab in conjunction with Philistia, Judah, and Edom as having formed an alliance with Egypt, Moab probably avoided an invasion by a timely submission. It continued subject to Sennacherib, Esar-haddon, and Assurbanipal, and, according to 2 K 24, furnished troops to Nebuchadnezzar against Jerusalem. Doubtless in Moab as in Judah there was throughout a party bent on regaining the national independence, and at the beginning of the reign of Zedekiah of Judah (Jer 27) this party appears to have been in power. Yet no actual revolt from Nebuchadnezzar seems to have taken place, and Moab afforded an asylum to fugitive Jews (Jer 40). It is not improbable that after the destruction of Jerusalem the policy 2 of the summit of Saul’s wars (1 S 14) bears such a strong resemblance to that of David’s (2 S 8) that it may be doubted whether there was any definite tradition of a campaign of Saul against Moab. Hostilities between Saul and Moab would not indeed be inconsistent with 1 S 22, and David, when he succeeded to the throne, would at once stand in a different relation to the king of Moab from that which he had occupied as a rebel against Saul.

A discussion of the way in which this statement is to be harmonized with the biblical chronology lies outside the scope of this article. In the certainty, was nearly exterminated (Gen 49:10, Dt 33), and Moabite rule was extended even over the Jordan valley west of the
of Moab coincided with that of the king of Ammon, who apparently intended by the murder of Geshurish to compel Judah to join a confederacy against the Chaldean. Moab was menaced, however, by a danger even more formidable than that from Assyria or Babylonia: east and south the country was exposed to invaders from the desert, and Ezekiel (26:24) already perceived the coming disaster. The criticism of Jeremiah (48), which describes the devastation of Moab, is extremely difficult; the chapter, however, appears to be of a great extent and in any case is further supported by Ezekiel. The description as a whole implies a late date. \(15-16\)th, which is used by the author of Jer 48, notwithstanding the corrupt condition of the text and later modifications, gives a clearer picture of Moab's disaster. Here it is evident, if we argue from the names of places which may be identified with tolerable certainty, that the invaders advance from south or south-east to north or north-west, and therefore cannot be the Assyrian, Chaldean, or Persian, but must be a foe from the desert.1 With this invasion the national existence of Moab came to an end (2 Ki 3:26, 30), and Moab henceforward was known only by the name of the old name (Is 25:8, Ps 60:8 38:1089). It is remarkable that the name Moab does not occur in Is Maccabees. It is found, however, in Dn 11:3, and Josephus (Ant. i. xi. 5, xiii. 4) uses a term "Moabitae" to denote the Nabataean Arabs.

The language of Moab, as we know from Mesha's inscription, was Hebrew, differing only dialectically from the language of the OT. It is, indeed, not impossible that what we regard as peculiarities of Moabite speech, once belonged also to the spoken Hebrew of W. Palestine. Although portions of the OT are earlier than the Moabite inscription, B.C., they were probably long preserved in an oral form, in which case peculiarities of dialect may well have been modified.

The land of Moab affords many proofs even in these days of its former fertility and prosperity. The OT has several references to the cities of Moab, many of which are named, and mentions its vineyards as well as its sheep. Being situated off the direct line of communication between Egypt and the great Asiatic empires, it was less liable than W. Palestine to be made a battlefield, though doubtless there was constant need of watchfulness against the raiding bands of Moabites. On the whole, however, Moab seems to have had a far more peaceful history than Israel. In the words of Jer 48:1, "Moab had been at ease from his youth, and had settled on his lees, and had not been emptied from vessel to vessel, neither had he gone into captivity.'

The religion of Moab presents many parallels to the popular religion of Israel in pre-Exilic times. There is no evidence, however, that any great Moabite prophets, if such existed, could point, as did the Israelite prophets, to a tradition of purer religion in the past. Like Israel, Moab had taken possession of a land containing stone-circles (in OT, language, gîrola) and other primitive monuments, and it is probable that in the land of Moab, as in W. Palestine, some of these were adapted to the worship of the later strata of population. From the occurrence of such names as Baal-Meon and Baal-Por it may be inferred that the pre-Moabite religion of the land resembled the pre-Israelite religion of W. Palestine, and was in fact Canaanite. This inference is strengthened by the occurrence of the curious compound ‘Ashar- Chemosh’ (Moabite Stone, line 17); for Ashar is probably a masculine form of the name familiar to us as Ashtaroth, and the combination of it with Chemosh suggests that some ancient sanctuary of Ashtar or Ashethoreth had been appropriated by Chemosh, just as the ancient sanctuaries of Canaan which came to be considered sanctuaries of Jahweh. We know both from the OT and from the Moabite Stone that Chemosh was the national god of Moab exactly as Jahweh was the national God of Israel. Indeed, the Moabite conception of Chemosh appears to have coincided with the ordinary Israelite conception of Jahweh. The name Chemosh appears compounded in proper names precisely as the name Jahweh. Thus Meshes's father's name was Chemosh in combination with some word which has been variously read as melâkh and qâd; a Chemosh-nadab (cf. the Israelite name Jonadab) paid tribute to Semacheri; and the name Chemosh-yahî (cf. the Israelite Jehiah) is inscribed on a gem found near Beirût (EBi, art. 'Chemosh'). Meshes speaks of Chemosh in precisely the same terms as an Israelite of his day might have used in speaking of Jahweh, and in Nu 21:29 the Moabites are called 'the people of Chemosh' and also his 'sons' and 'daughters.' Evidence of the existence of other cults among the Moabites may be found in the occurrence of such a name as Nebho, but there is no reason for supposing that such worship continued among the Moabites. The name Dawidah, or Dawdah, occurs on the Moabite Stone (line 12) apparently as a divine name; but, since Atarah, where the altar-hearth of Dawdah was seized, was Gadite, the name throws no light on Moabite religion.

Whatever the worship of Chemosh may have been before the permanent settlement of Moab, it is extremely probable that it was thenceforth largely intermingled with Canaanite elements. The OT makes it abundantly clear that the worship of Chemosh in the OT was not the same, and Nu 25 affords no evidence that Moab was worse than Israel in this respect; only, whereas, by the 6th cent. B.C., Israelite religion had to a considerable extent been purged of the grosser Canaanite elements, that of Moab remained unreformed. Besides religious prostitution, indications of the prevalence of drunkenness in Moab have been found in Gn 19:24, Jer 48:7; and, having regard to the references to vine-culture, this is not improbable, though the Israelites were scarcely in a position to throw stones. It is related (2 K 337) that Meshes, when hard pressed by Israel, sacrificed his son, and was made to offer that human sacrifice was a definite feature of Moabite religion. Human sacrifice, not only of the infant first-born, but on occasion of other victims also, was common in Israel down to the 7th cent. B.C. Meshes's sacrifice of his son should probably be compared, not with 2 K 16:8, Mic 6, for the case of Ahaz probably only the ordinary offering of the infant first-born is meant, but rather with Jg 11198, cf. also Gn 29 2 S 214, 1 K 14. Further evidence of the general agreement of Moabite religion with that of Israel is to be found in Meshes's boast (Moabite Stone, line 17) that he has banned or made taboo the population of Nebo.

The danger to Israel of intimate intercourse with a people closely akin in race, speaking the same language, and holding religious ideas similar to those of which the prophets had so earnestly laboured to rid Israel, was clearly perceived by the Israelite reformers, and will partly account for the stringent law in Dt 23, though political considerations may also have dictated this.

Literature.—See the excellent articles on 'Moab' in JB and EB; also W. H. Bennett, 'The Moabitc Stone', Edinburgh, 1913, with the bibliography there given (p. 60).

MOCHI.—See CHAMARS.
MODERATION. — Cicero in an interesting passage expresses some hesitation as to the proper Lat. equivalent of the Gr. word ἀθροπία. 

The word is translated: (1) ἀθροπία, ἰταθροπία, quae Graec ἀθροπία appellat, οµνακετίσειν ἀνατολικὴν κατοχήν, quam solo equalior est tum temperantiam, tum moderationem appe
tatur, nonmodo in modo, sed etiam in rebus et viribus fragilis ap
dem post (Inst. Tert. Quest. ii. 8). 

He proceeds to describe the virtue in question as follows:

'Eius videtur proprium, mutum animi appetitum resere et sedere, magnum adversarii nihil, moderatum in rei se servare constantiam.'

Moderation, according to this view, is a part of temperance. If temperance consists in self-control in regard to the pleasures of sense, moderation is self-control exercised in less difficult spheres. Limitation (modus, moderatio) is, of course, a feature in all virtue; this idea has a long history in the philosophy of Greece, and takes formal shape in Aristotle's doctrine of 'the mean' which gives expression to the peculiarly Greek notion that virtue in its essence means 'harmony, grace, and beauty in action' (see A. Grant, The Ethics of Aristotle, London, 1856, vol. 1, essay iv.).

The word 'moderation,' however, is in Christian ethics specially assigned to the virtue which in 'least things sets the limit.' If temperance is concerned with strong passions, moderation controls those which are less vehement. Such, at any rate, is the view of Aquinas in his discussion of modestia (Summa, ii. ii. 160).

Following the influence of Aquinas, we find that 'moderation' is chiefly concerned with four matters: (1) the desire of excellence or superiority; (2) the desire of knowledge; (3) the outward actions concerned with the conduct of life, business, and recreation, work and rest, etc.; (4) apparel, furniture, and the external apparatus of life.

Each of these points is fully discussed by Aquinas (Summa, ii. ii. 161-169).

(1) As regards the desire of superiority, the virtue which moderates it and regulates it is humility (q.v.).

(2) The various control of the desire of knowledge is called by Aquinas studiositas as opposed to a form of excess which he calls curiositas (cf. Aug. Conf. X. xxxv. 54). Little needs to be added to the discussion in the Summa (ii. ii. 162, 167). We may, however, call attention to a fine passage in Bernard (in Cont. xxxvi. 3), who points out that in I Cor 2 St. Paul 'non profat multa scientia, si sensi modum necsit.' Christian moderation in this says, in effect, will prescribe the limitations under which knowledge should be pur

sued, in respect of the choice of subjects, the degree of zeal, and the purpose of the student. He lays great stress on the question of motive. Those who wish to know merely for the sake of knowing give way to 'turpis curiositas.' Those who pursue knowledge 'ut sedelicitur' are guided by charity; those who seek it 'ut mediocritur,' by prudence (cf. T. Wilson, Maxims of Piety and Morality, no. 429 [Works, Oxford, 1847-63, v. 423]).

(3) Moderation in the matter of work and recreation and other corporal actions and move

ments is discussed in Summa, ii. ii. 165. What Aquinas says practically amounts to this—that man for his proper use to be law-abiding is to be consistent with his dignity as a reasonable being and with the claims made upon him as a member of a com

munity. What St. Paul means to imply in the whole of his treatment of uxores is here laid out (1 Ti 3:4-5).

1 Cf. Grat. pro Delit. ix. 20: 'Ego fragilitatem, id est modestiam et temperantiam, virtutem esse maximam iudico' (quoted by Aug. de la Stella, 31). Ambrose, in de Off. Mor. i. 43, treats moderation and temperance as synonymous.

2 Cf. Aug. de Nat. Bon. 3; Aquinas, Summa, ii. ii. 161. 7.

3 Cf. Seneca, Ep. lib. xvi. 101: 'Plurum scire quam suae aedibus, temperantia genue est.'

as to which Trench (Synonyma of the NT, Cambridge, 1854, xii. 261) draws the following distinction:

'Whatever there may be implied in εὐγενήτας, ... something more is involved in ἀυγον. If the εὐγενήτας orders himself well in that earthly reversion, of which he is a support and an ornament, he is moderate; the ἀυγον does not only order himself well but lends himself to the earth; but which he owes to that higher citizenship which is also his,' etc.

Aquinas deals at length with the question of recreation, but says little as to the duty of moderation in work. This point is one which has its importance for us owing to the conditions of modern industrial life. It has been said of the Anglo-Saxon race that 'an excess of industry, 'temperate labour,' is one of its most prominent characteristics (A. Wylie, Labour, Leisure, and Luxury, new ed., London, 1857, p. 19). Christian moderation implies such self-restraint in the matter of labour as will give fair play to the faculties, spiritual and mental, which are not absorbed in the business of life (on this point W. Law writes suggestively in his Serious Call, London, 1772, ch. iv.). On the other hand, pleasure

worship is a more obvious peril of our time. In every class there are multitudes who are 'lovers of pleasures more than lovers of God' (2 Ti 3, 2, and the result is seen in a wide-spread enfeeb

lement of will and conscience. Recreation is, of course, a duty which we owe to ourselves, and the distinctly implied in the Fourth Commandment, and there is a virtue concerned with the due regul

ation of the natural desire for relief from labor.

'Laudem diei est quemmodus retinendum' (Gen. de Off. l. 29; cf. 34).

We can scarcely on this point improve upon the maxim of Aristotle, that in determining the right mean in such matters tacet alone (τακτακτῶν), can decide, i.e. a sense of fitness trained by exercise and reflexion. Aquinas points out that, as there can be sinful excess in the matter of amusement, there may be a wrong defect, for a man in social intercourse must 'show himself friendly' (1 Pa 135).

'It is contrary to reason for a man to make himself licentious to others, taking no pains to please them and even hindering their pleasures' (Summa, n. ii. 155. 4 resp).

Still, since the pursuit of a point is to be sought with a view to labour (Arist. Eth. Nic. x. 8, 6: ταμεννέωs δέωs στοιχείων), happiness does not consist in amusement, and to make a serious business of it is 'foolish and unchristian' (cf. 1 Thess. iv. 13). One of the chief things that was the Puritans of the 17th. cent. lacked. They were credited with the opinion that 'no honest mirth or recreation is lawful or tolerable in our religion' (see the Declaration of Charles I. of 18th Oct. 1653, which may be found in H. Gee and W. J. Hardy, Documents illustrative of Eng. Church Hist., London, 1806, p. 528 ff.). The Puritan, says J. R. Green, lacked 'all sense of measure and proportion in common matters,' John Bunyan's sin which 'he could not let go' was 'a love of hockey and of dancing on the village green.' It was in the midst of 'a game of cat,' the converting voice 'did suddenly dart' into his soul (Green, v. 105 f.).

(4) The virtue of moderation finally finds scope in the situation of external apparel, furniture, and other conveniences of life (cf. Cic. de Off. l. 39): 'edem mediocritas ad omnem usum cultuque vitae transferenda est'; see also i. 35, and cf. Basil, Hom. de Humilitate, viii., and Ambrose, de Octos. (or de Contem. 37) remarks that he who has a good behaviour in voice, appearance, and gait, cannot est esse τακτος δεως στοιχείων τοις μικροσχολοις, which, for urbanscout or combat it might be a fair Latin equivalent. Ambrose says, 'omnem sibi moderationem cum se habere' (De Off. Mor. 39) that the words express the idea of a middle between the extremes of too much grace and too great a self-sufficiency.
Off. Min. i. 18). We may note that the word *moderatio* is applied to the dress of women (1 Ti 2:9), and a similar expression, *et sanctitatem respectus*, is found in Tit. 2:12. The principle implied seems to be that of making the dress suited to the station or office in life, or to the occupation in which he may have to be engaged (work, or recreation, or worship). Law goes to the root of the matter when he represents *Paterius* as advising his son on these points:

*Let your dress be sober, clean, and modest, not to set out whatever is of adornment, but to shew the sanctity of your mind, that your outward garb may resemble the inward purity and simplicity of your heart. For it is highly reasonable, that you should be one mean, all of a piece, and appear outwardly as you are inwardly.* *(Serious Call, ch. xvii.) As to the dress of women see what is said of *Miraucta.* (ch. it.).

It may be objected that this entire account of *moderation* is somewhat arbitrary. The fact is that moralists have evidently found difficulty in distinguishing between the different spheres of action in which the principles of holiness or sobriety or temperance or moderation are to be applied. There is, however, practical convenience in following the line suggested by Aquinas. He may be criticized as over-systematist, but we need not suppose that his classification is intended to be exhaustive. The virtue which *in minimis modum ponit* will be differently estimated according to the various circumstances in which it is brought into exercise. We need only remind ourselves that it is essentially necessary, if a man is to lead an inwardly pure life, to avoid excess in any direction; to be neither neglectful nor over-wary; to make provision to meet both the one and the other danger. The whole life of a saint should be a form of that beautiful *moderation* which Wilson describes in *Sacra Privata* (ed. Oxford, 1849, p. 41 [Works, v. 31]) as the way of an happy life:

*Lay nothing too much to heart; desire nothing too eagerly; rejoice not excessively, nor grieve too much for disasters; be not violently bent on any design; nor let any worldly cares hinder you from taking care of your soul; and remember, that it is necessary to be a Christian (that is, to govern one's self by motives of Christianity) in the most common actions of civilization, sobriety, and temperance.*

It remains to add that the word *moderation* occurs in AV only in Ph 4:8 (*et tempus*). In RV the word is translated *forbearance.* The grace which St. Paul has in mind—*considerateness* or *moderation*—is, of course, a form of that beautiful *moderation* which Wilson describes in *Sacra Privata* (ed. Oxford, 1849, p. 41 [Works, v. 31]) as the way of an happy life:

*A uxor, non alia. Modestia, quae cum sum estiam sui juris rebus, nihil sit usurpata, nihil videlicet, et quondammodo intras vires suas contractor, dives est apud Deum.*

*Litteratur.—Ambrose, *de Offic.] Minister, i.; Thomas Aquinas, *De Magistro, viii.*

MODERATION.—See EVANGELICALISM.

MODERNISM.—Modernism is the name given by the papal encyclical which condemned it to a complex of movements within the Roman Communion, all alike inspired by a desire to bring the tradition of Christian belief and practice into closer relation with the intellectual habits and social aspirations of our own time. These movements cannot be grouped and, for the most part, in entire independence of one another during the last decade of the 19th century. Since they had thus a common inspiration and a common purpose, it was reasonable that the authority which condemned them should unite them under a common designation in a common censure. Yet it is necessary to insist that, in the earlier stages of their development, the various movements grouped together and logically correlated by the author of the encyclical *Pascendi* had little or no conscious connection, and, indeed, most of them had never heard of each other. The internal pressure of adversity that gradually forced them at a later period into mutual relations of a more intimate kind.

It may be well in the first place to sketch briefly the history of this complex movement as a whole, and then to give some account of the various forms which it has assumed. These may perhaps be treated most conveniently under the heads of (a) apologetic, (b) historical criticism, and (c) ecclesiastical and social reform.

1. History.—It must not be forgotten that the Vatican Decrees were the result of a liberal movement in the Church. For its founders, or at any rate for most of them, Ultramontanism was the vision of a Roman Catholicism freed from the entanglements of ancient dynastic contentions and in its new independence pledged to the spiritual leadership of the rising democracies. It was natural that the movement should find its fruitful seed-bed in the countries which had yielded most readily to the call of the Revolution—France, Belgium, ors.

The consolidation of the spiritual empire of the papacy was to be achieved by other instruments and in another spirit. The Council of the Vatican seemed, both to the victors and to the vanquished, to be the definite repudiation of the generous dreams which had made it possible. Its reactionary character was accentuated by contemporary happenings—the consolidation of the Italian kingdom at the expense of the temporal power, and the establishment of the Third Republic in France. Yet, in fact, a new era had dawned. Both in the intellectual and in the political spheres new and strange problems urgently demanded the attention of Roman Catholic scholars and thinkers. Many among them felt that the Church was in danger of being paralyzed by the Syllabus and the Vatican decrees, and were resolved that this danger must at all costs be averted. The accession of Leo XIII in 1878 seemed to give them their opportunity. In his numerous encyclicals, while conservative and traditional in tone and perhaps still more so in intention, were nevertheless so accentuated as to be capable of being turned to account by the progressives. Of these encyclicals, three may be specially recalled: *Etiam Patris* (4th Aug. 1878), which enjoined a return to the traditional metaphysics of St. Thomas Aquinas as the necessary foundation for the demonstration of the chief points of Christian belief; *Breviarum Novarum* (15th May 1891), which dealt with the condition of the working classes; and *Presidentissimus Deus* (18th Nov. 1893), which expressly condemned *disquieting tendencies* in Biblical interpretation, which, if they prevailed, could not fail to destroy the inspired and supernatural character of Holy Scripture. The warnings and counsels contained in these documents were resumed and reinforced in a further encyclical, dated 8th September 1899, and addressed to the archbishops, bishops, and clergy of France. It may be said that the whole history of Leo XIII's pontificate, its success and its failure, is to be found in a comparison of the last of these documents with its three predecessors. Such a comparison reveals a marked growth of authority at the development both of those new tendencies in apologetic or exegesis which it had attempted to repress and of the social action of the clergy which it had encouraged.
That alarm was not without justification. It is in France, intellectually and politically the most highly developed country of the Roman Catholic world, that the modern movement has been most clearly traced. In 1875 the French episcopate secured from the government of the Third Republic the right to establish what were practically Roman Catholic universities free from all State control. Of this new achievement the most important was the Catholic Institute of Paris, which came into existence in 1878. Among its first professors was Louis Duchesne, a scholar who, though then only thirty-five years of age, had already achieved considerable reputation as an ecclesiastical historian of wide knowledge and independent judgment. Three years afterwards one of Duchesne’s pupils, Alfred Loisy, a young priest belonging to the diocese of Chalon, was appointed to the chair of Hebrew at the Institute. Both scholars claimed the right to apply a rigorously scientific method to their respective spheres of research, the one to ecclesiastical history, the other to Biblical exegesis. Their contention was that it was not only possible, but necessary, to distinguish between the requirements of history and of faith. De- claring the method of modern scholarship to be quite different from the traditional method of Biblical interpretation, Duchesne alleged that the historical theory of Biblical legend spread over the hostility of the traditionalists, and in 1885 he was compelled to suspend for a year his course at the Institute. It was then that Loisy was described by some as having resigned his chair—a resignation which was followed by the condemnation, in the encyclical Providentissimus, of the principles of Biblical interpretation which he had upheld. During the decade of his connexion with the Institute, however, a group of scholars had been formed who, having become teachers in their turn, carried an enthusiasm for the new work initiated with the Catholic Institutes and many of the diocesan seminaries.

The new movement towards a positive theology, as it was called, had its effect also upon the lay world. The beginning of the nineties was marked in intellectual France by what Brandenberg described as ‘the bankruptcy of science.’ This meant that science had proved unequal to the needs of life, that man could not live by science alone, and that religion was coming into its own again. But, if it meant a revolt against scientific dogmatism, it meant equally a revolt against philosophic dogmatism. New tendencies in philosophy were being brought to the fore, which no longer acknowledged the will or the total activity of the human spirit the principal role in determining truth. A young Roman Catholic philosopher, Maurice Blondel, turned these new tendencies to account in the interests of Christian apologetics in a thesis entitled L’Action, sustained before the Sorbonne for his doctor’s degree on 7th June 1893. A year or two earlier, a group of young members of the university, attracted by the new spirit among the teaching clergy and prepared to find in it a promise of reconciliation between religion and contemporary knowledge and ways of thought, had founded a society which was to embrace those who had desired to retain or regain religious belief without sacrifice of intellectual honesty. The society (its title, L’Union pour l’action morale, sufficiently indicated its object) included among its members religious free-thinkers, Roman Catholics, Protestants, and Jews. On the occasion of a congress of Roman Catholic youth, held at Grenoble in May 1892, Leo XIII. had spoken a letter to the bishops of Grenoble in which he declared that it was the part of Christian wisdom to promote the co-operation of all men of goodwill, whether believers or those who, while not believers, were yet naturaliter Christiani, in the pursuit of truth. This declaration was received with enthusiasm by the members of the new Union, and its president, Paul Desjardins, sought an interview with the pope and obtained from him the assurance of his entire sympathy with the movement. Meanwhile many of the younger clergy had found in the encyclical Rerum Novarum and in Leo XIII.‘s advice to French Roman Catholics to rally to the Republic the long-awaited opportunity of religious action upon the democracy. Numerous Roman Catholic foundations were started, the democratic clergy were invited by many bishops to explain their views to the students of the diocesan seminaries, and public conferences were organized at which men of all shades of democratic opinion were welcomed.

Thus throughout the French Church a new era of intellectual and social activity seemed suddenly to have dawned under the immediate sanction of authority. Leo XIII.‘s later pronouncement, it is true, aimed at keeping in check the various phases of the complex movement which his earlier en- cyclicals had been interpreted as in some degree encouraging. Yet up to the end of his pontificate no individual condemnation had taken place, and that though it was believed that determined efforts had been made to procure the condemnation of Loisy’s first book, had not the characteristic critical studies for popular apologetic purposes in his little book L’Évangile et l’église. This book, published towards the end of 1892, was afterwards described by some as the most historical and explanatory account of the development of Christianity, and (2) a general philosophy of religion and an essay in the interpretation of dogmatic form. It was a revolt against old definitions, with a view to bringing them into agreement, by the sacrifice of the letter to the spirit, with the data of history and contemporary ways of thinking’ (BIBLE XL [1903] 50).

His treatment of the nature of ecclesiastical authority in the Autour d’un petit livre (a sequel to L’Évangile et l’église) served to demonstrate a close kinship between their own aims and methods and those of the theological reformers. Loisy had all unconsciously become the nucleating centre of a movement which had taken to all the various elements of reform and extended its ramifications throughout large sections of the Roman Catholic world.

The election of Pius X. to the papal chair was an opportunity for stern dealing with this new threat to the fyxity of Roman Catholic tradition. For some years before the death of his predecessor the peril of the new doctrines had been vehemently proclaimed by the traditional theologians, notably by C. F. Turinaz, the bishop of Nancy, and J. Fontaine of the Society of Jesus. Leo XIII. had probably no sympathy whatever with the attempted reconciliation with his sacred life, but he had himself aimed at some reconcilia- tion, and therefore shrank from direct condemnation. Pius X. had no such difficulty. Reconcilia- tion implied that tradition was perfectible, in the course of his pontificate to reconcile with the papal authority his views. Proclamations motu proprio was issued which aimed at regulating
'popular Christian action.' The war, which was to be waged during the next four years, had been declared. A varied and continued literary activity, on the one side; and repeated denunciations, on the other. Loisy indeed made a formal submission, and devoted himself in silence to the preparation of his great work on the Synoptic Gospels. But Bohlen's 'Philosophy of Action' was popularized by Lucien Laborbionnave, a priest of the Oratory, in a series of articles published for the most part in the Annales de philosophie chrétienne. When afterwards this two-sustained volumes—Essais de philosophie religieuse and Le Réalisme chrétien et l'idéalisme grec. In the Quinzaine, a review edited by Georges Foseigne, a professor of the university, another university professor, Prof. H. von Hiigel, launched a discussion of the nature of religious dogma which provoked a considerable controversy. Le Roy afterwards published, in the form of a volume entitled Dogme et critique, a collection of replies to his critics, together with the original articles. In Italy Antonio Fogazzaro, the novelist, launched a programme of ecclesiastical reform, having for its chief point the rejection of a large number of the books of the Vulgate, including the Mosaic Pentateuch and the Hexateuch. In the diocese of Ferno, continued his crusade on behalf of Christian democratic action, undismayed by numerous manifestations of hostility on the part of authority. Among his chief supporters in this crusade was Salvatore Moncini, a professor of Hebrew at Florence, who had also become known as a Biblical critic through his studies of the Psalms and of Isaiah. In England the movement was represented principally by the writings of George Tyrrell, a member of the Society of Jesus, and Friedrich von Hügel. The latter had read a paper on the question of Ultramontanism as concerned the Hexateuch at a Roman Catholic Congress held at Fribourg-in-Switzerland in 1897, which afforded ample evidence of his accurate scholarship and of the freedom of his critical method and conclusions. Since then he had been engaged on an important work on The Mystical Element of Religion (it was not published till 1908), which revealed his originality and depth as a theological philosopher, in a religious spirit, while it gave further proof of his competence as a critical historian. Meanwhile he had contributed articles to the Quinzaine, Il Rinascimento, and other Modernist reviews, notably a reply to an article by Blondel which had impugned the right of criticism to a complete autonomy in the religious domain, and a defence of critical conclusions with regard to the Pentateuch against a judgment of the papal Biblical Commission affirining its Mosaic authorship (27th June 1906). Tyrrell was already widely known for his frank and bold handling of religious difficulties, but it was his acknowledgment of the authorship of A Letter to a University Professor, which had been privately circulated, and his consequent expulsion from the Society of Jesus (Feb. 1906), that brought him to the forefront of the Modernist movement and made him its universally acknowledged leader till his death in July 1909. In Germany the movement was for the most part confined to an agitation for ecclesiastical changes. Franz Xaver von Béthmann, a professor at Freiburg-in-Breisgau, was the determined opponent of Ultramontanism. An Ultramontane be defined as 'one who places the Church before religion, who identifies the pope with the Church, who believes in the infallibility of his own conscience to the sentence of an external authority' ('Kirchenpolitische Briefe,' ii., in Allgemeine Zeitung, Supplement, 1885, no. 211; the letters were signed 'Spectator,' one of the pseudonyms adopted by Kraus; another was Divinus, in the series Die Klassiker der Religion, p. 39, where the letter is given in full as the work of Kraus). Kraus, however, died in 1905, too early to be involved in the Petition and the project of a Neer-versions. Herrmann Schell, a professor in the Theological Faculty at Würzburg, had as early as 1896 published a book entitled Katholizismus als Prinzip deutscher Volksgeist, which provoked long and bitter controversy. As a result certain bishops of Northern Germany forbade their priests to attend his lectures. Two years afterwards controversy was renewed over Bollell's views on eternal punish-ment, and four of his books were placed on the Index. Schell made a formal submission after receiving an assurance from the bishop and the Theological Faculty of Würzburg that such submission did not imply any sacrifice of conviction on his part. But he withdrew none of the condemned books from circulation, and continued till his death in 1906 to be the leader of a strong liberal movement in German Catholicism. Of his most influential disciples were Albert Ehrhard of Strassburg, Joseph Schmitz of Munich, and Hugo Koch of Braunsberg.

Pius X. did not fail to reply to the growing menace of the Modernist movement. During the years 1905-06 he issued a series of encyclicals in condemnation of the Christian Democratic movement in Italy. Another series of decisions by the Biblical Commission which Leo XIII. had appointed in 1902 reproved the audacities of criticism in questioning accepted beliefs as to the authorship and authenticity of certain books of Scripture. In April 1906 the Congregation of the Index condemned the Congregation of the Index, the Pontifical Academy of Science, and the Pontifical Biblical Commission of the Holy See, and for the first time condemned the Modernists who had been launched at the beginning of the year. The Cardinal Prefect's letter was remarkable not only for the strong terms in which it denounced the review as 'notoriously opposed to Catholic spirit and teaching,' but also because it took the unusual course of expressly naming certain writers—Fogazzaro, Tyrrell, von Hügel, and Murri. In May the cardinal of Paris, inspired, no doubt, by similar action on the part of the Cardinal Viar, prohibited the reading of Le Roy's Dogme et critique, and at the same time forbade any priest in his diocese to collaborate in Loisy's Revue d'histoire et de littérature religieuses. The professors of the Catholic Institute of Paris were at the same time forbidden by the bishops who controlled that seat of learning to contribute to the Revue. Domains, a review in which Loisy had been founded at Lyons in 1905. In June Pius X., in a letter of felicitation to Ernst Commen, a professor at Vienna, who had written an attack upon the theology of Hermann Schell, described those who had projected a movement to sickness and conservatism as 'either ignorant of Catholicism or rebels against the authority of the Holy See,' though among them were the archbishop of Bamberg and the bishop of Padua. By this long series of censures the way was...
prepared for a more stringent and inclusive condemnation of all the various heresies, exegetic, apologetic, philosophical, and social, that were troubling the Roman Catholic world. That condemnation was pronounced in the decree of the Inquisition, Lamentabili semel actu, dated 3rd July 1907, and the encyclical Pascendi Dominici gregis, of 8th September in the same year. The decree Lamentabili was a mere collection of sixty-five propositions which were condemned. No indication was given of the sources from which they had been derived, and no writer was condemned by name, but thirty-eight of the propositions were directly concerned with Biblical criticism, and Leisy, in some notes on the decree which he published at the beginning of the following year, accepted its condemnation as directed in large measure against himself. The encyclical Pascendi was a document of much greater importance, and was recognized as such by the leading Modernists. Tyrrell met it with vigorous criticism and open defiance in two articles which appeared in the Times on 26th September and 1st October, in the full knowledge that he was exposing himself to the severest censures of the Church. On 28th October a more detailed reply was published in Rome by the Secretariat of Christian Liberty and anti-modernism. The encyclical had deduced from an unsound philosophical principle all the various errors which it grouped together under the name of Modernism, and had linked these conclusions of the Modernists with regard to history, dogma, and the Bible were all the necessary result of an erroneous philosophy. To this the Programme replied that it was, on the contrary, the undeniable results of an historic criticism that had made necessary a new apologie of some kind.

The attitude of Tyrrell and of the authors of the Programme revealed a determination to resist the attack of authority. The watchword of this resistance was to be 'No schism.' Even if excommunicated, the Modernist leaders were resolved to claim their inalienable right of spiritual domicile within the Church. Authority sought to cut them off from its outward communion, but could not affect their inward communion with it. Tyrrell expounded the new policy in an article contributed to the Grundrisse and remarked, 'this, his death was its most consistent adherent. But the difficulty of giving effect to the policy soon became apparent. The chief difficulty lay in the economic dependence of the Modernist clergy, which prevented their action. On the other hand, the publication of the Programme, e.g., the reading of the book was forbidden to the faithful and its authors were excommunicated. But, as they still remained anonymous, the effect of their protest upon the outer world was largely discounted. Yet it was in Italy that resistance to the encyclical was most obstinate and prolonged. In spite of the asiduous suppression of Modernist journals, both scientific and social, new ones continually appeared in that country. Among these the most influential was Nova et vetera, founded in January 1908, in which were published theological views of a decidedly negative character, such as found expression in the Lettere di un prete modernista, published at Rome in the same year, began to appear. More under the title of Pascendi and remarks on the leaders who had appeared in the open. Leisy was formally excommunicated on 7th March 1908. The same sentence was pronounced against Murri, who had been elected as a deputy to the Italian Chamber, on 22d March. Ducez, whose name had been deprived of the sacraments on 22nd October 1907. The same fate befell Schnitzer at the beginning of February 1908. Minocchi was suspended as a divinis in January of the same year, and in the following October voluntarily withdrew into secular life. This series of personal condemnations was followed up and completed by a blow aimed at the Christian Social movement in France. The Sillon, the organ of the movement, was formally condemned on 25th August, and its promoters ordered to work henceforward for social reform under the direction of their respective bishops. Marc Sangnier, the lay leader of the movement, was arrested by the minister, and his被捕, his prominent clerical representative, withdrew into secular life.

The various measures of repression set forth in the encyclical Pascendi having failed, after a lengthened trial, to produce the desired effect, Pius X, issued, on 1st September 1910, the motu proprio Sacrorum Antistitum, in which he enjoined the imposition of a special oath of adhesion to all the condemnations, declarations, and prescriptions contained in the encyclical Pascendi and the decree Lamentabili upon all professors of seminaries and Roman Catholic universities and institutes on admission to their offices and upon all ordinands. It fell, however, not to a priest or even to a layman, but to a woman, to make a protest against what she conceived to be a violation of Christian liberty. The leader of the anti-modernists, Dr. de Chateauroux, was excommunicated. Tyrrell, having been called upon by the bishop of the diocese in which he resided to subscribe to the condemnations contained in the encyclical Pascendi and the declaration of the bishops of Grenoble against the admission of her admission to the sacraments, refused to do so on the ground that such subscription would imply a readiness to defend, if necessary with her life, every word of those documents as being equally important for faith with the Apostles' Creed itself. About the same time an anonymous document, purporting to represent the views of a numerous group of ecclesiastics belonging to all the French dioceses and to the Parisian newspaper, the Sècle. It contained a declaration that its authors desired, before taking the oath under constraint, to protest before God and the Church that they did not regard their act of submission as in any way binding upon their consciences or as implying any modification of their opinions. Whether with this reservation or not, the anti-modernists were overthrown by most of those suspected of being Modernists, and the history of Modernism as an open movement in the Roman Catholic Church had come to an end.

2. Forms.—(a) Apologetic of immunacy.—It was the aim of the philosophic Modernists, notably of Labethomière, to establish the cardinal points of Christian belief by the aid of the modern evolutionary or dynamic view of the universe. That involved a departure from the traditional scholastic method of apologetics. But they did not abandon scholasticism arbitrarily, simply because it was old. On the contrary, it was their sincere belief that the Aristotelian metaphysic and logic utilized by the scholastic theologians provided a less perfect instrument for the illustration and defence of spiritual truth than the more modern conceptions of life. It is, e.g., an essential part of Christian belief that God is personal and that He is Creator. But it is only in the light of a dynamism that this affirmation of the divine nature and the full significance of these affirmations is disclosed. The God of Aristotle was a logical abstraction, the ultimate idea. Creation was but the logical derivation of the divine idea in specific forms toward which the real world of phenomena was in no sense a productive effort realizing new life. But that is just what the Christian belief demands. For it God is the sovereign source of power, and that power goes forth, must be its very
nature go forth, in a real creative effort issuing in new life independent of and yet closely united with its source. And the very essence of that new life is again real creative; for action is always creative, an extension of life beyond itself, its prolongation into another life, not itself, of which it remains the constitutive principle. Thus creation, as the divine works of the reality introducing itself into the world and becoming immaterial in it. And this act of creation is the act of the divine love by which God is eternally pledged to His works, being self-conscious in man, needs and can receive His grace. Again, as Laberthonnierre points out, it is just because God is not the 'pure act' of Aristotle, but the power which His own nature acts continuously, that we can conceive of a plurality, a society engendered within the unity of His own Being. The doctrine of the Trinity assumes a vital and not a merely formal character.

Thus the reality which we assign to life, because we already feel it there, is itself the motive of our belief in the personality of God. That personality is not a mere idea to which we attain by logical inference, but a fact deducible from our total experience of life as free creative action. That experience implies a more or less conscious communion of each separate creative unit with an original indwelling essence, and of all the units with one another in and through that life. All the terms which this essentially religious experience has formulated to express it—communication, inspiration, revelation, faith, judgment—liken a concretely personal character in God. On the other hand, these terms, when interpreted to us and by us through the logical abstractions of the Aristotelian metaphysical, lose much of their distinctive religious significance. The conception of faith, e.g., as an assent of the intelligence to the truth acquired extrinsically, by the teaching of a divinely deputed authority, fails to do justice to its concrete reality as an act of faith. For faith is an immediate response of the whole personal nature to the personal divine action upon it, a response in virtue of which it recognizes authority and the measure in which authority meditates the divine action to it. The intellectual element in faith exists, but it exists as a derivative from some profounder and more vital action of faith. So, again, revelation, when conceived as the final and immediate impact of extrinsic truths upon the intellect from without, is shorn of much of its religious character. And, in such a revelation need not be religious at all. The real concrete revelation of God is to the whole personal nature apprehending His action upon it. And the perfect instruments of that revelation are Christ, the Incarnate Word, and the life of His Church in so far as it is a real extension of His life. The thought of the Church, its dogmas, its truths—statements, are but the partial and ever-perfectible translation in terms of one aspect of man's activity, his power of intellectually apprehending reality, of its living apprehension of God in Christ. Thus even the Gospels themselves are not a completed revelation. They indeed enshrine the perfect revelation of the Christ-life. But that revelation can be apprehended only in proportion as it is lived, and by those by whom it is lived. The Gospels were but the earliest attempt of those who had lived it to read and interpret its mysteries. Thus history is not of merely accidental importance to the reality, but is, on the contrary, of its essence. As Laberthonnierre frequently puts it, Christianity has dared to conceive of God sub specie temporis. God condescends to weave the same creative, vital, creative, action with manifold hands. The divine inspiration of each individual life is a free product of the total inspiration of past humanity and a contribution towards all future inspiration. So tradition acquires a vital, and not a merely formal reality.

(b) Historical criticism.—It was the aim of the philosophical Modernist to vindicate the Church as the supreme organ of the vital religious tradition of mankind. The Modernist theory is to do the same thing in his own special field of study. The orthodox apologist, grounding himself on the closed character of revelation as imperfectible truth, and assuming practically final identity of the dogmatic statements of the Church to-day with the Scriptural revelation. For the historian, however, the admission of such final identity was impossible. The development of dogma from the most general to the most exact forms of statement, from the simplest to the most complex and detailed forms, was a fact of history. As a historian, the Modernist had merely to trace the development and expose its character. But, as a Christian apologist (the rôle which alone constituted him a Modernist), he had to undertake the much more difficult task of reconciling this development of dogma with its permanent truth-value. This he attempted to do by distinguishing between the spirit and the form of each dogmatic statement, ascribing to the former an absolute and permanent, to the latter a merely relative, instrumental, and mutable value. For such apologists such apologists meant its witness to some aspect of religious experience which was necessary to the reality of the religious life, and therefore universal or capable of being universal. But that witness could pass current between mind and mind only by the aid of some intellectual symbol capable of suggesting the actually experienced reality. Such symbols, necessarily shaped by the intellectual methods and habits of their period of growth, were clearly perfectible. But the growth of dogma was something more, and more truly spiritual, than an organic, than a merely factual reality, as he consciously and from without, of more perfect thought-forms to a constant experience. For thought reacts upon life, the clear perception of an experience upon the experience itself, enlarging and deepening its import. And so many of the Modernist apologists were ready to find in the more developed forms of dogma a fuller expression of its spirit, the experienced reality actually deepened by the more adequate forms. This new method of treatment was applied by the Modernist historian to the growth of ecclesiastical government and institutions and all the formal aspects of the Church's life. As a historian, he had to deny the orthodox contention that the actual fabric of Church order had been instituted by Christ Himself. But he claimed that the Church as a society had grown out of the spirit of Christ, and that each stage in the evolution of its order could be shown to have been the necessary means, under the circumstances of its particular historical moment, of preserving or extending the operation of that spirit.

(c) Ecclesiastical and social reform.—Yet the movement did not propose simply to divinize the existing Church. Her actual institutions came into existence in a divine movement in response to the needs of the spirit then operating within her. But to-day those institutions may be suffocating her true life. They may even, as Pogazzaro's saint suggests, be introducing false and destructive spirits into her system—"the spirit of falsehood, the spirit of clerical domination, the spirit of avarice, the spirit of immobility" (Il Santo, pp. 336-342). Yet none of the chief Modernist writers can be said to have drawn up any definite scheme of ecclesiastical reform. They urge rather
that Church authority should remember of what spirit it is, what spirit it exists to serve and extend.

The Church is the hierarchy with its traditional concepts, and it is the world with its continuous hold upon reality, with its continuous reaction upon tradition; the Church is official theology, and the lectern, the plenary of Divine truth which rests upon official theology; the Church does not die, the Church reigns. In the heart more than anywhere to its life the Living Christ, the Church is a laboratory of truth in continuous action (ib. p. 255).

Of the theory by such a conception of her character and mission will the Church discover what reforms she needs to make her equal to both in the profoundly changed circumstances of contemporary life. It is the conception which has inspired the Modernist social reformer also. He has aimed at making Christianity the leaven of national, political, social, and economic life, and therefore the principle of a large, and humane, life which may embrace and harmonize all these. He has conceived of the Church as an instrument of world-civilization rather than of world-renunciation, and of world-renunciation only in so far as it is involved in and necessary to a genuine world-civilization. And so he has tried to understand sympathetically and to cooperate with all the generous hopes and adventures of the modern democrat, democrat whatever his Churchmen be, or among those who are outside the Church's pale. It has been perhaps the chief burden of his offence in the eyes of authority. The Modernist social reformer, one of the chief ecclesiastical reformers in thinking that the Church needs especially to be saved from the danger of becoming increasingly a clerical autocracy, exacting from the laity as the sum of their duty a passive submission to its decrees. It may be said in conclusion that the one purpose which was common to all the allied but independent movements grouped together under the name of Modernism was the self-reform of the Church, a reform inspired by belief in life, in the totality of human action, as it is most likely to provoke man's need of God and to ensure a genuine satisfaction of that need—a reform, therefore, which was to be sought along the lines of contemporary thought and action. It was a generous purpose, arising out of a genuine revival of intelligent religious thought and activity, taking both a different view of the religious needs of the time and of the method of their due satisfaction, has succeeded in suppressing the open activity of the movement, as yet insufficient to predict its ultimate success or failure. One thing, however, may with some confidence be asserted, viz. that its apparent failure for the moment has been due less to the action of authority than to the prevailing lack of interest among the Latin peoples in thought about or discussion of religious questions. If that interest should ever be revived, it is certain that it will demand and procure throughout the Latin churches reforms similar in inspiration, in range, and in effect to those for which the Modernist leaders contended during the last decade of the 19th. and the first decade of the 20th.

The chief pontifical condemnations are conveniently given in J. J. Thottgen, 1908, 83, 1912, 83. Cyslishine, 401-406, (Lemestable), 307-2120 (Pascendi), 214-47 (anti-Modernist oath); and all the documents are collected by A. Vemerech, De Modernism, in CEK, 1911, 415-442.

A. L. LILEY.

MOGGALLANA. Moggallana was one of the two chief disciples of the Buddha. He was a Brahman by birth, and his mother's name is given in the Divyavadana (p. 82) and Bhadra-kanya. Moggallana is a friend and a young Brahman from a neighbouring village, had become 'Wanderer' (paribbdjakid) under Sanjaya. He had given his word that he first to find 'ambrosia' should tell the other. One day his friend, Sariputta, saw Assaji, another Wanderer, passing through the royal park, and Sariputta went to him and, after compliments he had exchanged, asked him if he was the teacher and what was the doctrine he professed, seeing that his miles was no serene, his countenance so bright and clear.

There is a great many references of the sense of the Sutta, who has gone forth from the Sīkṣa cha. He is my teacher; It is his doctrinal reform! was the reply of Assaji to the question of the doctrine? asked Sariputta. I am not a novice, only lately gone forth. In detail I can not explain, but I can tell you the meaning of it in brief. Assaji told him that what he wanted the spirit, not the letter, of the doctrine. Theo Assaji quoted a verse: 'Of all phenomena sprung from a cause The Teacher the cause hath told And he tells also, how each shall come to its end, For such is the word of the Sage.'

On hearing this verse Sariputta asked: 'the pure eye for the truth this'; that is, the knowledge that whatsoever is subject to the condition of having an origin is subject also to the condition of passing away. (This is the stock phrase in the early Buddhist books for conversion). He at once acknowledged that this was the doctrine that he had sought for so long a time in vain. He went immediately to Moggallana, and told him that he had found the ambrosia, and, when he explained how this was, Moggallana agreed with him in the view that he had taken, and they both went to the Buddha and were admitted into his order.

The story here summarized is repeated, in almost identical terms, in various commentaries. It is curious in two ways. In the first place, who, on being asked to give the spirit of the Buddhist doctrine in a few words, would choose the words of Assaji's verse? One may search in vain most manuals of Buddhism to find any mention of the point raised in the verse; and yet the verse has been so frequently found on tablets and monuments in India that Anglo-Indians are wont to call it, somewhat extravagantly, 'the Buddhist creed.' The Buddhists, of course, have no creed in the European sense of that word, but any one who should draw up one for them ought to include in it a clause on this matter of causation. The quotation may very well have made a special impression upon Sariputta and Moggallana. They had already obtained the solution of the unsatisfactory, inexpedient solution of the problems of life, and were seeking for something more satisfactory than the vague hints now to be found only in later passages, such as Āditi 19, where the ambrosia is reduced to a mystic connexion with cause and with passing life. 1 Pinaya, ed. H. Oldenberg, i. 85-94; translated in Rhys Davids and H. Oldenberg, The Literature of India, London, 1899; and in Edgsworthy, The History of Buddhism, London, 1907, p. 149; Agastīyāra, ed. 1. 83, etc.

1 It is not stated that he was the same as the Sañjāyā of Dipika, i. 58, the famous 'ed-vigreya,' who was the author of the Kārttikā Com. on verses 107; Syllabus of Buddhist literature, Ceylon, p. 1011; Agastīyāra Com. on i. 83, etc.

But see the following works in C. A. F. Rhys Davids, Buddhism, London, 1912, pp. 78-106.
MOGGALLANA

away. Here, in this new theory of causation, was a quite different view of things, which seemed to these inquirers to meet the case.

It is also, at first sight, a view that they should have called this particular doctrine "ambrosia (anata). Though this expression was no doubt first used of the drink that preserved the gods from death, it must before the rise of Buddhism have acquired a wider employment as the secondary meaning of salvation as being the ineffably sweet. It is true that the other idea of salvation, as being a deliverance (from evil, or from the eternal round of births and rebirths), is also found in pre-Buddhistic works (see Mokṣa). But it was natural, in the beginnings of speculation, to have varying attempts at the expression in words of so complicated a conception; and it is improbable that the early Buddhists invented such a phrase as ambrosia, connoting, as it does, so much of the earlier polytheism.

Moggallana is frequently mentioned in the canon, and usually with the epithet Mahā ("the Great"). A number of verses ascribed to him, including one long poem and several shorter ones, are preserved in the anthology called Therāgathā ("The Early Buddhists"). This anthology is curiously silent about him; but a whole book is ascribed to him in the Snīṇyuttā; 4 and about two score of passages in the Majjhima and the Aṅguttara, and in the Sutta-Nipāta, record acts done or words spoken by him. 5 We need not give the details of these passages. The general result of them is that he was considered by the men who composed them to have been a master of the philosophy and of the psychological ethics, and especially of the deeper and more mystical sides, of the teaching. There is, e.g., an interesting passage where the Buddha compares Sāriputta with Moggallana:

1 Like a woman who gives birth to a son, brethren, is Sāriputta to a young disciple, like a master who trains a boy so is Moggallana. Sāriputta leads him on; in conversion, Mogallana to the highest truth. But Sāriputta can set forth the four Aryan Truths and teach them, and make others understand them and stand firm in them, he can explain and elucidate them.

In one characteristic Moggallana is stated to have been supreme over all the other disciples. This is in the power of iddhi ("potency"). Both word and idea are older than the rise of Buddhism; and the meaning is vague. The early Buddhists, trying to give it a name, afterward developed the old two classes of iddhi—those, lower, intoxicating, ignoble; the other, higher, temperate, religious. The former has preserved itself: it is a belief common among the people, the latter the modification which the Buddhists sought to make it. The former reminds us of the mana of the South Seas, or the orakoa of some American tribes, or sometimes of the strange accomplishments of a spiritualistic medium. Birds have iddhi, with especial reference to their mysterious power of flight. Kings have iddhi 6 of four kinds (differently explained at Dīgha, ii. 171 and Āṭṭhakathā, iii. 454). It is by the iddhi of a hunter that he succeeds in the chase. 7 Iddhi is the explanation of the luxury and prosperity of a young chief. 8 By iddhi one may have the facility of levitation, or of projecting an image of oneself to a distant spot, or of becoming invisible, or of walking on water, or of passing through walls, or of visiting dead souls in their various abodes. All these are worldly iddhi, the iddhi of an unconverted man. That of the converted, awakened man is self-mastery, equanimity. 9 Both these kinds of potency were regarded as natural, that is, neither of them according to Indian thought, what we should call supernatural. And neither of them, in Buddhist thought, was animistic, that is, either dependent upon or involving the belief in a soul as existing within the human body.

In both these respects of iddhi, the worldly and the spiritual, Moggallana, in the oldest records, is regarded as pre-eminent. An amusing and edifying story is preserved of the way in which, like an ancient St. Dunstan, he outwits the Evil One. 3 We are also told how, in order to attract the attention of the gods to the very elementary exposition of ethics that he thought suitable to their intelligence, he shook with his great toe the pinacles of the palaces of heaven. 4 Other instances of Moggallana's instructing the gods are given in the Snīṇyuttā; cf. the passage just above, and in the Aṅguttara (iii. 311, iv. 55), while two anthologies, probably the latest and certainly the dreariest books in the canon, the Vinnāna Vatthu, consist entirely of short poems describing interviews which Moggallana is supposed to have had with spirits in the various heavens and purgatories.

Most of the episodes in which Moggallana figures are localized, that is, the place where the incident or conversation took place is mentioned by name. The names are very varied, and it is clear that no one place could be regarded as his permanent residence.

Tradition has preserved no further account of his life, but the manner of his death is explained in two commentaries, the two accounts being nearly identical. 8 Both Sāriputta and Moggallana died in the November of the year before the Buddha's death, just before the Buddha started on his last journey. 9 Sāriputta died a natural death; Moggallana, it is said, was murdered, at the instigation of certain jealous Jain monks, by a bandit named Samāna-gutta, at the Black Rock cave on the Isigili Hill near Rājagaha.

When Cunningham opened the two boxes (memorial and one) at Sākā, he found in them, and in the two boxes containing fragments of bone and inscribed respectively 'Of Sāriputta' and 'Of Moggallana the Great' in Pali letters of Asoka's time. A similar discovery was made in the neighbouring group of boxes at Sākā. 8 It is evident that more than two centuries after their death the memory of the two chief disciples had not yet died out in the community, and that the Buddhist laity who erected these monuments considered it suitable that their supposed relics should be enshrined in the same tomb.

The name Moggallana was occasionally adopted as their name in religion by candidates for the order until the 12th cent. of our era. The belief that the power of iddhi had been actually exercised by Moggallana the Great and others in the ancient days is still held by those of the orthodox who adhere to the ancient tradition, though, except as practised long ago, the belief in it soon died out. There is no evidence, later than the canon, of any

1 The stock passages are at Dīgha, i. 58; Majjhima, l. 34; 484; Aṅguttara, ii. 301; 17. 28.
2 Dīgha, iii. 115, 118.
3 Āṭṭhakathā, i. 328; Dhammapada Com. I. 65. 66.
4 Jātaka Com. i. 320.
6 J. B. P. 49.

1 Moggallana is mentioned as his name in religion by candidates for the order until the 12th cent. of our era. The belief that the power of iddhi had been actually exercised by Moggallana the Great and others in the ancient days is still held by those of the orthodox who adhere to the ancient tradition, though, except as practised long ago, the belief in it soon died out. There is no evidence, later than the canon, of any
contemporary cases of the lower, worldly ṛidhi of the unconverted man.

MOKSA (Sk., also mukti) and VIMUTTI (Pāli, also viṃ搞kha).—These terms, other prefixes being sometimes substituted, are all derivatives from ‘auch,’ ‘to let go,’ ‘discharge,’ ‘release,’ and, with varying import, are identical in primary meaning, with our ‘liberation,’ ‘emanation,’ ‘freedom,’ ‘liberty,’ ‘release.’ Whichever equivalent he selected, the inquirer may start with two general way-marks. In the first place, the concept in question has a negative side, viz., a having got loose from, or rid of, and a positive side, viz., the comfort, or general sense of expanded outlook, calm, security, attainment, power to be and do, with no care at all. The latter from were free in some cases too costly a gain. If these two aspects be held together in the mind, then the common terms for them, stated above, may—and this is the second way-mark—be considered as, more perhaps than any other idea, the pith and kernel of the religious faiths of India, and as coming nearer to the Christian ‘salvation’ than any other. It should, however, be added that the concept grew with the development of emancipation, by no means always and everywhere given this paramount emphasis and importance. Awareness of emancipation as such, or of its absence and desirability, is not patent in the earliest recorded expressions of the Indian mind. The vital importance of solidarity, either with tribal custom and convention or with the decrees and the very life of his gods, is far more pressing on the man of primitive culture than is any revolt or self-exclusion from, or independence of, any order or destiny, socially or divinely imposed on all. Moreover, the particular development of the riddances that had in time to be generalized under a common notion varied in kind. Before making good these general considerations by analysis, it may be well to guard the reader of translations from Indian literature against gaining an inaccurate idea of the frequency of allusions to freedom, etc. Perhaps no language is as rich in privative or negative inflexions as is that of the Indian classics, whether it be Vedic, Pātrik, Pāli, or Sanskrit. We have ourselves a few terms where the negative form exceeds, in inspiring emphasis, the positive form—e.g., independence, infinite, immortality, etc. Such terms are very numerous in Indian literature, and it often happens, notably in translations by Max Müller and Faubhūlā, that, to give the force or elegance of the originals, words with a negative prefix—a, it, vi, rendered by ‘free from,’ and even ‘freedom from.’ Thus we find such renderings as ‘ā-sūrya (‘from the sun’),’ ‘ā-pāvina (‘from the fire’),’ ‘ā-bhūt (‘from grief’),’ ‘ā-sūka (‘from desire’),’ ‘ā-thāma (‘from the body’),’ ‘ā-vati (‘free from decay, death’),’ ‘ā-vi (‘from the body’),’ ‘ā-nāma (‘from many others, notably, ‘being free from good and freed from evil’),’ ‘ā-bhūti (‘from expectation, i.e., ‘unshod from (1) the well-done and the ill-done, in other words, rid of the effects of his actions or karma’ (Katharma Uv. xiv, i, 14). Many other ‘liberties’ taken by the lavish use of ‘free from’ or ‘free from’ also have this peculiarity. They are among the most frequent in an archaic account of sanātana, or transmission. Now, it is true that the words, or moksa, concept centres in the release of the soul or self, not only from this body, but also from all future bodies. But the only term expressive of release here is the translation ‘free from’ or ‘depart from’ or ‘go away from’ in the language, the leaving or erasing of the moon, it passes him on’ (cātarṣa), i.e., he does not return to be reborn on earth. This, however, is by no means the general rule. Further on, in 11. 7, in an ancient aureole-hymn occurs the unique appellation ‘siva’ (‘twister’ or ‘turner’): ‘Thou art the twister that twisteth about the universe’ (sākrtā nāma). This is translated (6x): ‘Thou art the deliverer, deliver me from sin.’ In the Tattvartha, in 1. 1, in the A-hrjuttara (189), the ‘Twister’ is called ‘the true, truly, spritly, he saves himself,’ in the Bhāratarāgaḥa Upanishad, iv. 43, Regional renders aparākara (M. Müller: satisfied, pleased), 1895-96 (PTS); in the Chāndogya Upanishad, viii. 1, 6, the words rendered freedom in all the four senses, as they list (kāmakānaḥ); and in the Mṛgavās Upanishad, i. 2, 6, had obtained freedom from all desires (M. Müller) is, in the original, ‘had turned to renunciation’ (Deussen). It was very possible that the translators were encouraged in this task by consulting the medieval commentaries of Saṅkhya, in whose philosophy moksa was a well-evolved concept, and who uses it liberally in his paraphrases. For instance, in Rātha Upanishad, vi. 15—Nāchiketa became free from passion (śreyas) and obtained Brahman—the last clause is explained as ‘became freed’ (nātā bhāt). In being thus advised to discount much factitious emphasis laid in these ancient works on a notion that was evidently held by them that that most at least of the translations criticized render only what is really implicit in the various riddances referred to, namely, a liberty emerging through the getting detached from, or true that the Indian mind did indeed work its way to a positive concept of moksa or vimutti chiefly through an austere elimination viewed as the getting relieved of discarded hardness. Even a Buddhist commentator of probably the 5th cent. A.D. chose to define viṃkha as so-called ‘because of the being set free (viṃkha)’ from opposing things’ (Vagīśa-Pāthaitti Com.). But the state of the art of emancipation, as a conscious assurance, belong no less to that more evolved and positive side of its psychology which, in the West, is usually associated with political autonomy and social or personal self-congratulation. The freedom in which the Indian gloried was spiritual:

1) O free indeed! O gloriously free am I
In freedom from three crooked things
Ay, but I am free from rebirth and from death,
And all that dragged me back is hurled away
(Phalas of the Sutras, 11).

2) Henceforth in the real (or true) Brahman be he become perfected and another. His fruit is the extinction of bonds; without desires he attains to bliss imperishable, inmeasurable, and therein abides (Mṛgavās Upanishad, vi. 20).

3) And Kate Mātikā, ix. 1, is inclined to bring out the fact that, whereas one enters on ‘the Path’ to salvation, full of a sense of danger to get rid of, the gradual putting off of ‘fetters’ converts this consciousness into expectation of the bliss of perfected delivery, i.e. of Nirbhām. For vimutti is ‘comparable to’ Nirbhām, and ‘the holy life is planted on, and leads to and culminates in Nirbhām’ (Mājājīna, i. 104; Saṅgīta, v. 12).

There is but the faintest anticipation of this in the Vedas. The only ‘setting free’ in those pages is the resting-place (viṃkha) where horses are eased for a while from harness. Gods are called upon to deliver from sin—but it is such ‘as slings to our bodies’ (Rigveda, vi. xxv. 3; cf. iv. xxv. 9, vii. xvi. 18, vi. xii. 26, vācmanam)—and to let the enemy catch maras, but not to be slain (vii. 9). Such a prayer as ‘May I be detached from death like a gourd from its stem, but not from the immoral (aṃtya)’ (ib. 12) is the precursor of the later thought. Beyond such expressions there is no mention of freedom was, it would appear, born. The Brāhmans give, in the elaborate ritual of the altar-building, a rite to be chanted while laying the ‘bricks of saving’ (yātrā), that is, from evil 1 Hrab is a salutation just quoted concerning in an archaic account of sanātana, or transmission. Now, it is true that the words, or moksa, concept centres in the release of the soul or self, not only from this body, but also from all
and from death (Satsapatha Brāhmaṇa, viii. iv. 2), but elsewhere (xlv. iii. 3) it is said that none but a brahmācharīr or religious is exempted by Brahman from death, and only on the condition that he daily lends the sacred fire. Not having any merit than in the Vedas does the grasp and realization of an emancipated consciousness appear. It is still apparently only inchoate in the Upaniṣads ranked as the highest, but the Hindu Upaniṣad is silent on the matter. In the Aitareya Aranyakā, an ancient mystic nature-monologue, there are hymns prescribed for rites proficiency in which brings the conception of all desires. These desires are emancipated—long life, luck, wealth, fame, etc.—but ‘liberty’ is not among them. Progress in spirituality is revealed in the Tattvārthā and Chāndogya Upaniṣads, but the emancipation-spirit is still immanent, as former shows the growth of it at the end of the second part:

1. He who knows the bliss of that Brahmān whence speech, whose mind turn back, not finding it... contours not himself with: ‘What good have I left undone? What evil have I done?’ He, knowing this, saves himself.

2. The other (Deussen, xiv. 2) shows a parallel growth in the parable of the man brought blindfold from his Gandhāra home into the desert, and thence, with sight restored, directed how to get it again, even if he has gained true knowledge through his teacher know that ‘I shall only so long belong to this system of rebirth till I am emancipated (ekamgej) then shall I go home’ (so Deussen).

And in the closing section the favourite simile for deliverance:

‘Freely myself from the body, as the moon frees himself from the ocean, I rejoin into the world of Brahman.’

The same simile is hinted at in the Katha Upaniṣad:

1. He who has perceived the soundless, the intangible, the eternal, the unchangeable, is freed from the jaws of death (t. iii. 1).

But in the following passage (Ch. ii. v. 1) we see how the idea is finding expanded expression:

‘There is a town with seven gates of the Unborn, of thought insinuate. Whose approaches (Deussen: ‘honoured’) it, he grivces no more and, emancipated, is set free (vinnātād esa vimochhita). Verify this is that.’

From what ‘set free’ is not unambiguous (M. Mühler: bonds of ignorance; Deussen: the body), but ‘liberty’ is becoming realised as an ideal.

Turning now to the long Bhadrārayaka Upaniṣad, we come at length to an emphatic designation of certain attainments as constituting ‘liberty’. In the speech of the Vedā teacher how he who institutes a sacrifice may be freed from the influence and thraldom of death, of day and night, and of the waxing and waning moon, and how the bright worlds shall be reached up at a birth. By this or any celebrant priest are given the several replies, and to each reply is added: ‘That is liberty, that is utter liberty (a tāṇtikā śat atimukti).’ These are then termed the atimuktes.

It is noteworthy that, while these four ‘liberations’ are alone so emphasized, aspiration does not (in the adjacent section) stop at heaven. Urged by another interlocutor, a Kṣatriya, again and again, with proffered largess, to ‘speak of that higher thing which awaits for emancipation,’ Yaśuvakāiya, the Veda-teacher, finally discourses of the soul and of beholding the soul as God.

1. ‘Scarcely visible and old there lies a path
That reaches into me, was found by me,
Yet aiyā, the wise one is before me,
Far onward to the world of light, and thence
Overpassing that are utterly released’ (longāṇaṃ bhokṣaḥ dharmóstānaṃ tān śvānām).

2. ‘As the slough of a snake lies on an anthill dead and cast away, there lies this body, but that disembodied, that immortal, that life, is Brahman only, only light’ (iv. v. 3, 7).

This with its context is not designated as aitikā, or as muktikā. When we find again the snake-skin simile, in the Praṇa Upaniṣad, v. 5, where the emancipation described is that of spiritual ecstasy rather than of a disembodied spiritual unity, or full realization of the sameness, the freshness, on the one hand, is made more explicit, too, and all that, the liberation, theולימ, the Belshazzar’s ‘from evil.’ But, whether emancipation be from the power of the body during life or from the body itself and from all subsequent bodies at final death, the main position of the liberation of the soul during the early stage of Vedantist mokṣa, is, intellectually, discernment of the identity between the Absolute, Brahman or Atman, and the soul located in man, and, emotionally, the assent of that identity, peace resulting therefrom. For the individual becomes invested with the powers, negatively expressed, of the Absolute Being: undecaying, imperishable, unattached, unbound, unslumbering, etc. (Brhadārayaka Upaniṣad, iv. iv. 4).

1. If a man clearly beholds this self as lord of all that is and will be, who has entered into this patchwork being hiding-place, he is creator, maker of all, in his world, he is the world... there he is no more afraid’ (Ch. vi. 13, 15).

Proceeding to the less ancient Upaniṣads, such as may have been influenced by Buddhist and other developments, we find in the Upaniṣad of the Shavelling (Śrīdaka) the compound pari-nibbāṇa (vi. 1, 6).

‘They who have grasped the sense of Vedas, All anchorites, their longest burning
In earnest renunciation, at the final death
In Brahma-heaven become immortal, wholly freed.’

But in the Śvetāṣṭāra Upaniṣad, and the allied but perhaps still later Maitrāryaka Upaniṣad, the reader finds himself among new ideas jostling against the older ones. These are yet present—soul and Brahman, release from life and death, and knowledge as giving release—but the current has widened, if not deepened. The Theism of Yoga, the theory of separate souls and their self-emancipation from conditioned, mutable concomitants of the Sākhyā system, the critical, scientific attitude of Buddhist, and the tragic earnestness of the two former and of Jainism—all these have caused a revolution in outlook that strikes a new note at the very first words:

1. ‘Om! The Brahman teachers say: What is the primal cause, what Brahman? Whence are we?’ (Śvetāṣṭāra Upaniṣad, i. 1).

Through it all the mokṣa-idea appears as the work of a creator:

1. ‘The Deva’ or Siva (‘Lord’), ‘himself self-caused, is the first condition (the cause) of the maintenance and the movement (āthī, anahārā), the bondage and the liberation (bandha, mokṣa) of the world’ (Ch. vi. 13). To know him, ‘to see, tracing his own being a living, the being of the world, he who keeps of the world, all fetters fall away, all sufferings destroyed, and the ceasing of birth and death come to pass’ (Ch. i. 11, ii. 15). ‘I, seeking for freedom, take in my refuge, supreme Causeway to that which is not dead (ātmikā parām satkaraṇ). Faith that burneth where he feel is’ (Ch. vi. 18, 19).

2. ‘As soon a man might wrap the atmosphere About himself like any cloak, so reach
The end of suffering, not knowing God’ (Ch. vi. 20).

Yet both here and in the Maitrāryaka Upaniṣad the Atmanic monism is none the less maintained, and all personal deities are recognized as names of the self (iv. v. f., vi. v. 8). Much, it is true, is made of a disparate ‘element-soul’ or self, bound by the fetters of the fruits of good and evil, crippled, and as one in prison, till ‘by knowledge, by tapas (austerity), by meditation he is freed from those things by which he was filled and overcome, and obtains union with the Atman’ (iv. vi. 4).

2. Yet this concept no longer satisfies:

1. ‘Having seen his own self as the self (or soul), he becomes selfless (atmanā); and, in virtue of selflessness he is to be conceived as immaterial, unconditioned, immeasurable. This is the highest mystery, betokening emancipation... through selflessness he has no part in pleasure or pain, but attains absolutes (brahmanism)’ (iv. xvi. 1iv.), a wondrous blend of Buddhist and Sākhyā concepts.

Yet another new term reveals a fresh and notable development of the mokṣa-consciousness, that
of 'autonomous,' or independent—svantastra (V. xxviii. 38):

Independent, standing on his own greatness, he contemplates a top which is the centre of the chariot-wheels! (That is, he has ceased to convey him.) Cf. the 'autonomy' prescribed in and vital for Buddhism (Digha Nikāya, ii. 109, and elsewhere). The physiology of the process of self-liberation has attained an interesting development (Māttrāyāna Upānīṣad, vi. xxxiv.). Manas (i.e. the mental mechanism of sense-cognition, a narrower conception of mind, Sankhya's, is known), is called 'the cause of bondage and of liberty.' And to bring it to its right anchorage, to bring it, in fact, 'to an end in the heart' (the seat of the soul)—that is knowledge, that is mokṣa. In this sense, man is wholly freed (parinirvāṇya). Nor does this austere discipline, nor does the evolving power of introspection dull the rapture associated in the earlier books with this setting free. With a poet's licence, or through theistic influence, the poet pictures the Absolute soul (Brahman) as reciprocally 'longing for a true (or real) man' (ib. vi. xxx.).

That the yet later Upānīṣads could use mokṣa as practically synonymous with religion appears in the Mūkta Upānīṣad, which recommends him who seeks for mokṣa to study the Māṇḍūkya Upānīṣad, and, if that suffice not, certain others, and so on and so on. The one name is a concise effort to define the essence (sāra) of the soul or Brahman. More pertinent is the definition of mokṣa in another of the aforesaid Upānīṣads, the Sūrya-sūra, as the destruction of the illusion that the material body, or any other factor of the phenomenal self, is the Ātman ('soul'), who is God. The illusion is the bond, ignorance its cause. (This illusion is the first of the 'Ten Fetters' of Buddhism.)

Mokṣa as the supreme aspiration runs through that best known portion of the Mahābhārata epic called the Gītā. The allusions occur in almost entirely in the parts judged by R. Garbe to be older (see Bhagavad-Gītā). We find mokṣa applied to liberation from evil (iv. 16), from the body (v. 23), from lusts and anger (v. 26), from decay and death (vii. 29), from works (ix. 28), from the illusion of opposites (xv. 5). But, however the bondage be conceived, release is effected, here also, by a spiritual union with Brahman, concrete psychology as behind, lover, lover of the human soul, who invites his utter self-surrender, and bestows on him, in virtue of that surrender, release from this or that form of limitation (cf. iv. 203). Another section of the epic is called 'the mokṣa-doctrine'; yet it is in the Anugāta section that the complete picture of the emancipated individual occurs (Adhyāya, 19). In this we see him contemplating Ātman, attaining Brahman, sunk in this one goal, oblivious as to the past, freed from results, heedless of 'this' or 'that.' Yet he is a friend to all, suffering all, master of sense and self, fearless, wrathless, meek, upright, treating all creatures as if they were his, indifferent to opposites, lost to social and domestic ties, wanting naught, cleaving to naught, detached. 'He is in every sense free.' All classes, the trader and the lawyer too, may, each on this upward way, and even women, but much more the Brahman and the Kṣatriya who study, joy in their duty, and hold the Brahma world as highest; for the fruit of achievement is liberty, and the satisfaction of all. Beyond that lies no greater bliss.

This notable climax is in complete harmony with Buddhist thought. It is more than probable that, before the epic attained its final form, the influence of Buddhism was already deeply felt and that to it is largely due the breaking down of class and sex disability to attain the highest, the humaneness of the lonely saint, and the crucial emphasis on the ending of suffering. Dukkha ('ill') is not of, course, absent from the earlier Vedāntic literature, but it attains emphasis only in that which must have felt the impact of Buddhism, to say nothing of Jainist and Sāṅkhyan influence. Now, in the philosophy of Arhatas after the release from continued deaths and rebirths by the perfected character, vinuññati is not only dominant to the same extent as is mūkta (mokṣa) in Vedānta, but the treatment of it is more consistent and therefore, perhaps, simpler. In it vinuññati, vinuññati, 'freedom,' 'freed,' express the actual and consciously realized achievements; vinokha (kha) nearly always refers to certain prescribed courses of rapt mentality, whereby such a state might be sooner acquired, or, if acquired independently, quickened—a sort of morning sacrament (Dīgha Nikāya, ii. 112; Puṇḍara-Paññati Com. [JPTS, 1914, p. 177]):

If he who breaks his fast can touch Mental emancipation's eighth degree,
in grade ascending and so back again (Pāñini in Atharvā, 1172).

Hence the terms 'freed by understanding,' 'freed-both-ways,' meaning emancipated by the work of understanding only, or emancipated both thus and by the eight vinokhas or similar exercise in somadhi (cf. Mahāyāna Nikāya, i. 477).

Moreover, vinuññati, as expressing final achievement, with the rapturous assurance of it, was at the heart of the Buddhist Dhamma's practical content.

In that which is recorded as his second sermon—the Anātto-lakkhaṇa Sutta (Vinaya Texts, i. 101; cf. 107)—Gotama Buddha stated how emancipation grew out of the rejection of the cosmic soul as immanent in and identical with the sense of individual personality ('self' being only an abstract idea inseparable from bodily and mental factors). Perception of the absence of Atman realities (permanence, omniscience, bliss) in these denuded them of fictitious attraction. Craving to renew them in future lives fell away. The freed individual knew that he was free, and therforeforth needed only to await the final hour in quiet and blissful well-being and righteous living. Again, in sending forth his first missionaries, the Buddha named as his and their supremely adequate qualification:

'I am freed from all snares human and divine... go ye now... for the welfare of the many... '(Vinaya Texts, i. 1211.)

The subjective awareness of the freed state, held to be also valid objectively, is further enhanced by the use of such terms as 'realizing,' 'touching,' 'tasting' (Dīgha Nikāya, iii. 230; Mahāyāna Nikāya, i. 231; Abhigātara Nikāya, ii. 244, i. 30, iv. 203, etc.).

'Wherefore thus must ye study: "more and ever more offering our reverence shall we realize supreme realization" (Abhigātara Nikāya, ii. 218).'

'Having liberated his mind with respect to things that should be let go he touches perfect liberty' (ib. ii. 186; cf. 214).

'The eight deliverances (vinokha) are to be realized by personal contact' (Abhigātara Nikāya, i. 30).

'Few are they who obtain the taste of liberty' (Abhigātara Nikāya, i. 30).

'As the ocean has but one taste, that of salt, so has Nibbāna but one taste, that of emancipation' (ib. iv. 203; Vinaya Texts, i. 203).

Awareness of full attainment was realized as a timeless moment of ecstatic consciousness (Nātha-vatthu, iv. 4), but the reverberations formed an abiding joy.

Glimmers springing up within him, and rapture therewith; the thought of his enshrined consciousness became transcennial; thus tranquilized he knows bliss; and in that bliss his consciousness is stayed'(Dīgha Nikāya, ii. 231, 'The five occasions of emancipation' in i. 73).

Imagination plays about the text:

'He with fair flowers of liberality enrothed, single and immaculate, shall reach the perfect peace' (Pāñiniśṭhāna of the Brahmin, 199).

'Above the rolling chariot of this earthly life spreads the silken coverings of the rapture' (Sūtrāvatī, ii. 227).

And in the later Questions of King Milinda:

'As the ocean is all in blossom with the innumerable ripple of its waves, so is Nibbāna all in blossom, so it were, with
The innumerable, diverse, delicate flowers of purity, knowledge, emancipation' (iv. viii. 69).

Arahantship, in (ib. v. 17), is called

' the Exalted One's jewel of emancipation (vimutti-ratana, chief diamond of all.'

The three threads here brought together—Nibbana, Arahantship, emancipation—are largely, though not wholly, coincident in range, presenting different aspects of the ideal, Nibbana: the having eliminated the 'fires' of evil and of craving for continued life. Human or divine, the contemplated life is of an Atman-less Absolute: Arahantship; supreme positive attainment in life on earth; Vimutti: the subjective aspect of both, the negative force in life far off:

1. Let go (matta) that which has been, let go what will be, Let go what thou art midst of, that thou dest.
2. Transcend becoming (even every side freed-minded Thus't not again come toward birth and dying' (Dhammapada, 349).

But the self-knowledge that he is free is a clause in the formula confessing Arahantship:

'Emancipated by right (or perfect) gnosis (samajñānādhisthātā),
knowledge (atipa, knowledge"
'treed'! . . . (Nikayas, passim; Dialogues, i. 93).

And the unity connecting the negative and positive aspects may be discerned in the Sutta Nipata verses:

'(In whom no sense-desires do dwell, For no craving doth exist, Who hath crossed over (the sea of) doubt—
What sort of freedom (wait for him)'

In the Nikayas vimutti and Nibbana are declared to be 'comparable' one with another (in the same thought-category, Majjhima, i. 304). But in the Dhamma-scientific view it is distinguished into higher mental freedom and Nibbana (p. 234; cf. Dīga Nīkāya, i. 174).

As the subject of a distinct group (khandha) of religious experience, vimutti is ranked in the Sutta Nipata with the groups 'ethics' (sīlas), concentative studies (samādhi), and insight (pañña, Majjhima, i. 214; Aṅguttara Nikāya, i. 125, passim), while for the Arhat a fifth was reckoned: knowledge and intuition of vimutti (vimutti-dhamma-darsana, ib. i. 162, etc.). Closely associated with the fourfold path to Arahantship, and called, later, modes of progress, avenues, or channels to vimutti, are the 'Wisdom', 'Emptiness', 'the Signless', 'the Not-banked-after' (Dīga Nīkāya, ii. 219; Sathipputta, iv. 295–297; Dhamma-sāgari, 344 f., and Compendium of Philosophy, London, 1916, p. 216).

A very frequent allusion to emancipation in the Nikayas, that of chotāvimutti, 'little emancipation', corresponding fairly well to emancipation of heart and head. The systematic expansion of ethical emotion was not peculiar to Buddhism (see Love (Buddhism). But the founder of Buddhism is represented (Sānyatti, v. 118) as claiming that he alone inculcated in such exercises emancipation of the heart.

In this way, in suffusing the idea of more and more beings with (1) love—'let all beings be void of enmity and malice', (2) pity—'let all be set free from suffering', (3) sympathy—'let all be happy and fortunate', (4) equanimity—'all the owners, the heirs of their doers, these mental exercises, if truly practised, result in a thorough self-mastery through complete emancipation from the respectively opposed moods of (1) enmity, (2) harmfulness, (3) sympathy, (4) passion (Ledi Sakh, Mahāsaya, a letter to the writer).

Taken alone, apart from that supreme enfranchisement from all the conditions for rebirth, they constituted the true way to Brahma-heavens.

'Sāriputta: This, I told Dānaññā in that interior Brahma-world, when there was more to be done? Sāriputta: I judged, lord, that these Brahmas preferred that heaven.' (Majjhima, ii. 195).

All other bases of meritorious acts which are stuff for rebirth (upāyavat) are not compared to the contemplation of the heart by love. That takes all those up into itself, as the moon ousteth the stars, the sun the morning star, the night shining in radiance and in splendour' (Thutottaka, 19–21).

But to be emancipated by intuition or insight is to have broken all the ten 'letters' by the four successive stages of the Aryan Path—Stream-winner, Once-returner, Never-returning, Arahantship—and to have reached the going-out of all five desires as to lives on earth or in the heavens (Dīga Nīkāya, iii. 108).

'For not the instrument nor the tool, the unfolding, is that Nibbana to be reached which is the uttering of all knots (Itivuttaka, 162).

The mountain ranges of vimutti were the haunts of those who, with the world well lost,' had developed the symptoms of life's culminating in its final end. Hence it is in the two works containing the legacies of such matured creatures—the Sutta-Nipata and the anthologies of Theia and Therī—that the theme of emancipation is maintained most steadily:

'Come now, let us see Gotañas, who non-like both roam alone . . . and let us ask of him How can we be set free from snare of death? Declare to us who ask as to the way How may a man from sorrow be set free.' (Sutta-Nipata, 164 f.).

'Passed he away fraught with the seed of rebirth, Or as one wholly free? That would we know!' (Psalm of the Brethren, 1274).

'And as the sun rose up out of the dawn Let then my heart was set at liberty' (ib. 477).

'Whose range is in the Void and the Unmarked And Liberty (freedom) in the eight of birds in air So hard is it to track the trail of him' (ib. 92).

'And see, O Master! Some who come To tell thee of Emancipation won And of the night no more to reborn: Who hath himself from passion freed (satiyagha), Uplooked from bondage' (Psalm of the Sisters, 334).

'The I am suffering weak and all My youthful spring he gone, yet have I come, Leaning upon my staff, and climb al't.
The mountain peak. My cloak thrown off, My little bowl I returned: so sit I here. And over the rock The breath of Liberty' (ib. 59, 30).

'Passion abandoned, hatred and illusion, Shattered the bonds, nor is there any trembling In that the springs of life are wholly withered:— Like the rhinoceros let him wander lonely' (Sutta-Nipata, 71).

'Even as a fish that breaks its net in ocean, Even as fire fain to break its bond, stuff — Like the rhinoceros let him wander lonely' (ib. 62).

'Dwelling in love, in pity, and in freedom, In friendly joy, in balance, in season. Inught in the world disturbing his companion — Like the rhinoceros let him wander lonely' (ib. 79).

The evolution of mukti, or moksa, in Jainism cannot be adequately dealt with till its early literature is more fully accessible. As evolved, the idea is clearly presented above (art. Jainism, vol. vii. pp. 408, 470).

Similarly the idea (vikrota, or apevagya, concept of Sākyian thought, which survives in medieval commentaries, and which, even in the aphorisms on which these are based, shows a later and more habile metaphysics than such as the foregoing discussion reveals, will be dealt with in art. SĀKYA. In those aphorisms (Sātrika) the individual soul called paritta, is conceived as 'neither bound, nor liberated, nor migrating' (lixii.), as is the rest of man's nature, physical and mental. Emancipation consists in having discerned the subtle difference between this (dual) nature (pradhāna) and the soul' (xxvii.). By knowledge is liberation (jñāna cha-pevaṃga), by the opposite is bondage' (lixiv.). With this knowledge the work of good and evil is done; the notion of soul and universe may 'go on like the potter's wheel revolving from the effect [of his impact] (lxvii.) after the finished pot is removed, but, when nature thereupon ceases to act, the soul obtains absolution (kṣetrayam āphoti) (lixvii.).
MOLINISM

C. A. F. Rhys Davids.

MOLINISM.—There is no problem in theology more difficult than that which has reference to the knowledge and causality of God, on the one hand, and the liberty and eternal destiny of human beings, on the other. The problem includes three difficulties: (1) How is it possible to reconcile God’s providence and freedom of the will? (2) If the entire physical reality of our free acts proceeds from God as the First Cause, how is it possible for our will to be a free cause, or a cause, for everything to be imputed to the agent in actus? (3) Given the sincere will of God to save all men, how can an account for the terrible fact that many die without the light of faith and never attain to eternal salvation?

The endeavor of theologians to throw light on these difficulties have brought forth two systems: Thomism and Molinism. The doctrine of the Thomists is that divine providence is the traditional doctrine of St. Augustine and St. Thomas Aquinas (qq.v.), was attacked by Molina at the close of the 16th cent., since then an unending controversy has raged in Roman Catholic schools of theology. The history of the controversy is as follows:

I. HISTORY OF THE CONTROVERSY.—In the 13th cent. St. Thomas Aquinas, a Dominican, synthesized the human knowledge with regard to God as the First Cause and Final End of all things in a work called the Summa Theologica. Herein is contained all that the human mind, aided by revelation, can know concerning God’s providence, universal causality, grace, etc. So great was the renown of St. Thomas’ works for the solidity and sublimity of his doctrine that at the Council of Trent the Summa Theologica, alone of all theological treatises, was thought fit to be used as a model for the examination of the Sacred Scriptures. The Order of St. Dominie is sworn to love and defend the doctrines of St. Thomas as heredi- tary right; and it is their loyalty to these doctrines that has earned them the well-merited name of Thomists.

At the close of the 16th cent. the Jesuit Luis de Molina (1535-1600) published a new doctrine on predestination, free will, etc. The basis of the whole system is the so-called Leibnitz modus, a theory borrowed by Molina from his master, Pedro de Fonseca, who, knowing it to be entirely new and against the traditional doctrine, had not dared to publish it. The theory was published at Lisbon in 1588 and entitled: Concordia liberis arbitrii cum gratia divina, divina praeventia, praedestinatione et reprobatione. Had this work been well known and understood, Molina’s theory would have never existed, Luther would not have denied free will, and Semi-Pelagianism would easily have been stamped out. Molina further adds that St. Augustine and the other Fathers would have unanimously approved of this theory of predestina-

1 We do not wish the syllogisms (which we iterate, approve, and confirm) of our predecessors (Clement xi. and Benedict xi.) in praise of the Thomistic school to distract in our war from the authority of other Catholic schools" (Summulae Ord. Presb. viii. 291).

Since the encyclical Aeterni Patris of Leo XII. (4th Aug. 1870), Roman Catholic schools of theology have done their utmost to claim as their own not only the doctrine, but the very name of St. Thomas Aquinas. In spite of the reminiscences of Thomists, Molinists have endeavored to drag St. Thomas to their side, and even to impose on St. Thomas the theory of scientia media, which, before Molina, was not even dreamed of ("ne permedium quietem"), as C. Tiplanus, himself a Jesuit, declares. The first crossing of swords took place between R. P. Beaudoin and C. Mazella. Not long after, G. Schneemann published a work in 1841, in reply to the theories of which A. M. Dupurenauth published a work at Paris in 1866, which contains a complete demonstration of the mind of St. Thomas. In 1869, V. Frins essayed a reply, and in refutation of this Dupurenauth’s and the Molinists’ work in *La doctrine du desir et les sciences*.
MOLINISM

II. ESSENCE OF MOLINISM.—1. Natural order.

(1) God's foreknowledge and free will.—The knowledge of God, considered in itself, is one and indivisible. That which God reference to objects which are the term of His knowledge, it is divided according to the diversity of objects into speculative and practical, into necessary and free, etc. The division which concerns us now is that into the knowledge of vision (scientia visionis) and the knowledge of simple understanding (scientia simplicis intellectus). The former has reference to things which have existed, exist, or will exist; the latter has reference to the purely possible, i.e., to objects which have not existed, do not, and will not exist (cf. Summa Theol. 1, q. 14, art. 9). Now, if this division is adequate, God must know a future free act by the 'knowledge of vision.' But, according to St. Thomas (1, q. 14, art. 8, and art. 9 ad tertium), this knowledge necessarily implies an act of God's will or a divine decree. Hence a future free act is known by God by virtue of; in fact, in His decree, and therefore no future free act can exist unless God decrees its existence. This is the doctrine of the Thomists.

For Molina this is subversive of the freedom of the human will. For him, because God has made known to humanity the innermost recesses of the will and has seen there what it will infallibly do in such and such circumstances, this is the direct denial of free will, for the certain knowing of an effect is a cause of the knowledge of a necessary effect. (b) Therefore Suarez taught that God knows the future free act in His decree foreseen as future. But it is impossible for a future free act, which are the term of God; the divine decrees are eternal, and are therefore neither past nor future. Unable to answer this, Suarez had recourse to another medium: (c) God knows future acts in their truth, which is either formal or objective. 'The will of a future free act is the objective truth; the proposition expressing that reality is the formal truth. Some Molinists (G. Vasquez, M. Liberati, H. Kilber, D. Palmieri, etc.) hold to the formal truth, asserting that of two contradictory propositions expressing a future contingent event one is determinately true, the other determinately false from all eternity, and this independently of God's will; but God knows all truth; therefore... This medium is rejected, not only by all Thomists, but by many Molinists, by Billot, G. Lahousse, etc. Others (F. Suarez, J. B. Banzelis, Mazzolla, etc.) hold to the objective truth, hence the truth of a proposition expressing the future depends on the objective truth of a future event.

(2) God's causality and free will.—God is the First Cause; therefore no being or mode of being can escape His causality. Thomists teach that in virtue of the divine decree the human will is physically, i.e., efficiently, predetermined by God to produce a free act. This divine influx precedes the action of the will by a priority of nature and causality, and applies the will to act (i.e., makes the will pass from the state of not acting to the state of acting). Thus rendering the will in actu primo capable of freely determining itself in actu secundo. The free will infallibly consents to that which it is the cause of such a condition; hence, the scientia media, God explores and knows, with infallible certainty, what the human free will will infallibly do by its own innate liberty (consent or dissent, act this or that, etc.) if it be placed in such or such circumstances. God, if He wishes, e.g., Peter to consent, to do this act, etc., decrees to put Peter in these or those circumstances, and decrees conditionally to grant His help or concurrence for the particular action determined upon by Peter's free will (see below, 'simultaneous concourse'). In this decree, which follows the foreknowledge of the future free act, Molinists say God knows the absolute, future consent without prejudice to the free will; but the certainty of His knowledge is due, not to the intrinsic efficacy of the decree, but to the scientia media, which sees the consent before the decree.

The unanimity among Molinists is mainly negative, namely, that God does not know future free acts in any absolute, actual decree of His will; but, as regards the medium in which God sees it, God sees a future free act, quantum homines, tot sententiae. (a) Molina and, after him, R. Bellarmine, M. Becanus, etc., teach that God knows the future free act in the medium of the free will; i.e., God's knowledge penetrates into the innermost recesses of the will and sees there what
but of itself the influx is indifferent and inefficacious for this or that particular good: without any further influx from God, the will remains itself to act, not to act, to do this, or to do that.

Thomists are accused of making God the cause of sin by the physical premonition which is efficacious, but the doctrine of the Molinists allows Physical premonition effects, it is true, that the will cannot but infallibly do that to which it is premoved, but no Thomist allows that God pretermines to sin gua sin (see THOMISM); the contrary, being that the co-operation of God with the will, not indeed to produce the sinful action as sinful, but to produce the physical reality of the action. It is a lesser evil to co-operate than to make a sin; Molinists have chosen a lesser evil, but have not solved the difficulty.

Against the two theories of Molinism with regard to the divine influx Thomists object that neither safeguards the universal causality of God. The self-determination of the will is not nothing; it is a reality, which, therefore, cannot escape God's causality. To argue, as does a recent Molinist (Lahousse, Théol. Nat., Louvain, 1888, cap. 9, art. 3, no. 502), that there seems no reason why this quality (i.e. the determination of the will whereby it makes itself pass from the state of not being to the state of being) cannot be inefficiently produced by a created being is not only to beg the question, but manifestly to deny, in very words, God's universal causality.

2. Agreement to God's congenitally free will.

Against Pelagians both Thomists and Molinists defend the necessity of grace for the production of a salutary act. Against Semi-Pelagianism both defend the necessity for the very beginnings of faith, and for the desire to do a salutary work. Both teach the absolute gratuity of actual grace, even for the very beginnings (prima gratia oecans) of their opponents, Luther, Jansen both teach that sufficient grace is given to all without exception, and that, under the influence of efficacious grace, the freedom of the will remains intact. The first point of difference between Thomism and Molinism concerns the nature of sufficient and efficacious grace, which both agree to be a division of actual grace. For the Thomist efficacious grace is existentially, i.e. in such a way, that the self-determination of the will is efficacious, suffices to produce an act of grace. Sufficient grace gives the proximate power of producing a salutary act; it raises the will to a supernatural level, and constitutes it in actu primo capable of performing a salutary act; but in order to produce that act de facto an efficacious grace (which is a physical premonition in the supernatural order) is necessary. Hence sufficient grace in Thomism gives the posse efficacious grace the agere (see THOMISM). For the Molinist the same grace can be sufficient or efficacious; it remains sufficient if the will resists; it becomes efficacious if the will consents. Grace, therefore, is efficacious, not intrinsically or of its very nature, but extrinsically, by the consent of the will (gratia efficae ab extrinsceco). In the natural order, as said above, the divine indifferent concourse is not said to receive into the will, nor does it precede the action of the will, but in the supernatural order it precedes (owing to which it is called gratia prevenientia) the action of the will, and is received into the will, that is, making the will that principle in actu primo of the salutary act (this saves Molinism from Semi-Pelagianism). Prevenient grace is a physical reality produced by God in the acts of his own will (which is called gratia excitans) morally (not physically, i.e. efficiently) to consent; it co-operates (owing to which it is called gratia co-operans) with the will to elicit a salutary act; but the consent does not follow infallibly, because this grace is not of its very nature, or intrinsically, efficacious (cf. Molina, Concordia, qu. 14, art. 13, disp. 41). According to this doctrine, one and the same grace can be merely sufficient for one individual and efficacious for another; but it cannot be efficacious for one person, while a greater grace can remain merely sufficient for another. Nevertheless, an efficacious grace is a greater boon than a grace merely sufficient. Thus, God's gift of eternity foreseen by the semi-Pelagians (that, if He gave grace A to Peter, He would consent, but, if He gave grace B, Peter would not consent. When, therefore, God gives to Peter grace A, which He foresees will benefit another, a sin; Molinists have chosen a lesser evil, but have not solved the difficulty.

Against the two theories of Molinism with regard to the divine influx Thomists object that neither safeguards the universal causality of God. The self-determination of the will is not nothing; it is a reality, which, therefore, cannot escape God's causality. To argue, as does a recent Molinist (Lahousse, Théol. Nat., Louvain, 1888, cap. 9, art. 3, no. 502), that there seems no reason why this quality (i.e. the determination of the will whereby it makes itself pass from the state of not being to the state of being) cannot be inefficiently produced by a created being is not only to beg the question, but manifestly to deny, in very words, God's universal causality.

2. Agreement to God's congenitally free will.

Against Pelagians both Thomists and Molinists defend the necessity of grace for the production of a salutary act. Against Semi-Pelagianism both defend the necessity for the very beginnings of faith, and for the desire to do a salutary work. Both teach the absolute gratuity of actual grace, even for the very beginnings (prima gratia oecans) of their opponents, Luther, Jansen both teach that sufficient grace is given to all without exception, and that, under the influence of efficacious grace, the freedom of the will remains intact. The first point of difference between Thomism and Molinism concerns the nature of sufficient and efficacious grace, which both agree to be a division of actual grace. For the Thomist efficacious grace is existentially, i.e. in such a way, that the self-determination of the will is efficacious, suffices to produce an act of grace. Sufficient grace gives the proximate power of producing a salutary act; it raises the will to a supernatural level, and constitutes it in actu primo capable of performing a salutary act; but in order to produce that act de facto an efficacious grace (which is a physical premonition in the supernatural order) is necessary. Hence sufficient grace in Thomism gives the posse efficacious grace the agere (see THOMISM). For the Molinist the same grace can be sufficient or efficacious; it remains sufficient if the will resists; it becomes efficacious if the will consents. Grace, therefore, is efficacious, not intrinsically or of its very nature, but extrinsically, by the consent of the will (gratia efficae ab extrinsceco). In the natural order, as said above, the divine indifferent concourse is not said to receive into the will, nor does it precede the action of the will, but in the supernatural order it precedes (owing to which it is called gratia prevenientia) the action of the will, and is received into the will, that is, making the will that principle in actu primo of the salutary act (this saves Molinism from Semi-Pelagianism). Prevenient grace is a physical reality produced by God in the acts of his own will (which is called gratia excitans) morally (not physically, i.e. efficiently) to consent; it co-operates (owing to which it is called gratia co-operans) with the will to elicit a salutary act; but the consent does not follow infallibly, because this grace is not of its very nature, or intrinsically, efficacious (cf. Molina, Concordia, qu. 14, art. 18, disp. 41). According to this doctrine, one and the same grace can be merely sufficient for one individual and efficacious for another; but it cannot be efficacious for one person, while a greater grace can remain merely sufficient for another. Nevertheless, an efficacious grace is a greater boon than a grace merely sufficient. Thus, God's gift of eternity foreseen by the semi-Pelagians (that, if He gave grace A to Peter, He would consent, but, if He gave grace B, Peter would not consent. When, therefore, God gives to Peter grace A, which He foresees will benefit another, a sin; Molinists have chosen a lesser evil, but have not solved the difficulty.

Against the two theories of Molinism with regard to the divine influx Thomists object that neither safeguards the universal causality of God. The self-determination of the will is not nothing; it is a reality, which, therefore, cannot escape God's causality. To argue, as does a recent Molinist (Lahousse, Théol. Nat., Louvain, 1888, cap. 9, art. 3, no. 502), that there seems no reason why this quality (i.e. the determination of the will whereby it makes itself pass from the state of not being to the state of being) cannot be inefficiently produced by a created being is not only to beg the question, but manifestly to deny, in very words, God's universal causality.

2. Agreement to God's congenitally free will.

Against Pelagians both Thomists and Molinists defend the necessity of grace for the production of a salutary act. Against Semi-Pelagianism both defend the necessity for the very beginnings of faith, and for the desire to do a salutary work. Both teach the absolute gratuity of actual grace, even for the very beginnings (prima gratia oecans) of their opponents, Luther, Jansen both teach that sufficient grace is given to all without exception, and that, under the influence of efficacious grace, the freedom of the will remains intact. The first point of difference between Thomism and Molinism concerns the nature of sufficient and efficacious grace, which both agree to be a division of actual grace. For the Thomist efficacious grace is existentially, i.e. in such a way, that the self-determination of the will is efficacious, suffices to produce an act of grace. Sufficient grace gives the proximate power of producing a salutary act; it raises the will to a supernatural level, and constitutes it in actu primo capable of performing a salutary act; but in order to produce that act de facto an efficacious grace (which is a physical premonition in the supernatural order) is necessary. Hence sufficient grace in Thomism gives the posse efficacious grace the agere (see THOMISM). For the Molinist the same grace can be sufficient or efficacious; it remains sufficient if the will resists; it becomes efficacious if the will consents. Grace, therefore, is efficacious, not intrinsically or of its very nature, but extrinsically, by the consent of the will (gratia efficae ab extrinsceco). In the natural order, as said above, the divine indifferent concourse is not said to receive into the will, nor does it precede the action of the will, but in the supernatural order it precedes (owing to which it is called gratia pre-
special act of love and mercy He elects some to glory in preference to others, without any other reason than that of His own divine will. To the choices of Molinists (Billiot, etc., and all Thomists, after St. Augustine and St. Thomas). On this point there is practically no difference between Thomists and this group of Molinists; the difference between them has reference to another question treated above, namely, the origin of the efficacy of grace. Some Congruests teach that God graciously elects certain ones, not to glory, but to congruous grace, to which they will infallibly consent, and in which they will persevere. Foreseeing this consent by the scientia media, God predestines them to glory. Against the latter opinion Thomists object, in particular, that God is made to act in a manner that implies the denial of an axiom received as true not only by all schools of philosophy but by common sense. In order to actualize the means the God must act must necessarily precede the end; but in the order of intention the end must precede the means, for it is impossible to choose and adapt means to an end, without of presence of the end. Now, as God must act as an intellectual being. He must (according to this axiom) first all conceive the end, then choose the means for obtaining that end. But grace, good use of grace, merit, are the means, and glory is the end. Therefore, He must first predestine to glory before He predestines to congruous grace. In the Congruest theory He does exactly the opposite. To this simple and irrefragable argument no Congruest has ever essayed a reply that is not suicidal. Molina also teaches the gratuity of predestination (Concordia, qn. 22, art. 4, 5, disp. 1, membr. xl), but his explanation is very different from that of the majority of those who follow him. In eternity God knows all possible universes, infinite in number; in each universe or order there is a series of free acts, all of which God knows by the scientia media independently of any act of His will. In each of these possible orders certain people are predestined, not, indeed, through the efficacy of a divine decree (which as yet has not intervened), but through grace made efficacious by the consent of the human will, in which the will perseveres unto the end. The omnipotent God knows all this by the scientia media. By His own free will, without any regard whatsoever, as He chose in 1867-72, to bring one of these orders to existence. The difference between Molina and Suarez on this point comes to this, that the former teaches predestination to glory before a prevision of absolute future merits, but after the prevision of conditioned future merits, whereas the latter teaches predestination to glory before prevision of future merits, whether absolute or conditioned. Molina explains his own theory in a manner more subtle and more profound than any of his followers. But, apart from the insuperable difficulty of the scientia media, there are difficulties in this explanation which absolutely destroy free will. We deny absolutely that a free act can be connected with any one order; it is the denial in very words of the freedom of the act. It is absolutely false that a free act is connected with any circumstances whatever, in the sense that, given the circumstances, a particular free act must follow. All those possible universes are contradictions, and have therefore no reality or conceivability; God, therefore, can act only in a contrary manner. (3) Reprobration.—It is a defined doctrine of Catholic faith that no one is destined by God to eternal damnation except after a prevision of devotum; this called 'positive reprobation,' in the theory of gratuitions predestination, by the very fact that God gratuitously elects some and not others, those chosen will infallibly not be saved; hence a repudiation of some sort is common. Some define it as 'negative reprobation.' This difficulty is to conciliate negative reprobation with the universal salvific will of God. Suarez and his followers say it is 'absurd'; some Thomists (as J. B. Gonet, V. Contenson, etc.) that it is a 'direct exclusion from glory;' others (as A. Goudin, C. R. Billiart, etc.) that it is the omission of an effectual election to heaven. It is, however, very difficult to safeguard the salvific will of God if negative repugnance be a positive act on God's part. Why not say, therefore, that it is the entire absence of any act of the divine will, whether of vocation or nolition? It is the mere absence of the act of assumption.

II. THE DOCTRINE.—L. de Molina, Concordia liberii arbitrii cum gratia divina, etc., Paris, 1767, 18, 14; M. Beltracchi, Summa Theologiae Scholasticae, Lyons, 1831, De loco, cap. 18; E. Fauntenet, De Deo uno, Rome, 1853, sect. 4; A. Goudin, Tractatus Theologici, Louvain, 1874; C. R. Billiart, Summa S. Thomae, Arna, 1867-72, tom. i. dis. 5-6, tom. ii. dis. 5; N. de Prado, De gratia libere arbitrii, etc., Lyons, 1876.

ALFRED WHITACRE.
the earth is regarded everywhere with a religious dread, and Greeks and Romans alike avoided all contact with the spot where it had struck, this being for the former a consecrated place (μεταφηματατος, τοιετωριανος), and for the latter a bajidint, which is explained by the phrase ‘fulgur conditum.’ The lightning-flash actually came to be regarded as a divine being; some of the Diodochoi adopted the name Zeus. Selecting Seleucia Nicanor instituted a cult of the σεπαφως (Appian, de Reibus Syr. 58), the existence of which is attested by numerous coins; and there is an Orphic hymn dedicated to this deity. Kerasios is often represented as subordinate to Zeus, who in this capacity is called Kerasios, Katastheis, and Kappotis, just as Jupiter Fulgur is designated Fulgurator and Fulmurator (Usener, Kleine Schriften, iv. Leipzig, 1913, p. 471).

The natural phenomenon here involved is, of course, one of relatively rare occurrence, and but seldom arrests special attention by having visible traces of its action, but the worship of lightning, in its essential form, cannot be separated from that of winds and meteoric stones. Quite a different case, again, is presented by the worship of the last sheaf, or of the harvest-wreath, which has been explained by W. Mannhardt; the harvest-wreath, which was wound round with white and red woolen threads, and for the year remained hanging above, was hanging for the house, unmistakably a fetish, i.e. a sacred object fashioned and consecrated by human beings (J. M. Meyer, ARW xi. (1898) 320); in the last sheaf, however, and things of similar formation, the life-spirit which, according to animistic idea, renewed the life of the corn, but, while it is only at harvest-time that the spirit becomes in a manner manifest to sight, it is in reality always present, and is therefore not a ‘momentary god’ in the proper sense. Usener likewise adduces the conceptions of the ἄλαιος and the genius of the individual. It is very difficult to come to a definite conclusion regarding the ultimate origin of these conceptions, they have undoubtedly been influenced in part by ideas of the soul, and, in the case of the ἄλαιος, by the notion of ‘possession’ (J. Tambornine, De antiquarum dianaeorum, Giessen, 1898), while the snake-form of the genius seems to point in quite a different direction (W. F. Otto, in Pauly-Wissowa, vii. 1155 ff.). In any case, the present writer can see no grounds for regarding ἄλαιος and genius under the category of ‘momentary gods.’

While, however, the conception of ‘momentary gods’ is thus in part a rather indeterminate one, and in part of limited significance, the introduction of the term ‘special gods’ (Germ. Sondergötter) has proved to be of real advantage. This term, too, we owe to Usener, who framed it on the suggestion of E. Lehmann in connexion with Varro’s di cordit; like the latter, the special gods are deities with a clearly defined sphere of action, and thus closely allied to the momentary gods. Usener has shown that in the development of religion—so far, at least, as Greece was concerned—they are anterior to the great deities, and this result might, no doubt, be very widely generalized. Unmistakable examples are found in Greek heroes like Eudocis (G. Kallat, Gymnastica Graeca, Berlin, 1877, 825), Myagros (Paus. viii. xxxvi. 7), Telchiphylax (Hesych. s.v.), or Horophylax (JJS viii. (1887) 236), who never had more than a local significance and a narrow sphere of action, and for which none of them was absorbed by the great Olympian (i.e. Homeric) deities; thus Kourrotchros (also in plur., Ephemer. Arch., 1899, p. 145) was originally an independent deity who at length became a mere epiphet of Ge, Artemis, Demeter, etc., and Zeus Erechtheus, Athene Hygieia, etc., are to be interpreted in the same way. We may even venture to say that the displacement of these special deities by the Olympian was one of the most important processes in the development of Greek religion within historical times. Among the Romans such special deities are found mainly in the Indigetes (g.v.), in which every particular operation—e.g., in agriculture—was assigned a distinct tutelary spirit—Veneria, Redatoria, Imperatoria, Inistoria, Ostoraria, Occidentaria (C. G. Funck, Convecteur, Conditor, Promitor). It is said, indeed, that even the Lupanaria, culina, and carceres had each their special deity (Tertull. ad Nat. ii. 15).

From this, however, we derive but scanty information as to the earlier state of things which has been disturbed by the incursion of the Greek religion; even in Varro’s lists of these gods we already find many names of extraneous origin, and we are quite unable to say what degree of importance attached to the individual deities.

Very valuable data are furnished by the accounts of the Lithuanian special gods, as critically discussed by M. Dehler (Deostr. Narr., ARW ix. (1906) 281; O. Schrader, ERE ii. 311 f.). Here we find Anutieza, the goddess of bees, Babilos, the honey-god, Budintalu, the goddess who arouses the sea from sleep; for the house, the household gods, Meletele, the goddess of the colour blue, Rangipatis, who causes the fermentation of beer, and Wejopatis, the lord of the wind. Kindred figures are a reference to the existing Letitia.

As regards the existence of such special deities in other religions—with the exception, however, of the heathenism that was not wholly submerged by the Roman Catholic Church (see below)—our knowledge is at fault, partly from lack of materials and partly from lack of research. We may hesitatingly take for granted, however, that, e.g., the pantheons of the Vedas and the Avesta correspond with that of Homer in presenting various types of deities, and that the place of the great gods who hold sway in these literary monuments was, among the people, i.e. in the living religion, taken by a multitude of less imposing beings, of whom, it is true, our knowledge is most imperfect. The Phoenician religion provides an instructive example: here it was not, strictly speaking, a single self-sufficient group of deities, but the deities were paid; on the contrary, each several tribe and city had its own special Baal, and worshipped him as a tribal or tutelary deity. The data which lie most readily to hand are found in countries where residual elements of heathen views still co-exist with or underlie the Roman Catholic religion in the practice of saint-worship, and have to some extent been connedensed by the Church (D. H. Kerler, Die Patronat der Heiligen, Ulm, 1905). Thus, e.g., among the Zamaie of Prussia, St. Agatha took care of the household fire and St. Nicholas was the guardian of bovines, St. Apolonia cured mouth and St. Laurentius rheumatic pains, St. Crispin was the patron of shoemakers and St. Goar of potters. In the Voyages St. Abdon is believed to drive away leas, St. Catharine to secure husbands for maidens, St. Sabina to

MONARCHIANISM.—See mehrm.

MONARCHIANISM.—Monarchianism is a term generally used of those heretics who, to safeguard the Divine unity (monarchia), so reined away the distinction of the Divine Persons as to destroy the Trinity. Hippolytus has left us a summary account of their origin. A certain Noetus, so he tells us, was the protagonist of these ideas; they were upheld by his disciple, Epiphanes, and further propagated by the latter's disciple, Cleomenes. 1 From Epiphanes was derived the Diatribe, in which we are told, for instance, that St. Blasius sours throat and St. Liberius pains due to calculi, and that St. Martha protects from epidemics. Almost every diatribe was against Sabellius, who came to the front, and in many cases clings to him with marked tenacity.

LITERATURE.—This has been sufficiently indicated in the article.

MONADISM.—See Lehniz.

MONADISM.—Monadism is a term generally used of those heretics who, to safeguard the Divine unity (monarchia), so reined away the distinction of the Divine Persons as to destroy the Trinity. Almost every diatribe was against Sabellius, who came to the front, and in many cases clings to him with marked tenacity.

LITERATURE.—This has been sufficiently indicated in the article.
there can be no such diversity of action ad intra as shall imply distinction of Persons. But Christ is God, and Christ suffered upon the Cross. Therefore the Father suffered. The conclusion seemed correct, but the Noentians shrank from it and endeavoured to explain that this suffering of the Father was in some sense not really His. Theirs was a strong position. They seemed to be the victories of orthodoxy against the orthodox themselves. It was in vain that the latter rejoined: Then, according to your argument, it is the Father who sits at His own right hand! For, while the Noentians clearly taught the divinity of the Son and the distinction of Persons, yet there were certain texts which, while maintaining the former, seemed expressly to deny the latter. Thus Praxeas insisted on 'I and the Father are one' (Jn 10:30); this it was easy to explain in a monothetic sense, as Tertullian does. But it was not so easy to explain 'He that hath seen me hath seen the Father; and I am in the Father, and the Father in me' (Jn 14:10). Tertullian treats this passage at considerable length, but it can hardly be said that his answer precludes the retort: Then there are two.' It is only when we turn to such an analysis of these passages as is furnished by Athanasius (e.g., on Jn 14, in Orat, iii. 23) and Augustine (Tract, xix. 13, xxii. 14) that we realize the distinction between a platonic and a monistic clearness of expression when handling the questions ventilated by the Noentians and their successors. St. Pobladus (c. A.D. 393) puts the dilemma clearly: 1

1. If we speak of one God in the singular, excluding the word 'Second Person,' we thereby approve that mad heresy which says that Christ is not God. If, on the other hand, we admit of number combined with division, then we hold that God is divided from God, and that He fashioned a new substance out of nothing. We must, then, hold to the rule which confesses that the Father is in the Son and the Son in the Father, to the rule which while preserving the oneness of substance acknowledges an economy (organization) of expression when handling the questions ventilated by the Noentians and their successors. St. Pobladus (c. A.D. 393) puts the dilemma clearly:

1. If we speak of one God in the singular, excluding the word 'Second Person,' we thereby approve that mad heresy which says that Christ is not God. If, on the other hand, we admit of number combined with division, then we hold that God is divided from God, and that He fashioned a new substance out of nothing. We must, then, hold to the rule which confesses that the Father is in the Son and the Son in the Father, to the rule which while preserving the oneness of substance acknowledges an economy (organization) of expression when handling the questions ventilated by the Noentians and their successors. St. Pobladus (c. A.D. 393) puts the dilemma clearly:

2. If we say they, maintain the monarchy... Yes, but while the Latin takes pains to pronounce monarcharch, the Greeks refuses it. Yet the difference is not so great. For concerning the mon- archach at the expense of the economia, they contend for the identity of Father, Son, and Spirit.' And he puts his finger on the real difficulty which the Noentians had to face:

3. Praxeas put to right the Paradoxe, and he crucified the Father.' Hence the opprobrious nickname for the so-called Monarchians—Patrarians, i.e., those who made

2. Philos, ix. 5; cf. x. 52.

5. Libri c. Arianos, xxi. (PL xx. 91); cf. also Zahn's Constantine, ii. 15 (A.D. 1120).

6. Athanasius, de Synopsis, 20 (c.); (PG xxvii. 721); Newman, Athanasius, i. 114.

7. Adv. Prax. iii. (PL II. 183), and iv. (c. 161). Tertullian's use of the term monacharch is unusual. From the NT it generally refers to the ministry of the Word of God (e.g., 1 Cor 9:7); also to the divine council as fulfilled in the Incarnation (Eph 2:22). And thus it is used by the Greek Fathers of the mystery of the Incarnation (cf. J. C. Slicher, Thes. eccles., Amsterdam, 1728, a. e.); but, more particularly, it is used in the relationship of the Three Persons of the Trinity, a usage of which Slicher takes no notice.

8. Libri c. Arianos, 105. One cannot help being very little known. Hippolytus apparently knows nothing of him, though, if we are to argue from his silence, we could equally well argue from Papias, who is silent on the subject of the Noentians. For some of the views which have been held regarding his identification of the Monarchians see J. D. F. Praxeas, 34, 1910.

9. Ibid. Augustine, Tract, xxxvi. 3, in Joann.; cf. xxxvii. 6, xxxvii. 2, xxxvii. 5 (PL xxxv. 1667, 1672, 1619, 1830); and Origen, Dem in Ep. ad Titum (PG xiv. 1604).

10. As when they say, like Sabellius, that the Almighty Person of the Father Himself suffered.' It is of interest to note how these heresies shifted off into one another. Sabellius apparently denied that he was a Patrapiarch; but, in order to do so, he seems to have held that our Lord came into being only on His human birth. The Arians, on the contrary, said 'before 1 the fathers,' thus agreeing, so it would seem, with the Patrapiarchs. Again we note that, whereas Sabellius claimed to rank as a Monarchian, yet the Arian bishops, writing to Alexander, say:

11. 'We do not do as did Sabellius who, dividing the One, speaks of a Son-Father.' Thus their ground of complaint against Sabellius was precisely that on which he plumed himself on not doing, viz. separating the Divine monarchia. Similarly Athanasius says:

12. 'Sabellius supposed the Son to have no real substance, and the Holy Spirit to be non-existent: he charged his opponent with dividing the Godhead.' And once more: 'Sabellius, dreading the condemnation invested by Arius, fell into the error which destroys the Personal distinctions.'

13. It must, however, be remembered that no one can at this date say what precisely were Sabellius's opinions, partly for the inevitable fluctuations through which he passed, partly, and chiefly, because history is apt to confuse him with his disciples, as in the passage last quoted from Athanasius.

14. How grievous were the ravages worked by these Monarchian views can be seen by the frequent condemnations of them in the shape of Sabellianism. Thus Pope Damasus condemned them in the Council held at Rome in 380 (or 382): 'We anathematize those also who follow the error of Sabellius in saying that the Father is the same as the Son.

15. Similarly, in the ecumenical Council of Constantinople (A.D. 381) the first canon is directed against various shades of Arianism, and finally against the Sabellians, Marcellians, Photinians, and Apollinarists. By the time of the provincial Council of Braga (561) we see how these Monarchian principles have verged into Priscillianism and are tainted with Manichaeism. The same comprehensive condemnation was repeated in the Lateran Council of 1179, and the Arians were condemned in 1181. When Photinus was found it necessary to remind the Jacobites, in his decree dated 4th Feb. 1441, that the Church 'con- demns Sabellius for confusing the Persons and for thus altogether doing away with the real distinction between them.'

16. The subsequent ramifications of the Monarchian tenets do not concern us here. Suffice it to say that they spread very widely, though in forms which varied considerably from those originally set forth. Thus Eusebius mentions that Beryllus, bishop of Bostra, 'deserted the ecclesiastical standard,' i.e., the Rule of Faith, and asserted that Christ did not pre-exist in a distinct form of His own, neither did He possess a divinity of His own, but only that of the Father dwelling in Him. This is clearly a derived form of Monarchianism. The most prominent, perhaps, among the later

Monastics were the Friscillianists. They are of interest by reason of the strange influence which they had on the Latin text of the Gospels—indicated in chap. 25. To this fact, are due the Monarchian Prologues which have attracted so much attention in later years. It is usual to embrace under the heading Monarchianism, the soloed Theopneustian heresies. But, while it is true that the Adoptianists may be regarded as the legitimate outcome of the Monarchians, yet they approach the question from an entirely different standpoint. For Adoptianism is a Christological heresy, whereas Monarchianism, at least in its original form as Patrapiasianism, concerns the Father rather than the Son. To embrace the two heresies under one heading is to obscure the issue. See art. ADOPITANISM.

**HUGH FOPPE.**

**MONASTICISM.**—I. ETYMOLOGY; DEFINITION.—The word 'monasticism' is derived from the Gr. word μοναχός, 'alone,' 'solitary,' from which a whole family of words has been formed: μονή, μονάρχης, μοναχός, μοναχοστία, 'monastery;' μοναχός, 'monk;' or 'solitary;' μονόγενος, 'to lead the solitary life;' μονομαχός, 'saintly;' μονοστήριον, 'monastery;' μονοπώλης, 'monk;' και μοναχία, μοναχός, μοναχισμός, μοναχία, 'monasticism;' μοναχικός, 'monastically;' μοναχάριον, 'monachism.'

In this word has given monachus and its derivatives, monacha, monachata, monachare, monachizare, monachzia, monachismom, monachatio, monasterium, and a few other words.

*I. Adoptianism.*—To this word 'monastic' has been so often incorrectly extended to embrace the idea of the religious state in general, comprising even those religious orders which cannot be regarded as belonging to this category — such, e.g., as the Dominicans and Franciscans, the Jesuits and other clerks regular. Strictly speaking, the term should be reserved for the form of religious life led by those who, having separated themselves entirely from the world, live in solitude as, in fact, the etymology of the term 'monasterium' clearly indicates. We shall see below (§ III.) in what the special characteristics of the monk properly so-called consist, the special conditions of the monastic life, and its various types. The monk, 1

1 Thus note canon xvi. of the Council of Braga (A.D. 601):

*Si quidem rex Scisciliano corruptum in sorcellam viventem est... ut licet arma sit* (Mansi, ix. 774).

3. C. C. Merriam, *Thermaea ecce-dominations*, Amsterdam, 1792, ch. 24, note 1, referring to the compositions of the Roman and Byzantine periods, Boston, 1870, cf. 6.5.

4. J. F. C. Duvivier, *Gladiatorium*, ed. L. Faye, 10 vols., Nort, 1852-57, ii. 6. In fact, form a class apart among what are known as the religious orders; they must be distinguished from those that are commonly termed ' mendicant ' orders. Examples of the Franciscans, of Carmelites—from the clerks regular, such as the Jesuits, and from other forms of the religious life and religious congregations—e.g., the Redemptorists, Oblatarians, Sulpicians, etc. (see art. RELIGIOUS ORDERS.)

At the present day monks are represented in the Catholic Church by the Basilians and other monks of the East; by the Bollandists, Cistercians, Camaldolese, Olivetans, Carthusians, and other religious families of less importance. They must be distinguished from the ascetics who existed in the early ages of the Church, and who were simply Christians living a more purer life in the world. Nevertheless, after the monastic life properly so called had been instituted, many of these ascetics of both sexes entered the monasteries; hence we find the name 'ascetic' applied sometimes to the monks also (see, e.g., the Peregrinatio Eutherii; cf. art. ASCETISM, vol. ii. p. 63 f.). The canons regular and the military orders should also be distinguished from the monks, although there were many points of contact between them. We are not, however, concerned with them here.

II. MONASTICISM OUTSIDE OF CHRISTIANITY. —Monasticism cannot be regarded as an institution belonging exclusively to Christianity, although it is chiefly that in religion that its full development is to be sought. Examples occur in the non-Christian religions as well, and we shall see in what relation these stand to Christian monasticism.

1. Worship of Sarapis.—In recent years it has become the fashion to see in the xároes—pagan recluse lives who lived in the temples of Sarapis and their dependence on the authentic ascetical and Christian monks. Weingarten, to whom this theory owes its origin, has even maintained that St. Pachomius, the founder of Christian cenobitism, not only drew a large part of his rule from the usages of these xároes, but had been himself a xároes of Sarapis, before his conversion to Christianity, at the Sarapeum of Chonobocsium. This theory, however, rests on a series of unverified hypotheses. Pachomius was never a xároes. All that can be gathered from the most ancient life of this saint is that he withdrew to an abandoned temple of Sarapis, and that, while there, he had a vision of God—which, however, of the pernicious heresy, but of the God of the Christians. Moreover, the analogies that have been drawn between these hieroderloi and the cenobites of Christianity are only apparent.

2. Neo-Platonism.—The Alexandrian school of philosophy in the 2nd and 3rd centuries taught a kind of mysticism, more philosophical than religious, in which moral ideas and ascetic practices occupied an important place. The attempt has been made to find in this mystic philosophy the source of Christian asceticism. The latter, however, was in existence before this date, and under a very different form. Moreover, it seems difficult to avoid the conclusion that the Alexandrian philo-
that certain practices of Buddhist monasticism owe their inspiration to Christian influence.1

6. Monasticism among Jews and Muhammadans.—(a) Essenes.—The Essenes (q.v.) may be regarded as one of the most striking examples of the monastic life outside of Christianity. Whether they were looked on as a sect, as a tribe, or as a religious community, the Essenes (150 b.c.—A.D. 70) offer all the characteristics of a monastic life—community of goods, practice of poverty and mortification, prayer, and work, meals and religious exercises in common, silence, celibacy, etc. Although there was no direct relationship between them, it is nevertheless true that both Essenean and Christian asceticism derived much of their practice from the same source, viz., the Jewish religion.

(b) Therapeuten.—The Therapeutes (q.v.), whose very existence has been disputed, are described by Philo (de Vita Contemplativa) as cenobites, leading a life almost identical with that of the Christian monastics. This description bears so striking a resemblance to the life led by Christian monks that more than one writer has been led to deny its authenticity as a work of Philo and to uphold the interpretation of the author as a Christian compilation underwritten with the view of providing a venerable ancestry for the Christian cenobites. Renunciation of the world, prayer, life in common in real monasteries, the singing of the liturgy, the practice of fasting and other mortification—such are the chief characteristics of the life of the Therapeutes. Nevertheless, they do not seem to have exercised any direct influence on Christian monasticism.2

(c) Nazirites.—The Nazirites (q.v.) were men who lived an austere life, abstained from wine and all fermented liquors, never cut their hair, avoided scrupulously all legal impurities, and took a vow to consecrate their lives to God. They had certain practices in common with the monks, although their ideal was not the same. Regarding such resemblances we may point out that, as in the case of the Essenes, since Christianity itself had its ancestor in Judaism, it is not astonishing that there should be certain resemblances between their respective institutions on many points.3

(d) Rechabites.—Some (cf. T. K. Cheyne, EBR iv. [1893] 4019) regard the Rechabites as forming a sort of religious order, analogous to the Nazirites, and St. Jerome himself, on them the precursors of the monks (Ep. lxxv., 'ad Paulinum.' 5 [PL xxii. 583]). But such analogies should not be pressed too far. The Rechabites were distinguished by certain special observances, such as abstinence from wine, the prohibition against building houses, and the obligation to live in tents, but it is difficult to see in them anything more than a tribe of Bedawis such as still exist in these days and observe the customs of their ancestors with such zeal.4

(e) Muhammadans.—Muhammadanism has given birth to several religious orders, the chief of which are the Qadiri, the Malavi, the Baqtash, the Rafai, etc. The monks are called Dervishes ("poor"); they live together, 20, 30, or 40 at a time,1

1 T. Klein derives Christian asceticism from this source (Aus dem Ubrchristentum, Zürich, 1878, p. 291 f.). Against this theory cf. O. Völker, Der Ursprung des Mönchentums, Freiburg, 1901, p. 39, and O. Grimmusius to those of Christian monasticism. In the sacred books of the Hindu mention is made of hermits forming colonies and dedicating their lives to the study of the Vedas and to the contemplative life in monasteries. They are vegetarians, and practise mortification in all its forms. While in Brähmanism the monastic life has preserved its eremitic character, in Buddhism we find it, on the contrary, in the cenobitic form. The monks live together in monasteries, in the practice of poverty—as mendicants, in fact—and celibacy. Such monasteries are still to be found in Japan, Korea, China, India, and Ceylon, in the east and in the west. The laics of Tibet are the most curious examples of this form of monasticism. The monastic capital of Tibet (q.v.) is Lhassa, and of the 30,000 inhabitants of this city 10,000 are monks, who are divided into 200 monasteries. In the provinces of China there are also monasteries of this kind, some of which contain from 300 to 400 mones. They have the head shaven, and spend their time reciting prayers and performing ceremonies before the statue of Buddha. Many of them condemn themselves to a life of absolute silence, others to complete immobility. The laics of India offer another variety of the life of mortification and renunciation. A. Hilgenfeld and other writers have tried to establish the influence of these institutions on Christian monasticism. But it is easy to show, with the aid of modern scholarship, that it is contrary to the truth, and that certain practices of Buddhist monasticism owe their inspiration to Christian influence.1

1 Cf. Grimmusius, in FRED xii. 917; Helmbacher, Die Orden und Kongregations der bishärtigen Kirche, 1895, p. 545; J. K. Buchinger, Les vie contemplative et monastique chez les Juifs et chez les peuples bouddhistes, 1851.

2 On the Therapeutes and the question of the authenticity of the famous treatise of Philo, cf. Leclercq, in DACL, 1895, p. 592; and since the work of A. Maury, Les Essens et les Esséniens, 1864. As to the subject, the authenticity of the treatise would seem to be sufficiently established.

in a monastery under a head (shikhah). The Dervishes wear a long robe of coarse stuff. Reception into their order is preceded by a time of probation, which lasts for two years. In regard to religious practices, these Muhammadan monks have prayers, sacred dances, and sometimes penances, such as the privation of sleep, immobility (entertained following the作息), fasting, and solitary life (see DERVISH). Many of them are also mendicants. Some of the orders claim to go back to the time of the Prophet himself, although he had said 'In Islam there are no monks,' and although nothing is mentioned in this regard in the Qur'an. Even during the lifetime of Muhammad, however, the Sufis gave themselves up to certain practices of monasticism and lived together in community (see art. Sufism). Abu Bakr and 'Ali, contemporaries of the Prophet, formed, with his approval, communities of the same kind. Other orders were founded on the same model in Egypt, Arabia, Persia, and Turkey. There were no fewer than 27 monasteries in the island of Crete alone. One of the most celebrated of Muhammadan monasteries, that of Konia in Asia Minor, possessed 500 cells.1

III. CHRISTIAN MONASTICISM. — Is Christian monasticism derived from one or other of these sources, or is it an original institution? This is a question that has often been discussed. On account of the close relationship between the different religious systems of Christian monasticism and the various forms just described, some writers have not hesitated to regard the one as the child of the other. But in this case, as in that of the history of all institutions, however striking such resemblances may appear at first sight, they are not sufficient of themselves to establish a relationship. This is a principle now accepted by all serious students of history. To prove relationship between the institutions of Christianity and those of other religions, it is necessary to produce facts clearly demonstrating that one institution has been derived from the other. This, however, still remains to be done. We shall therefore regard Christian monasticism as a plant that has grown up on Christian soil, nourished exclusively on the principles of Christianity. This seems, for the moment at least, to be the only theory that can safely be maintained.2

1. Principal Characteristics. — Christian monasticism possesses certain characteristics all of which are not equally essential, but which, nevertheless, when taken together, are necessary to constitute a monk.

2. Poverty, chastity, humility, and obedience. — The first monks, after the example of the Christian ascetics, practised poverty, chastity, humility, and obedience — virtues which, along with obedience, soon came to be regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

3. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

4. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

The first monks, like the ascetics before them, took these words of the gospel literally and aban-

1 Conder, in Recueil des Monuments archéologiques de l'Asie Mineure, i. 61 t.; art. 'Derwich,' in Eth. Lexicon, iii. 1287 t.

2 It should be remarked that this is the conclusion now reached by writers of very different schools. L'Ordre monastique, Lecroq, loc. cit., Grégois, loc. cit., and Windisch, loc. cit., have all come to the same conclusion. No exception must be made, as we have already pointed out, for certain Jewish institutions, since between Jews and Christians many principles and religious ideas are held in common.

4. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

5. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

6. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

7. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

8. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

9. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

10. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

11. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

12. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’

13. Even if we exclude this expression, we may say that these conditions were regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

Beati pauperes spiritu (Mt 6:2): 'si vis perfectum esse, vade, vende tua habitation, et da paupertatem (Mt 19:23); non potes Deo servire et hæc non potes (Mt 6:24).’
3. Work.—Certain fanatics, such as the Messalians or Euchites (q.v.), maintained that the life of a monk should be entirely given up to prayer; hence they condemned all work or other forms of activity. This tendency was early reprobated by the Church; all monastic founders or legislators realized the danger of such exaggerations; and one and all signalized the vice of idleness as the most to be dreaded in the monastic life. St. Augustine, in his treatise de Laborre Monachorum, condemns this error, and shows the real necessity of work for those who follow the monastic vocation. Already in the East, due to the 4th cent., it was an established principle that the monk should live by the labour of his hands. The work of the monk was of two kinds: (a) manual, and (b) intellectual.

(a) Manual.—The manual labour of the early monks consisted chiefly in the weaving of mats or the cultivation of the soil. These occupations had as their principal motive not so much the interest or gain in mortification as to all the mortifications already forming part of their existence, and especially the avoidance of idleness. The proceeds of their work were usually handed over by the monks to the poor or to the prisoners, or else they were handed over to the community itself (Cassian, de Conaborum institutis, x. 22 [PL xix. 388 f.]). In the case of the monks of the West this manual work was ordered and methodized in such a manner that it resulted in the clearing of a large part of the waste-land of Europe.¹

The various arts and crafts had also their place in monastic activity, but in the West rather than in the East. A monastery came, in course of time, to form a little city in itself. Founded, as most monasteries then were, far from the towns and cities, this was a worldly activity, and the monks were obliged to provide for themselves, and, besides cultivating the soil, the monks had to give themselves to the exercise of the various trades necessary for their wants—e.g., baking, carpentry, weaving, etc. In addition to the arts of drawing and manuscript painting, architecture, sculpture, and the fine arts were cultivated with great success.

(b) Intellectual.—The intellectual work of the monastery consisted chiefly in the lectio divina, i.e., the reading and study of the sacred Scripture and other holy writings. In the West this part of the monastic curriculum underwent a great development and took more and more time when given to intellectual work. The copying of ancient MSS in the scriptorium of the monastery became one of the principal occupations of the monk, and it is to this fact that we owe the preservation of the greater part of the works of classical antiquity. The arts of calligraphy, drawing, painting, and the illumination of MSS took place as a natural consequence, and some monasteries had attached to them studies, from which came forth works of art that are now among the most precious possessions of the libraries of Europe.²

(c) External work; the sacred ministry.—The monks, especially in the East, retired from the world into solitude, there to lead lives of prayer and labour apart from all intercourse with it. They took part in the external ministry of the Church only on rare occasions and by force of special circumstances. A number of monasteries, however, received ‘oblates,’ i.e. children cons-

² Cf. art. ‘Bibliothèque,’ in DACL.

The Rule of St. Basil (Opera sacræ, Regularis fatus tractatus; Opera nostrorum tractatus [PL XXVII. 557-619]) was a set of regulations for community life in the monasteries of the 5th century. The Rule, written by Basil of Caesarea (fl. 329), was intended to provide a framework for the spiritual and physical life of monks living in monasteries. It was widely influential and was adopted by many monastic communities across the Christian world.

The Rule of St. Basil lays out a series of guidelines for monastic life, including the organization of the monastery, the role of the abbot, the structure of the community, and the conduct of the monks. Basil emphasized the importance of asceticism and the need for strict obedience to the rule of the monastery. He also stressed the importance of prayer, work, and community life.

The Rule of St. Basil was not the only monastic rule in use during this period, and there were many variations on the theme. However, it was one of the most widely adopted and was influential in the development of monasticism.

In the centuries following its composition, the Rule of St. Basil was subject to retouching by various authors and was eventually incorporated into the Rule of St. Benedict. Despite these changes, the Rule of St. Basil remains an important document in the history of monasticism and continues to be studied and discussed by scholars today.
MONASTICISM

St. Columban, his Penitentiary, and that of St. Columban, are the only ones the authentic character of which is really established. As its early date collections were made of all these monastic Rules. 1

The question of monastic costume is one with regard to which the manners and customs of the ancients show a bewildering variety. It is also, from the archaeological point of view, one of the least clear. It seems that there was originally no special dress for monks. The only rule on the subject seems to have been that the monk in his character of ascetic should, like certain ancient philosophers, show in his costume the outward sign of the poverty and humility of his state of life and of the conditions of the world. Even St. Benedict, at a time when monasticism already had customs and traditions both numerous and of long-established date, does not seem to have given much importance to the form, colour, or quality of the habit worn by his monks (Regula, ch. iv.). Nevertheless, at an early date certain garments worn by the monks, and borrowed in all probability from the peasant population among whom they lived, came to be regarded as traditional, and in time even had a mystic meaning attached to them, as in the case of the liturgical vestments. In spite of this the monastic habit must always be carefully distinguished from the latter category.

We may now enter into greater detail regarding the monastic costume worn by the ancient communities both in the East and in the West. Many of these garments are still in use among their descendants.

The ancients did not know the use of linens. The tunic of wool was their upper garment (celsilia, coelestium, coelestis). The monks adopted this. It had short sleeves or was sleeveless. The ancients often wore the tunic made of goatskin or camel's hair. Among the Greeks and Romans a tunic, made of a haircloth, with a hood, was the vestiment (M. et L. xiii. 74). The tunic was girded by a cinchon, which recalled that worn by John the Baptist (Isa. pellice clappin linnos suos,' Mt 3:4), and which soon became an essential part of the monastic costume. It was made of a kind of leather (laesathor, Zou, Botass, cimilerns, etc.). 2 The hood and the scapular are also characteristic of the monastic habit. The first (cucullus, cuculla) was originally merely a covering for the head. It was, in fact, the ordinary head-covering of peasants, and is found in both East and West, and protected the head against the heat of the sun, and could be thrown back at will on the shoulders. The hood came in time to be attached to a garment covering the shoulders and breast to protect them against the weather, and finally developed, after various transformations, into the cowl—a simple vestment falling in wide folds to the feet and with large sleeves. The cowl is the distinctive choir-habit of the monk. The scapular (scapularis) seems to be peculiar to Benedictines, and will be discussed in this treatise since there is no mention of it before the time of St. Benedict. Still it is evident, from the text of his Rule, that St. Benedict, in his own invention, as his text has been compared to an analogous garment worn by Eastern monks: but it is more probable that it was originally a kind of blouse or tunic girded and hooded attached, as was worn by peasants in the neighborhood of Monte Cassino. St. Benedict prescribed wearing a kind of loose garment—scapular—over his proper opera, and was worn to protect the rest of the habit, and replaced the cubiculum, protomology indicates that it covered the shoulders.

The Eastern monks usually wore huarot. St. Pachomius, however, gave his monks sandals, and St. Benedict speaks of

1 Hobee gives two other Rules attributed to SS. Comagall and Columba. For this question see L. Gougard, 'Inventaire des regles monastiques francaises,' in Revue Benedictine, xxv. [1808] 187-189, 219-239; O. Rebusch, Uber Codices von Louvain Klosterregeln, Dresden, 1883; Leclercq, in DACL ii. 3212 ff.

2 The earliest and most celebrated of these collections is that made by St. Benedict of Aniane (c. 425), entitled Conciliae Regularum (Concordia Regularum minima prumina edita ex Bibliotheca Florentinorum Monasterii, notiones ac observationes illustrata ad h. Benedict. O.S.B., Paris, 1858 = PL cli. 701-1360). Cf. L. Trunfr, 'Bibliotheca Gregoriana,' in Revue Arch. et Lit., t. vii (1901) 23 f. For other attempts of this kind see J. Thielman, Abert Le Mire, etc.; ed. also Heimbucher, p. 76. Of monastic recent date: H. Hobee, Codex Regularum Monasteriarum et Conformorum, 3 vols., Rome, 1861, completed by Brockie, Holstieni Cod. reguli monasterii et conventuum, 4 vols., London, 1841, in critical his wirdes historiche, Augsburg, 1759 (PL cli. 693-700).

3 D"renenberg-Seglies, l. c. 294; tr. 'Birrus,' in DACL ii. 901-902.

4 Cf. H. Guerard, in DACL ii. 901-902.

5 Cf. R. C. May, in DACL ii. 901-902.

7 Cf. Symon of Vannes, 365, can. 7; Symon of Agde, 506, can. 38; G. D. Main, Concilii, Paris reprint, 1915-15, v. 904, vili. 351.

'pedes ex calicis,' which seem to have been a kind of stocking, or sock, and sandals. Archaeologists have disputed at length as to the exact meaning of these terms and also regarding the other parts of the monastic habit.

iii. DIFFERENT TYPES OF MONKS.—The monks may be divided into various classes. We shall speak of the various types of monks: 1

1. Hermit.—The hermits (eremitae, from eremo, 'desert') lived in solitude in the desert; St. John the Baptist, and later St. Paul the Hermit and St. Anthony, were the first of these. During the primitive period the comparative advantages and excellence of the solitary and cenobitic forms of monastic life formed the subject of frequent discussions. St. Basil strongly maintains his preference for the cenobitic life over the eremitic life, and his preference is shared by St. Benedict. It is undeniable that in early days the eremitic life had the greater number of adherents; but in course of time it declined, even in the East, while, in the West, it cannot be said ever to have existed except as an exceptional case of things. After the 16th cent. it almost completely disappeared.

6. Sarabaites and Gyr vagoi, or Circumceliones.—Among the other monastic types, ancient authors draw attention to the Sarabaites and the Gyr vagoi, who were regarded as an evil kind of monks. The first, mentioned by St. Jerome under their Syrian name of 'Remboith' (Ep. xxii. 34 (PL xxii. 419), lived together in twos and threes in a monastery, in order to live a life without adventures. But in course of time it declined, even in the East, while, in the West, it cannot be said ever to have existed except as an exceptional case of things. After the 16th cent. it almost completely disappeared.

6. Sarabaites and Gyr vagoi, or Circumceliones.—Among the other monastic types, ancient authors draw attention to the Sarabaites and the Gyr vagoi, who were regarded as an evil kind of monks. The first, mentioned by St. Jerome under their Syrian name of 'Remboith' (Ep. xxii. 34) lived in trees.

5. Cenobites (from κοινοβίον, 'one who lives in common with others').—This was the general term for all monks living together. Among the Sarabaites and Gyr vagoi, who, on account of their relatively small number, may be regarded as exceptional cases. The former lived enclosed in cells, sometimes completely walled up and separated from the exterior only by means of a small window. The latter, who are found almost exclusively in the East, lived on the top of a pillar, more or less elevated from the ground.
either rule or law, following no other rule than that of their own will or caprice. The Gyrovagi or Circumcellionies ('vagabonds') went from monas-
tery to monastery, demanding a lodging for a few days, and scandalizing all true Christians by their excesses. 3

7. Catenati.—As the name indicates, these monks loaded themselves with chains. They took no care of their bodies, allowed their hair and beards to become long, and did not have the slightest regard for monastic discipline. They were, according to Jerome, the forerunners of the great future hermits. Their mode of life was called Carcer munasticus, or the life of the cell. No wonder that Jerome was surprised at the sight of a man wearing chains and a black cloak, and the yearning for the ascetic life of the desert.

Cf. A. Crr, 1 J. 119-130. These formed a class intermediary between the earlier ascetics and the monks properly so called. They were found in Jerusalem, in the East, and in Asia Minor. Some of them followed the example of the Gyrovagi, and spent their life wandering about, and some fell into the heresy of the Eunomites. 4

IV. HISTORY OF MONASTICISM.—I. ORIGIN OF THE MONASTIC LIFE; THE ASCETICS. —The ascetics of early Christianity may be regarded as the ancestors of the monks. The greater number of the characteristics of which we have already spoken as belonging to the essence of the monastic life. Like the ascetics of the present day, they were imbued with a feeling of poverty, celibacy, the practice of mortification, fasting, silence, prayer, etc. The ascetics were, in fact, simply monks living in the world.

It was natural that, as Christians gradually became more worldly, the ascetics should retire from their midst and betake themselves to the desert; and here we have the origin of true monasticism—the first monks were ascetics living retired from the world in the desert.

It is certain places to exist, is the monastic life, that is the essence of monasticism, as art. ASCETICISM. It may be remarked, in passing, that Christian asceticism, while recognizing among some of the prophets and just men of the Old Law (such as Isaiah, Jeremiah, and John the Baptist) its ancestors or forerunners, claims, above all, as its source and foundation the doctrine of Jesus Christ, who taught renunciation under all its forms. Not to mention certain axioms occurring in the writings of the Apostle Fathers—in those, e.g., of Tertullian, Origen, and Clement of Alexandria, whose 'true Gnosticism' offers many characteristics of asceticism—we may consult certain documents that will give assistance in arriving at a knowledge of this movement precursory of monasticism, especially the Epistles of pseudo-Clement—'To Virgins' and the work of pseudo-Cyprian, de Singularitate Clericorum. 5

II. MONASTICISM IN THE EAST.—1. Sources. —The question of the authenticity and truthfulness of the documents on which the history of the early years of Eastern monasticism is founded has given rise, in recent years, to lengthy and impassioned disputes.

1 For these different kinds of monks cf. Cassian, Collationes, xvi. 3, ed. Leclercq, in DACL ii. 2818.

The authenticity and veracity of the Historia Monachorum have also been the subject of much discussion, but it has a certain historical value. For discussions regarding the text see the works of Butler, Ladeuze, and Folard, already cited above. See also Leclercq, Histoire Monast., i. 1920, f. 731. 7 Futon Silice, in DACL ii. 2343-2357; O. Banier, Leben, Patrologie, etc., Freiburg i. Br., 1906, p. 615 ff. The text of the Rule of Cassian, which was believed to be lost, has recently been discovered in Munich and at the Escorial (Cf. H. Eickner, Die Quellen und die Schriften der ältesten lateinischen Mönchsnur, Munich, 1906, pp. 70-94).

The authenticity and veracity of the Historia Monachorum have also been the subject of much discussion, but it has a certain historical value. For discussions regarding the text see the works of Butler, Ladeuze, and Folard, already cited above. See also Leclercq, Histoire Monast., i. 1920, f. 731. 7
MONASTICISM

Lower Egypt, and was the father of monasticism in Nitria.1 His disciples lived in huts and met together in the monastic church on Saturdays and Sundays. There were 8 priests in the colony to carry out the liturgy and preside for the community. According to the \textit{Lausiac History}, there were 600 hermits in the desert of Nitria. Idleness was carefully excluded, each monk being obliged to provide for himself by his own labour. In the evening, hymns and psalms were chanted. The discipline of the life was very strict. Ammonius died before 336. His disciples continued his traditions in Nitria. The theological works of Origen were found there, and the \textit{Gospel of Truth}, which contains the words of the Lord, was written and edited there. The Desert of Scete still preserves the ruins of their ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Copts.

Besides Nitria and Scete, the whole of Egypt was strewn with hermitages—the Thebaid, Lyco-polis, Koptes, Oxyrhynchos (where there are to be found 10,000 monks and nuns), and Arisino, where there were also 10,000 monks. (\textit{Hist. Laus.}, 5, 18.)

In Upper Egypt the name of Pachomius attracted special attention. He was instructed in the monastic life by a venerable hermit named Palamon, and established himself at Tabenna (Tabenatus)—a name that was to remain famous in monastic history. Pachomius is the real founder of Christian monasticism. His disciples lived together under the same roof and were subject to the same discipline. Other monasteries were founded which followed the same observance, and thus monasticism was gradually spreading. Revisiting the organization of the Pachomian monasteries see above (p. 785; cf. also W. E. Crum, \textit{Theological Texts from Coptic Papyri}, edited with an Appendix upon the Arabic and Coptic Versions of the Life of Pachomius, \textit{A necoda Ostensiani, Semitic ser.}, pt. ii, 1913). While speaking of Pachomius, we must not omit to mention one of his disciples named Schemondi of Atripe, whose history has been revealed recently through Coptic MSS., and who, although he did not exercise so marked an influence as Pachomius, played an important part in the history of the monastic life. The profession of obedience which he taught, \textit{taurokcephalos} or \textit{taurokephalon} is the oldest document of this kind that we possess, and it marks a stage in the history of monastic Rules. Schenoni made the attempt to combine the eremitic with the monastic life, and he succeeded to a certain extent.2

(b) \textit{Sinait.}—From Egypt the monastic life soon spread as far as the Sinaitic peninsula, on which there were later several flourishing monasteries. St. Nilus of Sinai († c. 420) and St. John Climacus were its shining lights and may be regarded as the great doctors of the ascetic life. The \textit{Peregrinatio Ethisen} gives interesting details regarding the monasteries of Sinait (see below iii. (d)).

(c) \textit{Palestine.}—The monastic foundations of Palestine were less illustrious. It will suffice to quote the names of Hilarion of Gaza, a disciple of St. Anthony of Egypt, and St. Theodora, a nun of Melanion the Elder at the Mount of Olives, Paula, and St. Jerome.3 In this region monasticism made considerable headway. The number of monasteries and nunnery roose to 100, and the influence of these religious houses in the quarrel between Origenism, Eutychianism, Monothelitism, and iconoclasm was very important. It would be impossible to give here even an approximate idea of their extent; we content to refer the reader to the authors cited in note 2 below, and also to the attempt at a classification of some of the Palestinian monasteries in \textit{Lecquer, DACII II.} 3165–3175. It was only with the Arab king and later with the Arab hajj that the progress of these monasteries was arrested.

(d) \textit{Syria.}—Syria became at an early period a land of monasteries. It has even been questioned whether the monastic life was first introduced into Syria, i.e., whether it did not, as in Egypt, spring directly from the native practice of asceticism—which must be regarded as an early phase of monasticism—or whether, on the other hand, it was an importation from without. The latter opinion seems to be the more likely. The Syriac life of Mark-Armin, beneath its legendary surface, contains a residue of its history which can be extracted like a mining. According to this history, he came from a Pachomian monastery, established himself amongst the mountains near Nisibis, and died there in 363, leaving behind him a flourishing monastic house.4 The recently edited works of Aphrahat give some curious information about other solitaries (\textit{mauræs}), who seem to have ascetics living in the world rather than real monks.5

At Ein Karéma we have Julian regarded as the founder of monastic life in that country, and especially Ephraim the Syrian, a contemporary of St. Basil. He lived many years as a hermit, then went to study monastic traditions.6

3 \textit{Inscriptions grecques de la province d’Egée,} Paris, 1859, p. 224 (cf. \textit{DAEI II.} 3165).—\textit{natixmah.}

4 \textit{Hist. Laus.}, 8, 80.

5 G. Steindorffer, \textit{Durch die Rhyемые Wüste nach der Oase des Oryxier Ammon,} Berliner Lokalbeobachter, 10th March 1900.

tions under the guidance of St. Basil, and perhaps visited Egypt also. He is one of the principal scholars of the Syrian Church, and his numerous works contain much information regarding the monastic life.

There were colonies of hermits in Cilicia, round about Antioch, and in the Desert of Chalcis in the 4th and 5th centuries, and this was known as the Thebaid of Syria, and there St. Jerome lived as a hermit from 373 to 380. In the 5th century, the first of the Styllites, St. Simeon, makes his appearance. The work of these Syrian monks was of considerable importance, and it was to this kind of life that the monkish orders of the West were afterwards largely indebted for their monastic life as for all other institutions of the Empire. The Aecenites and the Studites deserve a long study to themselves; they have already formed the subject of many treatises, to which we can here only draw attention in passing.

The foundations attributed to Constantine or to the time of his immediate successors can, however, be admitted only with reserve. I must direct the reader's attention to the passage of Cypnis, which is quoted above, pp. 150-163; Bardeen here, pp. 357-360.

iii. MONASTICISM IN THE WEST.—I. Before St. Benedict.—(a) Rome and Italy.—It has been remarked, and with justice, that while, in the introverted life of the enclosé monk, careful mention is made of all the various degrees of the ecclesiastical hierarchy—even down to that of foster—no allusion has ever been found to ascetic, anchorite, cenobite, monk. The maxim of the church of monks of consorted virgins, and of monasteries at that period cannot, however, be denied. We leave on one side the legend of Boniface and Agnes, which is, moreover, the Eastern origin of Constantia, daughter of Constantine, gathered together around the tomb of St. Agnes a community of virgins. It was in a Roman monastery also that St. Marcellinus, sister of St. Ambrose, consorted herself to God (352-360).\(^1\) From this time onward Roman monasticism, with Amba, lived the ascetic life, and founded near the mouth of the Tiber a hospice which was served by monks.\(^2\) St. At. St. Martin, the Gaul, followed in the footsteps of two Egyptian monks. He remained there three years and inspired this community, so deeply Christian in spirit, with admiration of and sympathy for the ascetic ideal of the Therelid. He made proselytes even from among the highest society of Rome, and Marcella, daughter of the widow Albina, along with Melania the Elder, devoted herself to the life. So the community of ascetics and cenobites was founded on the Aventine, from which stand out names such as those of Sophronia, Asella, Paola, and Fabiola. The favour shown towards such institutions by Pope Damasus and, in particular, the arrival in Rome of St. Jerome, who became the spiritual father of the community on the Aventine, greatly accentuated the movement.\(^3\) The attempt made by Vigilantius to oppose it in favour of monasticism had no other result than that of starting a controversy with St. Jerome, from which Vigilantius came forth utterly crushed and humiliated (c. 385).\(^4\)

In the first half of the 5th century the progress of monasticism was scarcely less rapid than in Rome itself. In the middle of the 4th century, Eusebius of Vercelli, still exiled in Egypt, returned to his church (in 364) and obliged the clergy of its cathedral to submit to the monastic rule of life. His example was soon followed in Milan, under St. Ambrose, and at Aquileia,\(^5\) while Cremona, under the bishop Vincent (c. 392), Novara, under the bishop Gaudentius (397-417), Bologna, Ravenna, under St. Peter Chrysologus, Pavia, under the bishop Ennodius, and Turin, under the bishop Victor, all favoured the monastic movement.

In S. Italy, besides Nola with its illustrious bishop, St. Paulinus, we find monasteries at Naples, at Capua, and in Etruria, Sabina, Umbria, Picenum, at Tuscanum, Monte Calvo, Fundi, on the Athos and its Monasteries, 3 vols., Kieff and Moscow, 1885-82 (Basle); Cursus, op. cit.; E. X. de Vogüé, Syrie, Palétine, Mont Athos, Voyage au pays du palais, Paris, 1876; Kramerscher, pp. 113-115, 1923; D. Placidus de Meezer, Voyage de deux bénédictins aux monastères de Mont Athos, Paris, 1898; V. Viennetulli, Monte Athos e la moderna Roma, 1885; St. Luke. Early History of Monasticism on Mt. Athos, Oxford, 1926.

1 Leclercq, in DACL II, 3175.
6 On Vigilantius cf. below, p. 729.

banks of Lake Fusine, on the islands off the Mediterranean coast of Italy, Gorgona, Capraja, Sardinia, and the Isle of Cabis (near Torrentum).\(^7\) It would be difficult to draw up even a simple catalogue of these monasteries, so numerous were they.

Cassiodorus (c. 570) was contemporary with St. Benedict. He has even been conjectured that his Rule was based on this latter, but this is more than a conjecture. What is certain is that the minister of Theodoric, on his property of Vivarium, gave the example of a monastery where the ascetic discipline and the observance of the rule was allied with a high degree of intellectual culture. While, on the summit of Mt. Morius, the hermits gave themselves up to their solitary vocation, in the monastery built at the foot of the mountain the cenobites spent their time in the diligent copying of MSS.\(^8\)

(b) Gaul.—Monasticism, which was to play so considerable a part in Gaul, was established there at an early date (2nd half of the 4th cent.) and with great éclat by St. Martin of Tours. At first it took the eremitic form. The disciples of St. Martin lived as hermits, meeting for exercises in common on the estate of the monastery founded in Gaul was that of Ligugé, in 360. There were, besides, Marmoutier (Martinianum) and, no doubt, a great number of other houses, which were present at the obsequies of St. Martin.\(^9\) St. Martin wrote no Rule for his monks, and the latter seem simply to have followed the general traditions of the ascetic life. Several of his disciples applied themselves in company with their master to the work of the apostolate. This would explain why this first attempt at monasticism in Gaul did not leave any lasting traces behind it.

We find, about the same date, that there were monks at Rouen, in the Morinie (Boullonais, Artois, W. Flanders), in the forests, along the coast, and even in the islands of the coast.\(^10\)

St. Sylvester Severus, the historian of St. Martin, established a community of ascetics in his villa of Primaliucum.\(^11\) Gregory of Tours (594) gives in his works most valuable information regarding the monastic life during the 5th and 6th centuries. The greater number of the monks whose lives he wrote, while possessing their own characteristic spirit, are still largely under the influence of the rule of the former, the precepts of the monastic life.

The most interesting of all these experiments in the monastic life at this period is the foundation of the celebrated monastery of Lérins on an island that name off the coast of the Mediterranean near Cannes. Monastic life, inaugurated there towards the year 410 by St. Honoratus, was to continue through many long centuries, almost without interruption, to our own day. It was at the beginning a mingling of the eremitic and cenobitic elements. Both manual and intellectual work were held in honour, and great was the influence exercised by the monks of Lérins throughout the Middle Ages.\(^12\) It will be sufficient, for this earlier

1 Cf. Spreitzenhofer and Leclercq, loc. cit.
4 Malonay, op. cit.
5 A. Carle-Seineburg, Recherches sur les lieux habités par les monuments de la monastère littéraire de Lérins, Tires, 1876; P. Meaux, Sainte Sève à Primaliucum, Paris, 1897.
Another important influence exercised over the development of monasticism in Gaul during this period was that of Cassian. His works were in reality the first monastic code in Gaul (see above, p. 786). Cassian, the whole of the West. He founded the monastery of St. Victor at Marseilles, which became renowned, and other monasteries also.

St. Cesarius, bishop of Arles, must also be regarded as one of the principal monastic legislators at this date. We can only mention the monasteries founded by Leorian in the diocese of Vienne, by St. Theodulaire in Istrie, in the Isle Barbe, at Condé (St. Claude), and at St. Maurine of Agune, and by SS. Romanus and Lupicianus in the Jura.

(c) Britain, Ireland, the Celts.—The monastic life was established fairly early among the Celts and Anglo-Saxons, and underwent an extraordinary development among them. Its introduction into Great Britain was due to St. Germanus of Auxerre, who gave the name to the island in 430 to reinforce his ecclesiastical discipline. In Wales Llan Llud, Llancarvan, Ti-Gwen, and Bangor soon became renowned. Some of the monks from these monasteries—St. Gildas, St. Laurence of Saul Aurelian, and St. Samson—established the monastic life in Brittany (Armorica), where it also made great advance. Monasticism in Ireland has much in common with that of Britain, to which it seems, in fact, to owe its origin. The name of St. Columba and that of his foundation at Iona stand out conspicuous in its history. Another saint whose name we must not forget is Donatus of the Celtic monks, although his chief foundation, Luxueil, belonged to Gaul, is St. Columban, the rival and namesake of Columba. His rule, inspired entirely by the principles and traditions of Irish monasticism, spread rapidly in Gaul and disputed for a time the predominance of that of St. Benedict.

(d) Spain.—In Spain the beginnings of the monastic life are somewhat obscure. The Council of Elvira (c. 300) makes no allusion whatever to either asetics or virgins. The Peregrinatio Etheiriae belongs to the last quarter of the 4th century. It is the account of her journeying in the East and her return to Spain, to which she sent her nuns in Spain by a Spanish virgin named Etheria, or Egeria, who was, in all probability, abess of the community to which she writes. We find further traces of the ascetic and monastic life among the Priscillianists of Spain, in this century. Priscillian gave himself out as an example of asceticism (see art. PRISCILLIANISM). It has recently been shown that the Regula Consensoria Monachorum, attributed at first to St. Augustine, then to a contemporaneous of St. Fructuosa, probably comes from a Priscillianist source, in the 5th century. It is a Rule for cenobites, original in character.

The Rule of St. Isidore († 636) and that of St. Fructuosa of Braga (c. 669) also deserve mention. They enjoyed considerable success until the advent of the Rule of St. Benedict in Spain, which became there, as in almost the whole of the Western world, the only rule for monks. Vigilantius, who represents the element hostile to the monks and ascesis, was a priest at Barcelona in 356. During the year 409 the invasions in Spain, as everywhere else, resulted in the destruction of the monasteries. Mention of this is to be found in the chronicles of the period.

The Council of Tarragona, in 516, turned its attention to the monks. St. Martin, abbot of Dunio near Braga, who is known as St. Martin of Braga, and who had been a monk in Palestine and played so important a part in the history of the conversion of the Suevi, labour at the restoration of the monastic life in Spain.

Two other bishops, SS. Leander and Isidore, also worked for the same end. The first wrote a Rule for the monks, the second drew up a Rule for monks. The latter was already known to St. Leander, the friend of St. Gregory the Great, and to Tajo, bishop of Saragossa (c. 650), the great admirer of the works of St. Gregory and of his Dialogues, in which the praises of St. Benedict are set forth. This bishop did much to spread the knowledge of these works in Spain. Besides these names, we find, between the date of the conversion of Visigothic Spain (587) and that of the Arab invasion (711), those of certain monks and hermits—the African Donatus, who, along with 70 monks, also from Africa, took refuge in the monastery of Servilianum, in the province of Valencia; St. Emilian, who enjoyed a wide-spread cultus in Spain; the hermit, Valerius, in the neighbourhood of Astorga, etc.

(e) Africa.—In Africa the first monastic centre seems to have been formed around the person of St. Augustine. This saint had studied the monastic life both in Rome and in Milan, and, on his return to Tagaste, he installed himself with some of his friends in a house, where they devoted themselves to the practices of asceticism. Ordoined priest, he founded a second monastery at Hippo, where he lived himself till he was made bishop in 390. He then transformed his episcopal dwelling into a monastery like those of the bishops of Milan, Vercelli, and others at this time, and so founded what we may call a ‘cathedral monastery,’ or, as he himself called it, ‘monasterium clericorum.’ Others of the African episcopate soon followed this.

2 Malory, op. cit.
5 C. P. de Montalembert has devoted to the history of the Celtic and Anglo-Saxon monasteries a large portion of his book, Les Moines d'Occident, Paris, 1860-77; see esp. bks. xii.—xiii.; see also Migne, Patrologia Latina, II. 1827-81; see also Dumont, Hist. fondation des monastères irlandais, Rev. Hist. xliii. (1903) 327-328.

8 Leclercq, in DACL II. 2229; Albers, 'El Monachismo Primo.'
example, and Hadrumetum, Uzala, Calame, Cirta, Milleve, and Carthage became real centres of monastic life. The *Regula pro Monarchia* attributed to St. Augustine is not under this form, as we have already said, but it is drawn from his letter (excit.) to religious bodies of both sexes living in poverty and chastity, passing their time in prayer, the perfection of Robert, and in certain works of charity. The counsels of the great bishop are characterized by the charity, discretion, breadth of mind, and high spirituality to which all was agreed was a duty. It was spoken of his famous treatise, *de Opere Monachorum*, composed in the year 400.

The Vandal persecution was unable to destroy all these monasteries, but it arrested for the time the progress of monasticism in Africa. Byzantine rule (533–709) restored peace and liberty, and a true renaissance of religion took place, in which monasticism naturally benefited. Several new monasteries were founded, notably at Ruspe and at Teleessa. The ruins of the latter still exist, but the Muhammadan invasion was to destroy monastic life in Roman Africa as well as Christian life in general.

(f) On the Danube, in the region of Noricum, we have to mention the wonderful work among those people of St. Severinus († 482), called 'the apostle of Noricum.'

2. From St. Benedict to the 13th Century.—St. Benedict, born at Nursia (c. 480), died at Monte Cassino (c. 540), deserves a place apart in the history of Western monasticism. The influence exercised by his Rule in the West may be compared to that of St. Basil in the East. Having dwelt, at first, as a hermit among the Sabine mountains, he later gathered disciples round him, founded monasteries at Subiaco and Monte Cassino, and wrote a Rule which, after the lapse of two centuries, became the one monastic Rule of the West. It may, in fact, be said that the history of Western monasticism is practically identical, for the greater part of the Middle Ages, with that of the Benedictines. The Rule of St. Benedict, which is divided into 73 chapters, is written for cenobites, and addresses itself exclusively to those who follow that form of monastic life. It teaches the virtues of humility, obedience, and poverty, and enjoins the practice of silence, hospitality, and manual work. It regulates the hours for prayer and labour, and lays down the order of the daily monastic life. The monastery forms, as they were, a little city or, better, a complete society provided with all its necessary organs. At the head of all is the abbot, assisted by his provost, or prior, and his seniors, while at the head of every 10 monks is the dean. Then there are the cellarer, who is charged with the temporal affairs of the monastery, and the various other officials that divide between them the different functions necessary to the well-being of the house. The monastery should, as far as possible, provide for itself and possess a garden, a mill, and all the necessary offices and work-shops. The sick, too, are to be specially taken care of, and the monks and the *oblati* receive necessary instruction. Guests are to be received with honour. Those who offend against the Rule must receive punishment according to their deserts. Such is, in summary, the Rule of St. Benedict—a Rule which is clearly reflected that spirit of wise discretion and justice which was the genius of the Roman character, while at the same time it is penetrated throughout and has already a strong note of Christian asceticism, and rival in its discretion and its sublimity of view the Rule of St. Basil itself.

St. Gregory († 604), the greatest of all the popes of the early Middle Ages, in giving to this Rule the support of his authority and in reconstituting, in his *Dialogues*, the life and miracles of its author, assured its predominance over all other monastic Rules. He himself founded a monastery in his own house (the Monastery of St. Andrew, on the Celian), in which the Rule of St. Benedict was observed, and sent to England one of its monks, his disciple St. Augustine, who, while commencing the work of converting the Anglo-Saxons, at the same time implanted in their midst that Rule which was destined to take such firm root there and to spread far and wide over the land.

(a) England.—The Christianity established by St. Augustine among the Anglo-Saxons was thoroughly monastic in character. In the greater number of towns—e.g., at Canterbury, York, London, Ripon, Peterborough, etc.—the monastery was the centre of the new Christianity. The church of the monastery became the cathedral, and the abbot the bishop of the diocese that was thus gradually formed. The kings of the Saxon heptarchy were one after another converted by the disciples or successors of St. Augustine, and the history of the four centuries extending from the death of St. Augustine in 605 to the Norman Conquest in 1066 is one of the finest parts of the history of Western monasticism. It would be impossible to give even a summary of it here. We cannot do more than cite some of the principal characters and the names of the chief monasteries that stand out in its pages. Among the former we have the abbots and monks Aidan, Oswald, Wilfrid, Theodore, Cuthbert, Lanfranc, Aldhelm, Boniface, Bede, Alcuin, Odo, Dunstan; among the latter are Canterbury, Westminister, Malmsbury, York, Lindisfarne, Ripon, Peterborough, Jarrow, Wearmouth, Croyland, Whitby, Coldingham, Fynemouth, and Hartlepool. Even after the Norman Conquest in 1066 the history of monasticism in England does not come to an end. It was still flourishing in the 11th cent., and the Normans, far from destroying the English monasteries, founded new ones. Lanfranc and Anselm, archbishops of Canterbury, re-peopled the Saxon monasteries with colonies of monks brought over from the famous abbey of Bec and from other Norman monasteries. Cluny, too, made several foundations in the country, and the Cistercians, in their turn, established themselves at Waverley, Rievaulx,莓ehams, and many others. St. Stephen Harding, who exercised so great an influence on the order of Cîteaux and gave it its organization, was an Englishman. The order...
of Savigny, which also had numerous foundations in England, was absorbed by that of Citeaux. But the monasteries of Cluny and 15th centuries English monasticism began to decline.  

(b) France.—However great the success of the Benedictine life in England, it may be said with truth, if its history be regarded as a whole, that France during the 18th and 19th centuries was the cradle of a new reform of Benedictine life. Cluny, although careful to remain faithful to the spirit of St. Benedict, had become the seat of culture, of the liberal arts, and of letters, and had exercised considerable influence over the external world. Citeaux, under the inspiration especially of St. Bernard, returned to an anicter conception of the monastic life. All sumptuousness and solemnity, even in the hands of the Cluniac monks, monastic architecture was reduced to its simplest expression, and intellectual and artistic culture was set on one side, manual labour and the exercise of every kind of hard work taking its place.  

The Cistercian reform, whose influence, while not to be compared with that of Cluny, was nevertheless of considerable importance, especially during the 12th cent., spread beyond France and took in a large number of monasteries in other countries. It continued to exercise its influence till the end of the Middle Ages, and was revived on a new basis when in the 17th cent. a new reform of La Trappe under the Abbé de Rancé.  

(c) Germany.—Before the introduction of the Benedictine Rule into Germany, monastic life was but feebly represented in that country. The Cluniac and Anglo-Saxon monks, SS. Pirmin and Boniface, with their disciples, brought to Germany, along with their missionary zeal, the traditions of Benedictine life, which scarcely existed there at that period, the only known trace of that 14th cent. being found in the life of St. Eugenius.  

During the 7th and 8th centuries the Celtic monks of St. Columba came into Germany and founded a number of monasteries. Among these we may mention St. Gall, Ebersmunster, Moyen-Montier, St. Oidile, Homan (Onomis), and Aschaffenburg, not to speak of those at Strassburg, Mainz, Cologne, Ratisbon, Würzburg, Erfurt, and Heggbach.  

In 1185 all the Scottish monasteries of Germany were united to form a congregation, under the jurisdiction of the Abbé of St. James of Ratiboden by Innocent II. Gradually the numbers of Scotto-Irish monks that were at first continually coming into Germany began to diminish, and by the 15th cent. they were replaced, in most of the monasteries, by Germans. After the foundation of the monastery of the Cistercian order there that of Bursfeld and becoming one with it. Mention, however, is made in the 17th cent. of a Scottish abbott, Ogilvie by name († 1640).  

Beichmann on Lake Constance began, in 742, a history glorious in monastic annals, and Murbach, Fritzlar, Hersfeld, Heidenheim, and Bischofshiem are scarcely less famous. Fulda, in the days of its prosperity, counted 100 monasteries among its inmates and became a nursing-ground for missionaries, of whom the chief were to play an important part in the history of Christian Germany. Such were Starnarius, Willibald, Wunibald, and also SS. Walbargia, Lobi, and Tiedla. Synods held in Germany in 744 and 745 discussed monastic affairs and prescribed that all monks were to live according to the Rule of St. Benedict. Worthy of special attention is the synod held in Mainz, 1849-50, and in 1862, 5th to 11th April, at the request of the Bishop of Münster, and called the Synod of the Holy Spirit of Rheinland, 'in Studien und Mittheilungen, ix. (1888) 445.
MONASTICISM
genius in this connexion is the Synod of Aix-la-Chapelle in 892, famous for the legislation which it laid down for the monks. Under Duke Ottilo and Tasso, no fewer than 29 cloisters were founded, some of which have left a name behind them in history—e.g., Tegernsee, Benediktbeuern, Polling, Wessobrunn, Kremmsmünster, Scharnitz, and Rheinmünster.

Charlemagne and Louis the Pious were the great protectors of the Benedictine monks. At their courts were to be seen Alcuin, Adalhard, Wala, Angilbert, Arn, Ansegis, Paul the Deacon, and, above all, Benedict of Aniane, the great monastic reformer. The Cluniac reform found its way also to Germany, where it commenced a new era of activity and prosperity for the monastic life. The monasteries of Reichenau, St. Maximin of Trèves, Echternach, St. Emmeran of Ratibson, Tegernsee, St. Maurice of Magdeburg, and Weissenburg flourished anew under its protection. Einsiedeln, whose patron was St. Meinrad, a hermit who died in 861, became likewise the centre of an important monastic reform, 1 which extended to the abbeys of Petershausen, Disentis, Pfullen, St. Blaise and Muri, Holentwiel, Kapfenstern, Ebersberg, and Rheinmünster (near Schaffhausen). The monastery of St. Emmeran of Ratibson in its turn introduced its own customs into the monasteries of St. Peter of Pfullen, Tegernsee, St. Gall (1014), and several others. In 1036 Ulrich of Ratibson (or of Cluny + 1033) was one of the most active agents in the Cluniac movement in Germany and Switzerland.

Hirsau, or Hirschen, was founded about 930, as a kind of redoubt of the Cluniac order, and against the abuses among the clergy. Like the great Burgundian abbey, it also had much influence on art, architecture, and culture in general. 2 The reform of Hirsau, while keeping its own spirit intact, was, to a large extent, inspired by that of Cluny. The annals of the monastery were written by Tribunius and Basilius. 3 Besides these reforms issuing from within the monastic order itself, mention must be made of the efforts made by ecclesiastical councils to bring back the monasteries to the practice and observance of the Rule. In particular may be cited the Synod of Rouen (1074), and those of Poitiers (1075), Rome (1085), London (1112), and Paris (1212-13). The decrees of the last council, which received the approbation of Innocent III., exercised a great influence on the monastic order as a whole.

The 4th Council of the Lateran (1215) established rules that are still in force at the present day, especially as regards the convoking of general chapters—a kind of monastic council, composed of abbots and delegates from the various monasteries, wherein are discussed matters relating to the discipline and general interests of the monastic life, which is considered at times better perhaps to the spirit of the age, and which none the less drew numerous souls athirst for perfection and formed a current which, although not actually in conflict to the ancient monastic institutions, was nevertheless very distinct from it. Such were the great Dominican and Franciscan orders and a few other religious families inspired with the same principles. No other attempt at monasticism that was really original and powerful remains to be considered, with the possible exception of the congregation of St. Maur. Hence it will be sufficient to give a brief outline of the principal characteristics of monastic history during the last centuries of the Middle Ages.

The great schism of the West and the Hundred Years' War dealt another terrible blow to the monastic order. The other attempts at reformation were not less numerous than in the preceding centuries. The Council of Constance (1414-15) consecrated some of its decrees to the reformation of the Benedictine order; and it was inspired by a great meeting, comprising 131 abbeys of various monasteries, which was held at Peterhausen in 1417. In 1418 Pope Martin V. sent the abbot of Subiaco, Nicholas Seyringer, to Melk, the great Austrian benedictine abbey, with a view to that restoration of monastic life. The enterprise was successful, and a great number of the monasteries of Austria, Bavaria, and Swabia rallied to Gregory to reestablish the ancient form of the monastic life. 4 This was the great Aurelian Council; a good many of the monasteries remained independent and did not formalize this complete organization. 5

The Council of Trent dealt with the question of monasteries as it did with all other Christian institutions. The 25th Session (3rd Dec. 1563) treats de regularibus et monasticis, renews the decree of Innocent III. and then, of the Lateran Council, unites the exempt monasteries to form congregations, and institutes general chapters of the various monasteries. The constitutions of various monasteries, and in the new religious life, that of St. George of Tegernsee, of St. Blaise in the Black Forest, and of Muri, Garsten, Gottweg, Lambach, etc. 6

In England, the religious houses were reformed on the lines of the Cluniac order. 7 Besides these reforms issuing from within the monastic order itself, mention must be made of the efforts made by ecclesiastical councils to bring back the monasteries to the practice and observance of the Rule. In particular may be cited the Synod of Rouen (1074), and those of Poitiers (1075), Rome (1085), London (1112), and Paris (1212-13). The decrees of the last council, which received the approbation of Innocent III., exercised a great influence on the monastic order as a whole.

4 The church of Cluny is one of the most important in the world, 5 See the list in Heimboecker, l. c. 373.
Dederoth (*1430), who had already reformed the abbey of Cusa, took Bursfeld in hand in 1453 and also Heimbucher. The three monasteries became closely united. In 1446 the abbots of Bursfeld became the president of the congregation. The constitutions show a solid organization, with general chapters, visitations, and every means of safeguarding the observance of piety and regularity. The success of this reformation grew from day to day. The cardinal of Cusa, Nicholas v., and Pius ii. accorded a special privilege. At the death of Abbot Johann von Hagen (1460) the congregation numbered 36 monasteries, which later increased to 220. In 1579 the abbey of Bursfeld, which up to this time had been the head-house of the congregation, went over to I. observationalism under the influence of Julius of Brunswick, and the congregation was itself secularized in 1585.1

We have already spoken of the monastic origins in Spain. For a long time the Rule of St. Isidore was observed in that country, side by side with that of St. Benedict. The Synod of Coyaça (1590) prescribed that either the Rule of St. Isidore or that of St. Benedict should be observed in all monasteries in Spain. Not many years later, however, the influence of Cluny began to be felt and to spread throughout Spain; gradually it predominated, and eventually the observance instituted by St. Isidore. In the 14th and 15th centuries two important congregations rose up, those of Valladolid (1390) and Monseirat (1440). The latter founded foundations in Portugal, Peru, and Mexico.2 The movement of the clausuralism at Saragossa and at Tarragona were less important.3

The Low Countries were a monastic land for a long time. Wilfrid of York, on the occasion of a journey to Rome in 678, having been thrown on the shores of Friesland, was there welcomed with great warmth. After his return to his monastery at York, he was able to divide his monks, who established himself at Utrecht, and became the great apostle of Friesland, having St. Boniface as a fellow-labourer for some time. Other missions in this region came from Rome, and England, then the country became Christian and monastic at the same time. The most celebrated of these foundations were the monastery of Eckternach.4

The Reformation in Germany in the 16th cent. had the effect of taking from their monasteries, the closing of monastic buildings, and the handing over of their revenues to laymen, and especially to Protestant princes. A great number were sacked. It has been calculated that in the Peasant War more than 1000 monasteries and castles were destroyed. A few monasteries were, however, saved from the general ruin (cf. Heimbucher, l. 205).

In England the effects of the Protestant Reformation were still more terrible for the monasteries. In 1534 the Holy Sea had caused Cardinal Wolsey to make a visitation of the monasteries, and one of the consequences of this general visit was their confiscation and almost complete secularization by Henry viii. and his minister Thomas Cromwell (1534). Elizabeth finished the work of destruction in 1559. Scotland's turn came later on (1559-1560). In all it has been estimated that 578 monasteries, of which 63 were Benedictine, were conisicated. Besides the falls and lamentable deficiencies there were not wanting monks who became martyrs, and who paid with their lives their fidelity to their vows. Benedictine life was maintained throughout all these centuries of silence and desolation by the Anglo-Benedictine congregation and has preserved the inheritance of its ancestors to the present day.6

The Reformation which destroyed the monasteries in England and Germany did not succeed in establishing itself in France. There the monasteries held out. The 17th cent. was marked by an important monastic restoration, the Benedictine congregation of SS. Vannes and Hydulphe in Lorraine and that of St. Maur in France. These two congregations, with an end and a constitution that were similar, had for their common object to re-establish a stricter mode of observance in Benedictine monasteries and to bring back the monks to the rigorous practices of the Benedictine Rule. The very large part played by the congregation of St. Maur in intellectual work bore splendid fruits and helped to found a school of erudition that has given to France a Mabillon and a Montfaucon, a Denys de Sainte-Marthe, a d'Achéry, a Constant, a Rainurt, etc.—a school that has never been equalled.7

A certain number of new orders which practised the monastic life and accepted the Rule of St. Benedict as the foundation of their life were regarded as branches of the Benedictine order. We can give only a very brief outline of their history here.

(c) Sylvestrines.—The first of these orders sprang from the Benedictine trunk is the Sylvestrines, so-called from the name of its founder, Sylvester Gonzelin, of the family of Gozzolini (*1267). In 1277 he retired to Osimo and followed the Rule of St. Benedict, adding new activities, and in a short time a few ancient monasteries took their place under the new discipline. At the time of its greatest prosperity it comprised 50 monasteries, the greater part of which were in Italy and France. In Portugal and Brazil. At the present day this number is greatly diminished. The church of St. Stephen del Caco in Rome now belongs to them.

(d) Celestines.—The Celestines are a more important branch of the Benedictines, the Sylvestrines having their foundation to the pope of that name, St. Celestine V., who at first was a hermit on Monte Morone in the Abruzzi, and then at Mt. Majella. He endeavoured to combine under one manner of life the cenobitic principle of the Benedictines and the practices of the anchorite life. When he became pope, he protected and favoured the order which he had founded, approved of its constitutions, and accorded it many privileges. His congregation, having made numerous foundations in Italy, spread into France, Saxony, Bohemia, and the Low Countries. It possessed 150 monasteries, of which 96 were in Italy and 21 in France.8

(e) Olivetans.—The Olivetans were founded by Bernard Tolomei (*1349), a professor of Law at Siena, who, in company with a few companions, retired to Mount橄榄eto, some leagues south of Siena, 1

7. Elie, le Grand-Duché de Luxembourg, Répertoire; Topo-bibliographie, s. v. 'Eckternach.'
whence his congregation takes its name. They lived as hermits, while following the Rule of St. Benedict in so far as its main principles are concerned. Formerly the monks did not greatly advocate the discipline prescribed by the Rule, but in later times, perhaps more especially after the saint's translation to Monte Cassino, they adhered more closely to it. The monasteries of San Miniato in Florence, and Settignano and S. Francesco Romana at Rome. Among their members are counted 4 cardinals, 5 archbishops, 30 bishops, and a few savants, such as Lancelotti, Bianchieri, etc.\(^1\)

(d) *Humiliati, Pulsano, and Monte Vergine.*—Three other orders or congregations—the Humiliati, Pulsano, and Monte Vergine—are of importance. The Humiliati of Monte Cassino, founded by St. Benedict and his disciple St. Silvester, were a religious society which undertook to reform the world by their influence, especially among the clergy. The order was founded in the 12th century, and the members were known as 'friars of St. Benedict.' They took the Rule of St. Benedict, but added certain austerities of their own, such as the wearing of the woollen habit, the use of the breviary, and the recitation of the psalms. The order was suppressed in 1628, but was re-established in 1642.

(e) *Pontevetrual.*—Among the reforms in the Benedictine order we must omit to mention that of Ebrardus, a French reformer of the 17th century. The order of Pons Ebrardi, or Pontevraut, was founded by St. Peter Damian (1062) at Fons Ebrardi, near Limoges, to which St. Benedict had withdrawn, near Limoges, to which St. Benedict had retired, after his death. The order was suppressed in 1790, but was re-established in 1815.

(f) *Camaldolese.*—This was one of the most important religious congregations of the Benedictine order. They essayed to combine the cenobitic with the anchoritic mode of life. At one time they numbered 2000 monks, and their history is intermingled with the most important events of the Church in Italy in the 11th century. Their founder was St. Romuald (1027), who was an abbot of San Apollinare in Classe at Ravenna, and withdrew thence to Campo Maldole in the Apennines, whence the name 'Camaldoli' or 'Camaldolese.' The order was suppressed in 1790, but was re-established in 1815.

(g) *Vallombrosa.*—The order of Vallombrosa was founded by St. Giovanni Cenacchi (1073) at Vallombrosa in Tuscany. The founder, who was not ignorant of the attempt of the Camaldolese, also took up the idea of uniting the anchoritic life with the cenobitic mode, basing his plan on the Rule of St. Benedict. This congregation, like that of the Camaldolese, also played an important part under Leo IX. and St. Gregory VII. in the reformation of the Church in his fight against simony.

(h) *Grammont and Pontevraut.*—France, which, in Cluny and Citeaux, had given birth to the two most illustrious reformation of the Benedictine order, has since contributed one of its most important attempts to improve its character, although of much less importance—the order of Grammont and that of Pontevraut. The first resembles the Camaldolese order. Its founder, St. Stephen de Bueil, near Limoges (1142), who lived a very mortified life, withdrew to Grandmon, or Grammont, a place which was at that time a desert in the country. His order was more or less a success in France, and at one time numbered about 60 monasteries.\(^2\) The order of Pontevraut, founded in the Department of Maine-et-Loire, gave its name to the order founded by Robert d'Arbrissel, who renewed an ancient institution, namely, that of double monasteries.\(^3\) The founder's influence as a missionary and preacher was enormous, and at his death 3000 monks and nuns were united under his guidance. His Rule spread to England and Spain, but Pontevraut remained the principal house. The most rigid discipline maintained the spirit of St. Robert in the monasteries thus brought together.

There were other attempts to reform the worldly life of the monks, and a few foundations that arose in certain great abbeys which we might call monastic capitals, Chaise-Dieu, L'Abbaye de Cluny, Sasso-Bigio, S. Maria dell' Abbazia, S. Savigny, S. Stuhlpaoli, and Cadouin.\(^4\)

(i) *Mechitarists.*—The Mechitarists represented one of the most curious attempts at reform in the Benedictine order. Mechitar (Mechitar or Mechitar, 1740), was an Armenian who laid down a code of conduct for his fellow-countrymen concerning the Roman Catholic Church, resolved to found an order consecrated to the work of the mission and the education of youth and the composition or the translation of Catholic works. In Armenia he was subjected to long persecutions on the part of the schismatics, but, far from being discouraged, he succeeded in founding his congregation in Armenia. His most celebrated foundation, however, was in the island of St. Lazarus, near Venice; it became a very active centre for Armenian studies. The monastery of Vienna, founded in 1766, was an Armenian society celebrated for its printing-press and its seminary.

(j) *Carthusians.*—The Carthusians, like the Camaldolese, represent a mixture of the anchoritic and cenobitic modes of life in Western monasticism. St. Bruno, their founder, withdrew to the desert of the Chartreuse (whence the name 'Carthusian') in the diocese of Grenoble, France, where he established a little colony of hermits, whose successors have succeeded in keeping together and maintaining their traditions down to the present day. A great number of foundations were made throughout all the nations of Europe. In a Carthusian monastery each monk lives in his own cell and cultivates his little garden. They come together only for divine office in choir, for conference, or for chapter, and on certain days they meet in the common refectory and for the common meal. They have always been noted for their fervour,

4. The order of Pons Ebrardi, in the Department of Maine-et-Loire, gave its name to the order founded by Robert d'Arbrissel, who renewed an ancient institution, namely, that of double monasteries.
6. For the detail cf. Heimbucher, i. 595.
and among them there have been a few ascetic writers of high merit. Some of their chapter-houses are celebrated for their architectural beauty and their library treasures.

The 19th cent. was one of restoration for monasticism. While in England, Germany, Austria, and Italy the ancient monastic congregations and the great monasteries of the Middle Ages had fallen into decay, and the survival of all difficulties, some attempts at monastic restoration were made in France, Italy, Switzerland, Germany, and America. It will suffice to refer the reader to the articles ‘Beginnings of Monasticism in the Roman Church’, ib., vol. 5, pp. 445-445, for a fuller account of these attempts (cf. Heimbucher, i. 600).

V. Conclusion. – In an article that must necessarily be brief, we have been able to give only a very short summary or historical outline. To give it any degree of completeness one should study in detail the influence exercised by the monks on the Church and on society in general; consider what has been their work of sanctification, of charity, of apostleship; enumerate the services which they have rendered to civilization as savants, litterateurs, artists, agriculturists, and, at times, as statesmen. It was not, although venerated by their monastic profession to a life of retreat and renunciation, which is the kernel of their vocation, the monks have accomplished a work that has been called by no other society down to the present day.

If this résumé of monastic history had any pretensions to completeness, some mention should here be made of the nuns, in whose ranks are found characteristics as remarkable as those of the nuns, Medici, Sulpician, Gertrude, Hildegarde, Roswitha, and others. From the historical point of view, however, this is unnecessary. The nuns brought no new element into the monastic life, but were content to follow in the footsteps of the monks under the influence of the great reformers of the monastic order.

MONASTICISM (Buddhism).—I. The monastic order. — The monastic order in Buddhism, as instituted by Gautama Buddha himself, was not essentially a new creation in India, but was derived from ancient Hindu usage and practice. Separation from the world, in the solitary existence of a hermit, is found among the Hitavikrama, and the nuns, among the bhikshummas, have been almost from time immemorial a characteristic feature of Indian life. In adopting the principle of monastic rule and self-discipline as the basis of his religious system, and defining this as the sole way of religious attainment, the Buddha presented to his hearers no new doctrine or ideal, but urged and enforced a duty familiar to them from the teaching of their own sacred books. The distinctive feature of the Buddhist order, in which it was differentiated from its predecessors, and to which, in large part at least, it owed its wide extension and success, was the removal of all restrictions of caste.

Membership of the order was open to the highest to the lowest, without distinction of race or birth. All alike were bound by the vow of poverty, relinquished all personal or individual element of possession with its limitations of material enjoyment and spiritual endeavor that deliverance from the bonds of existence and misery which the Buddha taught, could never be achieved in the turmoil and distraction of a life in the world. To indicate, therefore, the life of renunciants and strenuous pursuit of the highest aim to which they pledged themselves the monks were known as bhikṣus, ‘beggars,’ bhāvanakṣas or bhavana-kṣaras, ‘endeavourers,’ the latter term being given to the novices or junior monks, and sthaviras, ‘elders,’ to those who were the senior or ruling members of the monasteries. The community of monks as a political or religious whole was known as the Sangha, or order, and with the Buddha himself and the Dharma, the sacred rule or law, formed a Buddhist triad, each member of which was idealized and invested with some sacred character that marks it as the object of a definite worship. On the sculptures the Saṅgha is represented as a man holding a lotus in his hand, the symbol of stainless purity.

In inception and intention the monasteries were not the establishment of Buddhist monks. To the latter no permanent abodes were assigned, they were to follow the wandering life of an ascetic or beggar, dependent for their livelihood upon the gifts of the laity, their only shelter the trees of the forest, or booths constructed of leaves and branches (parvata-sāla, parivasa-sāla). Only during Vesak (Varṣa), the season of the rains, when travelling became impracticable, or when they were executed only at the grave risk of injury to living beings, was it incumbent upon them to remain in a definite place or a permanent building. Caves, either natural or artificially excavated in the rock, seem to have been among the favourite dwelling-places of the early Buddhist monks. Gautama is represented as giving permission for five different kinds of abodes (patīka-tenāna): I. ‘you allow, O Buddha, these (the five caves and rocks) to be used by the bhikṣus, bhikṣummas, and bhiksukṣinas, storied dwellings, attics, caves.’ The more elaborate and permanent dwellings were, in the first instance, apparently always the gifts of wealthy laymen, who desired in this way to do honour to Gautama himself or to the order which he had founded. A usual name for the larger monasteries was saṅghārāma, the abode or delay of the Saṅgha; and the term vihāra was employed also to denote the temple where the images were enshrined in a building, which in a great many of the ancient monasteries at least, was usually distinct from the main hall.

It became necessary, moreover, at an early date to place restrictions upon the absolute freedom of entrance into the order. Such restrictions took the form of the prohibition of admission to those suffering from any mental or bodily defect, as the blind or lame, and to the vicious in habit or life,

1 Thus in the ‘three-refuge formula’ which every candidate for admission into the order was required to repeat the Saṅgha is personified, and to that Saṅgha, thus conceived, is attributed as the object of protection and aid: Buddhaka saṅghaṃ gacchhantu, ‘Bhikkhu saṅghaṃ gacchhantu, Saṅghārāma gacchhantu. ’I seek refuge in the Buddha, the Religion, and the Order’ (Mahān, i. 12. 4).

2 Cf. Chittà, vi. 1 ff.; SBX xx. 158; cf. Mohān, i. 30. 4, where these are termed ‘extra allowances’: adhīya-sāla is explained by the commentator to mean a gold-coloured flagged house.

MONASTICISM (Buddhist)

gamblers and those involved in debt. The consent of parents also was required in the case of a minor. No distinction or priority of caste, however, was ever recognized in Buddhism, although it seems to have been true that the early converts were for the most part Brahmans. Inasmuch as in and through the order alone was final deliverance to be attained, it was an essential feature of the Buddhist creed that no accident of birth should hinder a man from entering upon and prosecuting the path that led to salvation, for vérádha. It was impossible for the layman to work out his own salvation while in the world, lettered by its ordinances and under the spell of its attractions. He must renounce the world and become a monk, that, undistracted and at leisure, he might pursue the highest ends and win for himself final deliverance.

The earliest ceremony of admission to the monastic order appears to have been as simple as possible, and conformed to a recital of the 'three-page formula,' together with a declaration on the part of the applicant of his desire to become a monk. At first Gautama himself received and admitted all candidates. Later he entrusted this right to the monks themselves, each monk being permitted to retain on probation, if he found a candidate to be too strict, and ultimately the only limit to the number that a monk might himself receive was the condition of efficient overwork.

On admission the candidate provided himself with the usual almsbowl and the appropriate three vestments (trikhyavesa) which constituted almost his sole possessions. The color of the robes seems to have been originally dull red or reddish-yellow, as worn by most of the Hindu ascetics, but varies at the present time in different countries; in the north it is usually yellow. They were to be made in patches or torn pieces, like the rice-fields of Magada. Besides the almsbowl the ordained monk carried also with him a staff, a razor and tooth-pick, and a water-strainer, the last in order to ensure that no living creature should inadvertently be destroyed by him when drinking. The use of the rosary in addition was a practice of later origin. Frequently the robes were the gift to the Buddha or his disciples of wealthy laymen, who sought to secure merit for themselves by generosity to the order.

Upon converts from other sects who came desiring to take the monastic vows, a probationary period (prayūtihās, 'sojourn,' 'delay') of four months was imposed. Fire-worshippers and Jātillas (wearing the jata, i.e. with matted hair), however, were to be regarded on the ground of their orthodox belief; Sakyas also, because of their kinship with the Buddha.

The daily routine of monastic life admitted of little variation. The day began early with recitation and prayers, followed by the regular round for alms. Silently and with downcast eyes the monks moved in procession and presented themselves before the householders' doors, to receive whatever food might be placed in their bowls. For this they were not allowed to make request, as the Brāhmaṇ students and ascetics were accustomed to do. Whatever was bestowed they were to accept without question. If food were offered, they were to pass on to another house without showing remissness. On their return a simple noon-day meal was followed by rest and meditation, the monks sitting in groups, sometimes in the temple or hall of the monastery. In most of the

would be theirs as a certain reward. In respect, however, of their wealth and resources the monasteries of Buddhist countries differ to a considerable extent. They are built on a grand scale and are full of buildings that are more numerous and lavish, are larger and better finished, and are more imposing in appearance. In the heart of a few of the great cities, the melancholy but once illustrious monasteries of Ceylon are often surrounded by a few buildings which are small and shelter few inmates. In Mongolia and Tibet they are large and elaborately furnished and decorated, and frequently occupy a prominent position in the central city. In Japan and Siam possess buildings of much architectural merit; and the monasteries and temples of Japan are not excelled for stateliness and charm by any in the world. The Chinese monasteries have suffered much from neglect and decay, and in many instances have within recent years been altogether abandoned, or diverted to secular purposes.

2. Nuns.—Apparently only with much reluctance did the Buddha consent to the establishment of an order of nuns (bhikkunis, Pali bhikkhunis). The traditional account relates that at the thrice-repeated request of Mahâpâja-pati, Gantana's aunt and nurse, strongly supported by Ananda, the Buddha gave his permission for women to go out from the household life and enter the monastic life under the discipline proclamed by the Tâthâgata. The concession, however, would probably have been less liberating, so Gantana prophesied, than the prosperity and duration of the faith which he taught; the monastic order, which had been established only for five hundred years instead of a thousand. On the same occasion he prescribed the obligations and duties of bhikkhunis contained in Eight Chief Rules, to which they were bound in strict obedience. The regulations involved subervience to and dependence upon the order of monks in all respects. A nun even of a hundred years' standing was to rise and respectfully salute even the youngest monk, nor was a nun to venture to admonish a monk, though she must submit to receive admonition from him. Further a nun may not keep Vassa in a district in which no monk is resident. It is probable that the ordination of women as bhikkhunis and the establishment of nunneries are in reality due to a later age than that of the founder of Buddhism. The institution has never become popular or gained a strong hold in any Buddhist country; and the number of the nuns has always been small relatively to the number of monks.

3. India.—The Chinese pilgrims, Fa-Hian, Hiuen-Tsiang, and the two following centuries of the Christian era, found monasticism flourishing in N. India, and the great monasteries with their thousands of learned and studious monks exercised a powerful and attractive influence. They belonged in almost equal proportion to the two great schools of Buddhist doctrine, the Hinayâna and the Mahâyâna (Pali). In the time, however, of the visit of Hiuen-Tsiang, the most renowned of the Chinese monks (A.D. 629-645), they seem to have been losing ground everywhere to the rival sects of the Brâhmans. The most famous Buddhist monastery was that at Nâlandâ, the modern Barâgan near Gâyâ (p. 267), a description of which is given by the latter pilgrim. See further, art. NALANDA.

4. Ceylon.—In Ceylon the power and influence of Buddhism were at their highest during the early centuries of the Christian era, under the rule of the native Ceylonese kings, who were enthusiastic Buddhists, attained a high level, and were exercised not only ecclesiastically but also in political affairs. The rulers themselves received the ordination (p. 267), at the hands of the monks, who not only offered advice and exercised authority in matters of State, but also judged decrees penalties for breaches of the law. On the other hand, the kings interfered in the maintenance of ecclesiastical discipline, and are themselves said to have taught publicly and expounded the principles of the religion. The most flourishing period of monastic life, when the communities of the monks were most numerous and wealthy, appears to have been from the 2nd cen. B.C. to the 10th cen. after Christ, when the Tamil invaders from S. India began to overrun the island half by half. Nalanda, which was then the chief home of religious faith and prosperity, destroying the monasteries and introducing the beliefs and practices of Hinduism. The death of the last Boddhisattva of the 12th cen. a brief revival of national religion took place with the re-establishment of national independence under Parâkrama the Great (c. A.D. 1097). After the death of the king, however, a decline of national and religious life again set in, during which the monasteries and schools of Buddhism manifested little vigour or initiative, and, although the religious life of the community maintained itself outwardly, it gradually fell to a low level of intelligence and spirituality. Only within the last few years have there been signs of a renewed vitality and interest in the purer doctrines and principles of the faith, and of energy or zeal on behalf of its preservation and extension.

The chief authority for the history of the order in Ceylon is the Mahâvihâra, or 'Great Chronicle,' of the island, the native record of which endured only for five hundred years instead of a thousand. On the same occasion he prescribed the obligations and duties of bhikkhunis contained in Eight Chief Rules, to which they were bound in strict obedience. The regulations involved subervience to and dependence upon the order of monks in all respects. A nun even of a hundred years' standing was to rise and respectfully salute even the youngest monk, nor was a nun to venture to admonish a monk, though she must submit to receive admonition from him. Further a nun may not keep Vassa in a district in which no monk is resident. 4. Ceylon.—In Ceylon the power and influence of Buddhism were at their highest during the early centuries of the Christian era, under the rule of the native Ceylonese kings, who were enthusiastic Buddhists, attained a high level, and were exercised not only ecclesiastically but also in political affairs. The rulers themselves received the ordination (p. 267), at the hands of the monks, who not only offered advice and exercised authority in matters of State, but also judged decrees penalties for breaches of the law. On the other
More recently there has been a reoccurring of.
sectarian differences in the island. These, how-
ever, concern monastic usage and habit rather than religious practice; in the latter respect there is little if any variation throughout Ceylon. There are three chief sects, the origin of which appears to have been due in all instances to external initiative and influence; and one of them, the Buddhist, is at least four hundred years old. In the last respect there is little if any variation throughout Ceylon. The earliest and most numerous sect is known as the Siamese, established about the middle of the 18th century, by a number of monks from Siam, who came to Ceylon to restore, it is said, the true succession which had been lost. About fifty years later a separation took place, apparently on disciplinary, not doctrinal grounds, and the Amarapura sect was founded, its leaders being monks who owed their rank and ordination to the Burmese city. The third and most recent sect, the most numerous, is known as the Mon, and the Amarapura sect was founded, its leaders being monks who owed their rank and ordination to the Burmese city.

The monasteries of Ceylon are for the most part small, rarely containing more than ten to twenty monks. The few larger and more important institutions alone, as at Kandy, will accommodate up to forty. They are generally divided into districts, the districts frequently only two or three monks live together. Recitation, confession, and preaching by the monks take place especially at new and full moon, and on the mid-days intervening; thus four such days make the twenty-six. The normal services last for ten days or a fortnight without interruption, and are carried out at the expense of the laymen, who by charity to the monks ensure merit for themselves. During the three months of Vassa (Was), the monks leave the monas-
terias and live in the villages, either in specially constructed sheds or booths or by invitation in the houses of rich laymen, who entertain them generously at their own expense. The rule that in the season of the rains, corresponding in Ceylon to our late summer and autumn, no journeying may be undertaken is interpreted in the sense that no monk may be absent from his village or temporary home for more than six or seven days.

5. Siam.—Perhaps the most distinctive feature of Siamese monastic rule is the control exercised by the Archbishops. The habits and discipline of the monks are similar to the practice of Ceylon. The king is visitor and patron of the monasteries, and he himself nominates the sangkarat, or archbishop, supreme ecclesiastical dignitary of the country. He selects for the office one of the four chief abbots, who are entrusted severally with the control of the northern and southern provinces of the kingdom, the general oversight of morals and ritual, and the management of the interests of the wandering monks of Siam, who are uncon-
ected with any of the sects, or monasteries. These hermits, who make their home in the jungle, are few in number, but are said to have been very numerous in the past; at least the monks of the monasteries themselves frequently spend a considerable part of the year in journeying from one shrine or sacred place to another. Parties of these pilgrims are known as phra no, as they live in procession along the roads they form a picturesque element in the country side. Each monk is accompanied by a siya, or attendant, who carries his alms-bowl and other utensils, and a portable shelter or tent consisting of a large Chinese umbrella, which is set up in the ground at halting-places and a white cloth thrown over it. There are also a few nuns, known as chii-siian, who live for the most part in huts in the neighbour-
ood of the monasteries. They are usually women advanced in years who are without relatives to provide for their well-being or maintenance. There are no regular nunneries.

The four chief abbots, together with four con-
ductors or assessors, form a sort of Court of Final Appeal in all matters of religious or ecclesiastical administration or disciplinary discipline. The Abbots, as in the hands of provincial ministers of the Church, who exercise jurisdiction within districts that correspond usually with the civil divisions of the country. The ecclesiastical organization, therefore, is parallel to that of the State, and the ruler of the State is supreme over all.

In Siam, as in Burma, the rule obtained that every male member of the nation should at some time in his life take upon himself the monastic vows, and become resident in a monastery. The accepted minimum period of residence was three months; after this the monk was free to return to the life of a layman. Most of the monks passed through the monastery schools, receiving an ele-
mentary education in reading and writing and the fundamental doctrines of Buddhism. The layman retained an attachment to the monastery of which he had been an inmate, and once at least in the twelve months, at the religious celebrations in the autumn at the close of Was, brought gifts and new robes for the use of the monks during the coming year. At Bangkok the king himself, as head of the Church, goes in procession with much ceremony, bearing rich presents and costly robes for the monks. In all the festivals and numerous public holidays the monks take a considerable if unofficial part, and are the recipients of much attention and many generous gifts. In Siam the obligation of indivi-
dual and personal poverty is less strictly observed than in most Buddhist countries. In some instances the monastic cells are adorned with books and pictures and furnished with ornaments and other objects of luxury, and the monks may be seen driving about the streets in carriages. The majority, however, live a simple life, and are regular in their duties and apparently sincere in their devotions. The monasteries also frequently derive considerable revenues from land or other endowments granted to them by Government, or from the gifts of private donors.

The routine of life within the monasteries is practically the same as in Burma and elsewhere in the south. The day begins and ends at an early hour. Morning prayers in the bii, the principal hall or temple of the monastery, before the great golden images, are followed by the usual early begging round. The food placed in the bowl is received in silence, and eaten
MONASTICISM (Buddhist) 801

naturally centred in the monastic communities established in the several cities on the important roads of pilgrimage, devoted with study and meditation and in giving instruction, in recitation from the sacred books, or in preaching. The usual title of the monk is phra, ‘saint,’ or ‘blessed,’ and that of the nun, maid, or ‘good mother,’ signifying ‘our Master.’ The Japanese term bonze is also in use among Europeans.

6. Burma.—The monastic life of Burma is in its essential features similar to that of Ceylon. The monasteries themselves, however, are on a far more elaborate and costly scale, and the lives of the monks are more strictly ordered and devotional. The monasteries have also been more closely in touch with the laity, both because the monks have mingled freely with the people in their festivals and religious ceremonies and, more especially, on account of the influential position which they have occupied as centres of learning and education. Previous to the establishment of European missionary and Government institutions, which to an increasing extent have supplanted them, every Burmese lad passed through the monasteries, owed whatever book knowledge he possessed to the teaching of the senior monks, and for a longer or shorter period himself participated as a recognized member of the community in the orderly life of the nunnery. The majority returned to a secular life and to the pursuit of agriculture or trade, the entire male population of Burma had practical acquaintance with the life of a monk, and knew from within its requirements and aspirations. The system contributed effectively to national unity and strength, and for many centuries made of the Burmese a literate people, even if the standard of learning was not very high. The boys learnt also respect for their elders and habits of regularity and obedience which served them well in their after careers. See art. BurMA AND dOCTANTS (Buddhism).

7. Tibet.—The distinctive feature of the monasticism of Tibet is its elaborate and gorgeous ritual, recalling in many respects the ceremonial of the Roman Catholic Church. The similarity is due for the most part to the influence of the early Nestorian missionaries, who, while leaving little trace of their doctrinal teaching, succeeded in impressing upon the religious life of the country much of itself, and on the rival monasteries, which had been developed in Western lands and on Christian foundations. But, further, the Lamaist ritual includes ceremonies of exorcism and magic, accompanied by music, dancing, and dramatic performances, the whole most widely divergent from the spirit and simplicity of primitive Buddhism, the source of which is to be found in the ancient native superstitions and practices of the people, which the Buddhist missionaries from India tolerated either from necessity or of choice, if they did not actually foster them. The monastic communities of Tibet are wealthy and powerful, with large revenues and possessions. The buildings themselves are often of great size, sheltering as many as ten thousand inmates, and are imposing rather from their unrivalled position on the sides or summits of lofty rugged peaks than from any architectural excellence. At the other extreme, among the anchorites and hermits has been developed a rigorous and cruel asceticism, which is no less opposed to the true Buddhist spirit, but which is closely allied to and probably derived from the Stem of mysticism and practices of N. India. See art. LAMAISt.

S. Central Asia.—That for a considerable period Central Asia was the home of a broad and vigorous Buddhist life has long been known. That life

immediately on the return to the monastery. No solid food is taken after mid-day. The intervals in the reciting and debating, however, are on a far more elaborate and costly scale, and the lives of the monks are more strictly ordered and devotional. The monasteries also have been more closely in touch with the laity, both because the monks have mingled freely with the people in their festivals and religious ceremonies and, more especially, on account of the influential position which they have occupied as centres of learning and education. Previous to the establishment of European missionary and Government institutions, which to an increasing extent have supplanted them, every Burmese lad passed through the monasteries, owed whatever book knowledge he possessed to the teaching of the senior monks, and for a longer or shorter period himself participated as a recognized member of the community in the orderly life of the nunnery. The majority returned to a secular life and to the pursuit of agriculture or trade, the entire male population of Burma had practical acquaintance with the life of a monk, and knew from within its requirements and aspirations. The system contributed effectively to national unity and strength, and for many centuries made of the Burmese a literate people, even if the standard of learning was not very high. The boys learnt also respect for their elders and habits of regularity and obedience which served them well in their after careers. See art. BurMA AND dOCTANTS (Buddhism).

7. Tibet.—The distinctive feature of the monasticism of Tibet is its elaborate and gorgeous ritual, recalling in many respects the ceremonial of the Roman Catholic Church. The similarity is due for the most part to the influence of the early Nestorian missionaries, who, while leaving little trace of their doctrinal teaching, succeeded in impressing upon the religious life of the country much of itself, and on the rival monasteries, which had been developed in Western lands and on Christian foundations. But, further, the Lamaist ritual includes ceremonies of exorcism and magic, accompanied by music, dancing, and dramatic performances, the whole most widely divergent from the spirit and simplicity of primitive Buddhism, the source of which is to be found in the ancient native superstitions and practices of the people, which the Buddhist missionaries from India tolerated either from necessity or of choice, if they did not actually foster them. The monastic communities of Tibet are wealthy and powerful, with large revenues and possessions. 2 Cf. M. A. Stein, Ancient Khotan, 2 vols., Oxford, 1907, passim, and Stein, Buddhist Caves of Khotan, 2 vols., 1882; also by L. Giles, J. Pells, and others, in JEAS, 1914, etc. Stein found that the memory of the Chinese Buddhist pilgrim, Huien Tsang, is still retained at the ‘Halls of the Thousand Buddhas,’ in the west of the province of Kansu, and elsewhere in Central Asia till the present day. The Sutras, recitations, devotional, and devotion, and of the miraculous powers with which he was credited, proved to be a real power in the midst of the priesthood.

3 Hackmann, Buddhism as a Religion, lb, iii, ch. vi.; Edkins, Chinese Buddhism; Wigger, Buddhistische chinesen, L. Monachism, p. 133 ff.
The monasteries are usually small, the number of inmates rarely exceeding twenty-five or thirty, and sometimes, as in Ceylon, no more than three or four monks are found living together. The more important institutions are grouped around the capitol, but none are allowed within its walls. Each monastery’s architecture is different, the monks themselves command little respect, and are drawn, for the most part, as in China, from the lower classes. The example and influence of Japan also make it hard to keep householder of some of the buildings, which are fortified and built on high ground to dominate the country at their base. In the neighbourhood of Seoul a few nunneries exist.

The most distinctive feature of Korean monasteries is the presence of pictures on the walls. These are drawn and coloured on paper and mounted on silk, and usually represent scenes from the lives of the Buddha. Often the entire surface of the interior walls is hung with pictures, presenting a remarkable contrast to the monasteries of other lands. Externally the walls are covered with paintings in bright colours of bodhisattvas or other supernatural beings. The sanctuaries often contain only a single image, rarely more than two or three; and these are small, and for the most part of clay or wood. Metal images are almost if not entirely unknown.

In the dress of the monks they have preserved the national costume in the form of a long cloak with sleeves, worn over all, and generally white. The head of an ascetic is shaven, but not the beard. The shaved head, however, is not branded after the Chinese custom, although branding may be effected on other parts of the body, as the breast or arms. The robe is received from boys received by dedication or adoption in early childhood. Endowments are not numerous. Most of the monasteries are dependent for their maintenance upon the gifts of the laity, or, where opportunity serves, upon the personal labour of the monks in the cultivation of the temple lands.

11. Japan.—The temples and monasteries of Japan are large and well-appointed, and give the impression of a reality of creed and life which is almost altogether wanting to those on the continent. The numerous Buddhist sects of Japan have their home and abodes to life in the monastic communities, and the monasteries themselves in the details of their architecture present varieties of construction according to the sect to which they belong. In creed and belief the sects differ greatly among themselves, and have few features in common with the Buddhism of the south. In the past the activity and strenuousness of the national life found their almost complete counterpart in the monasteries, which formed associations of fighting monks at war with one another, oppressing and plundering the common people. In more settled times speculative thought, mystical, devotional, and idealistic, has been highly developed, perhaps most conspicuously in the Sect of the Pure Land, who hold a theistic creed, and expound and practise a moral code which has much in common with the mysticism of the oriental religions. As for life also, at different periods of the nation’s history, missionary effort and preaching have been prosecuted with zeal and success. Both at home and in China a similar work of propaganda is being carried on at the present time with much devotion and energy.

12. Conclusion.—It is natural to compare and contrast the monastic principles and life of Buddhism, of the Middle Ages and Early Middle Ages in Europe. In the general features of discipline and government there is much object in similarity. A monk is usually vowed to poverty and celibacy, and his chief duties are those of prayer, meditation, or instruction. His native castes, or sects, are classified in two: (1) the practice of literal mendicancy, which takes the form of a daily round, equipped with staff and begging-bowl, to receive whatever portions of food, drink, or clothing the poor may bestow. In the countries where the Mahayana type of Buddhism has prevailed this custom is not and probably never has been obligatory or usual. It forms a distinctive and characteristic element, however, of early Buddhist rule and observance. (2) According to Buddhist teaching, salvation is to be found only within the limits of the order. The layman can achieve his own deliverance only if and when he dons the robe of the monk, and takes upon himself the monastic vows. He must seek refuge from the world in a life of retirement, meditation, and self-denial, for no other can the letters of karma be broken and nirvana gained. In Buddhist polity and doctrine, therefore, the order holds a pre-eminent place distinct from and above that which it occupies in any other great religious system.

A. S. Geden.

MONASTICISM (Hindu).—The habit of monasticism owes its origin, it has been said, to the natural tendency of mankind toward mysticism and asceticism. These are developed, set in order, and satisfied, in the rule and restraint of the monastic life in India, more perhaps than elsewhere, the practice is of very great antiquity; and the motives and instincts suggested, although true in general of the rise and history of Indian monasticism, in two respects at least render an insufficient account of the causes at work. In the routine prescribed for the ascetics as far as this is taken from the solitary or wandering life of the hermits and ascetics, mystical devotion has played but a small part. Mysticism in India has shunned companionship, and the ascetic has been an ideal, and cherished pursuit of the lonely ascetic. And the latter, the ascetic motive or ideal, has been overwhelmingly predominant among the causes that have urged great numbers of men and women at all times to adopt the monastic robes and manner of life. A third motive, however, exercised a powerful influence in determining the choice of the monastic profession. This was
the Indian view of life as a whole. By the Indian
life has ever been regarded as essentially evil, and
religion the burden and sorrow of existence as the
chief and final [goal]. In many sectors of Indian
philosophy, especially the Buddhist, but also in that of
Hindu leaders and teachers before Gautama, this
end was to be achieved only in and through a mona-
stastic dedication and life. It was impossible for the
layman, dedicated to the pursuit of the highest
goals of travel, to renounce the world, to seek
salvation. Emancipated from these, he was free to devote
himself to the highest aim, and to win his way to
dominal enlightenment.

A second respect in which historically Indian
monasticism in general has been distinguished from
Buddhist or Christian is the deficiency of co-ordination or a central control. The various
orders have been for the most part loosely organized,
and that from want not of organizing power but of
inflation and will. The ideal of the Indian monk
or ascetic is not and never has been a fixed residence
and occupation, but rather freedom to wander at
pleasure, to visit the various sacred places and
shrines, and to dispose his manner of life and his
time independently in all respects as seemed best to
himself. And in fact the various methods of
the monastic life have undergone little change or
development since the earliest ages. The mendic-
ant, or wandering ascetic, rather than the resident
community, is the epitome of Indian religious life; and the monasteries
have served in a greater degree as lodging- or rest-
houses than for fixed and permanent habitation.
The earliest definitions of Indian social and reli-
gious life present the same features as are seen
in modern times—a large drifting population of
mendicants and ascetics, who find only a temporary
home in the monasteries, and after a longer or
shorter stay move on entirely as their own inclina-
tion prompts.

The habitual practice of a life thus ordered and
determined is of extreme antiquity in India. It
would seem to be based ultimately upon the Hindu
regulation of the four ārama (q.v.), according to
which every Brāhman towards the close of his
life must renounce the world and adopt the home-
less life and the ascetic garb. In intention, there-
fore, no low-caste or out-caste man could become a monk, but only the ‘twice-born.’ In practice,
of course, the wandering population is recruited from
all castes; and many follow the life as an easy and
convenient mode of existence, without any
trouble to themselves. The ancient Indian custom,
familiar to Indian thought and in closest harmony
with Indian ideals, formed the model for the great
Buddhist and Jain communities of monks, and
gave to them precept and habit and rule. Only in
organization did the younger communities go far
beyond anything that was developed in Hinduism.
Here the preference for an independent and self-
regulated life proved itself the stronger, and broke
away from all attempts at a settled and established
order or government.

The Hindu monasteries, or ‘maths’ (Skr. matha),
are not large or orize, providing adequate
accommodation for only a few inmates. Except at the
important pilgrimage centres, as Hardwar or Benares
(q.v.), where durable buildings of brick are found,
they are often little more than a collection of
huts or cells ranged around a central court-yard.
Permanent quarters are provided for the mukant,
or presiding abbot, of the monastery and his resident
students; but the other monks are generally
occupied at the periodical festivals by the members of
the order to which the monastery belongs. Attached
are a temple or shrine for the service of the deity,
and in the larger monasteries at least a separate
dhārmatālía, or resting-place, for the benefit
of travellers. The term maths appears to have
been originally applied to the solitary huts of the
religious recluse, and then to similar dwellings of the
communities of hermits living in the forests in the
practice of austerities. Of such a
woodland hermitage an attractive description is
given in Khādāsā’s Sakuntāla. The name was
ultimately extended to include all more or less
permanent homes of ascetics and hermits.

The maths exist in considerable numbers all over
India, but the inmates for the most part live a
retired life, keeping to themselves, and both they
and their homes are little known to outsiders or
Europeans. Each sect or monastic order has its
own maths, that of the founder of the order being
regarded as the chief. There is, however, no
central control, nor any interference in the manage-
ment or affairs of another monastery. The older
monastic buildings are of the simplest character
and architecture. Later more elaborate buildings
were erected, sometimes of more than one storey;
but they never carried the pretensions of the
Buddhist viharas. When the latter faith died out in Bengal, some of
its monasteries passed into Hindu keeping and were appropriated
for the use of Hindu monks.

To erect a monastery for the service of the monks
and wandering ascetics has always been regarded as an act of religious merit. The math
is the gift of a generous and pious layman, and of
such donors there has never been any lack in India.
In most instances an endowment for the upkeep
of the monastery is provided either at the time of
errection or by subsequent grant, and this is
increased from time to time by the gifts of patrons
who endeavour thus to secure merit for themselves.
The individual monk is bound by a vow of poverty,
but the monasteries often become exceedingly
wealthy in revenue and lands. Since the monks
themselves do no manual labour, nor indeed work
of any kind, the lands are usually farmed out to
Hindu lay-proprietors. The management, how-
ever, by the temple authorities of their large
revenues has sometimes been so defective that the
British Government has been compelled to inter-
fer, and take over temporarily the control of the
monastic estate.

The Hindu monk is known as yogin, one who
curbs his passions and has renounced the world, or
vratin, the devotee who has taken upon himself
the vows of renunciation and consecration. The
former term is technical among the Jains also, but
is said to be regarded with disfavour. The nais-
thika is the religious student, who engages himself
to remain with the guru as pupil and disciple after
the close of the regular period of service as a brah-
machārīn. The titles yogin and sannyāsin are
more appropriate and more usually applied to
the wandering ascetic, without home or stated
means of livelihood. The former denotes the Hindu
 monastic, the mystic and saint, who endeavours to attain
union with God by the way of self-control and
asceticism. The sannyāsin has ‘cast off’ all worldly
utterances and attachments, and is separated from
every earthly wants or ties. Bhikṣu, ‘beggar,’ describes rather the common characteristic of
the class. In the Pali form of bhikkhu it has become
the usual term for the Buddhist monk; Hindu
usage ordinarily retains the Sanskrit term for
these names. All monks depend for their livelihood
solely upon the charitable gifts of the laity.
The daily round with the begging-bowl for doles of food
at the door of the Hindu householder is never made
in vain, and the flow of Indian charity and

1 The abbot of a monastery in the Punjab made complaint to
J. C. Oman of the crowd of idles and worthless aśūras who
charged themselves upon him and took advantage of his
hospitality (Mystics, Aṣuṣitas, and Saints of India, p. 292).
hospitality to ascetics is unstinted. The red- or yellow-coloured robe of the monk is an unfailling passport to generosity and benevolence all over India. Such generosity accords to the merit of the donor, and has no regard to the character or motive of those who receive the alms. Among the latter there are not a few whose robes over avarice and the desire of worldliness and indolence and a desire to save themselves the trouble of providing for their own wants. But there are also among them sincere men, often of considerable learning, earnest and devoted in their pursuit of the truth.

The Sanskrit law-books contain rules and regulations for the guidance of the ascetic life. The sixth book of Manu is entirely devoted to this subject. Hermits and ascetics are to beg for their food once a day, to be indifferent to their reception, neither vexed at a refusal nor exultant when their bowl is well filled, to restrain their senses and appetites, eating little, and always to be on their guard lest they accidentally destroy life, watching the ground before them as they move, that their feet may not crush any living thing. The same purpose is in view in the rule that a monk must not change his residence during Vassa, the season of the rains. Elsewhere it is provided that students, ascetics, and others shall be free from tolls and charges. They shall not be allowed to bear witness in the law-courts probably because, being separated from the world, their testimony with regard to its doings would necessarily be unreliable; nor do they inherit property. Punences also are prescribed for those who for successive days omit to go on the begging round or neglect their other duties. The oversight of the monastery and the responsibility for entertaining itinerant monks or strangers are in the hands of a presiding elder or abbot (matābhigāti). Around him usually is gathered a band of young disciples, who are instructed by him in the Hindu scriptures and render him personal service in accordance with ancient immemorial custom. There is, however, no definite or fixed hierarchy or gradation of office. The inmates of the monastery are free to come or go at their own will, and neither their movements nor their actions are in any way controlled. They must wear the monastic garb, observe the vow of poverty, and depend entirely upon the bounty of others for their daily food. Beyond these simple conditions they do as they please. The actual possessions which the monk or sanyāsin carries with him vary to a slight degree with the sect to which he belongs. The essentials are the robes and a begging-bowl; to which are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.

The vows (vyāsa) which the ascetic or monk undertakes to observe are five in number: avoiding hurt to any living creature, truthfulness, abstinence from theft, self-restraint, and liberality (Skr. ahiṃsā, satya, asteya, brahmābhāgya, tyāga). These have been adopted, with the exception of the last, in the Jain and Buddhist systems. There are also a few lesser vows: earnestness of mind, obedience to the guru, gentleness, cleanliness, and purity in eating. The third is explained as having reference to the danger to living beings involved in rough or hasty contact. There is considerable difference between the sects in respect of the degrees of ascetic self-denial or actual discomfort and pain which they voluntarily endure. Savite monks are as a rule, more extreme in their manner of life and austerity. The Vaisnavites allow themselves greater liberty and seclusion, if ever, in fact, upon themselves, or others, for mere indolence. The Jains, on the other hand, sometimes pass from the extreme of asceticism to that of self-mortification.

The chief and largest monastery is at Kuruksetra (v.p.), where the annual festival of the sixty principal sects is celebrated. It is in honour of the great festivals of the year. In one instance at least in a monastery visited by J. C. Oman the monk wore robes differing from those of the ordinary monk—usually long-sleeved or tunic and a turban of bright colours. The chief and largest monastery is at Kuruksetra (v.p.) near the Golden Temple, built of brick in two storeys and with two open courts, belonging to the sect of the Gurus. The Jains also possess monasteries and temples of considerable size. In all a large part of the religious worship consists in the reading of the Gṛhasth (v.p.), and sometimes of other Hindu sacred books. Except at the season of the great festivals the monasteries are usually almost deserted, but upon these occasions they are thronged with monks and others who have come to join in the feasting and religious ceremonies.

The monastic institutions of the Jains in some respects hold an intermediate position between those of the Hindus and the Buddhists. Their rule and order are more definitely framed than that of the former, but less exacting than the Buddhist and allow more freedom to the individual. As in Buddhism also, the existing system or practice of the Brahmans monks as ascetics formed the model on which the founder of the Jain faith ordered his own community. Mahāvīra himself is said to have had a following of fourteen or fifteen thousand monks, and more than twentv of these went out of the way of asceticism, and, being divided into twelve chief disciples, or gopālāvārās, or twelve if Gopāla be reckoned, who proved himself the unworthy rival and opponent of his master. Jain writers are said to compare the twelve disciples of their founder with the twelve apostles of Christ, and to assign to Gopāla the part of Judas the traitor.

The prevision and independence of the founder of Jainism are shown in the recognition which he accorded to the laity. It has been urged with much probability that this was one of the chief facts that enabled Jainism to withstand the stress of persecution and the steady pressure of the dominant Hindun, when Buddhism, based solely upon a priesthood, decayed and fell away. Mahāvīra established four orders of society with his system, each with its respective functions and rights: monks (bhikṣus or gyātins) and nuns (bhikṣuṇīs), laymen (śrāvaka) and laywomen (śrāvaka). The Jain laity thus hold a definite place in the Church by the side of the ecclesiastical order. The Digambaras, however, refuse to admit the right of the women to enter the order, and assert that they cannot attain salvation (mokṣa).

The five classes of the Jain monk are the same as those of the Brahmans such as the.

1 Cf. art. ASCETISM (Hindu), voL. II. p. 94.
 Initiation (dikśā) into the monastic order takes place at the hands of a priest after a year's preparation. The training of the novice also is similar to that of the Hindu monk; and it is probable that this was the original meaning of the fifth vow in Hinduism, although it is now differently explained. A sixth year is required before ordination. The higher degrees given to the Svetāmbaras, never to eat after dark lest they should inadvertently destroy life; others declare that this rule is implicit in the first, āhīṣā. To this duty of self-restraint every article of life, fruits, jains of every sect attach greater importance than either Hindu or Buddhist monks. The Jain layman is hardly less rigorous and careful than the monk. All Jain ascetics carry a piece of cloth to place over their mouths lest they cause injury when inhaling. The stricter sect of the Sthānākavāsinī (Dhūndhis) wear the mouth-cloth always, by night as well as by day; the other sects are less scrupulous. These precautions against the taking of life do not under all circumstances apply to the monk's own life. When the twelve necessary years of asceticism have been passed, which every monk observes in imitation of the founder of his faith, religious suicide is not only innocent but an act of merit and may be even a duty. Most of the gauḍādharas are said to have lived their lives by voluntary starvation, and the practice is reported to have been not infrequent in former times.

In addition to the mouth-cloth the Jain monk bears the usual begging-bowl, and a strainer for his drinking-water. The members of all sects carry also an instrument for sweeping the path before them, which in the case of the Digambaras is usually a peacock's feather; the Svetāmbaras and Sthānākavāsīs use a broom, of greater or less size. The head is shaved, and the two last-named sects wear the monastic robes of five pieces, of white or yellow colour. The Digambaras (sky-eld) go on foot, and the Sthānākavāsīs also, whereas the last-named is most probably found in the south of India. All monks are subject to the vow of personal poverty, but it is said that in many instances this is evaded, even to the extent of carrying coin or bank-notes on their person.

The monastic life both of the monks and of the nuns is ordered on similar lines to the Buddhist. In the ordinary course the inmates of the monastery rise early, and each then makes confession of the holy vow, after which or before he proceeds to the temple for morning worship. This consists in meditation, bowing down before the idol with recitation of a sacred mantra, and in prostrākṣa, or circumambulation, which is performed four or seven times. About ten in the morning the round is made to beg for food. One monk, however, goes on behalf of all the inmates of the monastery; and in this respect Jain practice differs from Hindu or Buddhist. The food may not be eaten in the houses of the laity, but is brought back to the monastery and divided among all. According to rule the begging round should be made only once a day, but it is often repeated in the afternoon. After returning confession is made to the guru before partaking of the morning meal. The hours from one to three are devoted to study; and, if an afternoon circuit is undertaken for alms, it is succeeded, as in the morning, by confession. The second and last meal of the day is taken about sunset, and no monk is allowed to leave the monastery after dark. 2

Money.

Money is the name applied to the instrument devised by man which enables him conveniently to effect exchanges of goods and services. It was a great advance upon barter when an intermediary was adopted by the trading parties that provided at the same time a measure of values and a generally acceptable medium of exchange. As man advanced from simple barbarism, he acquired some elementary forms of personal wealth, and the practice of exchanging with others to satisfy his growing diversity of wants would naturally arise; in course of time the advantage of having a medium of value which formed a unit of comparison of worth and represented a standard of values would come to be recognized. For this purpose objects of common utility or ornament were early adopted—oxen, cattle, sheep, furs, slaves, shells, nuts, precious stones, and bits of metal are examples of the various substances used as money in different circumstances and stages of civilization. These tokens were the selected substance used, and presents were accumulated as stores of value and used as means of paying tribute and debt. They thus became also a form of what is called 'capital' in modern economics.

Gradually the defects of some of the various substances employed to satisfy the money-function became apparent in their inconvenient bulk and lack of divisibility for small payments, their perishability and absence of equality and stability. Thus by degrees the essential attributes of good money emerged: it was found that the superior metals (gold and silver) possessed in an exceptional degree the qualities desirable in a good medium of exchange, and a measure of value. Money should have stability in value; it should be durable, portable, divisible; it should be easily recognizable and capable of being coined. No substances possess all these attributes absolutely, but gold and silver display them in the highest degree; consequently they have been generally adopted for money by civilized nations. Since they are natural products, variations in their supply create some fluctuations in value, as do also changes in demand which follow on the growth of population and the irregularities of trade. But, on the whole, gold has responded to this test by stability as a basis for its complex and ever increasing trade and commerce. Standard money has the attribute

MONGOLS

of universal acceptability; it commands confidence that it will be promptly received by others without loss of value. It measures the value of the services of labour; and wages as well as goods are estimated in terms of money. The value of goods, when expressed in money, is called their price.

The business of money-changer, of banking and finance, consists largely in the manipulation of money in its various forms and of obligations—debts, credits, loans, etc.—expressed in terms of money. They are either in gold and silver or by documents (notes, cheques, bills, etc.), i.e. by paper money, representative of sums of metallic money and ultimately redeemable in standard coin.

In introduction of credit-instruments, as the paper substitutes for gold are called, is an extension of the money-function and a refinement upon the employment of metallic money. It is virtually a shift of return to barter; for, while it diminishes the use of coin, it simplifies exchanges and substitutes for payment in metal a promise on paper; this representative money becomes a valuable commodity and multiplies business by its convenience. Debts are set off against debts by means of credit-instruments, substitutes for money that circulate quickly; they become a peculiar currency of promises or of money which they are easily transmitted by post; thus they vastly facilitate the business of exchange. The term 'credit' implies that these instruments are promises, and they rest in the long run upon the recognized metallic basis. A definite amount of gold must be accumulated and safely stored in order to give stability and confidence to the system.

In OT times money was always weighed (G. ouv). This was a necessary precaution in earlier periods, but in modern times the process of coined, exercised as an exclusive function of the Government, confers absolute certainty, accuracy, and uniformity, and inspires confidence; the stamped coin carries with it evidence of the amount and value of the gold that it represents, where gold is the accepted standard of value. The subsidiary coins of silver and bronze are legal tender only within moderate limits, viz. two pounds in silver, and twelve pence in bronze in Great Britain; they are only token coinage, and do not correspond to their intrinsic value in metal, which is small. The value of these coins, like that of all commodities, depends ultimately upon the law of supply and demand; the value varies with the amount available for money purposes, for large quantities of the precious metals are absorbed in the arts and as personal ornaments.

The quantity theory of money—that the value varies inversely as the quantity—assumes that all exchanges are made in the standard coin, but the use of paper substitutes, while it does not nullify the abstract theory, introduces modifications too technical for detailed explanation in an article which is mainly descriptive. The system of substituting paper currency for the standard coin requires for security that such paper shall be convertible into gold on demand. To provide this most essential requisite an adequate cash reserve of gold must be maintained unless the value of the paper money is large, and the notes cannot be met by gold on demand—has led many countries into great difficulties, and has frequently caused much loss and suffering.

The Icelandic law, which declares that gold destroys confidence, raises prices, and produces financial disaster; business is checked, and the injury falls with peculiar severity upon the wage-receiving classes, who find that their wages paid in paper at such times fall greatly in buying power. The law assumes that the currency on a sound basis. A large number of interesting economic problems arise in connexion with the use of money; they are, however, too technical for present consideration, which is restricted to a general account of the nature and services of this useful instrument of civilization.

Money is a powerful factor in the spread of civilization, in distributing the varied products of nature throughout the world. Money, in fact, may rank with roads, vehicles, beasts of burden, railways, steamships, posts, and telegraphs in the advancement of human material well-being. The oft-quoted passage, 'The love of money is the root of all evil,' is frequently misapplied as casting a slur upon money itself and upon those engaged in occupations concerned with its employment. The dictum was, however, intended as a condemnation of greed, selfishness, worldliness, and absorption in gain; its profound truth and seriousness render it in no sense condemnatory of the use of money, which is of such great service to society in the distribution of products as a ship, a railway, or any other instrument subservient to the material needs of man.

In many of the more elaborate civilisations, and in the gospel narratives reference is made to money in its ordinary uses; in all these cases its practical utility is taken for granted and its economic services unquestioned.

MONGOLS.—i. Ethnology and habitat.—Like the Aimus and the Dravidians (q.v.), the Mongols are a race distinctively Asiatic. They fall into three great divisions—Burutians (q.v.), Western Mongols (Kalmuks), and Eastern Mongols. The homeland of the Kalmuks extends from the Hoang-ho to the Manch (a tributary of the Don), their special centres being Astrakhan and the Caucasus, Zungaria, N.W. Mongolia, Alassan, N. Tibet, and the Chinese province of E. Turkestan. The races that inhabit chiefly Mongolia, the southern portion being divided into a number of tribes, such as the Tumels and Chakhars, while the northern section consists of the more homogeneous Kharsas.

The Mongolian type is best represented by the Kalmuks and the Khalkhas:

'Nearly an average stature (65.54-66.46); head, sub-brachycephalic (brach, ind. on the liv. ab. 58); black straight hair, pilous system little developed: the skin of a pale-yellow or brownish-hue, prominent cheekbones, this straight flattened nose, Mongoloid eyes, etc. (J. Deniker, Races of Man, London, 1901, p. 370).

Another peculiar characteristic of this race is the 'Mongolian spot,' small dark patches of pigmentation, especially in the sacral region, frequently observable in infants, but disappearing in early childhood. The 'Mongolian spot' is not, however, restricted to the Mongols; it occurs sporadically in cold-blooded animals, one of these, in the responsible functions of the Bank of England. The management and control of the reserve are matters too intricate for present discussion. The excessive issue of nonconvertible paper—i.e. notes which cannot be met by gold on demand—has led many countries into great difficulties, and has frequently caused much loss and suffering.

The Mongolian race has spread from its original habitat. It has profoundly affected the Chinese (particularly in the south) and Japanese; in Bengal and Orias the crossing of Mongolian with Dravidian has given the type known in Europe as the 'Mongoloid' types appear in the Himalaya region and in the Far East.

The chief Asiatic area occupied by non-Buriat
Mongols (Kalmyks, Khalkas, etc.) is bounded on the north by Siberia, on the south by China, on the west by Russian Turkestan and Chinese Turkestan, and on the east by Manchuria. It forms a high, but depressed undulating plateau, roughly 2500 feet in altitude, hemmed in by an immense double or triple chain of forest-covered mountains, known together as the Tung and Yulshan, on the one side, and by the Altai range and its offsets on the other. Although the greater portion is Gobi (a Turki word), or 'Great (Desert) Expanse,' and is desert in winter, or frozen down, and deep; andimpede seriously the sweeping movements of horsemen, there are plenty of salt lakes (only one of which escapes into Russia by a river), innumerable oases and pasture lands, suitably located sweet-water wells, and even cultivable or forest lands dotted about and available in turn at different seasons of the year to the nomads who know the peculiarities of the country so well. This fact explains how armies of millions can easily move on the simple condition that they possess sufficient cattle, horses, sheep, and camels to drive before or with themselves as food and clothing; nothing else need be taken for the journey, and the track is left by the way at various well-known places, and women with babies can be carried with the tents in huge carts. This vast rim of mountain range nearly all roofed with coniferous forest, and on the outer side rivers run into Manchuria, Russia, and Turkestan; but the gravelly expanse of Gobi with its parched atmosphere soon causes the sources flowing into the depressed desert portions of Mongolia to dry up or disappear into the sands, so that in many places recourse must be had to rude cisterns or reservoirs, automatically collecting fresh water after each summer storm. The Onon and Kerulen rivers, the valleys of which have during the past 2000 years witnessed the successive rise to political prominence of several obscure tribes, bring the north centre of Mongolia proper into direct water communication with Siberia (i.e. Russia) and N. Manchuria (i.e. China).

2. Civilization and religion. — Mongol family life has been admirably described in a series of articles written (anonymously) by a Protestant missionary for the Chinese Recorder (a Shanghai publication) in 1875. Immovable property is scarcely conceived of, and the idea of personal property and individual rights is almost equally lacking, except in reference to the property of the wife, which she retains, and to the animals under her control. Even one's wife—who, so far as nature allows it, seems to be the absolute equal of her husband—is only a life interest, for all wives (except one's own actual mother) pass over on the death of their temporary possessor, with the felt tent and the stock-pot, to the eldest son, or, failing sons, to brothers, cousins, or uncles. In case of great warlike expeditions, of course, there are temporary aggregations of men, and the modern Mongols, like the Turks and Huns, always have an annual tryst; but as a rule tribes scatter, families scatter, and individuals scatter, so that the yurt, or the felt tent (or mongge bo, as the Chinese call it in E. Mongolia), is the sole economical unit. In 1790 the entire Kalmyk nation, four subdivisions, consisted of only 200,000 tents all told, i.e. before they were conquered. In the distance, on the prairie or grassy plain north of the Great Wall, one sees one or more black spots like dung-heaps. These turn out on closer inspection to be felt bo, firmly attached by long ropes to posts, and so high as to keep them dry. It is the correct thing to make some sound on approaching; otherwise one or more powerful dogs, often of Tibetan breed, may attack the intruder. The same may be said of the yurt, which, rugged, withstand the wind and snow. For wealth or poverty the interior is hung with hand-some or shabby stuffs, and the exterior is sometimes additionally protected with Chinese oil-paper or other such impervious material; but severe simplicity is the general rule; all horses are make-shifts. If a man has horses and dogs, or even only one horse and one dog, and maybe works for someone else as a herd, he is a poor man; a rich man may have as many as 100 horses, 50 camels (all of the two-humped or Bactrian kind), to notion sheep and goats (never pigs); but, rich or poor, the mode of life is always the same—rough, strong, ardent, and deep.

3. Present-day distribution. — When the Chinese Ming dynasty in 1663 sent the Mongol tyrants in Peking back to their steppe, the old division into the Western or right 'wing' and the Eastern or left 'wing'—practically Kalmyk and Khalkha—was reverted to by the ejected Mongols, and these two wings were subdivided into the Dzijrughan Tunen, or Six Myriads. When the Manchu conquered or conciliated the Chou and other Inner (Eastern) Mongols in 1628–33 (i.e. before they became emperors of China in 1644 as well as Manchu emperors), they organized all of them except the Chahar into six chugsayen, or 'leagues' (translated by the Chinese word meng, 'sworn alliance'). These six leagues, four east (Chin Li) and two west (Shan Si), are again subdivided into 24 aimaks; or 'tribes' (translated by the Chinese word aim; this word aimak occasionally appears in Chinese Chinghizide history as aima, and in Chinese Mandchou history occasionally as aimen). See E. Bretschneider, A History of the Chinese, vols. 2, 3, p. 128, 129; also "Traces of Christianity in Mongois in the XlII century," by the archiepiscopa D. Wall, p. vii, v. 1 (1750).
This is not the place to introduce a discussion on language or a long list of native Mongol tribal names; but it may be mentioned as specially significant that the Khalkas tribe of the Chosokhan league are the absolutely direct descendants of Jenghiz and his family; they now occupy the steppes north of Jehol (thrice visited in 1899-71 by the present writer).

Besides the 24 tribes of Inner Mongols under their own native "jassaktu" and irregularly subdivided into 49 flags, or bannars, there is still a much larger number of Inner Mongols, of whom before the 'herdsmen,' who are not ruled by their own princes at all, but by the military governors at Tendue, Kalgan, and Jehol. The extramural area of which Kalgan (= the "gate" in Mongol) is the governing centre is popularly known as Chakhar, a word derived from the leading tribe, called during the Ming dynasty Chakhar, or Chakhannur. There are also the Mongols of Kokonor, descendants of a collateral branch of Jenghiz's family, with whom have been associated a number of Kalman tribes from the west; they also intermarry with the Manchus, but were not entitled, like the Inner Mongols, to style themselves "cousin." Besides these main divisions, there are the Tumet tribes of N. Shan Si, the Bargu, the Uriangai, the Mingad, the Jakchin, and other odd Kudar tribes of Mongolian type, which for convenience are ranked among the herdsmen, and are under the administration of one or the other of the Manchus (now Chinese) tsvangs, or military governors, from Uliansuuti in the west to Jehol in the east.

The Outer Mongols mainly consist of two races—the Khalkas and Kalmyks—between whom there were prolonged and bloody wars until the Manchus (after having subdued the Inner Mongols and China itself) reduced both to complete subjection. Even after the ejection of the Jenghizide dynasty from China, when both classes of Mongols were thrust back upon their deserts, they frequently crossed the desert and fought incessantly between themselves, besides, separately or in unison, making raids upon the Ming empire. The Khalka area is easily recognizable on any map because the four (originally three) tribes or Khanates into which they are divided are usually plainly marked as the Tushetu, Tsatsen, Jassaktu, and Salminoin khanates, which were the remnants of the first, or the last, or the middle, in the Ming dynasty, by the Dalai Lama of Tibet as a reward for services rendered to the Yellow-hats at the expense of the Red. These four Khalka tribes, or Khanates, were again subdivided into over 80 flags, or bannars, but this arrangement was complicated by two of their banners having been incorporated with the Inner Mongols, whilst, on the other hand, three Kalmany banners were incorporated with the Khalkas. The other two of the four Khalka khanates used to fall under the political influence of the Mongol khatuna, or sultan, at Urga, who had a Manchu resident to keep things right. A certain proportion of the Kalmany race was moved to the neighbourhood of Lake Kokonor after the Manchu conquest of 1755-54, and it there falls under the control of the Inner Mongols as Jehol. These Mongol tribes are divided among themselves; the Kalmany have their own local saints both in the west and at Kokonor, but the Khalkas, the Khalkhan, and the Kalmucks, are almost hereditary enemies. Nor can the Kalmanas easily coalesce with the 49 flags or 24 tribes of Inner Mongols. The latter represent the true historical Tata, as

1 See Parker, 'Mandchur Relations with Mongolia,' Campagno against the Khalkas and Ochots," and other papers on this subject in China, Civilisation, 1899-90; also a paper on 'Kalmany Organization,' ib. xxix. (1898-99).

MONISM—The term. The term 'monism' was coined by Christian Wolff (1679-1754), and was used by him to denote the philosophical theories which recognized only a single kind of reality, whether physical or psychical, so that he could apply the name 'monists' equally well to the materialists and to the so-called idealists of his age. It is easy to understand why the word in this artificial sense should never come into general use, and in fact it was so employed only sporadically by individual philosophers here and there. In the 19th cent. the term 'monism' came to be used by the disciples of Hegel as designating their own peculiar mode of thought; thus, e.g., K. F. Goeschel, in 1832, published a work entitled Der Monismus der Weltanschauung, or 'The Monism of the World's Great Thought.' In this sense too, the term had but a limited usage. In point of fact, it first found a place in current speech as the designation of a philosophical movement close to the modern theory of biological evolution, and it was, in particular, the biologist Haeckel and the philo...
logist Schleiermacher who brought the word into general currency. In Germany the philosophical move-
ment referred to has found concrete expression in a "Free Monism," which is "theological" as it is drawn to itself a considerable body of adherents. Nevertheless, certain other applications of the term still maintain their ground. In special, the name "monism" is given to the psychical theories which, instead of subordinating the soul to the body, or the body to the soul, form the same aspects of a single fundamental process, and on this ground constantly referred to the other. Of monism in this sense Spinoza is generally regarded as the leading exponent. Finally, taking the term in its widest sense, we might apply it to every mode of thought which seeks to transcend the distinction between the physical and the psychical, and to reach an ultimate unity. The fact that these various significations are often mingled together in common usage has led to great confusion and much unprofitable controversy.

2. Monism as expressing an inherent need of the mind.—In its widest sense monism is the expression of a demand which no philosophy and no religion ever satisfied, which the human mind at length refuses to allow the real to fall apart into the irreconcilable opposites of body and soul, of nature and spirit: and every system of thought must eventually arrive at some kind of unity. German Christianity itself is a monism—a spiritual monism—since it traces all reality to the divine Spirit. In the philosophical realm, however, monism usually stands for the Spino-

nistic view, which recognizes an exact correspond-
ence between extension and thought, the visible and the invisible, finds the same laws and forces to work in each, and interprets the order and connex-

ion of thought and things in accordance with the order and connexions of things (Spinoza, Eth. ii. prop. 7: 'ordo et connexio idearum idem est ac ordo et connexio rerum'). This view has the advantage of providing a solution of the simplest kind for a problem which cost Spinoza's predecessors much trouble: the human mind, namely, of the interaction of soul and body; for, on this theory, according to which the two series of facts proceed side by side quite inde-

pendently, and yet remain ever in mutual harmony, there is no interaction at all, the specific data of either series being explained by the relations of that series alone. Modern psychology, in following up this trend, has recently proposed the doctrine of 'psychophysical parallelism,' and strives to apply the doctrine to mental and bodily processes in detail. As this whole mode of thought appar-
ently permits each aspect to develop its own distinc-
tive character, without severing it or keeping it apart from the other, it has proved remarkably attractive to the human mind.

3. Its tendency to one-sidedness.—Its power of attraction, however, lasts only as long as we keep to the general outlines of the problem, and every attempt to give the idea a more precise application encounters great difficulties, and results in giving the preponderance to one or other of the two sides: either the physical becomes predominant, and the psychical a mere reflection or concomitant of it, or else the psychical is assigned the superior position and the physical becomes simply its auxiliary expression or a means to its ends. Thus monism inevitably breaks up into two forms—an idealistic and a naturalistic—and there has never been, nor can there ever be, a pure monism, i.e., a monism maintaining itself in its own right, apart from any: physical or laws peculiarly its own, but is in every respect subordinate to, and wholly interwoven with, external nature; nor again, on this theory, is human life endowed with any special significance or any distinctive vocation. It is true that this naturalistic monism, in its theory of practical life, recognizes the ideal ends of the Good, the True, and the Beautiful, and undertakes the task of furthering them. But it can do so only by con-

travering its own naturalistic principles, and thus it comes to exhibit the fatal inconsequence of theo-

retically recognizing unity as its supreme aim while in practice falling into an absolute contradiction between thought and action.

The progress that this theory of naturalistic monism, in spite of its inherent flaws, is making in contemporary life, and at least, is due to the concurrence of various causes. Nature, form-

erly so often sadly ignored, has come to mean more and more for the modern mind. Not only does she reveal ever more fully the delicate texture of her being, but in you the self to the psychical has added vastly to our command of the environ-

ment. The importance of the material factor for human well-being is much more widely recog-
nized in modern philosophy than it was ever the case. The result of these various developments is that
MONOLATRY AND HENOTHEISM

Nature now exercises a much more profound influence even upon our thoughts and convictions than she formerly did. This does not, of course, lead necessarily to a natu-ralistic philosophy, nor was there any great danger of such an issue as long as high spiritual ends held sway among human beings and dominated their common efforts. But such spiritual ends have not entirely lost sight of, yet largely obscured, in the development of modern life; with regard to the ultimate questions of human existence mankind is now in a state of grave disunion, and common effort has given place to widely different tendencies. Amid so much diversity regarding the content of the spiritual life, the longing for a single all-embracing theory of existence readily attracts men to the path of naturalism, which proffers what seems to be the simplest and most intelligible solution of the great problem. In reality, therefore, it is the defects of the opposite view that here lend strength to monism.

Another factor which—in Germany at least—operates in favour of naturalistic monism is found in the perplexities that have emerged in the province of religion and the Church. That religion at the present day besits no problems, and that the minds of men differ widely in the treatment of them, are facts that cannot be denied even by those for whom religion is a supreme interest. In Germany, the Church has naively aggra-vated by the intimate relations between Church and State, in such circumstances the doctrines of religion readily come to be felt as a restraint imposed by the State upon thought; and, where large numbers are already alienated from religion, or are in dubiety regarding it, there is a natural tendency to look with sympathy upon movements that set forth with perfect candour the conflict of ideals, especially the conflict between natural science and the teaching of the Church, and seek to bring it to a decisive settlement. From this position the monist may regard himself as a champion of freedom and truth.

4. Its function and limitations.—When we have in this way explained the spread of naturalistic monism, we have at the same time shown its limitations. It possesses a certain power and has also a degree of rightful authority as long as it maintains a critical attitude and provides incentives to special tendencies of thought; and this cannot be called judging. It insistson a higher recognition of the natural factors in human life, and demands that the assured results of modern science shall not be ignored by those who speak in the name of religion. Its weakness, again, shows itself in the positive aspect of its work, and in its claim to serve as a guide to human life and to satisfy the human soul. For such ends it has, in truth, nothing to offer but an intellectual interpretation of things—an interpretation which purports, by improving our conceptions of nature and by showing that man forms part of nature, to be able to supply the human heart with powerful impulses and endow it with happiness. But between ends and means, between claim and achievement, there is a wide disparity. The scientific procedure of monism, moreover, suffers from the defect of confusing natural science with the philosophy of nature, and of too rashly transforming the results of natural science into principles of the cosmos, while giving no recognition at all to the peculiar character of spiritual life or the process of universal history. But, whatever judgment we may pass upon this modern monism, it is certainly a notable feature in the life of the present day.
this attitude, it recurs elsewhere. Max Müller recognizes it in Greece, Italy, and Germany (III., 1878, London, 1879, p. 256), as well as in Finland (Opinions concerning the Science of Mythology, London, 1897, p. 294). Both these books speak of 'heno-
thecism or kathenotheism ' (III., p. 271), ' katheno-
thecism or by a shortened name henotheism ' (Carpenter, The Origin of the Decalogue, p. 149). When P. Asmeans describes the whole of ' Indo-
germanic' religion as henotheistic, because of the alleged tendency of all its deities to pass into each other, he is inspired by Max Müller's second usage, though he does not hint it.

It may seem to us that Müller has himself been guilty of a certain confusion. But the worst confusion of all is introduced by Pfeiderer (loc. cit.), who, instead of calling the followers of one deity ' monotheist' and of the others 'henotheist', makes the whole of ' India, the first henotheism' (III. 34 n.), and this he calls henotheism. We cannot wonder if high authorities have proposed to super-
priorize it ' henotheism' by some of its ambiguity (e.g. J. Estlin Carpenter, in EBR xxii. 72; H. Oldenberg, Rel. des Veda, Berlin, 1894, p. 101, note 1; E. W. Hopkins, 'Henotheism in the Rig Veda,' in Class. Studies in Honour of H. Driscoll Macdonell, New York, 1894, p. 77; Religion of India, Boston, 1895, p. 139 f.; A. A. Macdonell, Veda Mythology, Strassburg, 1897, p. 10 f., with references to earlier literature).

'Henotheism' is regarded by Carpenter as already extinct. The word is cited by E. B. Tyler (PC II. 335), but has certainly found little favour.

It might have wished to see 'kathenotheism' and ' monotheism' coeval, as names for two very different approaches towards monotheism, while the word ' henotheism' might either be wholly suppressed or else generalized to include both katheno-
thecism and monotheism, together with any other workings of monotheistic tendency that fall short of monotheism properly so called. There is much significance for theists in irresponsible movements towards recognition of one great help, one supreme power, one sovereign goodness.

Allan Menzies's distinction (Hist. of Religion), London, 1911, ch. iv. p. 55; he has been good enough to confirm or explain its meaning and origin. And yet henotheism follows Pfeiderer (and makes henotheism cover exactly the very approach of monotheism). But it is suggestive that this distinction is Max Müller's own must be repelled. Cf.

further, Müller's Physical Religion, 1891 (Glasgow Giford Lecture), p. 71: 'It must be regretted that other scholars should have used the name henotheistic in a different sense from that which I assigned to it. Nothing causes so much confusion as the equivocal use of a technical term that is Müller himself quite clear of blame), and the fnrmer of a new term has generally had the right of defining it.

The classical region of monotheism is the religion of Israel, whose phenomena, as we saw, probably suggested the name. The First Commandment of the greater Decalogue, Ex 20 or Dt 5) crystal-
izes the requirement and carries it into the moral region. Kindred Western Semitic races—possibly other races too—may have known something similar, upon its lower side. Moab or Ammon or Edom may have been loyal to the tribal god in mere patriotic prejudice. Loyalty to the God of righteousness, in Israel or in all lands under heaven, means vastly more. The only real justification for monotheistic behaviour is the monotheistic fact. It is indeed true that 'the distinction between mono-
thecism and monotheism' is often a narrow one (art. God [Biblical and Christian], vol. vi. p. 253). It is also true that the element of monotheism in human faith—as theologically, or fully Christian—is no bare recognition of facts which exist independently of our attitude. Faith is choice of God and a pouring out of our humble all in His service.
a philosophia or οὐδεθέσεις in the one Christ—since for their conceptions, too, φύσεις and ὑπόστασεις were equivalent terms—and thus seemed to endanger the unity of His person. Their leading opponent, Cyril of Alexandria, was famously concerned to maintain this unity, but he did it only by leaving out of account every element of human personality in the Saviour. According to Cyril, we must assume two nature in the divine and human, but the human, existed in Christ before He became man, and that at His becoming man these two natures were fused together in an indissoluble unity (συνηθείς δύο φύσεως καὶ ἑνὸς ἑνίκου τούτου ἰματίου καὶ ἀργήτου) and could thus be distinguished only in theory (ὡς χῶρα).

To denote this divine-human nature Cyril likewise availed himself of the formula μία φύσεως τοῦ θεοῦ λόγου συνηθείς; he borrowed it from a confessional work of Apollinaries—the Περὶ τῆς συνηθείας τοῦ θεοῦ λόγου (cf. ERE i. 608), of which, it is true, he believed that Athanasius was the author. We cannot see how closely he approaches Apollinaries at this point. The Alexandrian, nevertheless, did not proceed to the conclusions drawn by the Laodicean, who rejected the view that the Saviour had to be either fully divine and partly human, or fully human and partly divine. To Cyril the formula remained a religious postulate, and he used all the resources of an artificial logic to give it also a theological validity. Hence, if he took even the most elementary idea of the divine-human nature, however, is something new in relation both to the divine nature and to human nature, and the properties of these, viz., sovereign majesty and possibility respectively, may be in mutual communication in Christ without forcing us to assume that there is any blending of them. In this way, accordingly, two natures go to form one (οὐδεθέσεις μία φύσεως [οὐδεθέσεις]).

To follow such intricate theories was a task beyond the power of simple and unlearned minds. It is true that, of the subtleties of Cyril's discriminative logic, Euchæthes, the aged archimandrite of a monastery near Constantinople, had come to a knowledge of the idea expressed in the phrase μετὰ τῆς ἑνίκου μία φύσεως, but precisely on that ground he would not grant that Christ's bodily form was identical in character with the human (λογίου ἰματίου) at the local Synod of Constantinople in 449, addressing the tribunal of bishops, he declared, ἐὰν ἠτόκειον ἄρχων τῷ τοῦ θεοῦ λόγῳ; and, although in this position of evident propriety he most carefully modified his statements, he was condemned on the ground of the Docetic tendencies which he could not conceal (see art. DOCETISM, vol. iv. p. 332 ff.). Thereafter, in the memory of the Church, the name of Euchæthes was one of reproach, and Euchæthesianism was stigmatized as heresy. Another group who would not renounce the idea of διο φύσεως μετὰ τῆς ἑνίκου were those who in their deepest hearts assembed to the formula μία φύσεως τοῦ θεοῦ λόγου συνηθείς defended by Cyril. For them it served to ease the situation that a distinction was now being made between the terms φύσεως and ἑνίκου. This distinction, in fact, soon came to be quite as important as that between οὐδεθείας and ὑπόστασεις in the doctrine of the Trinity. In the development of that doctrine the latter distinction was to be interpreted (as in the case of the divine persons, ὑπόστασεις) could participate equally in the divine being (οὐδεθείας); and in like manner it was now thought possible to explain how two natures (φύσεις), the divine and the human, could equally inhere in one person (ὑπόστασεις), viz., Jesus Christ.

The theologians of the West, from the days of Tertullian, had been accustomed to speak of the "double nature, and consubstantial, in one person, deus et homo Jesus." What they called "nature (substantia) found an equivalent expression in φύσεις, and persona could be rendered by ὑπόστασις. In reality, therefore, the best solution of the problem seemed to be that formulated by Pope Leo I, in his letter to Flavian of Constantinople (dated 449; the so-called Βίος Λέωντος, Ep. xxviii., "ad Flavianum") as follows:

Salva propriae utriusque naturae et substantiae et in unam consubstantiam et unam divinitatem, et unam in humanum, et unam divinitatis substantialia indivisa, licet virtute infinita, seu esse distinctum formam (μορφής) consumat alterius communie, et de semper prophete et de semper persona in utraque naturae intelligendi et Filium Dominum diutur descendisse, et auras Filii Dei erudicius indicet et suspells (PL liv. 768 ff.).

What was subsequently termed the communicatio idiomatum (αὐτοικία τῶν έμπαθών) thus already finds clear expression in Leo's words. Nevertheless Gibson is quite right in saying:

'An invisible line was drawn between the heresy of Apollinarianism and the faith of St. Cyril; and the road to paradise, a bridge as sharp as a razor, was suspended over the abyss by the master-hand of the theological artist ('Decline and Fall of the Roman Empire', p. 120).

In point of fact, while Western theology thus avoided the extreme of Apollinarianism, it was menaced by the sceptics of the Antiochene peril. Here too it could be said: 'Incidente in Sycliam qui vult vitare Codonem et Julianum et Antiochenum concilian- trine of the two natures in one person (Dyophysis- tim, or, grammatically more correct, Diplythism) not only failed to compose perturbed minds, but threw them actually farther. The controversy of the divine word, but of the one nature of the incarnate nature (σωφρονίστας, not σωφρονίστας), the intention being to indicate decisively that the point involved was not μία φύσις merely μετὰ τῆς ἑνίκου. We now proceed to trace the history of this Monophysitism properly so called.

2. The Council of Chalcedon and its results.—After Cyril's death in 444 the episcopal throne of Alexandria was occupied by Dioscurus, a man destitute of theological learning and possessed with a more daring ambition than even his predecessor. His great aim was to secure the supremacy of Alexandria, and the Alexandrian theology, in the Eastern Church, and, as long as he had the ear of the emperor, and Rome did not contest his claims, he seemed to be on the fair way to attain his end. After further modifications, he summoned a general Synod to meet in Ephesus in 449 (shortly afterwards stigmatized by Leo I. as intro- cistum, σώφρονος λογιστής, the Robber Synod'). Here, with the assistance of the civil power, and the physical violence of canonical Egyptian monks, he succeeded in giving full effect to his claims; and, while Euchæthes, who enjoyed the protection of Dioscurus, was restored to the communion of the Church, Flavian of Constantinople, Dominus of Antioch, and Theodoret of Cyprus were deposed. The triumph of Dioscurus, however, was but short-lived, for not only did he damage his case by his ruthless dealings, but he committed the blunder of irritating Leo by refusing, in spite of the protest of the Roman legate, to have the Epistula ad Flavianum read at the Council. The result was a swift revulsion of feeling how the accession of the Council 450, and his sister Pulcheria, the moving spirit of the administration, had even before his death come to recognize that the transference of the ecclesiastical centre of gravity from the capital to Alexandria, and the consequences flowing to the Church from political control, might be attended with the gravest consequences. As emperor, with the acquiescence of her husband, the military commandant Marzianus, who was little interested in ecclesiastical or doctrinal affairs, she actively pro-
nated a plan of co-operating with Leo to put an end to the theological dispute at a great assembly of the Churches thus to restore the ecclesiastical balance in the East.

To achieve this desirable end was the task of the fifth Ecumenical Council, held in 451 at Chalcedon in the vicinity of Byzantium. The deposition of Dioscorus, as it could quite well be justified on grounds of ecclesiastical polity, was effected without difficulty. The demand that Leo's doctrinal letter should be levied as a syllabus, however, was resisted with the utmost tenacity by a majority of the members. After protracted discussions the Council at length agreed—not, indeed, without menaces from the throne—upon a formulory designed to make for reconciliation, although, as a matter of fact, it involved, in its most decisive passage, a rejection of the Cyrillian tradition. The formulory, which was carried on 22nd Oct. 451, starts from a recognition of the Councils of Nicea (325), Constantinople (381), and Ephesus (431), and reproduces the Nicene and the so-called Nicene-Constantinopolitan creed; it then affirms that Cyril's letters to Nestorius and the Orientals, as well as Leo's Epistle to Flavian, have been adopted as attestations of the true faith. It next proceeds to the confession of belief in Jesus Christ and his perfected man-in-Christ, and in the substantive unity with the Father according to His deity, consubstantial with us according to His humanity, in two natures (εἶς δὲ φύσεως, not ἐκ δύο φύσεως as in portions of the liturgical tradition), without confusion or change, without division or separation (ἀσυχρότως, ἀσύρματα, ἀχρωμίας). The confession ends with a statement already quoted from Leo's letter, now rendered as follows:

τῷ τῶν φύσεων λαμπρὸν ἀρχήρομυρψιν διὰ τῆς ἐπιστολῆς, συμπληρωμένη μὲ μέλλων τῆς ἐπιστολῆς ἀποθεμάτων φύσεως καὶ εἰς τὰ προηγομένα καὶ μὲν ἐπονομαζόνσιν συνεργολογεῖν.

A decree, promulgated (7th Feb. 432) by the two emperors, Zeno and Anastasius, imprisoned severe penalties upon all who should henceforth dispute in public regarding the faith; offending clergy and arm officers should be deprived respectively of their priestly and military status, and others proceeded against by law. Dioscorus was exiled to Gangra in Paphlagonia, where he died in 454.

The results of the Council were not long in manifesting themselves. Peter of Alexandria, an active rival, broke out among the monks. Juvenal, bishop of Jerusalem, who had become prominent at Ephesus (449) as an energetic partisan of Dioscorus, at Chalcedon, at a time of a diminution of his ecclesiastical power, deserted the Alexandrian and his protégé Eutyches, and had also accepted the formulory, taking part, indeed, in its final revision. By this defection he lost the confidence of a large and influential body of monks in Palestine, who elected the monk Theodosius as bishop in opposition to him. The spiritual leader of the insurgents was Peter the Iberian, monk and bishop of Mayuma, the port of Gaza. The rebellious monks found a patroness of high rank in the empress dowager Eudocia, then resident in Jerusalem. It is told of one of these fanatics that, when Leo's Epistle was brought to him, he took it to the tombs of the Fathers and asked whether he should accept it or not, and that a voice cried from the tomb:

"Cursed be the ungodly Leo, robber of souls, as his name signifies; cursed be his profane letter, which sought to destroy the ungodly Palaeodorus; cursed be Chalcedon and its synod, which fixated on the image of a heretic, and who did not acknowledge two natures in Christ, the Son of God, after the union" (E. Renan, Hist. patriarchorum Alexandrinorum.

This wild outburst of hate expresses most appositely the state of feeling then prevalent in Palestine.

By A.D. 453, however, the movement was suppressed for the time by military measures.

In Egypt the situation was somewhat worse. A certain Proterius was forcibly thrust by the government upon the Alexandrians as bishop in place of Dioscorus. On the accession of the emperor Leo I. (457-474), Proterius (i.e., 'the Wretched'), who had been on friendly terms with Cyril and was known as a rigid Monophysite, was raised to the episcopal throne by methods of sheer violence. At Easter, 457, Proterius was murdered by the populace in the baptismity of the cathedral church, while Timotheus purged the Egyptian sees of Diphysites, and pronounced the anathema upon Chalcedon (the Synod, as it now comes to be called in the sources). Timotheus held his position until 460, when, after fierce conflicts, he was driven from Alexandria and banished to Gangra; he was subsequently sent to Cherson, and there devoted himself to the composition of a refutation of the doctrine laid down at the Synod of Chalcedon, a work which only recently (1908) came to light in an Armenian translation.

The patriarchate of Antioch was likewise kept in a state of unrest by long protracted dissensions. Here the presbyter Petrus Fullo (Διαφώσ, 'the Fuller'), who in no long time supplanted Bishop Martyrius, zealously opposed the composition of the Council, and contended for the doctrine that God had been crucified (ὑπὸ θέου ἐξαρήσαμεν). To the liturgy he added the singing of the Trisagion (Is 69) supplemented by the phrase ὁ σωτήρ μου ὁ θεός; and he also introduced the 'Credo (the Nicene) into the Mass, probably with a view to emphasizing his opposition to the Chalcedonian formulory, as also, however, to Eutychianism which his tenure of the see did not last long, for in 471 the emperor Leo ordered him to be deposed. The imperial government thus found itself confronted by a serious task. On the one hand, it was a matter of urgency to preserve unity between East and West, between Byzantium and Rome, and this could be done only if there was no deflexion from the lines marked out at Chalcedon; on the other, those in the East whose dissatisfaction and resentment were due to the Council had to be restrained, pacified and, if possible, reconciled to what had been done. The emperors Zeno (474-491) and Anastasius (491-518) exerted all their energies to establish ecclesiastical equilibrium in the East, but they failed altogether in the task of maintaining peace with Rome at the same time. A proceeding of signal importance was the attempt of Zeno (482) to gain acceptance for a new formulory, the so-called Henotikon, in place of the Chalcedonian symbol. The Henotikon was designed to give emphatic expression to what was common to all parties, and accordingly it recognized the Councils of Nicea, Constantinople, and Ephesus as witnesses to the faith, disclaimed Nestorius and Eutyches, and condemned every one who 'now or ever, at Chalcedon or elsewhere, thought or thinks otherwise.' The formulory expressing the doctrine of the natures of Christ were adroitly kept in the background, so that every cause of offence might be removed. In spite of all, however, the policy of conciliation was not successful on the whole. It is true that Acazios, the court-patriarch of Constantinople, and Petrus Mongus (i.e., 'the Stammerer'), who now occupied the episcopal chair of Alexandria instead of Timotheus Aelurus, worked straightforwardly for the union of the warring factions, but the policy of reconciliation was repudiated by the uncompromising Monophysites, especially in Egypt, where the extremists (Διαφωγοί) actually took their names from the rest of their party. On the other hand, the convinced Diphysites, including the Acoemite
MONOPHYSITISM

monks of Constantinople, bitterly resented the virtual repudiation of Chalcedon. The most serious result was the severance of relations with Rome. This was due in part, no doubt, to the dogmatic problem, but certainly not less to jealousy of the ever-growing ascendency of the Constantinopolitan bishop as 'eccumenical patriarch'—a title that move did not approach. The question of communion between East and West which was brought about in 484 by Felix III. of Rome presents itself as the outcome of an inner necessity. That ecumenical and ecclesiastical convocation, and monophysites were to subordinate their own will to that of Christ's priests. The two convocations remained apart for thirty-three years in bitter controversy. The result was the recognition of Chalcedon and the condemnation of the monophysites. This renewed anancy with Rome, purchased at so great a cost, carried with it, of course, a close analogy with the Monophysites. During the reign of Anastasius the latter had gradually won a position of greater influence in Church politics. Anastasius, too, no doubt, tried to steer a middle course between the monophysites, but his own Monophysite convictions tempted him, especially towards the close of his reign, to show an imprudent compliance to the more fury and impetuous spirits in the opposition party, and it is not without good cause that his name stands in the Monophysite calendar of saints. The aggressive movement of the malcontents began in Syria, where the Monophysite leaders, and especially the leadership of Severus of Antioch and Philoxenus of Hierapolis (cf. § 3), gained an ascendancy over the Monophysites. At the Synod of Tyre (618, or, more probably, 515) they renounced the Council of Chalcedon, and thus placed the Monophysites in the position of the policy of the empire, directed from Constantinople. Palestine, too, was the scene of a Monophysite reaction, which in Egypt they completely gained the upper hand. The change of policy begun in Justinian's reign was dictated mainly by a desire to put an arrest upon these successes. A fierce persecution was the result, especially in the diocese of Antioch, many bishops, including Severus and Philoxenus, being banished from their sees.

3. The Monophysite theology. The views of the Monophysites regarding the theological problem were by no means homogenous. The fact that the sect were unanimous was their opposition to Leo's Tome and the symbol of Chalcedon—this idol with the two faces, as Zacharias Rhetor called it. Only a few of them drew from the doctrine of the one nature the Docetic inferences of Apollinaris or even of Eutyches. The majority tried to keep to the lines marked out in the theology of Cyril. This was the case, e.g., with Theodoret of Antioch, ecclesiastically the most influential, and theologically the most outstanding, champion of moderate Monophysitism, while Julian of Hal-

It was far from the minds of Severus and those who shared his views to argue for a fusion of the divine and the human in the person of Christ. Their insistence upon the singleness of Christ's nature after the Incarnation was the result of the conviction that the hypothesis of two natures necessarily implied two subjects or individual entities. What they found specially objectionable was the inference drawn with Severus and Philoxenus of Hierapolis more extreme in their views.

Severus, born c. 455 at Scopoli in Pisidia, was the grandson of a bishop and the son of a town-councillor. He studied
divided the one Christ into two φύσεως, since no nature could possibly assert itself (αυτερις) that could be rejected; and thus the hypothesis of two φύσεως led to that of two υποστάσεων, and so to the abhorred heresy of Nestorius. In conformity with the position of Cyril, and with a mode of expression he adopted with much force in the writings of Theodoret, the Arians, viz. ἄνθρωπος Θεός and Ἰησοῦς Χριστός (cf. art. MONOTHELETISM, § 1, p. 822a), Severus took as the basis of his speculations the inherently contradictory position of the Logos, as united to the full divine and human nature of Christ. The Logos, in His act of assuming flesh—flesh animated by rationality—becomes flesh and man, and, as man, is born of woman, but still remains, even as He had been, one, since, in virtue of such an indissoluble union, and without detriment to His inherent character, He transfigures and transfigures the flesh with His own glory and power. The united elements thus form a composite nature and a divinely-human hypostasis, and it is to this that all His activities are to be traced.

The thesis that the body of Christ was subject to the laws of nature was deemed of the utmost importance by the Severians and Theodolians, who saw in it an expression of the identity of essence between that body and our own, and were thus able to avoid the heresy of Eutyches. It was probably a consequence of this dogma, which was accepted by the extremists of the party. To Julian and his followers it was simply inconceivable that Christ's body had been subject to corruption (φαντασμός), which has been a characteristic of human nature since the Fall. In order to understand the precise usage of this term in the present connexion, we must note that it did not refer to the φαντασμός which denotes the complete dissolution of the body into its elements at death; all parties were at one in asserting that Christ's body was not subject to φαντασμός, if I so express it, i.e. as decomposition. The question at issue here had to do with the natural infirmities of the human body (ἀνάθεμα πάθη)—its liability to hunger, thirst, weariness, sweating, weeping, bleeding, and the like. The view of Julian, Philoxenus, and the Galatians was that, while Christ certainly hungered and thirsted, it was because He desired, not because He required (οὐ υπόθεται φύσιν), to do so—because, in short, according to the divine counsel (κειμένος ἀνάθεμα), He had assumed and united the human character, and His was the Son of man, as man was before the Fall, while all other men, though sons of Adam too, were possessed of a body and a soul of a nature that was due to Adam's fall.

We are thus able to understand the heretical designations applied by the warring Monophysite parties to one another. The Julianists or Galatians charged their opponents with phthartolatry, the worship of the corruptible. Those phthartolatry, however, retorted upon their accusers with the epithet 'aphthartodocetai' or 'phantasistas,' i.e. those who would change the reality of Christ's human experience into a mere appearance. As a matter of fact, the latter view was quite a natural inference, and many of the extremists were led astray by it. The most extravagant view seems to have been reached by those Galatians who asserted that the body of Christ, from the moment of its union with the Logos, should be regarded not only as incorruptible (ἀναθανάστως) but also as uncreated (ἀναθεματωμεν). These were stigmatized as 'kistolatres' by their opponents, whom in return they called 'kistolaios,' i.e. 'worshippers of that which was created.' Divisions arose even among the Severians themselves. The Question, a deacon, taking this opportunity of expressing his views, repeated the arguments which had been stated in the previous paragraphs as Mk 13a and Jn 11a, maintained that, as the body of Christ was subject to natural conditions, so its animating spirit could not be regarded as omniscient. To the adherents of this doctrine their opponents applied the term 'symbol.'

4. Justinian and the new orthodoxy.—On 1st August 527 Justinian became sole emperor of Rome. It does not fall to us here to set forth fully his far-reaching ecclesiastical policy in its transforming effect upon all things. One factor in his attitude towards the West was his recognition of the Roman chair as the supreme tribunal of the Church, though this did not prevent him, after his victory over the Goths, from giving the popes an experience of his autocratic power. The defection of the Eastern Church gave the imperial ecclesiastic many an anxious hour. He soon came to recognize that his persecution of the Monophysites (see § 2 at end) had been a grave error. Little as he might wish to displace once more the orthodoxy now officially recognized, he could hardly help desiring to reconcile the Monophysites, especially as the empress Theodora was working with growing fervour for the rehabilitation of the party with which she sympathized in her devout moods. A few years after Justinian's accession to the throne, accordingly, negotiations were opened with the insurgents, and the most eminent of the bishops deposed in 518—not, however, including Severus—were summoned to Constantinople, where, after a long conference, they would be won over at a religious conference. In this conference, on the orthodox side, only such theologians were to be present as unequivocally the Church had been considered since the fall of the empire.

This Theopaschite formula was manifestly a friendly overture to the Monophysites. But the ex-colleague of Severus was of no avail; after two days of verbal controversy, came to nothing. On 15th May 533 Justinian issued an enunciation in which he once more declared Chalcedon to be a standard of faith co-ordinate with the three earlier councils. The negotiations with the Monophysites were, nevertheless, still proceeding, and communications were now opened with Severus as well. Severus, yielding to reiterated pressure, went at length to the capital, where in 539 Anthimus, a protégé of the empress Theodora and a theological partisan of Severus himself, had been raised to the episcopate. But the interlude was not of long duration. In the following year the emperor was able to so influence the emperor that the doctrinally suspect patriarch was superseded by the orthodox Menas. It is nevertheless the case that, during the entire reign of Justinian, the Monophysites firmly maintained their position at the court, while in Syria and Egypt their ecclesiastical power was supreme (cf. § 5).

Justinian himself made zealous efforts to comprehend the points of the doctrinal controversy. His great aim was to reconcile the teaching of Cyril and the Symbol of Chalcedon. In this he found effective support in that most eminent of his theologians, Leontius of Byzantium (+ 543, or 553), a monk in Palestine, who, in his Ευφροσύνη αυτού τούτου Συμβουλίου, επαναλαμβάνει κατά Νεοπροφηταμβαίον και Ενενταναίων ἐπιστημόνων τιτρών, be occupied by a work of the same name, which was a composite, and he said of it that the doctrinally suspect patriarch was superseded by the orthodox Menas. It is nevertheless the case that, during the entire reign of Justinian, the Monophysites firmly maintained their position at the court, while in Syria and Egypt, their ecclesiastical power was supreme (cf. § 5).
Monophysitism

Cyril's doctrine. It was nevertheless the use of this expression that led to the introduction of schismatics into the Byzantine theology.

Justinian died in 565. Under his successors the Monophysites of the city and diocese of Constantinople had much to bear, and their harsh experiences have been graphically described by John of Ephesus, himself a Monophysite, in his Church History. Negotiations for a union of the warring factions, it is true, were once more resumed, but were forsook to failure by the circumstance that the imperial court would not surrender the understanding with Rome, while the Monophysites regarded that understanding as the root of all evil. The consequence was that in the course of the 6th cent. the Monophysite communities in the Byzantine patriarchate were destroyed one after another. The Churches of Egypt and the Eastern provinces, on the other hand, remained quite inviolable to the ecclesiastical influence of the capital, and the severance of the purely Monophysite communion from the Catholic Church became even more complete.

5. The independence of Monophysite churches.

The Monophysites of Syria never ceased to regard the banished Severus as the rightful patriarch of Antioch, and declined to recognize the standing of those who were successively appointed to the office by the emperor of the empire. The church life was Jacob Baradai (i.e. 'he with the horse-cloth'); + 578), who, originally a monk in Constantinople, had been ordained, c. 541, bishop of the place. The archbishop of Baradai (cf. § 5) then also resided there; and in consequence the Syrian Monophysites came to be called Jacobites. Baradai, in his long journeys in W. Asia and Egypt, instituted communities, and consecrated patriarchs, bishops, presbyters, and deacons. The chief representatives of literature in Syria were nearly all Monophysites.

From the time when Islam became the dominant power in Syria, the Jacobites decreased in numbers more and more. At the present day there are only some 200,000 of them in the Turkish empire, and about 1,000,000 in Egypt—on the Malabar coast and in Ceylon. Their ecclesiastical superior (formerly entitled 'maphrian,' now 'katholikos') resides in the monastery of Deir-Safaran, near Mardin. Efforts made by the Jacobites, from the close of the 18th cent., to effect a union with Rome had a very meagre result. At the present day the Roman-Catholic Syrians number about 200,000, and are subject to a patriarch, who takes his title from Antioch, but lives in Mardin.

In Egypt the conflicts between the Severanians and the Jacobites (cf. § 4) at length captured the unity of Monophysitism, which, nevertheless, became the faith of nearly the whole Coptic population. The patriarch of the orthodox, the Melchites (i.e. 'imperial'), who was also pro-curator of the province, could count upon the homage of very few outside the higher official ranks in Alexandria and some of the larger towns. The Melchites were represented in the synods of the Copts, and with the help of the Nubians and the Aladons. From 616 marauding bands of Persians ravaged the religious stations on the Upper Nile, and it was only after the Arabs, with the hearty good-will of the Copts, took possession of the country that the Monophysite patriarch ventured to leave his place of refuge in the Upper Egyptian desert. During the Middle Ages the condition of the Coptic Church was a fairly prosperous one, but subsequently it was sorely harassed by the new wave of Muslim fanaticism, and it is only within recent times that it has been able to make a fresh advance. The Christian Copts of the present day still maintain their Monophysite creed (see, further, Art. Coptic Church).

Finally, Monophysitism penetrated also to Armenia. The Armenians, while still engaged in battling for their own faith with Parsi Mazdaism, were quite ready to adopt the dogmas of the Monophysitism, as they had been engaged by Muslim fanaticism, and at the Council of Dvin, in 554, they overitly accepted the more radical position represented by Julian of Halicarnassus. From that time they have remained faithful to Monophysitism, though they subsequently gave their adherence to the more moderate Severian school.

Literature. — 1. Sources.

(a) Decrees of the Councils, Declaratory, 

(b) Historical works and Chronicles;

2. Historical works and Chronicles. — Zacharias Rhetor (Scholaschius), shortly after the accession of Anastasius, wrote, from a precise standpoint, a treatise on ecclesiastical events from the Council of Chalcedon to the death of Zeno (extract only in a Syrian version; see below, under Historia Monophysitana); Theodorus Lector, Anagnostus in the Church of St. Sophia in Constantinople at the beginning of the 6th cent., wrote, in addition to the orthodox standpoint of the Church from Nestorius to Justin I., which now exists only in fragments; Eusebius, a compiler of the era period by an unknown monophysite writer, and including the history of Zacharias Rhetor mentioned above (ed. G. Alten and G. Krüger, Leipzig, 1889); also F. J. Hamilton and E. W. Brooks, London, 1899; John of Ephesus (c. 685), Ecclesiastical History (ed. von Zeiten, 1805; E. Bistort, 2 ed., Paris, 1899); the work of Eusebius, quoted by the above writer, see: Eusebius, in Eclog. hist. c. 690 (ed. C. Lillie, Leipzig, 1885-86). Of the Latin chronicles the Monophysites' Historia Ecclesiastica, Brevisarium conciliorum, and Julian (cf. § 3), the following writers of the earlier period deserve mention: Jacob of Sarug (c. 521), the author of widely read metrical hagiologies, which earned for him the title of 'Flute of the Holy Spirit'; Sergius of Remis (c. 530), physician and priest, who translated from Syriac several works of Aristotle and Galen, as also of the pseudo-Dioscorides Arrepontica; Jacob of Edessa (c. 700), equally renowned as theologian, liturgist, writer, philosopher, historian, exegete, and grammarians; George, bishop of the nomading Arabs, a writer whose letters have come down to us in large numbers. Of the medieval authors of the most prominent is Bar Hebraeus (Abifrus; c. 1250), whose Chronicle forms one of the most important sources of information regarding Monophysitism.

From the time when Islam became the dominant power in Syria, the Jacobites decreased in numbers more and more. At the present day there are only some 200,000 of them in the Turkish empire, and about 1,000,000 in India—on the Malabar coast and in Ceylon. Their ecclesiastical superior (formerly entitled 'maphrian,' now 'katholikos') resides in the monastery of Deir-Safaran, near Mardin. Efforts made by the Jacobites, at the close of the 18th cent., to effect a union with Rome had a very meagre result. At the present day the Roman-Catholic Syrians number about 200,000, and are subject to a patriarch, who takes his title from Antioch, but lives in Mardin. The Monophysites, who were also pro-curator of the province, could count upon the homage of very few outside the higher official ranks in Alexandria and some of the larger towns. The Monophysites were represented in the synods of the Copts, and with the help of the Nubians and the Aladons. From 616 marauding bands of Persians ravaged the religious stations on the Upper Nile, and it was only after the Arabs, with the hearty good-will of the Copts, took possession of the country that the Monophysite patriarch ventured to leave his place of refuge in the Upper Egyptian desert. During the Middle Ages the condition of the Coptic Church was a fairly prosperous one, but subsequently it was sorely harassed by the new wave of Muslim fanaticism, and it is only within recent times that it has been able to make a fresh advance. The Christian Copts of the present day still maintain their Monophysite creed (see, further, Art. Coptic Church).
MONOTHEISM.—In the history of religion monothelism, the doctrine that 'there is one God,' or that 'God is One,' is somewhat sharply opposed to a newer belief, pantheism. The contrast, when it appears in the religion of a people, or in the general evolution of religion, tends to have an important bearing both upon religious practices and upon religious experience, since to believe in 'One God' means, in general, to abandon, often with contempt or aversion, many older beliefs, hopes, fears, and customs relating to the 'many gods,' or to the other powers, whose place or dignity the 'One God' tends henceforth to take and to retain. If these 'many,' as the older beliefs, which some form of monothelism replaces, had dealt with them, were themselves for the most part 'polytheistic' monotheism which is at times in question opposes, and replaces, some form of 'polytheism.' This is what happened when Judaism and Muhammadanism replaced old local faiths. If one were satisfied to view the contrast the light cases closely resembling these, and these only, then the natural opponent of monothelism as a belief in 'One God' would appear to be, in the history of religion, polytheism as a belief in many gods, besides those that are properly to be called gods.

Since, however, there are various religions and many superstitions which recognize the existence of powers such as, despite their more or less divine character, lack some or all of the features which naturally belong either to God or to gods, and since demons, the spirits of the dead, or magic powers may be in question in such religions, the name 'polytheism' can hardly be quite accurately applied to the whole class of beliefs which are in any important way opposed to monothelism. So, in the history of religion, monothelism has two opponents: (1) polytheism proper, and (2) beliefs that recognize other more or less divine beings besides those that are properly to be called gods.

In the history of philosophy, however, monothelism has a more general and opposing beliefs. Polytheism, as an explicit doctrine, has played but a small part in the history of philosophy. To the doctrine 'God is One' or 'There is one God,' where this doctrine forms part of a philosophy, there are opposed forms of opinion which are often classified under three heads: (1) philosophical pantheism, (2) philosophical atheism, (3) philosophical scepticism regarding the divine beings. The modern name 'agnosticism' has been freely used for a philosophical scepticism which especially relates either to God or to other matters of central interest in religion.

Frequently, in summaries of the varieties of philosophical doctrine, the term 'pantheism' has been used as a name for such philosophical doctrines as 'identify the world with God.' Pantheism is often defined, in the world. But a more careful study of the philosophical doctrines which have gone under the name of pantheism, or which have been so named by their opponents, would show that the name 'pantheism' is too abstract, too vague in its meaning to make any clear insight easily obtainable regarding what ought to constitute the essence of a philosophical pantheism. In the same way, the term 'divine immortality' and divine transmigration are abstract notions.

The two propositions (1) 'God is One,' and (2) 'God is identical with all reality,' or 'with the principle upon which all reality depends,' are not, on the face of the matter, mutually contrary propositions. However, in many systems of philosophy, or theology, or religious tradition, the first proposition appears to be contrary to the second depends upon the special interpretation, and sometimes upon the special prejudices of critics, sects, or philosophers of a given school.

One who asserts the 'unity of God' may or may not be laying stress upon the fact that he also makes a sharp distinction between the reality called God and other realities—e.g., the world. That such sharp distinctions are often in question is an important fact in the history of philosophy. Nevertheless the doctrine that 'God is One' has been philosophically maintained at the same time with the doctrine that 'God is all reality.' For such a view, the two doctrines would simply be two ways of expressing the same centrally important fact. One who wishes to understand the numerous controversies, subtle distinctions, and religious interests which at one time or another have been bound up with the name 'pantheism' must be ready to regard that doctrine 'monothelism,' when used without special explanation, is a poor instrument for making clear precisely where the problem lies. In brief, one may say that, while the term 'pantheism' has been freely employed by philosophers, as well as religious writers, devoted to practical religious interests, it is, as a historical name, rather a cause of confusion than an aid to clearness. The proposition, 'God is One,' has, despite the complications of doctrine and of history, a comparatively definite meaning for any one who advances a philosophical opinion concerning the nature of God. But the proposition, 'God is all reality,' is a really difficult proposition, and of the history of thought, no one meaning which can be made clear unless one first grasps all the essential principles of the metaphysical doctrine of the philosopher who asserts this proposition, or who at least is accused by his critics of asserting it. If we endeavour, then, to make clearer the essential meaning of the term 'monothelism' by contrasting the historical forms of monothelism with philosophical doctrines which have been opposed to it, we may attempt to solve the problem of defining what is essential to philosophical monothelism by dwelling upon a contrast which, especially in recent discussion, has had a place in asserting only opposing beliefs, e.g., that in speaking of the name of the 'One God' who is the essential being of monothelistic belief, either (1) one holds that God is 'immanent' in the world, as asserting the doctrine of the 'divine immalance,' or (2) one holds to the doctrine of the 'transcendence' of God, thus asserting that the divine being in some fashion 'transcends' the world which He has created or with which He is contrasted. But here, again, one deals with two doctrines which, in certain philosophical contexts, do not appear to stand in contrary opposition to each other. For, as is well known, there are philosophies which insist that God is in a certain sense 'immanent' in the world, and also in a certain sense 'transcendent' in His relation to the world. Aristotle, in a well-known passage (Met. X, vii., 986 b, 20 ff.) in the relations of the doctrines which are here in question, when he stated the question as to whether the divine being is related to the world as the 'order' is to the army, or as the 'general' is to the army. Aristotle replied by saying that in a certain sense 'God is both the 'order' of the world and the 'general,' although rather the general.' Thus the opposition between divine immalance pantheism and divine transcendent monothelism is an abstract opposition.
ing the most important part in the history of philosophical monotheism (see art. INMANENCE).

Another attempt to get the issue between mono-
thetical and the contrasting or opposed philoso-
phical doctrines clearly before the mind may take
the well-known form of declaring that monotheism,
properly so called, lays stress upon the 'per-
sistence' of the divine, or on the whole of the
doctrines, which so often are regarded as constitut-
ing or as tending towards pantheism, have as their
essential feature the tendency to view God as

MONOTHEISM 819

ethical monotheism of the Prophets of Israel. 'We include under the phrase that form, or type, or aspect of monotheism, which characterizes philosophy and theology, the idea of a God who is the cause, or the explanation, or the correlate, or the order, or the reasonableness of the world. It seems fair to call this form 'Hellenic monotheism.' In the history of philosophy, monotheism, in a form which has grown up under the influence of Christianity, this idea of God has, of course, become interwoven—sometimes consciously, sometimes unconsciously—with the ethical monotheism of Israel. But, when a philosophy of Christian origin is in question, while in some respects this philosophy, if positively monotheistic, is almost sure to be strongly influenced by ethical monotheism, the most important and essential features of the philosophy in question will be due to the way in which it deals with the relation between the order of the world and the nature of the 'One God.' Aristotle's statement of his belief that the Logos is identical with the 'order' or is related to the world as the 'general' is related to the army is a good example of the form which the problem of monotheism takes from the Christian point of view.

(3) The third form of monotheism is very widespread, and has actually had many different historical origins. In the history both of religion and of philosophy this form of monotheism, somewhat like the Ancient Mariner, 'passes, like night, from land to land' and 'has strange power of speech.' Often unorthodox at the time or in the place where it is influential, it has indirectly played a large part in the creeds of various times and places. Usually fond of esoteric statements of doctrine, and often conditioned by common sense as fantastic and intolerable, it has had many times of great popular influence. History of Christian philosophy has had great difficulty in defining the relation of orthodox doctrine to this form of opinion. In the history of philosophy the more technical statements of it have formed part of extremely important systems.

This form of monotheism is especially well marked in the early history of Hindu speculation. It is often called 'Hindu pantheism'; and it is indeed to be ascribed to Indian soil. On the other hand, it has a less exclusive relation to Indian philosophy than the Hellenic form of monotheism, in its later history, has to Greek philosophy, so that the connexion here insisted upon between this kind of monotheism and the early history of Hindu philosophy must be interpreted somewhat liberally. In fact, at the close of the history of Greek philosophy this third form of monotheism appeared as a part of the Neo-Platonic philosophy. Yet in this case an Oriental origin or direct influence is extremely improbable. Examples of the tendency of this form of monotheism to take on new forms, and to be influenced by other motives than those derived from the religion or philosophy of Indian soil, and in the recent revival of such types of doctrine in various forms of 'intuitionism' and 'anti-intellectualism' in European thought.

The essence of this third type of monotheism is that it tends to insist not only upon the 'sacred reality of God,' but upon the 'unreality of the world.' The name 'ascesism' therefore is more suggestive for it than the name 'pantheism.' It might be supposed to imply strictly that 'God is real,' but all else besides God that appears to be real

is but an 'appearance' or, if better estimated, is a 'dream.' If we attempt to make more precise the vague word 'pantheism' merely by saying, 'God and the world' as it were, and 'the one,' the natural question arises, 'If they are not one, then which one?' But what we may now call, in a general way and upon the general historical development of man, the 'monotheism of the one, the general question arises, 'If they are not one, then which one?'

The threefold distinction now made enables us similarly to review some of the great features of the history of philosophical monotheism. It is in a way which cannot here be stated at length, but which, even when summarily indicated, tends to elucidate many points that have usually been unduly left obscure.

The ethical monotheism of the Prophets of Israel was not the product of any philosophical thinking. The intense earnestness of the nation into whose religious experience it entered it has kept it as the basis of the age-old world. The beginnings of Christianity soon required philosophical interpretation, and in any such interpretation the doctrine of the righteous God must inevitably play a leading part. This is the course of the development of the Church. This doctrine sought aid from Greek philosophy. Consequently, the whole history of Christian monotheism depends upon an explicit effort to make a synthesis of the ethical monotheism of Israel and the Hellenic form of monotheism. This synthesis was as attractive as, in the course of its development, it has proved problematic and difficult. The reason for the problem of such a synthesis, as the philosophers have had to face that problem, lies mainly in the following fact. Whether taken in its original form or modified by philosophical reflection, ethical monotheism is, in the form of 'God is righteous,' very sharply contrasted God, 'the righteous Ruler,' or, in Christian forms, 'God the Redeemer of the world,' with the world to which God stands in such ethical relations. On the other hand, for the Hellenic form of monotheism, the problem which Aristotle emphasized about the 'order' and the 'general' indeed exists. But in its essentials Hellenic monotheism is, on the whole, a secular form of philosophy, which deals with the world and the world together. Our later philosophies, in so far as they are founded upon Hellenic monotheism, must therefore attempt explicitly to solve the problem which Aristotle stated. And, on the whole, such philosophies tend towards answering the question as Aristotle did: God is both 'order' and the 'general' of the army which constitutes the world. Hellenic monotheism, moreover, is influenced by strongly intellectual tendencies. On the other hand, the monotheism of Israel was, even in its ante-philosophical form, a kind of voluntarism. God's law, viewed as one term of the antithesis, the world, which He rules, or which He saves, viewed as the other, are much more sharply contrasted than Aristotle's 'order' and 'general' tend to be. When, in the development of the philosophies which grew out of the Greek tradition, the Hellenic concept of the Logos (q.v.) assumed its most characteristic forms, its intellectual interests were, on the whole, in favour of defining the unity of the divine being and the world as the most essential feature of monotheism. But, at each stage of this development, this intellectual or rational unity of the Logos and the world gradually came into sharper and sharper conflict with that type of monotheism, which dwelt upon the contrast between the righteous
Ruler and the sinful world, and between divine grace and fallen man. Therefore, behind many of the conflicts between so-called pantheism in Christian tradition and the doctrines of 'divine transcendence' and 'divine personality,' there lies the conflict between intellectualism and voluntarism, between an interpretation of the world in terms of order and a lived interpretation of the world in terms of the conflict between good and evil, righteousness and unrighteousness.

Moreover, in terms of this antithesis of our first and second types of philosophical monotheism, we can state only half of the problem. Had the monotheism of Israel and the Hellenic doctrine of God as the principle of order been the only powers concerned in these conflicts, the history both of philosophy and of religion would have been, for the Christian world, far simpler than it is. The motives which determine the third idea of God have tended both to enrich and to complicate the situation.

It is true that a direct connexion between ancient Hinduism and early Christian doctrine cannot be traced, yet: for very general reasons, the Indie type of idea of God became, in the course of time, a part of Christian civilization for very various reasons. As we have seen, the doctrine that God alone is real while the world is illusory depended upon motives which were fitted to India. In the form of what has technically been called 'mysticism,' this view of the divine nature in due time became a factor both in Christianty and in philosophical interpretation. The Neo-Platonic school furnished some of the principal technical formulations of such a view of the divine nature. The religions experience of the Graeco-Roman world, in the times immediately before and immediately after the Christian era, also in various ways emphasized the motives upon which this third type of Christian monotheism depended.

The Neo-Platonic school thus found room within the limits of orthodoxy for the recognition, with certain restrictions, of the tendency to view the world as mere appearance, ordinary life as a bad dream and salvation as attainable only through a direct acquaintance with the divine being itself.

The very complications which for philosophy have grown out of the efforts to synthesize Hellenic monotheism and the religion of the Prophets of Israel, have repeatedly stimulated the Christian mystics to insist that what the intellect cannot attain, namely, an understanding of the nature of God and His relation to the world, the mystic experience can furnish to those who have a right to receive its revelations. Philosophy—intellectual philosophy—falls (so much mystics assert) to solve the problems raised by the contrasts between good and evil, between God and the world, as these contrasts are recognized either by those who study the order of the universe or by those who thirst after righteousness. What way remains, then, for man, beset by his moral problems, on the one hand, and his intellectual difficulties, on the other, to come into real touch with the divine? The mystics, i.e. those who have insisted upon the third idea of God, and who have tested this idea in their own experience, have always held that the results of the intellect are negative, and lead to no definite idea of God which can be defended against the sceptics, while, as the mystics always insist, to follow the law of righteousness, or without the aid of divine grace, does not lead, at least in the present life, to the highest type of the knowledge of God. We approach the highest type of knowledge by faith, for faith permits, if we recognize, in the form of some sort of a negative theology, the barrenness of intellectualism, and if, meanwhile, we recognize that the contemplative life is higher than the practical life, and that an immediate vision of God leads to an insight which no practical activity, however rigorous, attains. To teach such doctrines as matters of personal experience is characteristic of the mystics. To make more articulate the idea of God thus defined has formed an important part of the office of theology.

Without this third type of monotheism, and without this negative criticism of the work of the intellect and this direct appeal to immediate experience, Christian doctrine, in fact, would not have reached some of its most characteristic forms and expressions, and the philosophy of Christendom would have failed to put on record some of its most fascinating speculations in theology.

It is obvious that, on the face of the matter, the immediate intuitions upon which mystical monotheism lays stress are opposed to the sort of insight which the intellect obtains. Even here, however, the opposing tendencies in question are not always in any very direct contrary opposition in the thought or expression of an individual thinker or school of philosophers. Each successive exposition of mysticism may devote a large part of its philosophical work to a return to the Hellenic type of theism. That this was possible the Neo-Platonic school had already shown (see art. NEO-PLATONISM). Where are no Christian monotheism is strongly under the Neo-Platonic influence, it tends to become a synthesis of our second and third types of monotheism. In such cases the monotheism is Hellenic in its neatness for order, and categories, and for an intellectual system of the universe, and at the same time devoted to immediate intuitions, to a recognition that the finite world is an adequate expression of God in terms of an ineffable experience, rather than in terms of a rational system of ideas. Such a synthesis may, in an individual system, ignore the conflicts here in question. Nevertheless, on the whole, the opposition is bound to become, for great numbers of thinkers and, on occasion, for the authorities of the Church, a conscious opposition. And the opposition between the ethical and the mystic types of monotheism is in general still sharper, and is more fully conscious. Despite all these oppositions, however, it remains the case that one of the principal problems of Christian theology has always been to bring the third of the ideas of God, the third of the tendencies to define God as One, into some tolerable and true synthesis either with the first or with the second of the three types of monotheism, or with both.

In the technical discussions of the idea of God which have made up the introductory portions of many systems of so-called 'nature theology' it has been very general for the philosophers of Christendom to emphasize the Hellenic type of theism. The so-called philosophical 'proofs of the divine existence' make explicit some aspect of the Hellenic interest in the order and reason of the world. The 'design argument,' first stated in an elementary form by Socrates, and persistently present in popular theology of the monotheistic type ever since, is an interpretation of the world in terms of various special analogues between the particular sorts of adaptation which the physical world shows us and the plans of a designing intelligence, in the case of art, or natural, in cases called 'cosmological argument' makes more in general terms from the very existence of this 'contingent' world to the Logos whose rational nature explains the world. The highly technical 'ontological argument' which such thinkers often use in the course of the effort to define the very nature of an
MONOTHELETISM

orderly system. In its briefest statement the ontological argument is epitomized by Augustine whom he defines as 'Veritas' and states that Veritas must be real, since if there were no Veritas, the proposition that there is no Veritas would itself be true. The more highly developed forms of the ontological argument reason in similar fashion, and are framed in part of the Logos, or of the rationally necessary order system of the universe—in other words, from the realm of Platonic ideas, in so far as it is manifested through and to us, in the reality of such a system beyond our intellect.

It has been insisted, and not without very genuine basis, both in religion and in the controversies of the philosophers, that all such efforts, through the intellect, to grasp the divine nature lead to results remote from the vital experience upon which religious monotheism and, in particular, Christian monotheism must rest, if such monotheism is permanently to retain the confidence of a man who is at once critical and religious. Into the merits of the issues thus indicated, this is no place to enter. In any case, however, both the warfare of the intellectual schools with the contrast between intellectual theology and the religious life have often led to philosophical efforts to escape from the very problems now emphasized to the exclusion of the divine, or to assert that there is no philosophical solution to the religious problem of theism. Thus intellectualism in theology, in the forms in which it has historically appeared, has repeatedly tended to bring about its own elimination. The more highly rational it has become, and the more its apparent barrenness, or its inability to combine the various motives which enter into the three different monotheistic tendencies has become manifest, the more the result of a careful analysis of the intellectual motives has led either to the revival of mysticism or to a sceptical indifference to philosophical theology. To say this is merely to report historical facts.

Some negative results of the more purely Hellenic type of monotheism became especially manifest through the results of the Kantian criticism of reason and of its work. It is extremely interesting, however, to see what, in Kant's case, was the result of this criticism of the traditional arguments for the existence of God. By temperamental Kant was a mystic, and he believed in the existence of a mystical type. For him, therefore, the failure of the intellect meant a return to the motives which, in no philosophical formulation, but in the form of an intensely earnest practical faith, had long ago given rise to the religion of Israel. Therefore the God of Kant is, once more, simply the righteous Ruler. Or, as Fichte in an famous essay defined the idea, 'God is the moral order of the world.' This Kantian-Fichtean order is, however, not the Hellenic order, either of the realm of Platonic ideas or of the natural world. It is the order of 'the kingdom of ends,' of a universe of free moral agents, whose existence stands in endless contrast to an ideal realm of holiness or moral perfection, after which they must endlessly strive, but of whose real presence they cannot never become aware through a mystical vision or by a sure logical demonstration. The righteous man, according to Kant, says: 'I will that God exists.' Kant defines God in terms of this will. Monotheism, according to this view, cannot be improved, but rationally must be acknowledged as true.

Yet, in his Critique of Judgment, Kant recognized that the requirement to bring into synthesis the intellectual drill, and to interpret our aesthetic experience, i.e., our acquaintance with the kind of perfection which beauty reveals—this ideal, a synthesis of the ethical, the intuitional, and the rational—remains with us. And, despite all failures, this ideal is one from which philosophy cannot escape.

The revived interest in intuition and in religious experience which has characterized the transition from the 19th to the 20th cent. has once more made the mysticism and the Hellenism of the Logos, or of the rationally necessary order system of the universe—other words, from the realm of Platonic ideas, in so far as it is manifested through and to us, in the reality of such a system beyond our intellect.

While no attention can here be given to the solutions of the problem of philosophical monotheism which have been proposed during the last century, the problem of monotheism still remains central for recent philosophy. It may be said that dagnostic formulations are at the present time often treated with the same indifference which is also characteristically shown towards the faith of the fathers, and is owed simply as a heritage. Nevertheless, the problems of philosophical monotheism remain as necessarily impressive as they have been ever since the early stages of our intellectual theology. They are simply the old problem of philosophy itself. What the whole history of the monotheistic problem in philosophy shows becomes to-day, in view of our explicit knowledge of the philosophy of India, and in view of our wide comparative study of religions, more explicit than ever. Philosophy is a necessary effort of the civilized consciousness, at least on its higher level. Monotheism is a central problem of philosophy. This problem is not to be sufficiently dealt with by merely drawing artificial or technical distinctions between Platonic or Neo-Platonic theses; nor can the problem be solved by calling it the problem of the immanence of God as against his transcendence. The question 'Is God personal?' becomes and will become more explicit in its modern formulation the more we become aware of what constitutes a person. Meanwhile, as was remarked above, the problem of monotheism has other aspects besides the problem of personality.

The essentials of the great issue remain for us, as for our fathers, capable of formulation in terms which have undergone change. To repeat, the philosophical problem of monotheism is (1) In what sense is the world real? (2) In what sense is the world a rational order? (3) In what sense is the world ethical? The effort to answer these questions cannot be made by exclusive emphasis on one of them. For, as we have seen, the problem of monotheism requires a synthesis of all the three ideas of God, and an answer that shall be just to all the three problems. Whether monotheism is true or not can be discovered, in a philosophical sense, only through a clear recognition of the contrast of the three ideas of God, and the synthesis which shall bring them into some sort of harmony. The further discussion of the nature of this harmony does not come within the scope of this article (see art. God [Biblical and Christian]).

JOSIAH ROYCE.

MONOTHELETISM.—1. The problem. The Monenergetics or Monothelite controversy seems
at first glance to be a mere sequel to the Mono-
ophysite conflict, a knowledge of which is assumed
in the present article. On a closer examination,
however, we see that the later controversy has a
character of its own, since it shows how the adop-
tion of the orthodox Diphysite point of view was
not regarded as leading necessarily and directly to
Dsophysite. In the controversy MONOPHYSITISM
(p. 811 ff.) it was indicated how the new orthodoxy
came to terms with the problem of the two natures
in the one person of Jesus Christ—the problem raising
questions about the Theodorean. The person of the
God-man was conceived as arising from the
person (ὑπόστασις) of the Logos, which assimilated the
human attributes, and upon which, as the
core of personality, human nature was, so to speak,
governed by the process of υπόστασις. On this
hypothesis it might seem entirely justifiable to
ascribe everything that Christ said or did to the
one volitional activity (ἐνέργεια) of the God-man,
and actually, indeed, to regard all as emanating
from His unaided will (δύναμις). Such a view,
moreover, could be supported by the evidence of
earlier Fathers. Cyril, with reference to Lk 8th,
said of Christ: ὁ θεός γίνεται ὁ ἄνθρωπος (i.e.
word and hand) ἐποίησεν ἡς ἐνέργεια; and it was
possible, above all, to adduce the witness of a
passage in the fourth Epistle of the psuedo-Diony-
smus, by which the teaching of ἐνέργεια
was destined to play so important a part in the
coming days. The Monophysites were possessed with the idea that the redemptive
activity of the God-man emanated wholly and
soley from divine nature, providing the
stimulus which was mediated by His
rational soul and brought to realization in His
body. Nor had even the natural operations of
Christ as a rational being their source in His
human nature purely by itself, as that nature
subsisted, not by itself alone, but in the divine
nature conceived as inherently personal. Hence
that which the Monophysite characterizes as human nature
was itself the work of God: it was one energy,
whose source is God, and whose instrument was
His humanity; it was one will, and that will was
divine. To Sergius of Constantinople (cf. § 8) it
seemed perfectly obvious that the rationally en-
dowed body of Christ effected its natural move-
ments only in accordance with the measure
assigned by His divine will, and that, just as our
body is governed by our rational souls, so also
the whole complex of Christ's human nature was
constantly directed by His deity.

The objections urged by the opposite party against
this theory of the oneness of Christ's
ἐνέργεια were based upon the feeling that it sur-
rendered the distinctively human element in Christ's
activity, since it implied that His human nature
was a mere passive instrument, and must therefore
be conceived as innaminate or, at least, as non-
rational. Such a view, however, was in reality a
reverson to Apollinarism (q.v.); and, even if the idea of the one composite
energy really presupposed that of the one composite nature as held by the Sever-
fans. In point of fact, the theses of the Monem-
physists approximate very closely to those of the
Severians—the more the later party of the Mono-
physites. As the Monophysists themselves came
to recognize this, they surrendered the phrase μία
ἐνέργεια and rallied around the θεός ἐνθάμα. This
position they regarded as unassailable, since two
wills (as distinguished from mere impulses or
natural tendencies to action) seemed inevitably to
involve two subjects endowed with volition (δύο
ἐνέργειαι), and that the human will was in the
God-man a will which diverged from His divine will, that divergent will could spring
from nothing else than an ungodly tendency in
the nature which He had assumed. Such a view,
however, would have been in conflict with the
document of the sinlessness of Christ's human
nature, in which all parties were at one, and would
therefore have been accounted blasphemy. Gregory
of Nyssa, writing long before, had said: τὸ κεκύρω
δέντον ἀδελφόν Ἰωάκην ὑπὸ τοῦ θεοῦ φύσεως
ἀντικαταβλέπει. The adverse party was wont to appeal to passages like
Mt 26:20, where the human will and the divine will
seem to stand in opposition; but the Monophysites
sought to interpret these in the light of the
orthodox interpretation of this text, Christ had a human
will κατ' οἰκείωσιν only. They did not mean to
deny the presence of a human activity in the one
will of Christ, but they held that this activity was
entirely due to His divine will. In relation to His
divine ἐνέργεια, they maintained, the human
ἐνέργεια becomes a πάθος, and, when Gregory said
of Christ that His soul wills, he meant that the
volition of Christ's soul was due to the will of the
Deity who was personally united with His soul,
and that, accordingly, it was divine volition in a
human form.

The Monophysists and Monophysites sought to
support their contention also on the ground that the
phrase δύο ἐνέργειαι had never yet been heard in
the doctrinal controversy; and, while this claim
was not altogether without some show of reason that none of the δι
ἐνέργεια τῆς ἐνέργειας, i.e., none of the
recognized Fathers of the Church, had made use
of the phrase. As regards the formula of the δο
ἐνέργεια, another divine nature providing a
stronger one. In earlier writers the phrase δο
ἐνέργεια is used only as expressing a final con-
sequence foisted upon those who held the doctrine
of the two natures. The use of the phrase in a
positive sense can be traced only in a single work,
written—if genuine—before the Monophysite con-
troversy, viz. the treatise τῆς ἡμέρας ἀριστερᾶς καὶ
τῆς ἡμέρας οὐκείωσιν ascribed to Dionysius of
Alexandria (+ 697). But, while the Ditheitists
were thus unable to call tradition to their aid, they operated all the more zealously with the
inherent logic of their case. In point of fact, no
logical objection could be urged from the stand-
point of the new orthodoxy, as, e.g., from that of
Leontius of Byzantium, against the procedure of
ascribing δύο φύσεως ἐνέργεια to the δοῦνα φύσιν.
Indeed, it was pointed out by our rational souls, so as to
amptonise the consistent development of the
position affirmed in the formula of Chalcedon,
that helped the doctrine of the two wills to gain
the day. It is true that the contradiction involved
in the doctrine of the two natures was rendered
still more palpable in that of the two wills. But
these who had come to terms with the former
document had no difficulty in accepting the latter,
and it is the aim of the following historical sketch
to show how this point was reached.

2. The beginnings of the controversy.—The
succession of the Monophysites did serious damage to Byzantium and its Church. It smoothed
the way for the advance of the Arabs and of Islám.
Far-seeing and energetic politicians sought to
arrest the mischief by working for the ecclesiastical
reconciliation of the eastern and southern prov-
inces of the empire. The most outstanding
figures in this movement were the emperor Hera-
cius (610-641) and the patriarchs Sergius (618-638),
Sergius, a Syrian born of Jacobite parents, was
already giving his mind to the thought of union in
the early years of his tenure of office. He caught
at the watchwords μία ἐνέργεια and μία ἐνέργεια ἔγγον
τῆς ἡμέρας, and, so far as it was possible, to
forbid the controversy by the Alexandrian Mono-
physites, and he succeeded at the outset, on the
basis of the doctrine implied by these expressions, in winning the Emperor's approval to his designs. Soon afterwards (622) Hermæus issued an edict proscribing the doctrine of the δύο ένιον. But, although Sergius brought all the weapons of patristic learning to bear upon the Armenian and Syrian Monophysites, the negotiations made little headway. It was not until 633 that indications of real progress began to show themselves. Cyrus, patriarch of Alexandria, whom Hermæus had threatened, thenceforth was treated with respect. In Lazia, he succeeded in bringing about a union with the Theodosians, i.e. the Monophysites (see art. MONOPHYSITISM, § 3). The doctrinal programme drawn up by Cyrus, while setting the doctrine of the two natures in the forefront, guarded it carefully by special clauses; it distinctly recognized the Cyril- lian terminology of the one incarnate nature, and it adopted the Aneagapitite formula of the one theanthropic energy. The Monophysites had some grounds for thinking that, as one of our sources puts it, it was not they who made alliance with Chalcedon, but rather Chalcedon with them. About this time, too, the metropolitan church succeeded in effecting an understanding with the Armenian, though this did not last long. The greatest triumph, however, was the winning of Athens. The Jacobite patriarch of Antioch, for now the occupants of the three great Oriental sees were all on the same side. But at this juncture the union that had been brought about with such difficulty was gravely imperilled by the action of a Palestinian monk. This was Sophronius, who had at an early date maintained relations with the Alexandrian patriarch Eulogius and John the Merciful. He now seemed to be preparing, as he had threatened, to lodge a protest with Cyrus against the articles of union, in which he thought he discerned Apollinarianism. As Cyrus hesitated to withdraw the articles at the request of Sophronius, the latter proceeded to Constantinople and tried to induce Sergius to delete the expression πία ένιον from the document. The patriarch was not prepared to take that step, but for the sake of peace he agreed to send his Alexandrian colleague a letter recommending him to have done with the dispute as to one ένιον or two, but forbidding him to sanction the thesis of the two wills, which he stigmatized as blasphemy. With that Sophronius was satisfied. Sergius, moreover, secured another triumph in gaining the support of Pope Honorius for his pacific policy (cf. § 3). Shortly afterwards (634) Sophronius was appointed to the see of Jerusalem. He broke away at once from the accepted understanding by referring in his inaugural encyclical to the two natures, though he certainly avoided any overt acceptance of the doctrine of the two wills. His action was deeply resented by Sergius, and Honorius tried, though without success, to persuade him to drop the objectionable expression. Eventually the emperor issued a decree, framed by Sergius—so-called Ecthesis of 638—forbidding all mention either of one energy or of two energies: of one, because the mention of it might lead to a denial of the two natures, and of two, because two energies seemed logically to involve two mutually antagonistic wills.

3. The case of Honorius. —Honorius of Rome, by reason of his attitude in the Monothelite con- tradictory, was, as will be explained below (§ 5), put under the ban by an Ecumenical Council. This proceeding has had such important consequences in the history of the doctrine that we cannot afford to ignore it. Here we must first of all ask what Honorius had really said. The misstep in which he explained his theological position to his colleague in Constantinople is extant only in a Greek translation, but the agreement of this translation with the Latin autograph was definitely confirmed at the Council. In this letter Honorius had set in the foreground his desire that the controversy as to one or two energies should be allowed to rest or to be relegated to the grum- mians. The introduction of the new phrases into the doctrinal terminology might bring those who used them under suspicion either of Eutychianism or of Nestorianism; nevertheless he adhered impartially to the view that, whatever decision might be made between the hypothesis of the one and that of the two energies, it was at all events necessary to accept the doctrine of a single will (μίας τοις θεολογικών του κυρίου Ἰησοῦ Χριστοῦ); for, as the Son of God had assumed a pure and supernaturally begotten human nature, the idea of a second will, disparate or antagonistic (διαφόρου ἢ ἑνώτος θελημάτων), was simply out of the question. Passages like Mt 23rd or Jn 5th, in which Christ seems to mark a contrast between His own will and the will of God, did not in any real sense indicate a different will, but simply referred to the economy of His assumed humanity (οὐκ εἰς ταύτα διάφορα θελήματα, ἀλλὰ τὰ θεολογία τῆς ἀνθρωπίνης τῆς πρεσβολήθεσις). Christ, as an example, adopted the manner of this dispensation in the name of the one will, and not, as the case might appear, of the one will, and not, as the case might appear, in order that we should follow His footsteps, not seeking our own will but the will of God.

The letter of Honorius reveals throughout an intelligent and accurate grasp of the situation. To reproach its writer with having adopted the doc- trine of the one will is simply an anachronism. For that doctrine had not yet become eclesiastically problematic, and was of no especial respect. Even if, in order to do so, Honorius had already been said, had not put the doctrine of the two wills upon his programme, and the question as to the Monothelitism of Honorius is of a piece with that regarding the Monophysitism of Cyril of Alexandria. We might venture to say, indeed, that, if Honorius had, a generation later, occupied the Roman chair in place of Agatho, he would have given the same supplement as the latter did, and thus, to speak paradoxically, would have pronounced his own condemnation. Agatho and the Council of 681 stood face to face with a situation of a totally different kind. As Monothelitism had then become a dogma of orthodoxy, to simply bind to condemn it, and, in doing so, they could not avoid reproaching the missive of Honorius as well. Above all, however, we must not forget that Agatho not only refrained from protesting against the anathematization of his predecessor, but by the voice of his legate actually gave it his sanction. In the following year Pope Leo II. expressly ratified the condemnation in a communica- tion to the emperor, in which he spoke of Honorius as one "qui hanc apostolicam sedem non apostolicae traditionis doctrina illustravit, sed profana prodi- tionem inaneamculam fidel subvertere conatus est." This judgment is, no doubt, unduly severe, and, measured by the standard of historical truth, positively false. Still, it certainly shows the remarkable freedom from prejudice with which the authority of a pope in matters of doctrine could then be viewed even in Rome itself. It is quite incompetent, on the other hand, to bring the case of Honorius into the question of papal infallibility. If we keep in mind the provisions of the Vatican dogma regarding the import and scope of the pope's infallibility, we shall see at once that they do not apply at all to the missive of Honorius. It is the case that in our historical judgment this attribute might with equal justification be applied to any other utterance of a pope.
death of the emperor Heraclius, and the brief reigns of his two sons, his grandson, Constans II. (641–659), son of Constantin III, was raised to the throne in consequence of a court revolt. Constans, too, adhered to the Ecthesis, which, however, had meanwhile encountered a keen resistance, especially in Africa. The N. Africans, and Pope John IV., officially condemned Monotheletism; the N. African bishops raised a vigorous agitation against it; and soon the whole western province was agitated against the Ecthesis. Constans, on the other hand, remained loyal to the Ecthesis. The patriarch Pyrrhus, who had succeeded Sergius, was deposed by Constans on political grounds, being suspected of influence with the exarch, and a monk, looking like doctrinal views with himself. Pyrrhus went to Africa, and there intervened vigorously in the conflict. With Maximus, an abbot of Constantinople, who had likewise remained in Africa, he conducted a discussion, the records of which are among the most notable documents of the whole controversy. Here Maximus proved the victor.

This Maximus was the most eminent, and effective champion of Dithyleism, and his constancy to his creed won the title of "Confessor." He was born c. 659 at Constantinople. He held, when a youth, a high State functionary, and he acted as imperial secretary in the reign of Heraclius. From 659 he visited the council of Chalcedon (2), where he soon attained the dignity of an abbot. He worked energetically on behalf of Dithyleism both in Africa and at Rome, and it was at his instigation that the Lateran Council of 669 (see below) was summoned. As the part which he thus played ran counter to the interests of the emperor, he was at length committed to await his trial. In 663 he was arrested and taken to Constantinople, and two years later he was banished. In 682 the usurper, Leontius, interceded on his behalf, and he was released from a legal process, as a result of which his tongue was cut off and his right hand struck off, and he died within the year in exile on the east coast of the Euxine. The best known of his extant works is his Scholia to the pseudo-Dionysian writings, and it was, in fact, the comments of Maximus that secured the Church's recognition of these texts.

The vehement opposition of the Dithyletes, however, served to bring to the centre of ecclesiastical policy of the emperor. Already in 648 Constans, acting on the advice of the patriarch Paul, had issued a decree, the so-called Typus, declaring that the dispute regarding the doctrine of the wills must come to an end at once. The Typus, unlike the Ecthesis, avoids all argumentation on matters of detail; disobedience to its provisions was to be visited with severe ecclesiastical and civil penalties. But the Dithyletes would not be silenced. They had now their centre in Rome, and a Council conducted in 649 by Pope Martin in the Constantinian basilica of the Lateran Palace; a council of Greek monks who had fled to Rome, affirmed, in explicit conformity with the declaration of Chalcedon, its adherence to the doctrine of two wills and two energies corresponding to the two natures of Christ. The action of Martin raised an agitation in both East and West, and the emperor, bitterly resenting this, as well as the pope's friendly relations with the exarch Olympus, then lying under suspicion of high treason, had him sent to Constantinople (653), and, after a criminal trial, banished to the Chersonese, where in 653 death released him from his sufferings.

5. The 6th Ecumenical Council and the end of the controversy.—For a time it appeared as if the new policy of peace would be attended with success. Pope Vitalian entered into friendly alliance with the emperor; ecclesiastical communication between East and West was tacitly restored; and, when Constans visited Rome in 663, he was received with due imperial honours. At the murder of the emperor, however, the antagonism broke out more fluently in the East than in the West, and the division led to a formal rupture of ecclesiastical relations. Such a state of matters was felt by the politicians, as formerly in Justinian's time, to be intolerable; and to deal with it the emperor Constantine IV. Pogonatus summoned the 6th Ecumenical Synod. In November 669, accordingly, the Eastern prelates, together with the legates of Pope Agatho, assembled in the Hall (τριγώνον, hence 'Trullan Council') of the imperial palace at Constantinople. This Council, after considerable interruptions, until September 681, is recognized officially by both Churches as the 6th Ecumenical Council. The members, with abundant excepts from the Pulpit, heard in turn from one point to another, until at last the Roman representatives won acceptance for the doctrine of the two wills, and procured the condemnation of its opponents, living and dead, without any real change in their opinions; as we saw above (§ 3), Pope Honorius. The Roman point of view is set forth in the comprehensive statement laid by Agatho before the emperor—a document that came to be regarded as a counterpart to the Tonus of Leo I. (cf. art. Monotheleism, § 1). In the Symbol of the Council the terms in which the Chalcedonian formula defines the relation to the two natures are applied to the two wills and energies, corresponding to the two natures of Christ, in the person of the divine will.

Thus the two wills corresponding respectively to the two natures are not opposed to each other (ἐν ἕνῃ στροφῇ); on the contrary, the human will is united to the divine will, and the divine will is the principal will to which it is subject (ἐν ἕσσον τὸν ἀνθρώπινον αὐτὸν [i.e. τῶν λόγων] θῆλη καὶ μὴ ἀπεκτίνητο ἡ ἀντιλαβών, μᾶλλον μὲν αὐτῷ καὶ ἐστατικώς τὸν θρόνον καὶ ἑαυτοῦ δείκτη), for it was necessary that, while the will of the flesh must indeed act, it should be subordinate to the divine will. Just as the flesh of the God-Man (ἐν θεον λόγων) is called flesh, and is flesh, so the natural will of this flesh is called flesh, and rightly called, the will of the God-Man. And, as His holy and stainless animate flesh was not taken away in being made divine (ἐν θεον αὐτῷ ἐστι), so the human will of this flesh is called flesh, and is flesh, so the natural will of this flesh is called flesh, and rightly called, the will of the God-Man. And, as His holy and stainless animate flesh was not taken away in being made divine (ἐν θεον αὐτῷ ἐστι), so the human will of this flesh is called flesh, and is flesh, so the natural will of this flesh is called flesh, and rightly called, the will of the God-Man. And, as His holy and stainless animate flesh was not taken away in being made divine (ἐν θεον αὐτῷ ἐστι), so the human will of this flesh is called flesh, and is flesh, so the natural will of this flesh is called flesh, and rightly called, the will of the God-Man. And, as His holy and stainless animate flesh was not taken away in being made divine (ἐν θεον αὐτῷ ἐστι), so the human will of this flesh is called flesh, and is flesh, so the natural will of this flesh is called flesh, and rightly called, the will of the God-Man.

Eventually the emperor Philippicus Bardanes (711–715) undertook to deal with it, while his successor, Anastasius II. (713–715), restored the authority of the Council of 680–681. But Monotheletism was still faithfully adhered to by the Maronites of Lebanon.

Literature.—I. Sources.—(1) Letters and other writings of Maximus, some that took part in the controversy, as found in the documents of the Lateran Synod and the 6th Ecumenical Council; (2) contemporary works, esp. the writings of Maximus Confessor (ἦν πανθεικόν πολέμων καὶ Μικράντις, Disputatio cum Pyrrho) and statements in Anastasius Sinaitæ, 'De arti εἰς εἰσόδον et De monasteriis' (A. M. Script. Vet. Nova, Oliva, Rome, 1851, vi. 195 ff.); (3) later chronicles and historical works, as, e.g., the 'Topia αὐθεντάς of the patriarch Nicæus, and the Apophthegmata of Theophanes.

II. Modern works.—The reader should consult the works cited at the end. Monotheleism; those of Gibbon, Walsh, Gorner, Hefele, Harnack, and Krumbacher are valuable; also, in fact, it was intermittently fanned to fresh outbursts by the wranglings of the Byzantine court. Eventually the emperor Philippicus Bardanes (711–715) undertook to deal with it, while his successor, Anastasius II. (713–715), restored the authority of the Council of 680–681. But Monotheletism was still faithfully adhered to by the Maronites of Lebanon.
MONSTERS (Biological).—Monstro vocantur quia monstrat. 1 This ancient platitude may seem ridiculous to-day, but it has not yet lost its meaning entirely. Doubtless in a modern civilized society the birth of a two-headed lamb, of a "bull-dog-faced" calf, or of a monkey-exchange of the uterus for a portion of the body, would be set down as a portent of disaster or proof positive of witchcraft. Yet to a certain section of the community the objects present opportunities of enlarging the common store of biological knowledge. The specimens themselves demonstrate eloquently the possibilities of aberration in the processes of normal development and growth. They testify to the existence of numerous independent forces or influences, balanced delicately under normal circumstances. They point to a disturbance of the balance. They reveal the nature of individual influences, as manifested when one has been exerted in excess, to the exclusion or suppression of the countervailing factors.

In biology monsters are regarded as extreme instances of developmental varieties. Variations of lesser degree of the class of "abnormalities," although, as explained in art. ABNORMALITIES (Biological), no hard and fast line separates the two groups. Many monstrous formations are determinate effects affecting the embryo or the fetus, though the post-natal period of growth is by no means free from disorders productive of a comparable result. And instances of the latter kind, such as retarded adolescence, or precocious senility, may be included fairly with others showing the extreme tenuity of the neural zone between health and disease.

The study of monsters falls naturally into two divisions: (a) the investigation of their actual structure, and (b) research into the mode of their production.

(a) On the anatomical side a classification has been attempted, and it is based upon consideration of the part or parts actually affected. In view of the vast number of categories thus recognized, only the most cursory survey is possible here; and, instead of rehearsing the long list of classes and their subdivisions, it must suffice to note that, while the whole body has suffered in some cases, in others certain parts only will be found to be distorted.

The developmental history of monsters shows us that, as a general rule, the departure from what is normal will be greater and more complete in proportion as the disturbance was early in its occurrence. For in the first phases of development, when the total mass of the embryo is almost infinitely small, even a slight error will affect the rudiments of every organ and structure that is to be perfected subsequently. At this point again two distinct groups of monsters must be separated. In some cases the uterus may void its contents prematurely as a shapeless mass; to this, in human pathology, the antiquated term 'mole' is still applied. Or, again, the disturbance may lead to partial 'gemination,' i.e., to some distorted kind of twin-formation. Thus twins of equal size may continue to grow though connected with each other, and at the birth may produce such a phenomenon as the 'Siamese twins.' In other instances of this class the twins are quite unequal in point of size and, it may be, of development. As a result, an abortion is the issue, the residual portion of the twin attached to it. The two are then distinguished as the 'autosite' and 'parasite' respectively. The parasite is most commonly attached to the autosite in or about the middle line of the body. It may present almost any part of the body, though it is more wart-like excrecence to that of a headless trunk with arms and legs. In rare instances the parasite has been found to be entirely enclosed within the mass of the host, so that it is not visible externally at all.

Lastly, in yet another class of monsters, the process of gemination may have been complete but unequal, and one twin is born in a normal state, while the other suffers deformation, whether of mass, consisting of various tissues and rudiments of organs in the most complete comission. Even the latter may be maintained alive throughout the intra-uterine period of existence.

Apart from these instances of 'twinning,' we may notice that certain particular structures such as the heart or the brain may be defective to the point of obliteration, while a large class bears witness to interference with such normal processes as the formation of the face or the closure of the walls of the body to protect the viscera.

(b) The study of the normal processes of development throws a flood of light on the problem of explaining the particular aberration responsible for the occurrence of a monster. Physiological investigations have dealt with the nature of the disturbing causes, and to these we shall now turn.

The artificial production of monsters first claims attention. In fish-hatcheries the occurrence is accidental and unexploitable, yet the frequency with which grotesquely-formed individuals appear among the fry is so well known as to be almost a matter of common knowledge. The eggs of the domestic fowl have been used for experimental purposes for at least fifty years past. In this department of biology the name of the French observer, C. Daresse, deserves special mention. The more usual modes of procedure are to subject the eggs during artificial incubation to selected abnormal influences. These may be of the nature of magnetic force, variations of temperature, or, again, the disturbances caused by partially vanishing the eggs, or by subjecting them to incessant rotation. In these ways various physical agencies have been shown to be influential in producing monstrous forms. Eggs of other animals (often those of Invertebrates) have been employed to test the effects of chemical agents or of altering the chemical constitution of the media in which the developing eggs normally rest. Such ova have also been the subjects of experiments in which the fertilizing element has been varied. Physiological research of this kind has established clearly the susceptibility of the egg-cell to a variety of influences, whether these be physical, mechanical, or chemical. At this point another possibility seems to demand notice. The influence of so-called maternal impressions has long been discussed by those who are not prejudiced on this subject. Only the highest forms of life are suitable for observation or research in this respect, and it cannot be said that the potency of such impressions has been established.

Turning more particularly to human beings, it may be mentioned that medical research has shown that certain monstrous developments, viz. Acronegaly and Achondroplasia, are due to the excess or deficiency of certain fluids which normally pass with the blood to bathe the tissues of the body. In this department of research only the first steps have been taken as yet.

In such ways the anatomical study of monsters shows the investigator imperfectly, but the physiologist is able to point to the disturbing element. Thus we are left with the impression that, where the balance of reacting forces...
is so delicate, no absolute standard of what is a normal form is possible. The individual is connected with others which we call abnormal by an infinite number of intermediate forms. And the abnormal examples in turn lead on to monsters.

That which is born is the outcome of a host of interacting forces. Its capacity to maintain existence and to reproduce its kind depends first upon its conformation, and then upon the environment in which it finds itself. Two marks may be made in conclusion. Though the attribute of vast size is commonly associated with our ideas of monsters, yet from the biological point of view this is not necessary, and huge monsters are but representative of one of many possibilities.

And lastly, while in this article the occurrence of monstrous forms among animals has been reviewed, it is to be remembered that most of the considerations here set forth are applicable equally to the vegetable kingdom.

LITERATURE.—Special meetings may be made of C. Daresete, Bouddhisme et à la production artificielle de monstrous in Paris, 1877; other contributions to the literature are so numerous as to preclude even a partial enumeration here. Reference is made to the bibliography provided by E. Schwab, Morphologie der Missbildungen, Jena, 1906.

MONSTERS (Ethnic).—1. Various kinds of monsters.—The existence of monstrous beings, human or animal, is believed in at all levels of culture. They are referred to or described in stories, traditions, or myths, or as they are depicted or represented in some artistic form. Among savages monstrous beings are often supposed to exist, like the Bun-yip of Australian tribes—a mythic water-monster who carries off women—or the monsters or demons said to swallow yonths at initiation in New Guinea. Frequently more or less disgusting features are supposed to be the result of some monstrous or abnormal feature—one eye, more than two eyes, eyes under the arms, vast ears, two or more heads—or be headless or featureless or of great size, or to possess tails. Ghosts, especially ghosts of those who have died a violent death, are often visualized as monsters of a more or less horrible kind, usually with a fondness for human blood. Among barbaric peoples similar beliefs are found, especially in Oriental mythology and folklore. Here whole classes or tribes of monstrous beings exist, like the rakshasas of Hindu myth—hideous fiends with shape-shifting powers, or the ghoul or the ghunghroo (Arabic belief), or the satyrs, centaurs, and cyclopes of Greek mythology. Here also human tribes of monstrous form are a subject of popular belief. The people of Jâhab (Java) were supposed by the Arabs to have their heads in their breasts.2 Herodotus describes some of the tribes supposed to live beyond the region of the Scythians—men with goats' feet, men with one eye (the Amazons)—and other tribes believed in by the Lityans—monsters with dogs' heads or headless with eyes in their breasts.3 Pliny also writes copiously about such tribes.4 Irish mythology speaks of tribes of men with dog, or cat, or goat heads. Tribes or individuals covered with an abnormal growth of hair are often mentioned by ancient or medieval travellers from the Carthaginian Hanno onwards. In Egypt monstrous creatures were often figured on tombs, and the god Bes is depicted as a dwarfish but monstrous and repulsive figure.

The monstrous creatures of Babylonian and Assyrian art are well-known—winged bulls or lions with human heads, and other abnormal forms. These were set in front of entrances as a means of frightening away evil spirits, and a similar use of horrific figures is known elsewhere (see Delitzsch, vol. iv. p. 848 ff.), at both lower and higher levels.1

Among the folk everywhere monstrous beings have a real existence to the imagination, and are doubtless such kinds of similar beings believed in by their forefathers. But the influence of Christianity was often to give a sinister aspect to the supernatural beings of the older paganism. The water-horse and water-bull of Celtic lore are typical examples of monsters which have still a real existence to the folk in remote districts. Demoniac beings are also often envisaged as monsters, and everywhere more or less repulsive giants and dragons have been subjects of popular belief (see DEMONS AND SPIRITS, GIANTS).

The mythologies of most races tend to give a demonic, gigantic, or monstrous form to the supernatural creatures of culture-heroes or the gods—Tânat and her brood in Babylon, the opposing hosts of beings whom Isâ daily conquered in Egyptian belief, the Demons, Giants, and Charon, who strive with gods in Hindu, Greek, Teutonic, or Celtic myth. They typify chaotic forces, the powers of evil, or the powers of order, and hence they constantly tend to be regarded as evil, while their enemies enjoy righteoussness and goodness.

As early as the days of primitive man monstrous forms have been depicted in various ways. Thus in caves and mounds men and women of sinister faces may represent demons, while other curious hybrid figures, half-human, half-animal, have been variously interpreted, but may represent monsters of the imagination of the ancients. Savage art tends to give all its human or supernatural subjects a grotesque, if not monstrous, form, often, no doubt, from lack of skill, but there is sometimes a deliberate exaggeration, in a horrible or grotesque direction, of features or of one or more members of the body. This monstrosity of feature is also seen in masks worn on ceremonial occasions by savages, and often meant to represent the faces of particular spirits.4 Indian art delighted to represent their divinities as many-headed or many-armed—a method which has spread into adjacent countries.5 Tibetan representations of demons or gods are often repulsive in their monstrosity. Reference has already been made to the monstrous Babylonian figures. In medieval and later Christian demonology demons and the devil were depicted in the most sinister and horrible forms—half-animal, with exaggerated features, tasks, horns, tails, or with faces on chests, stomach, or knees.6

2. Origin of the belief in monsters.—Probably no single origin is to be looked for. There may have been different origins for the belief as a whole, or particular monstrous forms may have had an origin different from that of some other forms.

(a) Imagination is doubtless responsible for much of the monstrosity that is attributed to men, mythical animals, or demons in mythology or primitive tribes. As man's imagination permeates the world around him with spirits, so these appeared to his imagination as gorgons, hydrenas,

2. Cfr. ERE VI. 603 f.

5. Cf. Hahn, Head, for other instances.

6. This is particularly noticeable in illuminated MSS or in pictures of the Temptation of St. Anthony type. Cfr. Le Doux and Housay, pataine.
and chimeras. There was a constant tendency to visualize the creatures of belief as human and yet not really human, and yet more than animal. As man drew little distinction between himself and animals, as he thought that transformation from one to another was possible, such fancies of savages have a certain plausibility. This, in part accounts for animal-headed gods or animal-gods with human heads. Or, where gigantic superhuman strength, wisdom, or productivity was concerned, man represented these to himself by a combination of monstrous features, of which he thought in waking hours could no more rid itself than could Frankenstein escape his monstrous creation. The combination of existing but diverse forms which seem in sleep and human beings to monstrous forms would play a part in the drama enacted during the hours of sleep. Such forms, seen in sleep by men to whom dreams had an intense reality, became a real part of the contents of the actual world in which they lived. Primitive and savage men are like children, and they no doubt had their night terrors, caused by fantastic or horrible figures seen in dreams and still appearing to haunt them when sleep was rudely broken by the effect of fear. Again, hallucinations seen in waking hours by those whose mental balance was deranged might also aid in the creation of monsters, as they form part of the world inhabited by persons with certain kinds of mental affliction.

Such hallucinatory appearances, described to the sane, would be accepted as real, and it is probable that hallucinations may have been a part of normal life and given to seeing visions, is never quite sane. But, again, the savage in his waking life is probably the subject of hallucinatory impressions to a far greater extent than the civilized man. His psychic state when awake bears a close resemblance to his psychic state when asleep. What he thinks he sees is actual to him, and every illusion, however incredible or monstrous, is a fact. Even in cultured Egypt there were figured on the tombs the monstrous forms which the deceased thought he had seen in his lifetime.

(c) Monsters, again, may owe their origin to a basis of fact. Any large predatory animal whose coming and going was obscure would tend to be envisaged in still more awful guise. Some, indeed, have argued that belted survivals of now extinct animals may have given rise to the monsters of folk-tale and tradition, and, if this were true, it is certain that the impression made by them would easily become legendary. Most monstrous savages have had a fish or animal. These, which are really exaggerated forms of actual animals seen by their ancestors, but unknown to their descendants in their new habitat—e.g., the monstrous lizards of Maori tradition are the creatures of the reptile-crocodiles of the early possessors. Perhaps actual abnormal or monstrous births may have assisted in the formation of mythical monsters, or would tend to be regarded in popular belief as matters of common occurrence. Thus, in China the standard histories are full of such pro-
digies. It is certain also, apart altogether from the possibility of abnormal births as a result of bestiality, that men have often speculated upon this or imagined the effects of such unnatural unions between different species of animals or between beasts and human beings. This is seen in universal folk-lore and in ancient myth, as well as in the half-gossipping tale of Frankenstein and his creation. And in the pseudo-scientific works on natural history from the time of Linny onwards. Medieval theology also believed that the union of demons and man or the human and monstrous forms would assist to them, or this or that feature was exaggerated, or habits of a peculiar vileness were ascribed to them—e.g., forms of loathsome cannibalism. Even remoteness or ignorance of such tribes would invest them with distorted forms. Here, probably, is to be seen the origin of the belief in those monstrous tribes already alluded to. Invading peoples, behaving with brutality, are sure to be regarded as monsters. In the same way the monstrous cannibalistic ogres of folk-tale are exaggerated forms of actual cannibals (see Cannibal-
ism). Again, where certain deformities are assumed by warriors to strike terror into their opponents, where faces are painted or tattooed, masks or animal-head dresses worn, these are apt to become a real part of the men themselves. They are regarded as monsters living in abnormal forms.

(d) Lastly, the misinterpretation of fact may easily give birth to monsters. This is especially seen where the bones of fossil animals of large size have been regarded as those of monsters or giants, or their tanks as the claws of monstrous birds—the griffin or the rukh. Hence the rise of many myths about these beings—e.g., of how they were slain by gods or spirits beneficent to men.

There is no doubt that the belief in the existence of monstrous forms has had a profound influence on the mind of man, probably for the reason that, as has been proved experimentally, any abnormal shape has a strong power of suggestion.
MONTANISM.—1. The movement now generally known, from the name of its founder, as Montanism had its birth at a village called Ananias in the province of Asia, probably not far from Philadelphia (Ramsay, Cities and Bishops of Phrygia, p. 578). There, as it seems, about A.D. 150, Montanus, a recent convert, was guided by visions to prophesy. His prophecies were accompanied by strange phenomena resembling those associated with demoniacal possession. In what way his exercise of the prophetic charisms was regarded by his opponents as differing from that of the genuine prophets we have various hints from nearly contemporary documents: he spoke while he was actually in a state of ecstasy; the true prophets received their messages while lying ill to their faculties returned to a normal condition. Moreover, the ‘ecstasy’ of Montanus was a kind of madness, deliberately induced, whereas prophets, according to the New Testament, even when in a state of ecstasy, were of sound mind; the so-called ecstasy of Montanus was, in fact, not προφητεύειν, but rather, as a contemporary writer (Ep. Clem. ii. 7, § 7), ἐκπροφητεύειν, agreement with these statements an oracle of Montanus declares that the prophet is as a lyre played upon by the divine spectre; and the form in which most of his extant utterances are cast implies that there was a more personal instrument, and that the phrases which fell from his lips were actually the ἰερογλυφικά λόγια of the Deity. His opponents reminded him of the style of the ancient prophets, who as human agents proclaimed the will of God—Thus saith the Lord. 2. After a time—as seems to be implied, a considerable time—Montanus was joined by two companions, Maximilla and Priscilla, both women, with whom he left deserted their husbands, and who also claimed to possess the prophetic charisms. Their utterances were similar in manner and in content to those of their leader. 3. There can be no doubt that Montanus maintained that this ‘new prophesying’ differed essentially from all preceding prophecy. Thus the novelty of its form was to be explained. It was the immediate fruit of the conversion of the Paraclete (Jn 14:16–18). The apostles had not the perfection of the Holy Spirit (1 Cor 12:8); this was reserved for the new prophets, of whom Christ spoke in Mt 26:30. This is stated to be the Montanist doctrine by many writers, and it is the basis of the exaggerated assertion of Eusebius (HE v. xiv.), that Montanus claimed that he himself was the Paraclete. 4. It is not clear whether in the earliest period the prophecies were regarded as mouth-pieces of the Paraclete in the same sense as Montanus. Eusebius suggests the contrary when he reports that, while Montanus was held to be the Paraclete, the women were ‘as it were prophetesses of Montanus’ (cf. ibid. Alex. Strom. Trtn. iii. 41. 2; pseudo-Tert. Harr. 7). It is possible that at first they were put in a lower position, Mt 23:24, but not Jn 13:1–12, being taken as referring to them; and it was only after a later time, perhaps after the death of Montanus, that they were regarded as equal with him. 5. It is evident that the acceptance of the ‘new prophecy’ as embodying the final teaching of the Paraclete, and as in some sense superseding earlier revelation, was the cardinal principle of Montanism. This is made manifest by the very phrases ‘new prophecy’ constantly used by its adherents; by the title προφητεύοντος which they arrogated to themselves, as distinguishing them from other Christians (cf. 1 Cor. v. 1f., Col. ii. 6, 18: cf. Alex. Strom. iv. 13 [PG viii. 1300 C]); and by the polemics of anti-Montanist writers, whose argument was mainly directed to proving that this ‘so-called prophecy’ was in truth a false prophecy proceeding from the spirit of evil. The charge was not regarded as confined to Montanus and the women. Theodosius, e.g., was an ecstatic, and was reported to have died while in an ecstasy. 6. We are not surprised to learn that this sudden outburst of prophecy, and the claims that were made for its leaders, provoked much opposition. Many of those who heard Montanus and his companions would naturally regard the Phrygian bishops made an ineffectual attempt to prove and refute the spirit that spoke in Maximilla; another, who had come from Anchialae in Thrace, attempted to exorcise Priscilla. At first, we are told, the movement advanced slowly: ‘but few of the Phrygians were deceived.’ But after a time, it seems, the majority of the Phrygian Christians became adherents of Montanus. Thus only can we account for the fact that at an early period his followers were commonly spoken of as ‘the Phrygians,’ and their teaching as the heresy of the Phrygians (cf. ἡ γὰρ Ἑλληνικὴ ἁπάντη, whence the Latin term, although even then some formal protests were issued by the bishops. While the movement was still in its infancy, Claudius Apollinaris, bishop of Hierapolis, wrote a treatise against the Phrygians, and by the year 177 the majority of many bishops, at least one of whom came from Thrace. Other contumacies of the new teaching followed it (Ens. HE v. xvii. 1). Many synods met in Asia and excommunicated its adherents. On the other hand, the Montanists used scattering words about the ecclesiastical rulers, and stigmatized them as slayers of the prophets. They put forth treatises in which the arguments of their opponents were unanswered. It is impossible to determine with accuracy the date of the inevitable crisis; but it is certain that in Phrygia before the year 177 the Montanists were excluded from the Catholic Church (Ens. HE v. i. 4; cf. xvi. 22, which clearly refers to the persecution under Marcus Aurelius). 7. It is difficult to fix the date of the beginning of the prophesying of Montanus. The choice is usually held to lie between A.D. 150, under which year Eusebius records the origin of the movement in his Chronicon, and A.D. 156–157, which is supported by Ephythasius (Harr. xiv. 1). It is not clear, indeed, that these two dates are necessarily, for Ephythasius in the year, not of the earliest prophesying of Montanus, but of some prominent event which he regarded as the starting-point of the ‘heresy’—the Lacedaemonian war, or the promulgation of one of Montanus’s more startling innovations. In any case, he is probably that Ephythasius who is the earliest authority for the statement that Claudius Apollinaris wrote his anti-Montanist treatise—which Ephythasius appears to have dated on insufficient grounds after 174 (Lawlor, Ephythasius, p. 105f.) —when Montanus with his false prophetesses was in the act of introducing his new teaching (HE v. xv. 11). We must regard caution. It is to be observed that Apollinaris wrote some time after Montanus had joined by his false prophetesses (6, v. xiv. 2)—an event which was itself probably a good deal later than the beginning of the prophesying. Further, (1) the history of which a short account has been given in the preceding section requires a period of a good many years; and (2) Maximilla, the last of the three leaders, died in 179–180. The movement must have enjoyed the advantage of its super- vission for a sufficiently long time to give it the strength and stability which it undoubtedly possessed. These considerations point to an origin much before 172. The earlier date is therefore to be preferred. It should be observed that the statement of Ephythasius is open to an error in one passage (perhaps two) in which he gives dates connected with the Montanist movement (Harr. xiv. 2, li. 33). 8. That the Paraclete was manifested in Montanus, and in him and his companions revealed the fullness of Christian revelation, and that the original essential doctrine of Montanism. But, since it was the office of the Paraclete to supplement the teaching of Christ, it was to be expected that this doctrine, when it was translated into a system differing at many points from the teaching of the Church as usually understood. Montanus,
it is true, did not consciously deviate from ecclesiastical dogma. His opponents bear witness that he accepted the canonical Scriptures and was orthodox in his teaching, but the distinction of the death and the doctrine of the Trinity. But in another sphere his 'innovations' were considerable.

9. Not long after the beginning of the prophesy- ing, Montanus crossed the Phrygian border and established himself with his followers at a city called Pepuzza, which Ramsay (pp. 213, 573) places west of Eumeneis, and not far from the Phrygian city of Demetrius. With the neighbouring village of Tyimon, he named Jerusalem. To this settlement, which was then the centre of the holy city of Eastern Montanism, he endeavoured to gather adherents from all quarters. These facts, coupled with the lavish promises made by the prophets to their adherents and certain predictions of Maximilla (Eus. HE v. xvi. 9, xvii. 4; Epiph. HE, xviii. 2), apart from a more explicit oracle attributed to another prophetess (Epiph. HE, xlix. 2), would lead us to the conclusion that the 'new prophecy' taught men to expect in the near future, at Pepuzza, the final Parousia of the Lord (Eus. HE v. xvi. 9), and that a high priest held the doctrine of chiliasm, but chiliasm of a new kind. It was this hope of the Parousia at their Jerusalem that gained for them the name of Pepuzian.

10. Connected in some measure with their chiliasm was their view of the prophetical office in the Church. The prophet's charisma was not an occasional gift, bestowed on the need for its exercise arose; according to the dictum of 'the Apostle' (1 Co 13:13), it was perpetual, one of the notes of the Church. Consequently Montanus, Maximilla, and Priscilla received their office in a line of succession. Quadratus and Annonius of Philadelphia were the links which connected them with Agabus, Judas, Silas, and the daughters of Philip (Eus. HE v. xvii. 3, 4; Epiph. HE, xviii. 2). But, since Montanus and his companions were the channels of the ultimate revelation, they were the last of the prophetical succession. After them would come the end.

11. Again the exalted position given to the 'new prophets' led naturally to the assignment to them of prerogatives generally regarded as belonging to the bishops, and thus to a conflict between the prophets and the regular hierarchy. The prophets had the authority of an oracle (Epiph. HE, xix. 11; Tert. de Frat. 21). This power they shared with the 'martyrs' or confessors (Eus. HE v. xviii. 7).

12. Once more, the association with Montanus of two prophetesses involved the recognition that women might hold high office in the Church. Maximilla and Priscilla seem to have made independent contributions to Montanist teaching (Hipp. Polyli. 19; cf. Did. Alex. de Trin. iii. xlix. 5; ZKG xxxvi. 480); and they were probably in the habit of prophesying in the congregation (Eus. HE v. xvi. 9: απολυτα). There is evidence that, at any rate in later times, other women followed their example (Orig. ap. Cram. Did. x. 279), or even outdid it; for we read of a prophetess in Cappado- via in the 3rd cent., perhaps a Montanist, who baptized and celebrated the Eucharist (Firmilian, ap. Cypr. Ep. lxxv. 10), of female bishops and priests, and of virgins who regularly officiated in the congregation at Pepuzza (Epiph. HE, xlix. 21; Did. Alex. de Trin. iii. xlix. 3).

13. Montanism made laws regarding fasts (Eus. HE v. xvii. 9; cf. ZKG xxxvi. 2; v. xvii. 2; Hipp. Phil. x. 25; Tert. de Icet 13). This does not mean, apparently, that he increased the number or the rigour of fasts, but rather that he reduced them to rules, eliminating that of free will in such matters, making them a duty to be observed by all Christians alike, and not only by those who used them as a means for attaining higher perfection. Among these ordinances (perhaps a later development, due to alterations of the doctrine of the Trinity and the doctrine of the Trinity. But in another sphere his 'innovations' were considerable.

14. Under the same category may be brought the Montanist repudiation of second marriages. For on this point the two lists of numbers (1 Co 7:26, 34) must not be exaggerated. The Church discouraged second marriage; the Montanists held it to be fornication. That which the Church permitted in special cases the Montanists excluded by a law which admitted no exception.

15. We learn (Eus. HE v. xvi. 50, xviii. 5) that the Montanists held martyrs (suffering confessors) in high honour, and set special store by their opinion on questions of doctrine and practice. But this was no peculiar feature of their system; it reflected the general feeling of the age. And, when they went a step further and allowed them the power to forgive sins, they were in agreement with some of the orthodox. (Tert. de Frat. 22), if not also with those of Phrygia. It must be added that there is no proof of the statement, often made, that Montanian canonization was a severe assentiation, and that its adherents more analogous to heresies than other Christians in the same district, or displayed special eagerness for martyrdom. Such evidence as exists points in the opposite direction (Labriolle, Butzbachia, pp. 157-159).

16. Montanism, after its ascendency from the Church, though it retained the hierarchy of bishops, priests, and deacons, developed in its organization some peculiar features. Montanus was responsible for the innovation (as it was esteemed) of salaried preachers, and for the institution, doubtless connected therewith, of collectors of money, headed, as it seems, by a steward (ευφέρων Eus. HE v. xvi. 14). St. Jerome (Ep. xiv. 33) reports, that in his day the bishops and Justianin (Cod. Just. I. 20. 3), that the hierarchy consisted of the patriarch of Pepuzza, ευφέρων (apparently the successors of the stewards), bishops, and inferior ministers.

17. Of the peculiarities of Montanism here enumerated some were a revival—perhaps rather a survival—of the belief and practice of an earlier period; such, e.g., are the recognition of prophets as a permanent order (1 Co 12:28; Eph 4:11; Didache, 11 ff.), the prohibition of second marriage (Athenag. Leg. 33; Theoph. ad Antol. iii. 15; Iren. iii. xvii. 2), chiliasm (Just. Dial. c. Tryph. 50; Eus. HE iii. xxxix. 12 ff.). Others are in harmony with what is known of the Oriental religious temperament, especially that of the Phrygians, and may be accounted for by the influence of environment. Among these are the 'enthusiasm' of the prophets (Boywetsch, Gesch. des Montanismus, p. 62 ff.), the ministry of women, and the expectation of an immediate Parousia (Hipp. in Dion. 18 f. Orig. c. Iren. vii. 8—10). The substitution of Pepuzza for the literal Jerusalem may be due to the same influence. It had, at any rate, the practical advantage of providing a holy city in the district from which Montanus drew the greater number of his adherents.

18. It is not necessary to pursue the history of
Eastern Montanism in detail. For some years after the death of Maximilla, the last of the original trio, in 178-180, there were no prophets, and the Church and the world enjoyed peace—facts which, as anti-Montanistic writers pointed out, disproved the claims of the first prophets. But the spread of the sect was not permanently checked. Tertullian's work against Montanism and its adherents has taken place shortly before A.D. 200 (Eus. HE v. xviii. 3-12), and ultimately adherents of the movement were found in every part of Asia Minor, in Phrygia (from the use of bread and cheese in the mysteries), the Tessalodromites (from a peculiar way of dressing hair), and the Lamproi (of Phrygia). This Passaloyotes is a variant form; cf. Ramsay, p. 576), and the Ascodografus or Ascetie of Galatia (from orios connected with a wine-skin (Epiph. HE viii. 22); Ramsay, p. 300). It is perhaps scarcely correct to speak of Montanism as a sect. In its later stages it was rather a conglomerate of sects somewhat loosely held together by an acknowledgment of the manifestation of the Paraclete in Montanus (cf. Voigt, p. 131).

21. The earliest notice which we possess of any knowledge of the Montanist movement in the West appears in the year 177. In that year the Christians of Gaul, setting out as ambassadors for the peace of the churches, wrote letters to Pope Eleutherius and to the brethren in Asia and Phrygia expressing their opinion of the movement. Since Eusebius (HE v. iii. 4) pronounces their judgments pious and orthodox, it may be inferred that they have been, on the whole, anti-Montanist. And this conclusion is confirmed by an examination of the account of the assembly at Lyons, written at the same time (de Labriolle, La Crise, p. 225 f.). If we may judge from two passages of Ireneus (Herr. xi. 9, iv. xxiii. 6 f.), who was their emissary to Rome, though they avoided the extreme position of the Alogi (see arc. Logos, above, p. 137), in their zeal against Montanism rejected the Johannine writings, and though they refused to deny the existence of prophetic gifts or the right of women to prophesy in the church, they yet condemned the followers of Montanus as schismatics. It would seem that Eleutherius confirmed their judgment.

It is difficult to explain this incident without supposing that there was at the time a Montanist propaganda in Rome. No doubt the Montanist missionaries there were quickly followed (perhaps preceded) by representatives of the orthodox party in Phrygia; and it may be conjectured that among these was Aviceius Marcellus of Hierapolis in the Pentapolis, 'the chief figure in the resistance to Montanism in the 2nd cent. There were two parties of Montanists, who took different sides in the Monarchian controversy, and both of them appealed to the oracles of the prophets as well as to their own writings (Clem. Alex. Strom. vii. 17), and the followers of Aviceius of Hierapolis, the chief of the Montanists, is indicated as having been at Rome (Ramsay, p. 709). He certainly visited Rome with a purpose in some way connected with the welfare of the Church; and in one of the passages from Ireneus (Herr. xii. 2) we are told that the Montanists recall both the labors of the Gallican Christians for the peace of the churches (cf. Ireneus Herr. iv. xxxii. 7 with Eus. HE v. iii. 4) and a treatise dedicated to Aviceius almost at the time when his famous epistle recording the visit to Rome was written (cf. Ireneus Herr. iv. xxxii. 6 with Eus. HE v. vii. 1 f., and see Ramsay, pp. 709 ff., 722 ff.).

22. Twenty-five years later, under Pope Zephyrinus, a fresh attempt was made to introduce Montanism into Rome. The Montanist leader Proclus held a disputation there with Caesius, who was afterwards published, and some fragments of which remain (antic. Comm. 211, 212). The various communities seem to have been commonly designated by the names of local leaders. Thus we hear of the followers of Proclus or of Abosephus (pseudo-Tert. Herr. 7), the adherents of Montanus, the Priscillians, and the followers of Phrygia. The latter the name see Voigt, Eusebius’ scholastische Urkunden des antimonistischen Kampfes, pp. 107, 129 f.). The anonymous last name of this class to emerge was that with which we are most familiar, 'Montanists' (first found in Cyril, Cat. xvi. 8). There are also nicknames, which we may suppose to have been merely local, and to have witnessed to local customs (cf. Jerome, in Gal. ii. 2). Such are the Artodytis of Galatia (from the use of bread and cheese in the mysteries), the Tessalodromites (from a peculiar way of dressing hair), and the Lamproi (of Phrygia). This Passaloyotes is a variant form; cf. Ramsay, p. 576), and the Ascodografus or Ascetie of Galatia (from orgies connected with a wine-skin (Epiph. HE viii. 22); Ramsay, p. 300). It is perhaps scarcely correct to speak of Montanism as a sect. In its later stages it was rather a conglomerate of sects somewhat loosely held together by an acknowledgment of the manifestation of the Paraclete in Montanus (cf. Voigt, p. 131).

23. It secured some foothold in Spain. But of its history in that region we know nothing except
that it had some adherents there at the end of the 4th century (Pacianus, Ep. i. 11).}

24. In Africa the propaganda had more success. By the end of the 2nd cent., knowledge of the 'new prophecy', and Pepuza, perhaps from Rome, less probably direct from Phrygia—and it gained there its most illustrious convert in the person of Tertullian. St. Augustine seems to have gone beyond his evidence when he stated that Tertullian first heard it in London; he would certainly in later life a sincere and ardent champion of the teaching of Montanus, as he understood it.

25. The qualifying words are necessary: for Tertullian, as a 'boredom in the pages of Tertullian, differs so much, and withal is so little conscious of difference from the Montanism of Phrygia that we are compelled to suppose that his acquaintance with the teaching of the prophets was imperfect. He can hardly have received direct instruction from Eastern Montanists; his knowledge of their tenets must have been, in the main, derived from books, including a collection (de Fuga, O.; note the words 'et alibi') of the oracles of Montanus and Priscilla (he never quotes Maximilin by name), which was apparently incomplete.

Tertullian accepted, without reserve, the claim of the Montanists in Phrygia and the Paraelete. But, though he speaks of prophetic speech in a state of ecstasy (de Lei. 3), we find no hint in his writings of the strange phenomena which were then normal companions of prophecy in Phrygia in the East. He tells us (de An. 9) of a sister who fell into an ecstasy during a church service; but she was not permitted to communicate the revelation which she had received till the congregation had departed. None of the usual anti-Montanist arguments (see Epiph. Hær. xlviii. 3-8) would have had any force against ecstasy so well controlled and so little identified with a state of frenzy. Again, Tertullian never mentions Pepuza. He was a chiliasm, and he expected the Parousia in the near future; but he believed that it would take place in Jerusalem (see de Mort. iii. 24). He cannot have read the oracle (Epiph. Hær. xlvii. 1) which declared that the New Jerusalem would descend at Pepuza. Tertullian agreed with the Phrygians in allowing to the prophets authority to absolve from sin, though he has some difficulty in reconciling this view with his own opinion that certain sins are unpardonable (de Pud. 19, 21). But he is indignant with those who hold that martyrs have a like prerogative (ib. 22).

On another subject he is in conflict with the Phrygians. He will not permit a woman 'to speak in the church' had reached Carthage—without, nor to offer, nor to assume any function which belongs to a man' (de Virg. Vel. 9). If the sentence had been less trenchant, one might have supposed that it came from an anti-Montanist polemic.

26. The crutches of the prophets (ed. with commentary in de Labriolle, La Citro, pp. 34-100); the anonymous writer of a.d. 192 (quoted Ed. Hær. v. xix. 1); Apollinaris of Larryma (a.p. 250, quoted ib. 3), the second document worked up in Epiphanius, Hær. xliii. 2-18 (a.p. 180-300); Hippolytus, Syntagma, represented by pseudo-

27. Even on subjects in which he was in entire accord with Eastern Montanism we find no essential difference between his earlier and later teaching; e.g., he expressed disapproval of second marriage in his pre-Montanist treatise ad Uxorem; the arguments used are identical with those of his de Exhortatione costitatis and de Monogamia, including that founded on the nearness of the end, which is more strongly stated in the earlier work. His description of the Parousia as a final event of the millennium occurs in all three. The result of his adoption of Montanist principles is seen merely in the fact that an absolute prohibition takes the place of a more general rejection of marriage. In other words, that he draws the logical conclusion from his argument. Here, as elsewhere, he found in oracles or visions only a new sanction for opinions already formed.

28. Thus we see that, if the form of Asiatic Montanism was largely determined by environment, and possibly by the influence of individual leaders, the form of African Montanism, or, as it was afterwards rightly called, 'Tertullianism,' was determined by the personal force of Tertullian himself, and doubtless in some degree by the environment which moulded his character. We cannot forget that the home of Tertullianism was later to become the home of Novatianism and Donatism.

29. If it be asked, What was there in Montanism to attract such a man as Tertullian? it must be remarked that he was unaware of, or ignored, many of those features of the movement which to Eastern opponents caused most scandal. There are remained the prostration of those in the living Church, burdened with a few corollaries, most of which had been anticipated by his own thinking. Premising this, we may accept the answer of Swete (Holy Spirit, p. 79): 'For Tertullian the interest of Montanism lay chiefly in the assurance which the New Prophecy seemed to give that the Holy Spirit was still teaching in the Church.' It need only be added that the acceptance of the Montanist oracles as embodying the teaching of the Paraelete was made easier for him by the support which they seemed to give to opinions which he maintained in opposition to other Christians held.

30. The Montanists seem to have become an insignificant body after the death of their founder. They are never referred to by St. Cyprian, in spite of his renunciation to his veneration to his tender as well as the sect returned to the Church when St. Augustine was at Carthage, and he reports that, when he wrote his work on heresies, their basilica was in Catholic hands (Hær. 88).

MORAL ARGUMENT.—"Moral argument" is
distinguished from logical either in the nature of the
facts to which appeal is made or in the assurance
which the conclusion expresses. It is possible
that both implications are associated with its
meaning. But in general it is often used to denote some
probability, or the nature of it is distinguished from the
certitude of logical argument.

It is probable that the term derived its specific
import from the implications of the 'moral argu-
ment' for the existence of God and immortality in
the Kantian philosophy. In this method of 'proving'
then Kant remarked the impossibility of
meeting the demands of the moral law in this
life, and, as this law required the adjustment of
duty and happiness, he sought this realization in
a life to come. To effect this adjustment the exist-
ence of God was supposed to be required. This
argument was assumed to be valid when all the
logical arguments for the same conclusion were
null and void. The want of absolute assurance
implied in the conclusion was transferred to all
arguments which gave what is called 'moral
certainty.'

This also derives part of its meaning from the
implication that the moral order of things favours or
expresses the ultimate significance of what lies
behind it. That is, the assumed rationality of things is
taken to imply the nature of the causal agency
behind it, and the 'moral argument' is an
expression of what is supposed to be implied by the
admission of an actual moral order in the world,
while the moral argument is supposed to be limited
to a physical order and its implications.

A fuller exposition of Kant's moral argument for
the existence of God and immortality is the follow-
ing:

Happiness is the natural condition of a rational being in
the world, and is the natural accomplishment of virtue.
In fact, the moral law itself requires a union or synthetic connection
between virtue and happiness. But in the present natural
order this ideal union is not effected, and we cannot treat the
world as rational unless it provides for this connection between
them. The connexion requires an infinite time for its realisa-
tion, and hence we have to postulate immortality as the con-
dition of realizing the demands of the moral law which holds
valid for the present. Immortality thus becomes a necessity of a
rational order. But this union of virtue and happiness, not
being a necessary one, requires the causal intervention of some-
thing to bring it about. Since we postulate immortality as the
condition of rationality, we postulate the existence of God to
effect the realization of happiness in connection with virtue.
The "moral argument," thus, is that immortality, if valid and binding as it
requires God and immortality to make its imperatives rational
and its rewards possible.

JAMES H. HYSLOP.

MORAL EDUCATION LEAGUE.—Following on
the rise of the Ethical Movement (q.v.) in
England, a number of persons interested in the
training of men and women for the express
purpose of imparting moral instruction on an ethical basis
pure and simple, and in such a manner as to meet
the needs of children drawn from all denominations,
the chief issue of Ethical Instruction was the
opportunity of an approaching election of the
London School Board to invite a wide variety of
society to send delegates to a conference.

In July 1897 the delegates met under the presidency
of Frederick Harrison, Bishop of London, and
the proceedings of which the leading statements were as follows:

1. "That there is urgent need of introducing systematic
moral instruction without theological colouring into the Board
schools in place of the present religious teachings."

2. "That this moral instruction should be made the central,
culminating and converging point of the whole system of ele-
mentary education, giving unity and organic connection to all
the other lines of teaching, and to all the general discipline of the
school life."

A direct result of this conference was the estab-
ishment of the Moral Instruction League at a
well-attended meeting in St. Martin's Town Hall
on 7th December 1897, and annual meetings have
been regularly held and reports issued since
January 1898. The original object, 'to substitute
systematic non-theological moral instruction for
the present religious teaching in the school,'
was changed, in 1901, to the purely constructive policy
'to introduce systematic non-theological moral
instruction into all schools.' On the same
principle, the object was, in 1909, relieved of the
phrase 'non-theological,' and modified into
'to urge the introduction of systematic moral
and civic instruction into all schools, and to make
the formation of character the chief aim in education."

At the same time the title of the society was altered to the
Moral Education League. The League, however, definitely
affirms that it 'works on a non-theological basis,' and both its consid-
able output of literature and practice during
the seventeen years of its history (1898-1915) have
obviously exhibited its detachment from all forms of
sectarian and denominational principles. Its
supporters in the earlier stages made attempts,
with some success, to induce parents to take ad-
avantage of the Conscience Classes of the Education
Act of 1870, withdraw their children from religious
instruction, and apply for special moral lessons.
These efforts ceased as the League became absorbed in its
scheme for building up a sound method of civic
teaching, and for illustrating that method by lessons publicly
under the direction of a Moral Instruction Circular.
The scheme was nominally conducted by the Union of Ethical
Societies, but naturally proved very useful to the
League as a means of propaganda, and it was
maintained for several years. The League's
views by meetings, in the press, and among Education Committees and
Members of Parliament gradually leavened public
opinion. In 1904 the Government Education
Council appeared with a preface in which character-training
was emphasized; in 1905 the official volume of
Suggestions for the Consideration of Teachers and
Others concerned in the Work of Public Elementary
Schools was published under the title of the
character; and in 1906 the Code, issued by August-
us Birrell, directed local authorities to devote
'greater and more systematic attention' to the
subject, though the choice of the words 'inciden-
tial' and 'natural' was left open. In 1909 a debate
on moral instruction, led by G. P. Gooch and
William Collins, took place in the House of Commons, and the young League representatives waited upon the Minister of
Education (W. E. H. Longman) in May of the same
year. Since that date the League has been
quiescent in the political field, and has mainly
MORAL LAW

devoted its energies to influencing the opinion of educators and the general public. A return issued by the League in 1908 showed that, of the 327 local education authorities in England and Wales over 100 had taken definite action in emphasizing moral instruction in their schools, in some cases by setting apart a lesson in the secular time-table, but usually by incorporating special moral elements in the religious course; and twenty authorities had adopted the Belsham plan laid up by the League. Besides this syllabus, which supplies a detailed series of notes for the seven standards, the literature of the League includes a number of text-books by W. A. Chesterton, Baldwin, Waldegrave, Rolston, Reid, Wicksteed, and F. J. Gould, numerous pamphlets, a Quarterly (beginning April 1908), and a volume designed for use in India (Youth's Noble Path, 1911). The education authorities in Bombay, Ceylon, and Mysore have evinced practical interest in the methods of the League; and significant sympathy has been shown by H. H. the Gaekwar of Baroda, and many other Indians as well as Anglo-Indians. Each annual report testifies to a spirit of inquiry aroused in various colonies and foreign countries. A remarkable testimony to this spirit was afforded in 1907, when a special committee of the Punjab Education Department was appointed by the Government to inquire into the system of moral instruction and examiners in training in schools examined witnesses and collected papers, its report being published in two volumes in 1908 (vol. i. 'United Kingdom,' vol. ii. 'Foreign and Colonial'). The inquiry was carried on independently; but several members of the League sat on the Committee and contributed to the volumes just named. A still more striking reinforcement of the League's endeavours appeared in 1906 in the shape of the first International Moral Education Congress, held in London under the secretaryship of G. Spiller. A similar congress was held at The Hague in 1912.

F. J. GOUId.

MORAL LAW.—The concept of law is one of the two concepts which may be taken as fundamental in an ethical system. According as we start from the idea of a good to be realized or of law to be obeyed, we have a teleological or a jural theory of ethics. The former of these was the characteristic type of Greek theories; the latter became predominant in Christian times. Under the stress of human ignorance, as fundamentally a matter of self-expression or self-realization, and its laws are regarded as rules for the attainment of a good which every man naturally seeks. The Christian idea of God was able to maintain his paradoxical position that no man is willingly vicious and that all vice is ignorance. Such a position is essentially a naturalistic one, implying a naivety in human nature which needs only enlightenment to realize its natural good. Moral conduct is the rational pursuit of happiness.

In a jural system of ethics, on the other hand, human nature is conceived as divided against itself and therefore in natural opposition to the good. Morality is not a harmonious development of natural powers guided by the idea of happiness, but a right view of natural life as an authoritative law. It is not the natural value or the pleasure of an act that renders it moral, but its value as commanded by the law. It is not commanded because it is good, but it is good because commanded.

It is evident, therefore, from this distinction of starting-points and attitudes that the term 'moral law' is not to be regarded as having practical efficacy in conduct. The idea is of an order which is to be imposed upon human nature and, accordingly, to be accepted by the rational will. One must, therefore, distinguish between such an imperative, which does not rest upon any natural desire for happiness, and a moral rule or law in the teleological sense of the term. The moral laws, in the teleological view, are not imperative, but counsels of prudence, pointing out the best ways for the attainment of happiness. Their practical efficacy rests upon a natural desire for satisfaction, and hence, in their hypothetical character, they have more the nature of conditions or uniformities in the sense of the term 'law.' They are rules of applied psychology. Although such rules are often spoken of as laws, yet, lacking the element of imperativeness, they are perhaps better not designated by that term.

Historically, the conception of morality as law is an early one, primitive morality consisting in obedience to tribal custom regarded as ultimately imperative for the individual. When ethical reflexion awakes, however, with its scepticism and questioning of authority, the natural view of morality is the teleological one, and the concept of moral law gives way to that of good. Experience and a deepening of the moral and religious consciousness, such as occurred in the Hellenistic age and in early Christian times, revived the dualistic idea of morality, and we have the Christian moral theories with their doctrine of subordination and obligation. While these were at first theological in character, in modern philosophy we find the idea of law maintained also upon a natural basis.

Considered with reference to the nature of moral law and its authority, three types of system may be distinguished: (1) teleological, (2) natural, and (3) rational.

1. Teleological. — In the teleological systems moral law is regarded as a rule of conduct which has its ground in the natural or will of God and not in the nature of man or in the consequences involved in obedience or disobedience to the law. The rule may be for the good of man, but it is for his good because it is the divine will, and not the divine will because it is for his good. 'Man's chief end is to glorify God and enjoy him forever,' God is the beginning and the end of the moral world, man but an incident in the creation. Sometimes it is the will, sometimes it is the intellect, that sets the standard, but in all cases systems of this type are theoretically almost identical. To follow the various forms of scholastic theory, so far as they succeed in really breaking away from their classical originals, as well as the chief systems of Protestant morality, is to seek Socrates.

The serious difficulty in theological systems has always been the question of the authority of the divine law and its hold over the individual. Emphasis upon the divine has tended by contrast to raise new centres of interest in the human, and men have always refused to remain satisfied with the idea of a law whose basis is outside themselves. The significant element has therefore been found either in the consequences of the law for man, in which case we have a utilitarian principle, or in the human nature itself, under which hypothesis we have a natural basis for morals.

2. Natural.—Natural laws or basis for morals may therefore be described as an order of human nature, known to be such by the unaided reason of man, and recognized as binding without reference to the desires or pleasures and pains of the sentient life. Man knows himself as properly of a certain nature, and cannot reasonably depart from the rules involved in its realization. These rules are not imposed from without, but the external law of his own nature and binding only as such. To be moral is to be truly a man, and to be truly a man is to be truly a rational animal. The norms of reason are the moral laws. This type of theory

VOL. VIII.—53
was prevalent in the earliest period of modern ethics, and represented the attempt to place morals upon a rational basis. The general idea takes various forms as it is expressed in the Stoic formulæ of Grotius and the Neo-Platonic doctrines of the Cambridge Platonists and their like. While the

istic in their philosophical implications and foundations, these systems agree in their desire to free

morals from theological authority and to found them upon rational, i.e. a given

In Kant, the principle of morals is based upon a transcendental basis. Yet in so doing they tend to lose their juridical character and revert to the teleological type of

their Greek originals. The dictates of reason which reveal these moral or natural laws are indeed authoritative, but their validity rests upon the value of the good end or ideal which they express. Moral law, when rationalized, ceases to be supreme, whence it was very easy for the transition to be made from these Platonicizing systems to the early forms of English utilitarianism. Indeed, in spite of their legal terminology, it is hardly accurate to include them at all under the juridical type; they are the natural compromises of the transitional period.

3. Rational.—The rational interpretation of moral law finds its clearest expositor in Kant. It is not enough to state that the rational, i.e. English theory of conscience half a century earlier, but even in his conception the supremacy of conscience does not involve independence of consequences; it is a principle to decide between the rival interests of self-love and something better, not to dictate a law irrespective of either. It was Kant's merit, as he conceived it, to separate out the pure principle of a moral law and present it free from any admixture of that from which it is drawn if it is a common rationalization of consequences. To be moral is not to seek to satisfy a desire for anything, however good, but to obey a dictate of reason determined by nothing outside its own rationality. This is thus a moral imperative of a being not naturally inclined to obedience. The motive to obedience is respect for the law itself without the necessity we feel in our sense of moral obligation. The law, as grounded neither in the nature of God nor in its consequences for man, is thus absolute and the expression of a free reason which commands of itself alone, or is autonomous—

to use a term from the new form. Thus, there is such a categorical imperative of the only fact given us by pure reason, and that, if there are free beings, they must govern themselves by such laws is evident; but how these free beings to all, and how we assume can be subject to such absolute dictates of reason—these are matters involved in the mysteries of personality. The form of such a law, as independent of consequences, must be

abstract. Be rational, or 'act from a maxim fit for universal law,' is the formula. It is thus essentially negative—a critical test rather than an informing principle. No act is to be done whose maxim is not capable of universalization, but no principle is given us, apart from experience, by which to determine any positive control for the will.

In illustration of this rational concept of moral law, Kant's theory of motives indicates most adequately the juridical concept of morality in general, the essence of which, as in Kant's system, is the privacy and absoluteness of law. In the theological forms the law tends to become heteronomous and foreign, and hence immoral, while in the natural systems it tends to subordinate itself to the concept of good and thus lose its juridical character. In Kant's system alone is it at once a law and absolute.

NORMAN WILDE.

MORAL OBLIGATION.—The word 'obligation' comes from Lat. *obligare,* and implies that we are bound to some rule or norm. While legal obligation is based upon a chain of authorities, some external coercion, a sense of the personality being bound by that which may have no external authority to enforce it, and which, indeed, may be but very imperfectly formulated. In its act, it is a voice of humanity to a universal human experience of a sense of this obligation or 'oughtness.' Even the most primitive speech reveals the sense of an inner compulsion, and an inner voice that says 'I must.' In its actual history, however, this inner compulsion has rarely been quite separated from the sense of some external coercion. We find it first expressed in a series of more or less definite limitations. Its earlier chapters are written in a series of commandments, saying, 'Thou shalt not,' and this primitive morality is based upon customary and largely exter

nal usage; it is law. It is, however, in an increasingly elaborate system of 'tabas,' which form a link between the external and internal authorities. The realization of an internal authority as compelling as any external coercion is a relatively modern thing, and in theory what practical purpose early made definite, namely, that to the extent that coercion becomes foreign to the agent, the to that extent it ceases to be the agent's action. Moreover, older moral reflection failed to draw any sharp line between the sense of moral obligation, as a category of the practical understanding, and the voice of the rule or norm to which the moral agent feels himself bound.

1. Uncritical religious intuitionism ascribed both the sense of moral obligation and the contents of the ethical code to an innate sense, and regarded both as a divine implanting in the human soul. Thus to both was ascribed a certain absolute and fixed character that often ended in an unreal and static moralism of fixed laws and philosophical history and reflection have revealed the fact that all codes are, in part at least, subject to change according as social and economic conditions change. And, as it became clearer and clearer, the question naturally arose whether the whole sense of moral obligation was not equally empirical and derivative of any normative or permanent character. Men began to seek its origins in the ebb and flow of human tradition. Thus arose the question of the seat of this inner voice and the historic genesis of conscience.

2. Greek intellectualism was prone to seek the origin of this sense of obligation in the rational process. Plato represents Socrates as identifying all moral obligation with rational insight, and he himself taught that morality recognized the given heavenly types of norms and philosophical history and intuitionism in the eternal ideas of the good. And, though Aristotle parted company at this point with Plato, and saw the social and empirical character of the ethical norms, yet on the whole Greek intellectualism never succeeded in keeping clearly apart these two elements in every ethical situation—the code of morals to which a moral agent is bound and the inner compulsion by which he is bound. The Greeks thus swung between an uncritical intuitionism and an equally uncritical empirical rationalism. It may now be taken for granted that, though the discursive reason is and always must be concerned

MORAL OBLIGATION

in every ethical situation, and is more particularly interested. In the critical group this code of ethics, nevertheless it is vain to seek the origin of the sense of moral obligation in the rational process alone. Nor can we successfully re-state the doctrine clear rational insight into consequences of any kind.

3. Critical rationalism began with the work of Hobbes, Locke, and Hume. Locke had little difficulty in showing how untenable was the Aristotelian intuition which sought for inherent codings of morals. But both Hume and Hutcheson leave unanalyzed a 'moral sense' as something ultimate. This moral sense Adam Smith, in his brilliant ethical treatise, sought to resolve into sympathy, or at least to trace its origin to sympathy as a natural attribute of man. It was distinctly on the basis of this critical rationalism that Bentham and the two Mills made their famous analysis of the sense of moral obligation in terms of utility, and more especially of social utility. So far as this enterprise rationalism dealt with the codes of morals found in human history, it was fruitful and stimulating in a high degree. At the same time, it became increasingly evident that empirical utilitarianism could build no bridge from the socially useful to the sense of personal responsibility to be socially useful. John Stuart Mill conceived an intuitive capacity for estimating values as higher and lower, and thus also a capacity for the intuitive recognition of moral values as higher or lower. Conceding critical rationalism as an element of rational utilitarianism realized that Bentham's system had gone into bankruptcy.

4. Biological evolution, however, infused new life into the discussion as to whether the origin of the sense of moral obligation might not be found in the socially useful. It was suggested by Darwin himself that the conflict of instincts, and the survival of groups obeying the instincts that made for group-preservation, would in a large process of development link the socially useful with the morally right, and this line of inquiry has been followed up by Leslie Stephen, Alexander Sutherland, E. Westermarck, L. F. Hobbse, and others. The exceedingly useful light that this line of research has thrown upon the gradual development of social codes of conduct has led to confusion of the two forces involved. It may be rashly conceded that the socially useful has determined in a measure, perhaps we may say in large measure, what men consider morally right, but the origin of the category 'moral obligation' remains unexplained. Evolutionary analysis has not yet succeeded in building a bridge between the socially useful and the sense of moral obligation to the group. Somewhere at some time such a sense must appear in unmodified life as a variation, and this variation having been once assumed, law and morals link themselves with group purpose, as von Hering aboundsantly shows (Der Zweck im Recht, esp. Vol. I, ch. vi.), but the biological analogy has been distinctly overworked, and it is becoming increasingly evident that evolutionary philosophy must assume variations and does not explain them. Thus on the ethical field origins are no more explained than on the biological, and the question of a moral obligation cannot so far be successfully analyzed into unmodified elements. Moreover, even in detail the sense of individual moral obligation presents many difficulties in connexion with the socially useful, for historically it is easy to show that the sense of moral obligation has time and again protected courses of conduct patently socially detrimental.

The twofold task of ethical inquiry is, in many different phases reasserting itself, and, especially on the ethical field, there are many attempts to re-state more satisfactorily the position of Kant and Locke. There is some return to Jacobi and Fries, and the philosophers of Wundt, Eucken, Eisler, James, and Sergison are suggesting new formulations for the sense of moral obligation as a category of the practical reason incapable of further analysis. In the Einstein empty concept, it is true, in this form whose content is given in empirical experience and is subject to the laws of evolutionary process and progress, among which laws the socially useful is one of the most important, factors in the psychological point of view Wundt and James, as well as Eisler and others, assume the capacity for moral distinction and the sense of moral obligation, without attempting to analyze the category further, while realizing that the content of moral appication is a subject for scientific examination, and has its own evolutionary history. From this point of view the feeling of moral obligation arises as a variation, and maintains itself by its social usefulness.

Sergison has as yet given no development of his philosophy along ethical lines, but the revival of a critical intuitionism has found support in his main contention, and followers of Fries and Jacobi see in the sense of moral obligation the evidence of a capacity for reaching beyond the phenomenal, and link this with a re-statement of the Kantian argument for God's existence. And, according to this school, the fundamental significance of the sense of moral obligation is the compelling power of the purposeful character of life. The unity of our mental and spiritual life demands that moral judgments be not isolated in the form of critical rationalization may be beyond our power. However divergent the empirical codes of social behaviour may be, the existence of a moral obligation is an element everywhere. The socially useful process itself is involved in a defence of the inherent validity of moral obligation.

5. Conclusion.—Moral obligation may then be said to so far defy any further analysis of its nature and origin as are all other origins and variations. It is a category of the practical reason, and is in so far super-rational, but the contents of the moral judgment are subject to the rational process, as in the sphere of the phenomenal. Thus the total ethical complex reveals rational, sympathetic, endemonic, and hedonistic elements. But into no one of these can the sense of moral obligation be successfully resolved. Moreover, this sense of inner compulsion, covering as it does fields of action which no external coercion could regulate, is everywhere becoming the regulative principle, by which human beings replace in the moral a natural outward law, and giving the sense of new freedom, because our obligation is the categorical imperative of the informed conscience, and has its seat within, and is not based upon, outward law with its concomitant of external coercion.

THOMAS C. HALL.
MORAL SENSE.—The term 'moral sense' is practically equivalent to 'conscience,' and shares the field of ethics with such principles as rectitude and duty, happiness and social health. In the form of συνείδησις, the term 'conscience' appears as early as Periander and Bism (Stoebes, p. 192, 219, 221), and for the moral sense, Epicurus uses the synonym νοησις (bk. iii. ch. xxiii.), while the disapproval of conscientia is referred to by Cicero (Laws, i. 14). Upon the basis of a natural moral sense, St. Paul speaks of the conscience. Those who performed by nature (φύσις) the works of the law, being guided by conscience (συνείδησις, Ro 2). The appreciation of an inner moral sense distinct from external commandment seems to have arisen in the 17th century. In this sense, conscience, in Antigone, where the heroine appeals to a higher principle of action, while she repudiates the established law; the Sophists distinction between φιλος and φιλαρχος further marks off the internal sanction of conduct from all forms of external statutes. However important the principle of a moral sense may appear to be, it cannot be denied that the most profound moral systems have been elaborated in independence of it. Socrates based Greek ethics upon the general principle of knowledge, whence Plato and Aristotle, Stoic and Epicurean, perfected the ancient ethical ideal, leaving for the followers of conscience to the modern moralists. The meagre development of ethical theory in medieval times failed to develop the notion of a natural moral sense; it is in modern systems of ethics that the hypothesis of the moral sense is to be found; even here such ethical philosophies as those of Kant and Spinoza were perfected without appealing to a special sense of morality.

When modern ethics began with Hobbes, it was the opposition to relativism and egoism that led R. Cumberland (de Legibus Naturae, London, 1672) to postulate conscience and benevolence as the true moral sentiments, although it was the latter principle that received chief emphasis. As a deist, Shaftesbury insisted upon a 'natural sense of right and wrong' (Inquiry concerning Virtue, London, 1699, bk. i. pt. iii. 2), which he identified with conscience, and thus spoke of 'religious conscience' and a 'dispelling consciousness' (bk. ii. pt. ii. 1). With F. Hutcheson the moral sense was discussed more aesthetically than ethically in the form of a dissected appeal for universal humanity, whereupon he inquires, 'If there is no moral sense ... if all approbation be from the interest of the approver, What's He candies, or we to Him?' (Inquiry concerning Moral Good and Evil, London, 1725, sect. i. 5).

J. Butler was the first to subject the moral sense to exact psychological analysis, whence he regards conscience as the 'principle in man by which he approves or disapproves his heart, temper, and actions' (Sermons upon Human Nature, London, 1726, serm. i. (Works, ed. J. H. Bernard, London, 1900, i. 31)). This inward sense of approval and disapproval is further regarded as a principle of 'reflexion' whose essence is that of 'authority' (serm. ii.). Butler tends to complicate the problem when he asserts that the dictate of conscience is ever in accordance with self-love, while the supreme sanction of the moral sense is found in the principle of harmony with nature.

Among the ethical idealists of the 18th cent., Richard Price and Kant opposed the notion of a moral sense as such, and sought in reason the ultimate moral authority. In his Review of the Principles of Conscience (The Philosophical Repository, London, 1758), Price denies the validity of Hutcheson's 'moral sense,' and appeals to the 'understanding' as the ground of ethical distinction, although Price's treatment of the understanding makes it possible for him to depart from mere rationalism and to concede that feeling will help them out, even in what concerns general laws (Metaphysics of Morals, tr. T. K. Abbott, London, 1889, p. 61).

In its treatment of the moral sense, then, the Enlightenment (q.v.) insisted upon something even more rationalistic than conscience.

The tendency of the 17th and 18th centuries was to regard the moral sense as something rational, the tendency of the 19th and 20th centuries has been to reduce the principle in question to the social. In the middle of the 19th cent., Adam Smith inaugurated the career of social ethics when he sought the source of moral sentiment in sympathy. The first to raise the question concerning the origin of moral sense, Smith had no hesitation in founding the ideas of propriety, merit, and duty upon the instinct of natural sympathy (Theory of Moral Sentiments, London, 1759). A century later Darwin connected the moral sense with biological, and thus made the moral sense dependent upon the predominance of the social tendency in man. To 'sociality' Darwin adds the principle of 'reflection,' without which the social could not have become possible. Kant himself was aware that to whom Darwin pays due tribute, have not been wholly lost to view (Descent of Man, London, 1871, ch. iii.). Equally significant with the departure from the rationalist is the change from the individualist to the social; for, where Butler identified conscience and reasonable self-love, Darwin united conscience with the non-egoistic in human nature.

Where the moral individualism of the 18th cent. has practically succumbed before the advance of social ethics, there has arisen an aesthetic individualism which, while not allying itself with the moral-sense theory, has not failed to make vigorous warfare upon the social conception of life. Beginning with the romanticism of Friedrich Schlegel and the realism of H. B. Stendhal, and advancing with the Decadence of C. P. Baudelaire, this anti-social view has come to a climax in Nietzsche, who stigmatizes the conjunctions of the social moral sense as so much 'bad conscience,' from whose terraces he would emancipate mankind (A Genealogy of Morals, tr. W. A. Hauser, London, 1885, vol. ii. bk. ii. ch. vii.). In the same manner Ibsen speaks of the modern man as one who, suffering from 'sickly conscience,' stands in need of a 'philosophical conscience' (The Master Builder, tr. E. Gosse and W. Archer, London, 1893, act ii.), while H. Sade riding, with more direct reference to social ethics as such, speaks derisively of the 'conscience of larceny' and 'assassins in Theather' (Wharton, London, 1903, act iv.). Similar expressions of anti-social immoralism may be found in Anatole France, August Strindberg, and Bernard...
MORAVIANS.—1. History.—The Moravian Church, or the Units Fratrum, belongs to the historic Churches of Christendom. For more than four and a half centuries it has never wavered in its claim to be a part of the Catholic Church, possessing the historic episcopate and the three orders of the ministry, administrating the sacraments and holding to apostolic practice, laying special emphasis on the importance of Christian unity, the cultivation of personal religion, and the necessity of personal service.

Whatever obscurity surrounds certain points in its history, there is nothing doubtful as to its origin. It dates from the year 1457; Bohemia was the land of its birth; and its more spiritually-minded followers of John Hus were its first members. Hus, the gifted rector of the University of Prague, an earnest reformer and eloquent preacher, owed much of his religious enlightenment to the writings of Wyelit, introduced into Bohemia by the wife of Richard II., a princess of that country. After his martyrdom at Constance in 1415 the greater part of his followers took up the sword in defence of their religious liberties. Some were pacified by concessions, such as their partaking of the cup as well as of the bread of the Holy Supper; but others, whose convictions went deeper, the Puritans of their day, withdrew from political life, retired to a remote corner of the country, and settled down in the Barony of Lititz. Here they formed themselves into a religious community, known as the Lititz Brethren, in which matter and immoralities of the early Christian Church were revoked, under the leadership of duly elected elders. At the Synod of Liotta in 1467 they further proceeded to elect their own ministers, and for these they obtained ordination from the Waldenses (q.v.), whose bishop, Stephen, consecrated Michael Bradacius as the first bishop of the Units. The episcopate was given and received in the conviction of its apostolic origin, coming from the Eastern, not the Western, Church, transmitted possibly through the so-called sects, such as the Enchites, the Paulicians, the Cathari, etc. The validity of these orders was recognized by the ecclesiastical authorities of the Units; and, as the step taken involved complete ecclesiastical separation from Rome, it resulted in fierce persecution, despite which, however, the membership increased, the congregations multiplied, and the Church’s influence spread far and wide, not merely in Bohemia, but beyond its borders also. The name adopted was Jednota Bratrská, the Latin rendering of which, ‘Unita Fratrum,’ is familiar to the world; hence the more popular name, ‘Teutonic Order.’

In the belief that the days of the Units were numbered Comenius drew up a remarkable document in which he says:

*As in such cases it is customary to make a Will, we hereby bequest to our enemies the things of which they can dispossess us; but to you, our friends (of the Church of England) we leave ouritself, the Church of the Brethren. It may be God’s will to revive her in our country for evermore. You ought to love her even in her death, because in her life she has given you an example of the Church of the first two centuries’ (Ratio Disciplinae, Amsterdam, 1600, Dedication).

He also secured the episcopal succession, apart from the Polish branch in which it still continued, by having his son-in-law, Peter Jablonsky, conse-
crated as bishop by Bishop Bythner at Milenezy in 1716.

With the death of Comenius in 1672 the first part of the history of the Unitas ends. The second part opens at Herrnhut, in Saxony, where in 1722 a company of fugitive Bohemian valleys, in which isolated families of the ancient Church had still preserved the faith of their fathers, found a refuge on the estate of a young nobleman, Count Nicolas Ludwig von Zinzendorf. The companionship of David Nitschman from Bohemia and in association with a number of German Pietists they formed themselves into a society similar to those which then existed within the Lutheran Church. But this did not satisfy the descendants of the Unitas; they insisted that they were not Lutherans, they belonged to a much older Church; and, being now in the possession of a certain amount of religious liberty, they desired its re-establishment. To this Zinzendorf was at first opposed, still from a chance copy of the writings of Comenius he learned what the history of the Unitas had been, how glorious its past, how it evangelized its doctrine, how strict its discipline, how firm its faith and steadfastness under suffering. Almost unconsciously he found himself being led on to devote his life, his means, and his talents to the cause of an organized Church, and its equipment for further service. But the Reunited Church was not of Zinzendorf's creation. Its points of contact with the Unitas lie in the person of the magnificent members, in the church regulations which were again introduced, and, above all, in the orders of the ministry, which in 1735 were restored, when David Nitschman was consecrated bishop by Bishop Daniel Ernst Jablonsky, whose father had received the succession from Bythner with the written commission of Comenius.

The little community at Herrnhut rapidly increased and developed in spite of the banishment of Zinzendorf by order of the Saxon Government, on the ground of his having introduced unauthorized religious novelties and of teaching false doctrine. Its fame spread far and wide, since in it a striking union of spiritual life with good works and industrial activity was to be seen. The danger of a narrow type of Pietism (p.e.) was averted by a wonderful experience of revival and a wave of evangelizing zeal, which visited the Church in 1727, under the impulse of which it embarked on that particular work in the doing of which lay the pledge of the existence of the Church. At the beginning of the 18th cent. foreign missions were almost entirely unknown among the Reformed Churches; it was left to the Moravians to inaugurate the modern missionary movement. This dates from the year 1728, when two of the Brethren set out to evangelize the enslaved Negroes in St. Thomas, willing to become slaves themselves if that should be the only way of winning them for Christ. In the same spirit other went to the Eskimos in Greenland; others settled in S. America, and carried the gospel for the first time to the natives in the Dutch Colony of Surinam. Work was begun among the N. American Indians, to whom David Zeisberger devoted sixty-three strenuous years of life. In S. Africa these early missionaries were to be found teaching the Hottentots and Khoikhois of its continued existence. At the beginning of the 18th cent. foreign missions were almost entirely unknown among the Reformed Churches; it was left to the Moravians to inaugurate the modern missionary movement. This dates from the year 1728, when two of the Brethren set out to evangelize the enslaved Negroes in St. Thomas, willing to become slaves themselves if that should be the only way of winning them for Christ. In the same spirit others went to the Eskimos in Greenland; others settled in S. America, and carried the gospel for the first time to the natives in the Dutch Colony of Surinam. Work was begun among the N. American Indians, to whom David Zeisberger devoted sixty-three strenuous years of life. In S. Africa these early missionaries were to be found teaching the Hottentots and Khoikhois.

The death of Zinzendorf in 1760 had important results. It involved a severe financial strain which at one time threatened the existence of the Church, but it also led to the framing of a distinctive system of church government, the settlement of its constitution, the definition of its doctrine, and the organization of its undertakings. The administration of the Church was divided between two centres, with a council of elders at the founding of that little Saxon village which its inhabitants numbered only some 600. They formed the first Protestant Church that recognized and attempted to fulfill the duty of world evangelization; and in this effort they stood alone for sixty years. A characteristic of the Renewed Church still remains its outstanding distinction; and that is why, alone among all others, it possesses no separate mission. The Moravian Church is the society, and within it the principle prevails that 'to be a Moravian and to further missions are identical.' From Herrnhut strong religious influences began to spread at home as well as abroad among the students in the German universities, the landowners in the Baltic provinces, the merchants of Amsterdam, and the army in Berlin. Zinzendorf and his Brethren were in every land, as a result of their evangelistic work, societies or congregations, known as 'settlements,' sprang up in Denmark, Holland, Russia, and Switzerland, and in several of the German principalities. Each became, like Herrnhut, an industrial as well as a religious centre, for the apostolic rule of being "diligent in business" as well as 'servent in spirit' was insisted on. It was largely by means of these industrial undertakings, supplemented by the unstinted generosity of Zinzendorf, that the cost of the mission work was met—not to mention the fact that most of the missionaries provided for their own maintenance. The first official visit was paid to England in 1731; and here it was that Peter Böhler three years later met with John Wesley and became the means of his spiritual enlightenment. Here also the name 'Moravian' came into use; given originally as a convenient nickname (like 'Methodist'), it has now gained a kind of permanence, though it cannot be regarded as satisfactory, since it emphasizes only one point, and that a comparatively unimportant one, in the long history of the Unitas.

The Moravian influence was unquestionably one of the chief factors in the Evangelical Revival; for a time it equaled that of the Methodists. Moravian evangelists preached throughout the length and breadth of the United Kingdom, leaving their mark especially in Yorkshire and the Midlands; and, through the preaching of John Cennick, to a yet greater degree in Ireland and the west of England.

In America also the Church took root in the middle of the 18th cent. and set up two centres, Bethlehem in Pennsylvania, and Salem in N. Carolina; and from each of these two places it spread rapidly. Thus the Church came to consist again of branches of existence. At the beginning of the different nationalities—German, English, and American. These form the home base, and, though widely separated, they are organically one. Each province is independent as regards the conduct of its own affairs, elects its own bishops, appoints its own administrative boards, and legislates for itself through its own synods. The main outward bond of union between the parts (and the seat of final authority) is the so-called General Synod, made up of delegates from all the provinces. This bond may seem a very slight one, yet through these many years the spirit of brotherhood in Christ has been strong enough to prevent any kind of schism in the body.
pions of orthodox Evangelicalism. Here also their influence was as far-reaching as in England, though in a different way. In this case it was due largely to the writings and the personality of Bishop August Gottlieb Spangenberg, originally a professor at Halle. It made itself felt in the universities; Schleiermacher learned his religion and gained his conception of the historic Christ at a Moravian college; and Kant, the philosopher of Königsberg, referred to it in his writing on religion, to the little Moravian church over the way; that', he said, 'is the place in which to find peace.'

2. Characteristics.—(a) Diaspora.—A unique feature of the Church's work on the Continent was, and still is, the so-called Diaspora, an extensive agency for promoting spiritual life and fellowship within the National (Protestant) Churches. It is carried on in many parts of Germany, in Denmark, Norway, Sweden, Switzerland, and Russia; and, according to synodal resolution, no worker in it is allowed to seek converts for the Moravian Church from among the members of other communions. The effort is in the interests of the Kingdom of God as a whole, supplementary to the existing religious agencies, and is designed to strengthen and promote the unity of believers. This accounts to a large extent for the growth of the Moravians by those who know the disinterested nature of their labours, and the catholicity of their spirit. Had there been more denominationalism, not many would have built outside that would have resulted, but it would have meant the loss of that kindliness of mutual feeling which has marked the Church's relationship to other Christian communions.

(b) Education.—Another Moravian characteristic is the educational system, officially recognized and regarded as belonging to the Church's work and responsibility. Love of education, and enthusiasm for it, formed a part of the inheritance which had come down from the days of the Unitas. It was held that, just as the Church had its mission to the heathen, who had never heard the gospel, so had it also a mission to the young to ground and train them in its divine precepts. To carry this out was a priceless privilege ordained of God, to be undertaken with prayer, and to be done for Him. In this spirit numerous boarding-schools were opened in s Germany, Holland, England, Switzerland, and America; many of them have become famous, not only on account of the education given, but also by reason of the pupils who have gone forth from them to England, Germany, Switzerland, the U.S., and elsewhere, and have all been a blessing to themselves and the world.

(c) Missionary zeal.—The third, and the most characteristic, feature of Moravianism is its missionary zeal. Never since the beginning of the work in 1722 has this waned; the Church has sent forth its sons and daughters in an unbroken stream, in some cases through five generations of the same family. Most of its congregations have their representatives in the missions, and through these living channels they with the foreign field is maintained. The Church's energies flow largely along this channel, in support of what represents, and is felt to be, its God-appointed work in the present as much as in the past, a glory that has not faded. Hence the surprisingly large number of Moravian missionaries in proportion to the membership; and also the relatively high standard of pupils in the First and Foreign Protestant Churches at large the proportion of missionaries to members is about 1 to 5000, among the Moravians it is 1 to 60. These are the words of J. R. Mott on the subject:

*If members of the Churches in Great Britain and America gave in like proportion (as the Moravians), then the missionary contributions would aggregate over £1,000,000, or nearly £3,000,000 instead of some £3,500,000. And if they went out as Missionaries in corresponding numbers, we should have a force of nearly 60,000 foreign workers, while the present number of Missionaries estimated as necessary to achieve the evangelization of the World is only 1.4.*

The work abroad has to a great extent been among primitive races, some of them now approaching extinction, with others in countries which are peculiarly unassuming and uninviting, and that have been neglected by every one else. These have been taken up by the Moravians in accordance with Zinzendorf's early desire and determination, when, as a school-boy, he established among his companions the so-called 'Order of the Mustard Seed,' for the purpose of seeking the conversion of the heathen, having in mind 'especially such as others would not trouble themselves about.' Thus the Moravian Brethren were the pioneers in work among the lepers, first in the Cape Colony, where as early as 1818 a missionary and his wife cut themselves off from their fellow-Europeans, and settled down in a lonely valley among the poor outcasts, in order to care for their bodies as well as their souls. The result was remarkable, for within six years over two hundred were lepers received and baptized. Afterwards the work was continued on Robben Island, a sandy stretch lying off Cape Town; and still later a spacious hospital has been established near Robben Island. Its aim is to gather all the lepers of Palestine, and to alleviate the sufferings caused by this dread disease.

Continuous expansion has marked the missionary enterprise of the Church, till now it is to be found in every continent. The fields are as follows: Labrador, Alaska, California, the W. Indies (Jamaica, St. Thomas, St. John, St. Croix, Antigua, St. Kitts, Barbadoes, Tobago, Trinidad, San Domingo), the Mosquito Coast, Nicaragua, Demerara (British Guiana), Surinam (Dutch Guiana), S. Africa, East and West, Nyasa and Umyamwezi (in German E. Africa), W. Himalaya, and N. Queensland—14 different countries, 343 stations, with 1508 preaching places. The workers include 367 American and American missionaries, among them doctors, educators, deaconesses, etc., 48 ordained native ministers, 459 native evangelists, 1662 native helpers; with a total of 107,570 souls in their care. The annual expense amounts to £114,000, exclusive of the Leper Home, which costs an additional £1500 per annum. Mission stations, a dozen or more, are established in the W. Indies, and S. Africa; hospitals in Labrador, Jerusalem, Surinam, and Kashmir, where Zenana work is also carried on.

The above figures, if not large in themselves, are strikingly so when compared to the size of the home Church. This consists of the continental congregations, in Germany, Austria, Switzerland, France, Denmark, Russia, Sweden, and Norway; the British provinces (England, Scotland, Ireland, and Wales); and the American provinces, North and South. The last-named have 134 congregations; in Great Britain there are 45, and on the Continent 30; in the United States 47; in the W. Indies, and S. Africa; hospitals in Labrador, Jerusalem, Surinam, and Kashmir, where Zenana work is also carried on.

3. Worship.—The worship of the Church com-
MORAVIANS

hies the liturgical element with a large measure of freedom in extemporaneous prayer—a blending of order and liberty. The British Book of Worship includes two liturgies for public service, an alternate form of prayer, a confession of faith, and的形式 for the baptism of infants and of adults, for confirmation, ordination, marriage, and burial—and combined with these is a newly-revised collection of hymns of all ages. It is the latest successor of the first publication by hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wise caution in the use of symbolism, and also to a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. At all these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special confession or profession, compiled by Luther and made up mainly of a connected sequence of Scripture passages, is recited on the great Church festivals, such as Easter, Whitsunday, etc. This latter Triennial Confession of Faith fulfil the Church faithful's marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of Christ in His perfect humanity, the 'Lamb of God' once slain, the Judge, the justiciary of the things which are in heaven and earth. The power of the Holy Spirit, 'Who proceedeth from the Father, and Whom our Lord Jesus Christ sent forth after that He went away...that He should abide with us for ever.'

4. Doctrine.—The main points of doctrine are defined and taught in the Church Book under the following heads: the doctrine of the total depravity of human nature; the doctrine of the love of God the Father; the doctrine of the real Godhead and the real humanity of Jesus Christ; the doctrine of our reconciliation unto God by justification through the sacrifice of the Cross; the witness of Scripture and of the Church to the evidence of faith; the doctrine of the fellowship of believers; the doctrine of the Second Coming of the Lord; and the doctrine of the Headship of Christ in the Church. The doctrine of the connection in essence the theological position is that of the Nicene Creed, the XXXIX Articles, the Augsburg and the Westminster Confessions; but, since no one Creed can be said to be a complete statement of the whole range of Christian dogma, liberty is allowed for difference of view in non-essentials. The Holy Scriptures are regarded as the only rule of faith and conduct, the basis of all teaching, and the final court of appeal. More stress is laid on Christian life and character than on perfect agreement of opinion. Devotion to Christ, and personal union with Him, form the foundation of the Brotherhood. The Church has kept itself free from anything approaching sectarian peculiarities of doctrine, and this because it came out from Rome on the broad ground of gospel truth and liberty, and did not separate itself from any other Evangelical Church.

5. Constitution and government.—The constitution and government of the Church, which at one time was something of national peculiarities, is now essentially democratic, as may be seen from the fact that in the General Synod, which meets every six years and controls the funds and the work of the entire body, the elected members outnumber those who have a seat in virtue of their office. The same applies to the provincial synods, and also to the authorities of the individual congregations. The principle at work in Church affairs is that of 'the government of the people, by the people, and for the people,' under the sole headship of Christ. The bishops have no administrative powers on account of their position, though, as a matter of fact, a bishop is almost invariably the president of the board of Mission or Synod of a particular province. These boards are elected by synod, the members holding office only during the inter-synodal period; they are responsible to the synod for their administrative doing. The foreign missions, as the-collectors of funds, are directed by a man standing under the management of an international mission board, on which each of the home provinces, as well as the foreign field, is represented.

This has at present its seat in Herrnhut, though it might just as well be located anywhere else. In addition there is a general directing board of the Unity, which has to see to the carrying out of the principles laid down by the General Synod in regard to constitution, doctrine, worship, orders, congregation rules, and discipline. It exercises also the functions of a court of appeal; it summons the General Synod, or, in the case of a refractory representative of the Church in its entirety.

All appointments in the ministry are made by the directing boards of the respective provinces; each congregation is entitled to suggest names for the filling of vacancies, and enjoys the right to accept or decline a call sent to him. The different provinces make their own arrangements for the training of their students, whilst in all the various colleges, the presence of at least one, the normal course includes the work necessary for a University Degree in Arts, which each student is expected to gain; then follows a three years' study of theology, during which he is subject to a rule, some sort of or other, and takes courses in teaching in the boarding-schools. Later on comes ordination, in the first instance as a deacon when acting as assistant minister; and, on being appointed to a separate charge, second ordination admits to the presbyterate. Thus the Church possesses and combines within itself many of the features which in other cases separate some of the larger religious bodies. Its orders are strictly episcopal, for the theocratic governing body is presbyterian. Its teaching is distinctly evangelical, though no formal subscription to any specific Creed is demanded, or expected, from its ministers or members. Authority of the Church is bound by no formularies; the bond of union lies not so much in a common Confession as in the exercise of mutual love as the supreme mark of discipleship. Infant-baptism and confirmation are practised; at the Holy Supper the wafer is generally used; the Church seasons are observed with very special stress on the services of Holy Week and Easter. In some of these observances there is a marked element of ritual, ballowed by the usage and tradition of past centuries; but at the same time the Church is as free from the bondage of form and ceremony as it is from all sacramentarianism.

The whole body, scattered over the world's surface, on the Continent, in Great Britain, in America, and in the 14 mission-fields, is still an organic Unity, each portion maintaining its own national characteristics, the Germans attached to their German ways, the English and Americans equally loyal to their own country's interests and customs. The Church is also now essentially brotherhood, composed of men of many races and differing opinions, all banded together, not to propagate any special system of church government, or any kind of ritual, or any particular point of
doctrines, but to evidence and promote the oneness of the kingdom of Christ, and to prove the possibility of a union, organic as well as spiritual, which rises above all barriers of nationality and opinion. The Moravian Church does not work in opposition to any other, even if it seeks to increase its membership by any system of proselytizing. Its aim is to gather into the fold of Christ those who are still outside, and then to further that growth in grace and that fruitfulness of service of which the divine task is meant for the spread of the kingdom of God among the children of men. It is above all else a missionary and a union Church.

MORBIDNESS.—The term 'morbidity' as applied to moral and religious states of mind is popular rather than scientific. It designates particularly any unduly depressed state connected with one's moral or religious status. Little effort has been made thus far to discover a scientific difference for religious and moral disease or morbidity. One author,1 essaying a moral pathology, treats largely of ordinary moral faults and classes as pathological even such habits as result from mistaken conceptions of the moral life. Here 'pathological' loses all definite meaning; as well might we class as morbids the misspelling of a word. On the other hand, neurologists and medical writers tend, on the whole, to limit moral and religious morbidity to certain phenomena of the insanities, such as the delusion that one is God or Jesus Christ, or that one has committed the unutterable sin of commit an act which is impossible to differentiate between sanity and insanity. A vast field lurks in the moral sick basin of the insane is that they are incapable, for the time being at least, of fulfilling their social functions. Thus, all the insanities are cases of moral inability and, in this sense, of moral morbidity. There is, however, a broad expanse of moral morbidity that is neither insanity, on the one hand, nor, on the other, mere delusion from a moral ideal through erroneous thinking or through the common instinctive impulses. The best example is the moral distortions frequently found among adolescents. Under the stress of the new and intellectual re-organization that is going on at this period of life, the following types of morbidity are not uncommon.

(1) Excessive or minute introspection of one's desires and impulses, often with the application of excessively severe standards to one's self. In religious communions that emphasize such experiences as conversion, regeneration, and the work of the Spirit, this introspection often consists in a search for signs of the divine presence or of divine operations within one's soul.

(2) Hypersensitiveness to moral and religious situations, a proving at all is to be heinous; only perfection is really good—this is the attitude of mind. This is what is often called 'morbid conscience.' The victim of it is likely to put them to test, and to perform overnice duties. Habitual self-condemnation or sensiorniveness towards others may also appear.

(3) A passion or even a refusal to live by the ordinary, commonplace assumptions, probabilities, and of 'rule of thumb' devices of nature practicality. Sometimes a sense of uncertainty becomes almost an obsession. The victim feels uncertain, for instance, whether he has locked the door, although he knows, in the ordinary sense of 'knowledge,' that he has done so. So, also, he may feel that he ought or ought not to do a certain thing, although he understands, in a way, that his feeling is unreasonable.

(4) Feverish or self-annihilating devotion to a person, a cause, or an ideal. Here morbidity consists partly in emotional excess, partly in the egregious self-assertion upon which the supposed sublimity of self-abolition depends.

(5) In the four types thus far named we behold a sort of psychical congestion and soreness. A fifth type displays the opposite—insensibility and indifference to function in the presence of normal stimuli. Callosity towards the pains and pleasures of others and lack of a sense of obligation is its expression. In lesser extreme cases this appears only in spots, as towards some one person, human interest, or kind of duty.

These adolescent twists illuminate the whole subject of moral and religious morbidity. For, if the five types be broadly interpreted, they will be found to cover all cases of such morbidity at whatever stage of life. Here we have over- and under-sensitiveness, excess of action and defect of it, excess and defect of introspection, over- and under-caution, and disproportion in thinking. This is not normal or healthy, yet it includes no insane delusions and no such failure of practical adjustment as puts one outside the pale of social toleration.

The causation of morbidity in the sense that now grows towards definiteness includes two factors: neural depression (or at least lack of vitality), and some incidental experience that starts an unfortunate mental habit. The fundamental facts with which we have to deal are excess, defect, and disturbance. Not infrequently morbid persons cherish a conviction that their mental processes are rational rather than emotional even though observers easily discover the lack of emotional balance. Conduct, and what passes as reason, are alike determined by some congestion or soreness, or by abnormal callousness. These emotional tendencies are primary psychical signs of neural conditions. The depression may be a hereditary or temperamental trait, an incident of a disease, or the product of an internal irritant, of a drug, or of fatigue. The reason why morbidity occurs so frequently in adolescence is that the puberal change and the consequent reorganization of habits put extraordinary demands upon the nervous system. To this cause must be added the peculiar loads in school life, economic life, and social life that our occidental customs impose upon youth. Finally, many moral perversions and difficulties connected with the firm establishment of a healthy sexual life increase the tendencies to depression. In mature life the same general principles apply. Morbidity may safely be assumed, in practically all cases, to spring partly out of nerve depression, which, in turn, may have many causes.

The last of the five adolescent types enumerated does not readily reveal its neural basis. Moral insensibility, indeed, may not seem to require any special neural basis. May it not be a matter of

1 A. E. Giles, Moral Pathology, London, 1890.
MORDVINS

more habit? Habit might, perhaps, account for it in older persons, but, whenever a child or youth exhibits it, the presumption is that strength for a full social position is lacking; let it be remembered that socialized conduct is an achievement that implies power to feel in particular ways, and to resist and organize impulses. In the games of the olden youth 'foul play' is often simply the resort of individuals who have not sufficient muscular strength or mental power to hold their own while playing the game according to the rules. In adult life the same situations that present a full of normal strength a child of normal powers will react socially unless some positive counter training has preceded. Persistent unresponsiveness to social stimuli is strongly suggestive of constitutional weakness or of incidentally depressed vitality.

But the neural basis of moral and religious states is not nearly the whole explanation of them. Neural depression is generic rather than specific; it puts consciousness into a minor key, but it does not of itself construct the melody. The particular reaction depends upon particular stimuli and upon incidental as well as permanent subjective conditions. The same neural basis may be present in a person who worries about his soul's salvation and in one who worries about his health. Further, habit plays a leading role in the whole matter; even the original action, which is so strongly induced in a period of weakness, may become fixed as a habit, and so persist even after the original neural depression has been partly or wholly removed. The relation between moral and religious morbidity and neurasthenia is often close. In both we find a general background of neural depression and a foreground of habitual ideas and practices, often highly systematized and therefore regarded as rational.

A gloomy theology or moral theory rarely, if ever, producessettled moralities in the absence of predisposing nervous weakness or depression. Healthy and nervously strong persons, if they accept such doctrines at all, usually hold them in a theoretical way for the most part, or yield to their terror only now and then when attention is specially directed to them. There is truth in the popular observation that, if men really believed in the grim theology that some of them profess, they would 'go wild.' The fact that, even in circles in which such doctrines are accepted, men pursue and enjoy the common values of life, such as family, home, property, and social recognition, is direct evidence that any settled emotional realization which the prevailing belief depends upon something more than a set of ideas. If, however, any individual in such a circle has a tendency to nervous weakness, religious instruction may easily become the decisive factor in producing morbidity of a serious kind. In the aggregate the spiritual havoc thus wrought is undoubtedly large, although the cases of it are scattered. It is most unfortunate that among those who are susceptible to such injury are many persons whose sensitiveness and fineness of organization adapt them for high tasks. It is sometimes, no doubt, the possible prophet, poet, reformer, or thinker whose energies are fruitless by reason of the depression of function.

LITERATURE.—G. Vorсhod, "Zur Religionspsychologie, Priorippen und Pathologie," Theologische Studien, Jena, 1898, pp. 257-303; this is the clearest exposition of the view that the phenomenon such as a moral phenomenon. Josiah Moses, Pathological Aspects of Religion (New York, 1894), gives an extended analysis of religious extremes of various sorts. E. D. Starbuck, The Psychology of Religion, London, 1899, shows that conversion is, in general, a normal rather than abnormal phenomenon, chiefly of adolescence (ch. xlii), but he presents numerous cases of adolescent depression by a religious excitation (ch. xvi). G. A. Coe, The Spiritual Life, New York, 1900, also discusses adolescent difficulties, particularly doubts and moral conflict. It should be noted that he is not significant for our topic. A popular discussion of depressive states of the neurasthenic type will be found in E. W. Hulse, and others, Religion and Medicine (New York, 1906). See also J. B. Bretzel, Religionshygiene (pamphlet), Halle, 1907.

GEORGE A. COE.

MORDVINS.—I. Introduction and sources.—The Mordvins form a branch of the Finno-Ugric race (cf. vol. vi. p. 222), and consist of two tribes called respectively the Erza and the Moksha. Our knowledge of their ancient religion, coming, as it does, almost exclusively from a Russian source at least, they had been converted to Christianity by the Russians, and when they could practise the rites of their earlier faith only in secret, is very scanty and defective. After the Mordvin people, as a whole, in consequence of the victory by which the Russians finally overthrow the Tatar khaneate of Kazan (1552), had come under the sway of the conquerors, measures of a more or less violent nature were taken here and there to convert them, and were continued in the 17th century. It was not, however, till about 1740-50 that they came to submit on some of the rite of Christian baptism, and the following decades witnessed the disappearance of the last vestiges of their heathenism. Yet for a long time their conversion was, in the main, a merely nominal change, and, accordingly, even in quite recent times the exploration of remote districts has yielded much valuable material for the elucidation of their ancient religion.

Our earliest information on the subject comes from an Italian traveller. G. B. Bruni visited the district now called Eastern Russia in 1446, and who gives a short account of how the victim was dealt with in the horse-sacrifice of the Moksha tribe. The notes on the religious and sacrificial practices of the Mordvins made by N. Witsen, a Dutchman, at the close of the 17th cent. are altogether negligible; nor can we gather much of value from the accounts of P. J. Stahlberg, K. Miller, J. Lepelin, J. G. Georgii, and P. S. Fallas, in the 18th century. A more useful source (in spite of errors due to misapprehension) is the Russian MS written by a land-surveyor named Miljiković in 1753, and several times printed (most recently in Tambowskaja Eparchial'nyja Vědonosť, no. 18, Petrograd, 1905, p. 815 ff.). From the middle of the 19th cent. we find in Russian newspapers and periodicals some of the fairly abundant material (in the provin.) as, in other publications, sporadic notices and descriptions of local conditions. Accounts of a more general character have been given by Meljnikov, Mainov, and Smirnov (for literature at end). Meljnikov (writing c. 1850) draws his material mainly from MS sources; but, as regards the ideas of the gods, deals with his data too freely, and adds imaginative embellishments. The same may be said of Mainov, who, some thirty years later, devoted himself to the investigation of Mordvin ethnography, and even travelled over the Mordvin district; in many points he merely follows Meljnikov. A much more valuable production is that of Smirnov, who carefully utilizes the available literature as well as a number of MS sources, and also draws upon his own observations. The following account is based not only on published sources, but also on his own collections made by the present writer among the Mordvins themselves, and the fairly abundant MS material subsequently forwarded by native Mordvins to the Foreign Missionaries (in Helsingfors), and in part from a letter based on some (in part very valuable) MSS dating from the middle of the 19th cent. and now in the keeping of the Imperial Geographical Society, or else deposited in the Asiatic Museum of the Imperial University of Saint Petersburg. The latter group of MSS had been already used in part, though unscientifically, by Meljnikov and Mainov.
2. The dead.—Life after death was regarded as a direct continuation of earthly life, the departed in their graves live and occupy themselves in much the same way as they did upon earth—hence the articles required by them were placed beside their heads in the grave. Life kith and kin are still together, so that the graveyard is the counterpart of the village; there is no realm of the dead in a universal sense. From the graveyard the human-like shades come forth to visit the living. In the summer, probably the last remains of the dead, the foremost and mightiest of whom is the first who was buried in the particular graveyard, i.e., the progenitor of the family (together with his wife), who was often still spoken of by his own name and was honoured with the title of 'ruler of the graveyard' (kalmon' kirdi). The prevailing idea seems to be that this progenitor should not belong to too remote a past; thus among certain Erzhl Mordvin in the government of Saratov, who migrated thither some 200 or 250 years ago, the earliest ancestors to whom worship is accorded are positively stated to have been the first settlers—the memory, and thus also the worship, of the earlier generations having faded away. Festivals in honour of departed individuals are celebrated during the first year after death—one immediately after the death, that is, three, six, or twelve months, or the fortieth day, after death, from which time onwards the shade of the dead becomes more closely attached to the corpse in the grave, which is called the burial-ground (bonto kiran). The form, in the former home or, it may be, in places where the living person had been accustomed to visit. At this festival the previously deceased members of the family are believed to begin to appear as minstrels, and are implored to take the newly departed into their midst.

General festivals for all departed ancestors (pokiatat bolat, or at at bolat, 'grandfathers and grandmothers' [= ancestors]), again, are celebrated at least twice a year, in spring and autumn (latterly the dates of both the individual and the general festivals were for the most part brought into accordance with those of the commemorative celebrations appointed by the Russian Church). The ancestors are invited in due form to a feast in the village, the several houses of the family-group being taken to make a sort of banquet of the living with the dead. According to a tradition from the beginning of the 17th cent., joint festivals for the dead were in an earlier period held by larger family-groups or clans also at intervals of some fifty years. Formerly, animal-sacrifices were offered at the celebrations, and the ceremonies connected with them contain features that seem to point to a still earlier practice of human sacrifice. The living approach the ancestors with prayers and gifts in all circumstances in which, as they think, they require the help of these ancestors either for their own benefit (particularly in cases of illness, which may be sent by the ancestors themselves, if angered) or in order to injure others. Moreover, at the sacrificial feasts which are held by the community in honour of the (nature-) gods, the ancestors are in some districts conjoined with them as the gods of worship, being invoked in the prayers immediately after the deities, and besought for the same earthly blessings—success in tillage and cattle-rearing, good fortune, and health. The dead, when thus present by invitation, are welcome guests, from whose benignity all good things may be expected—though at the close of the festival, it is true, they are driven away, sometimes with threats, but when by their own initiative, they are greatly feared, especially as causing disease. Peculiar ceremonies are excited by the dead who perish by accident—e.g., by drown-
the Chuvash tongue of to-day, Kerâmât, originally an Arab. word). Among the Mordvins this deity bears the title sëgnq, which is obviously the same as the Arabic-Turkish sélân. What is told of him among the Mordvins is meagre and inconsistent. Among the Moksha, according to M. R. Aldé, a highly respectable authority, Këldor is the supreme god, and the mother of all creation, and is regarded by the Moksha as 'horn and bred with the earth'—a fact which shows that the people had no idea of his human origin—it would seem, nevertheless, that his worship contains certain elements of a former native hero-cult. In the legal proceedings of the community oaths are taken in the name of Kerâmât, and it is believed that those who are guilty of an

3. Nature.—(a) Air and sky. In the Erzä tribe the deity of the air is the god who is above. We also find mention of Ski-pas and Nisk-pas or Niske, the latter of whom, while now identified by some of the Erzä with Vere-pas, was originally in all likelihood a distinct god (probably of foreign origin). In a number of ancient MSS the name Niske occurs in the form Nebi-skâ, and another name is readily a synthesis of inê, 'great,' and the first element in the divine name Ski-pas just mentioned. Ski, again, is a participle of the obsolete verb ska-na, which, when past, it signifies literally 'the generative god,' 'procreator-god,' and Niske, 'the great, procreator.' The sky-god of the Moksha is called Skaj—a name corresponding exactly to the Erzá Ski—or, with the addition of the term for 'god,' which among the Moksha is still found in the more primitive syllabic form pawas, Skabas also (Skabas and Skajbas), which accordingly corresponds in form with the Erzá Ski-pas. In the prayers he receives the designation Vârdît, 'he who is above,' or Ot'su, 'the great one' (see above), the explanation of the Erzá name Niske. The Erzá Niske or Nisk-pas has a consort named Niskâ-bas,...
tillers of the field. She seems sometimes to have been the earth's mother, or corn-mother, 'spirit, earth-goddess,' although elsewhere Mastor-pas appears as a distinct (male) deity, whom people invoked in their imprecations to bring their enemies to destruction. The Moksha and the Kuj are both called 'mother earth,' but in their official worship her place is taken by Pak'ya-ava, 'mother field,' 'field-mistress,' or Paks'ya-avediya, 'field-mistress,' 'field-hostess,' or, again, Norov-pas, 'corn-god, corn-mother,' Also designated Norov-ava, 'mother corn, corn-mother,' also designated Norov-pas, 'the god (goddess) corn,' to whom, among the Moksha, corresponds Sor-ava (or sometimes Noru-ava), 'mother corn,' Sor-ava, however, is found mainly in the magic formulae and the songs. Each tilled field had its own particular spirits. For the meadow likewise there was a special presiding spirit, called Narazatara, 'mead-mistress,' or the like; but, as far as we know, she was not the object of a distinct cult, or, at most, she was presented before the hay harvest with a few pieces of bread, accompanied by a prayer for her protection.

(c) Forest and trees. — The forest-spirit (e.g., Yorax-) also has its own — is usually designated Vir-ava, 'mother forest,' 'forest-mother,' and is now generally an evil-disposed being, whose characteristics (with the exception of her sex and her large breasts) are (in due form) the same as those of the earth-mother. Among the Lipperians, and possibly among the Russian peoples, therefore, the forest-spirit, or, more generally, the spirit of the tilled field, here, along with mother earth, we find the place of that spirit usually taken by Norov-ava, 'mother corn, corn-mother,' also designated Norov-pas, 'the god (goddess) corn,' to whom, among the Moksha, corresponds Sor-ava (or sometimes Noru-ava), 'mother corn,' Sor-ava, however, is found mainly in the magic formulae and the songs. Each tilled field had its own particular spirits. For the meadow likewise there was a special presiding spirit, called Narazatara, 'mead-mistress,' or the like; but, as far as we know, she was not the object of a distinct cult, or, at most, she was presented before the hay harvest with a few pieces of bread, accompanied by a prayer for her protection.

(d) Water. — The water-deity common to all the Mordvinian peoples is called Veda-ava, 'water-mother,' 'water-mistress.' She holds an important position in the cultus, principally as the spirit who presides over the fecundity of the earth, of women, and of cattle — though, at least latterly, less as the sender of fish, probably on account of the small importance of fishing as an industry. Each distinct body of water — river, brook, lake, fountain, well — has its special presiding spirit, who may bear a more definite name, e.g., Rav-ava, 'mother Volga,' Volga-mother, Ais-ava, 'mother fountain,' etc. In the songs we find mention also of a sea-mother (Mor-ava), probably of Russian origin; with her also associated are 'sea-mistress' (ot's'a-red, 'great water,' also 'sea-mistress' (ot's'a-red, lit. 'great water,' also 'sea-mistress'), of an older Moksha account, although our informant interprets her name as Ot'nu vedae. ..."
lives beneath a stone situated in the court; and is generally addressed, or spoken to, as a female. Among some of the Moksha we hear of a court-spirit named Koram-ot'-sun'ã, the chief of the court, while others speak of a special spirit called Kaldas-ava, 'eattleyard-mother.' These, however, are especially in the sacrificial sacrifices are offered by the individual family at stated seasons, and also on special occasions—the birth of a child, the birth of a cow's first calf, etc. At the legal trial the deities, however, are called in all cases the titled household will, for his family, according to an early Moksha account, it was the practice to warehouse the house and the dwelling-place-spirits as well as by deceased ancestors. As protectors of the cattle we also find, sometimes even at the communal sacrifices, certain saints of the Russian Church—e.g., Froilavról (a distortion of two saints' names, Flor and Lavrov), surnamed Alasán'-pas, 'horse-god,' Nastasji (Russ. Anastasia), with the epithet Reven'-pas, 'sleep-god (desds);' Miljković mentions also a 'swine-god' (Tuon'-pas), etc. Moreover, the store-pit, the bathroom, the threshing-place, etc., had each its special presiding spirit, usually designated 'mother,' or (among the Moksha) 'mistress,' 'hostess,' as, e.g., Ban'-ava, 'bathroom-mother,' or Ban'-azërava, 'bathroom-mistress,' and on certain definite occasions offerings of milk and flour were made to these spirits. Likewise the bee-garden, sometimes forming part of the house-garden, sometimes situated in the forest, had its particular spirit: Niskep-ava (Moksha), 'bee-garden-mother,' or Niske-ava (Ert-pas), 'beehive-god,' etc. Mention is made even of an alley-or lane-god (Ulv's'-pas). The village, too, had its spirit, named Vel-ava, 'village-mother,' or Vel-azërava, 'village-mistress,' or Vel'en'-pas, 'god or goddess of the village'; this spirit was worshipped at the communal sacrifices.

5. Evil spirits.—To this class belong the spirits ever-present in the house and in the open air; they are legion in various forms, including that of a fish. In the Mordvin speech they are found also as servants of the wicked earth-god Mastor-ava (see above, p. 845). The Ert'zæ believe in a distinct spirit of curses, 'the ruler of the curse,' called Ert, 'curse,' Ert-pas, 'curse-god,' 'the god curse' (also Erza), besides a householdarily figured as having a wife and a large family. Another evil spirit is Aves', or Jâves' (Moksha), Eves', Evs' (Ertz'), called also Idem-eyes' (idem, 'fierce'), etc. According to a Moksha account, this spirit and his wife produce seventy-seven children every year; every year, however, the whole family is killed by thunder except two, who in the following year beget other seventy-seven, and so on. The Ertzæ seem to regard this spirit as a wicked sorcerer, who flies in the air as a meteor. Numerous diseases are personified, and addressed as 'mother'; some of these disease-spirits, too, are thought of as married people, while others take the form of children, etc.

6. General observations on Mordvin mythology.—Among the Mordvin the personification of the deities (nature-spirits) is of a very feeble character, especially to the influence of the linguistic usage, and more particularly by that of the sacrificial prayers. Thus the 'rising and setting sun-god (god sun)' and the moon-god (god moon) have a mixed character, and this is especially the case with the sun and the moon in their visible form, but regarded as animate; in the sacrificial prayers there is nothing that would point to their personification, and, while in the mythology the sun is depicted as a maiden and the moon a maiden, it is only the latter that is the object of foreign influence. Nor can the designation 'mother'

(ava), which—with the epithet kirdži, 'ruler' (fed.), or Mastor-pas, 'animate ruler of the earth'—is the general term of most frequent occurrence in the names of the deities, be regarded as implying the attribution of personality to any particular deity; these 'mothers,' in fact, are only the amorphous and indistinct 'souls' of natural objects, etc. Thus men 'dig' the earth-mother, and 'sow corn in her'; the field-mother—in place of whom tributary, is the 'titled household' or household which, in the Ertzæ, is generally the head of the household. Likewise the bee-garden-spirit is the 'beehive-god,' the house-garden-spirit is the 'house-garden-mother,' and the field-spirit is the 'field-mother.' Likewise, in the Ertzæ, 'the wild bee' is the spirit of weeds, and 'the bee' is the spirit of flowers. Thus, in sum and substance, we may speak of the common Ertzæ term 'God' as meaning 'a kind of soul.' The spiritual 'weeds' is 'the spirit of the field,' 'the bees' are 'the soul of the flowers.'

So, too, with the household-spirit, we can still to some extent distinctively pray the original idea that it is the animistic dwelling-house itself, or, in other words, the amorphous soul of the house. Thus we find it said in a Moksha magic prayer, 'Kud-azërava, 'house-mother,' above is the lime-bark (the roof is thatched with this), below is the petrified lime-bark (Ertzæ), 'beehive-god,' 'beehive of the house; this spirit was worshipped in the communal sacrifices. This spirit is the 'house-mother' and 'house-maiden,' and is addressed as 'the house-seat' and 'the house-mother;' in the Ertzæ it is the 'soul of the house.' It was the object of sojourn much in the warm house.'

In conjunction with the spirits designated 'mothers' (ava) and 'mistresses' (azërava) are found the correlatives ('male') old ones (av'at) and 'lords' or 'hosts' (azërč)—e.g., Ved-at'a, 'water old one,' Ved-azër, 'water-lord,' Nastasja, 'house old one,' Nastasja, 'house-lord.' They are for the most part absent from the sacrificial prayers, belonging rather to the sphere of the magic formulae and of folklore, where such married couples are even represented as having children. Here we have obviously a later development, perhaps not unconnected with ancestor-worship, in which male and female progenitors are generally named together as spiritual persons. It is only in the case of the god of the sky and the god of thunder that personification has reached a more advanced stage. These two deities are always represented as human-like figures, and it is mainly with them that the few myths current among the Mordvin have to do. Thus, the thunder-god appears in the songs as the son-in-law of the sky-god Niske, while the latter, again, finds a wife of his son (of whom otherwise nothing has come down to us) in a Mordvin maiden whom he bears up to the sky in a silver eradle upon a chain. This myth-making process, which perhaps was to some extent due to foreign influence, does not, however, appear in the worship—the sacrificial prayers—at all, while among the Moksha the name of the sky-god, the form of which certainly suggests personification (broforcara), is only a tradition attracted into the mythology, and is also used as the designation of the natural sky—e.g., in the phrase brojč wazanč, 'the sky redens.'

The older conception of nature as animate merely, but not personified in an specific ground, and to impede the process of personification.

Virtually no limits were set to the practice of ascertaining life to inanimate things. In the magic formulae we find that, e.g., plants, the clay of an oven, the rowan tree, the honey-baby due to the beetle (the last three are invoked by the magician for the purpose of personal protection. 1 The blood of sacrificial animals is allowed to run into the cavity under this stone. 2 Cf. the Mordvin name for the pupil of the eye: zel'mans. Lit. 'eye-mother.'
as his 'elder sisters'), are all endowed with life, and their aid is sought to expel disease.

It is manifest that, in the course of centuries, the religion and worship of the Mordvins have been influenced (directly or indirectly) by various (e.g., Persian, Lithuanian, Turkic) influence, as is shown, for one thing, by a number of mythological terms—e.g., *paxaa*, *pat*, 'god' (cf. O. Ind. *bhagaa*, O. Pers. *baha*), *pur*-*gine*, the thunder-god (cf. Lith. *perkūnas*), Keramit (cf. Kurgan), *tewazat*a, the evil spirit (cf. Tatar *Sazjan*, Chavash *Sazjan*); in later times they have also been greatly influenced by Russian popular beliefs, especially in ancestor-worship.

7. Worship.——Besides the obligations performed at home by the individual family, usually under the direction of the head of the household or his wife, and accorded mainly to the domestic spirits and to ancestors, every village community held its own sacrificial feasts, in which the participants frequently arranged themselves in groups corresponding to their families or clans. From certain reports and indications, however, it would seem that at an earlier time there were joint sacrificial festivals for larger districts. The places at which sacrifices were paid to Keramit appear to have been fixed in. On at least some of the sacrificial places Earth-windows, which, like the ordinary dwelling-houses, was called *kuda*, and was used for religious purposes. The deities were not represented in universal form, but spirits (or non-physical spirits) are driven out by threats and by magic practices, special magic formule serve to protect against the evil eye, and so on. Magic might, of course, be employed also to cause injury.

The magic formule and associated practices of the Mordvins show, on the whole, strong evidence of Russian influence, if, to speak more accurately, for the most part have been borrowed from the Russian people.

MORMONISM.——See SAINTS, LATTER-DAY.

 MOSQUE.——See Architecture (Muhammadan in Syria and Egypt).

MOTHER.——See CHILDREN, FAMILY, MOTHER-RIGHT.

MOTHER OF THE GODS (Greek and Roman).——The Mother of the Gods was identified by Homer (II, xv. 187) and Hesiod (Theog., 634) with Rhea, the wife of Cronus. She was famous in legend for having prevented Cronos from swallowing Zeus by providing him instead with a large stone which he had wrapped in swaddling-clothes (Hes. Theog., 485 f.; Apollol. i. 5). The story was localized in Crete, the deity being connected in the closest way with agriculture, the principal employment of the people, and also with the related industry of cattle-rearing, and the deities were especially sought to grant success in these. In the cult of the nature-deities there is no trace whatever of an ethical element, prayers being addressed to them for earthly boon alone; but that element, as already indicated, does not seem to have been lacking in the cult of the dead, or from the worship of Keramit (and the obscure Azër-ava), and the spirits of the house and the homestead.

8. Magic.——From the sacrificial priest should be distinguished the magic and sorcerers, although there is certainly a suggestion that the priests were selected from the family or caste of the sorcerers. The latter are now usually designated by a term borrowed from the Russian, viz. voraijda, voroteja (Russ. voroleja), but we find also a genuine native term, *sodl't'a*, *sodaj*, 'he (she) who knows.' These sorcerers prophesy; they discover lost things; they find out the causes of disease and all misfortune with the aid of forty-one (or forty) beans or other objects like beans, or by gazing into water freshly drawn from a well in the early morning, or by looking into the face of the person afflicted; they cure diseases by magic spells and magic prayers conjured with the appropriate offerings, and among these prayers there is a specially large number in which a spirit (e.g., the earth-spirit), being invited to the sacrificial feast, will, from retrospective injury unwittingly done to him by a fall, a push, etc., and punished by a visitation of disease or other calamity. Other kinds of disease (disase-spirits) are driven out by threats and by magic practices, special magic formule serve to protect against the evil eye, and so on. Magic might, of course, be employed also to cause injury.

The magic formule and associated practices of the Mordvins show, on the whole, strong evidence of Russian influence, if, to speak more accurately, for the most part have been borrowed from the Russian people.
there was an altar of the Mother of the Gods in the agora at Athens (Kosfin. i. 69), and a sanctuary (petrot) on the Acropolis was used as a sort of office (Lycurg. 66). An ancient festival, known as Galaxis, on the occasion of which a barley cake was boiled in milk, was celebrated in her honor at Thebes (Herodot. ii. 181-21, p. 2:9. 5). The etiological legend which ascribes the foundation of the sanctuary to the expiration required for the murder of a Phrygian myrrheus (Patera), the goddess (Paus. III. 20: 1; Phot. Lex. p. 268, 7) shows clear traces of the later conviction that the worship of the Great Mother had been imported from Asia Minor. The same influence may be present when Pindar speaks of a sanctuary of the Mother close to his own gate, where she was worshipped in conjunction with Pan (Pithy. iii. 77 ff. [157 ff.]), and the scholiast, who does not hesitate to identify her with Rhea, relates that Pindar himself set up her statue near his house in consequence of a stone image of the Mother of the Gods having fallen from the sky at his feet. Pausanias (VIII. xxx. 4) records the existence of a ruined temple of the Mother of the Gods at Magnesia in Arcadia, and of another, which was roofless, close to the sources of the Euraotis and the Alpheus, and of two lions made of stone in its immediate vicinity. The oldest of these temples in the Peloponnesus, containing a stone image of the goddess herself, was at Acris in Laconia (ib. iii. xxt. 4). Yet another temple was at the Styx, on a stone throne, and a stone image of the goddess.

From the 5th cent. at least Rhea came to be identified with the Phrygian Great Mother (Eur. Bacch. 358, 1262), whose influence in Greek religion was henceforth increasingly important. Already in the Homeric prologue (Ilium xiv.) the Mother of the Gods is described as rejoicing in the clasp of cymbals, the beating of drums, the blare of pipes, and the roar of wolves and lions. In another passage (Soph. Phil. 391 ff.), where the name of Rhea is not mentioned, she is clearly referred to as the mother of Zeus, and is identified with the Phrygian Mountain-Mother, the mistress of the swift-slaughtering lions. She is there also addressed as 'all-fostering Earth,' and there are other passages in which the earth-goddess is described as the Mother of the Gods (Ilium. Hom. xxx. 17; Solon, frag. 36. 2; Soph. frag. 269)—a title which she might well have claimed as mother and wife of Uranus according to the Hesiodic tradition (Theog. 68). But it is impossible to explain the worship of the Mother of the Gods as merely a development from the vague conception of a motherly earth. The identification of the Mother of the Gods by certain 5th cent. poets (Eur. Hyl. 1301 ff.; Melanippides, frag. 10 [T. Bergk, Poetae Lyrici Graeci, Leipzig, 1878-82, ii. 592]; Pind. Isthm. v. 4) with Demeter, who, according to the received genealogy, was a daughter of Rhea (Hes. Theog. 454), is a further cause of perplexity. The existence of a Metron at Agrigentum (Pheid. I. 359; J. G. Frazer, Pausanias, London, 1885, ii. 204), where the lesser mysteries were celebrated in honour of Demeter, seems to indicate that the Phrygian Mother was another form of the Demeater (Oe. Phre. and C. Robert, Griech. Mythologie, i., Berlin, 1887, p. 651). Lastly, we must take into account the similarity of the title of the Mountain-Mother in Crete, which has been abundantly established by the archæological discoveries of recent years. Most significant in this connexion is the inspection of a signet-ring found at Croesus, which represents the goddess seated on the back of a mountain and guarded on either side by a lion (see art. MOUNTAIN-MOTHER).

To disentangle the actual course of development from these interrelated facts is one of the most puzzling tasks within the sphere of Greek mythology. The leading consideration is that, though the name of Rhea was often associated with Cybele, the goddess (Lex. p. 186; Paus. xii. 18. 4), she was never so completely merged that the Rhea of the Greek theogonies did not remain distinct from the partner of Attis (Gruppe, Griech. Mythologie, p. 192). Some modern investigators hold the opinion that the fusion did not take place until the period subsequent to the Persian Wars (J. Beloch, Griech. Geschichte, Strassburg, 1890-1894, ii. 5g). Others, while maintaining that the cult of the Mother belonged to the oldest stratum of Greek religious thought, believe that her legend and ritual passed from Crete to the Greek settlements in Asia Minor, where she was completely assimilated to Cybele in the 7th cent. or earlier (Gruppe, p. 1596 f.). Beyond this lies the question whether the goddesses subsequently identified were in origin entirely distinct (Wilamowitz, in Hermes, xiv. 1878) 105 f.): Crete and Phrygia, and the Cretan Rhea both developed in their separate manifestations from an identical substratum of belief belonging to the pre-Hellenic and pre-Phrygian inhabitants of Crete and the Phrygians, and that the Cretan Mother of the Gods, whose relation to the Phrygian Mother is to be explained by the fact that she belonged to a period anterior to the separation of Greeks and Phrygians. It is argued, though the evidence of the cult of Rhea in antiquity, its existence as distinct from that of the Mother of the Gods is well attested in Arcadia (Paus. viii. xxxvi. 2), at Olympia (schol. Pind. OI. v. 10), and at Athens (Paus. i. xvi. 7). To this it has been replied (CGS ii. 298) that the double title justified the establishment of distinct sanctuaries, and that it was quite possible for Greek travelers who found in Crete the worship of a great maternal goddess of fertility, bearing the name of Rhea, to transfer her cult to the mainland, using sometimes her original name, and sometimes the title myrph Rhea, in reference to their own god Zeus, whom they affiliated to her. From this point of view it becomes significant that the cult of the Mother prevailed especially in districts which are known to have been affected by Cretan influence, and traces of such coincidence are the appearance of the Islean Dactyls at Olympia (Paus. v. vii. 6) and the legendary connexion of Athens with Crete. Moreover, the result of recent Cretan discoveries enables us to gauge better the extent of the influence which Cretan civilization must have exercised in prehistoric times. On the other hand, although Cybele did not appear in myth as the Mother of Gods, it is impossible to explain the worship of the great maternal goddess of fertility, bearing the name of Rhea, to the sacred stone of Cybele at Pessinus (Livy, xxix. 11): the noisy rites of the Cretan Curetes to those of the Phrygian Corybantes (Lucian, de Sult. 8); and the Islean Dactyls, the attendants of Rhea,
were located both in Phrygia and in Crete (Soph. frag. 337).

So far as it appears to be established that there was a primitive cult in Crete and Asia Minor, and to a lesser degree in Greece proper, devoted to the celebration of the Mother of the Gods, or Great Mother, but, on the other hand, the specifically Cybelean character of the cults, which were regarded as essentially foreign to Greek sentiment and were introduced to the mainland at a comparatively late period, it must be inferred that the character of the Orphic cults, which had been largely modified by the influence of our authorities (Clem. Alex. Protrept. i. ii. 13, p. 14 P.; schol. Plat. Gorg. 497 C), are undoubtedly derived from the Phrygian worship of the Great Mother: 'I have seen from the Thracian barbarians, when many have drunk from the cymbal, I have entered into the bridal chamber' (J. E. Harrison, Prolegomena to the Study of Greek Religion, Cambridge, 1903, p. 125). The last phrase relates to the mystical communion between the goddess and her lover, which was ritually enacted all over the East, whether in connexion with the names of Cybele and Attis, or of Aphrodite and Adonis, or of Isis and Osiris (GB ii. 159 ff.). It is common to both of these legends that the lover was put to death and afterwards restored to life, if not always in the same incarnation. The mythological material may have been in its origin a magical process intended to stimulate the reproductive forces of nature, while the subsequent death and resurrection of the priest-king, of which much has been written in the last two centuries, was the revival of vegetation. The self-mutilation of Attis, which, of course, the transference into myth of a primal custom of priestly emasculation, though at first sight not easy to reconcile with the other data, probably belonged to the same circle of ideas. Whether we should regard the act in its primary intention as the final obliteration of the body of which the votary seeks to assimilate himself to the priest-king,
the conception of the frenzied Galli who scourged themselves with whips (Plut. adv. Colot. 33, p. 1127 C), and lacerated their flesh with knives (Anth. Pal. vi. 94. 5), cannot be traced to an earlier source than the Alexandrian writers (Curt. op. cit., col. 675), and has become known to us chiefly through Latin literature (e.g., Sen. Agam. 728; Luct. ii. 614 ff.).

In the year 205 n. C. a Sibylline oracle was discovered by the Decennviri, directing them to, as a condition of success in the war, to introduce into Rome the parents of a certain slave and the sacred staffs of the same. (Livy, xxi. 10). Accordingly, the sacred stone, which was then in the custody of Attalus, king of Pergamus, having been removed by him from its original shrine at Pessinus (ib. in Pess. iii. 295 B), was brought to Italy in circumstances of great ceremony, and reached its destination in the year 204. Strange happenings marked its arrival. The ship conveying the sacred object grounded on a sandbank in the Tiber. Then Claudia Quinta, a noble matron whose freedom of speech had provoked censorious tongues to silence, prayed to the goddess that her character might be cleared by the ordeal, if she succeeded in drawing off the ship after strong arms had failed. The ship at once began to follow her direction, and Claudia's innocence was triumphantly proved. (Ov. Fast. iv. 263; Stat. Theb. ii. 249; Tac. Ann. iv. 64). On the 4th of April the goddess was received as a temporary guest, until a permanent home could be provided for her, in the Temple of Vesta. The arrangement was set apart for a festival to be known as the Megalesia, on which gifts were presented to the shrine, and a luctisternium and public games were held. (Livy, xlv. 14). Two years later scenic performances were for the first time exhibited at the Megalesia (ib. xxxiv. 54). Subsequently, thirteen years after the contract had been placed, a temple was erected on the Palatine, and an occupation was dedicated to the Magna Mater Ideia on the 10th of April 191, when the Ludi Megalesiani were included for the first time in the State calendar (ib. xxxvi. 90). Somewhat later, if not immediately, they were extended so as to occupy the entire interval between the 4th and 10th of April (CIL i. 314). On the first day of the festival the pretor urbanae made a solemn offering to the deity, and the games were held in the Circus. We know that four of the extant works of Terence were presented on this occasion. Races (circenses) were held on the last day (Marquardt, Rom. Staatsverwaltung, iii. 501), and in the age of Nero and Domitian these had become by far the most popular feature of the whole celebration (Juv. xi. 191). The recusance of the festival was marked by general merrymaking and licence; clubs were formed to promote social enjoyment (Cia. de Senect. 49); and so lavish was the expenditure of the upper classes on reciprocal hospitality that in 161 a sumptuary law was found necessary to restrain it (Aul. Gell. ii. 24).

In the last two centuries of the Republic the participation of the State in the cult was limited to the extent already described; but, dating from the time of Augustus, who restored the temple of the Magna Mater after it had been burned down in Augustus' time, there is evidence of a further ceremony of a primitive character which took place on the 27th of March. This was known as the taurobolium, when the symbolical stone and possibly also the blood of the taurobolium were conveyed, by the direction of the Quindecimviri, through the Porta Capena, and washed in the waters of the Almo, which debouches into the Tiber just outside the city (Ov. Fast. iv. 357; Luean, i. 599). In all other respects the administration of the cult was left in the hands of its foreign ministers, particularly the Galli with their Archigallus (CIL vi. 2183), and no Roman citizen was allowed to acquire any official status in relation to it. The Phrygian priests, however, were permitted on stated occasions to march in procession through the city in their sacerdotal dress, singing their wild songs to the accompaniment of flutes and tympany (Dion. Hal. loc. cit.), and collecting alms from the by-standers of PassiL Luean.

In the latter part of the 2nd cent. a complete re-organization of the cult seems to have taken place. Hereinafter, as the evidence of numerous inscriptions shows, Roman citizens were permitted to assume priestly offices subject to the approval of the Quindecimviri, but the privilege was exercised chiefly by the freedman class. To the ceremony of the taurobolium on March 27th there was now added a further festival of five days, the opening ceremony of which on March 15th was denoted Comus invat on the Calendar of Philochus (CIL ii. 264), while the remaining four days, the 22nd, 24th, 25th, and 26th of March, were designated respectively Arbor inavat, Bacchus, Hilaria, and Requieta. The ceremonial represented in detail the various incidents of the story of Attis with which we are already acquainted (Ov. Fast. ii. 223), and the procession of reed-bearers (Cannophori) which entered the city was intended to recall the fact that Attis as a child was exposed among the bulrushes of the Tiber (cf. Dion. Hal. loc. cit.). Similarly on March 22nd the Dendrophiroi carried to the temple on the Palatine a pine-tree, encred with fillets of wool and adorned with violets, as a representation of the tree under which Attis mutilated himself. The day of blood (24th) was given up to lamentation for the death of the god, and, whereas originally the act of self-mutilation was then performed by the priests and sacers, for it was sufficient for the Archigallus to make an incision in his arm and symbolically to sprinkle his blood (Tert. Apol. 25). The climax of the festival was reached in the rejoicings over the resurrection of the god which occupied the day of the Hilaria. It was recognized in antiquity that the renewal of the sun's power after the vernal equinox was hereby symbolised (Macrobr. Sat. i. 20. 10), and that the whole festival was a sort of panegyric (Dion. Hal. in Lit. 220 f.) on the decay and re-birth of vegetation (cf. Plut. de Is. et Osir. 69 [378 F]). Modern scholars have noticed the parallel presented by our Lenten and Easter services, which occupy a corresponding position in the calendar (CGS iii. 301).

It remains to mention the rite known as taurobolium, performed on 25th March, the existence of which is attested by a series of inscriptions extending from the 2nd to the end of the 4th century. Although during this period it was invariably linked to the service of the Great Mother, there is no doubt that it belonged originally to the cult of some other deity, and it has been conjectured that this was the Persian goddess Anahita, who had been identified with Ἀργεύς Ταυραβολον (F. Curt. rep. archzol. xii. [1888] 182 f.). There is also much obscurity in the details of the rite. In the earlier period the chief incident of the taurobolism and of the certainly similar erobolis was the sacrifice of a bull or a ram; but at a later date, according to both the inscriptions (CIL vii. 311) and the literary (Prudent. Peristeph. x. 1101 ff.) records, the recipient of the taurobolium stood in a cavity having a perforated roof through which the blood of the taurobolium was poured down that he might suffer a 're-birth.' The whole ceremony was under the control of the Quindecimviri.

In the Roman Imperial period the cult of the
Great Mother, by passing under State control, lost many of its original characteristics; but the power of the goddess passed to a male head, by the adoption of suitable accretions from outside, and by its association with the cults of Isis and Mithra, it exercised during the last days of paganism a wider and more potent influence than at any earlier time.

MOTHER-RIGHT.—I. Introduction.

Mother-right is a form of social organization in which the right of a person in relation to other members of his community and to the community as a whole are determined by relationship traced through the mother. In this condition the duties which a person owes to society, the privileges which he enjoys, and the restrictions to which he is subject, are determined, by the relations in which the person stands to his mother's relatives and his mother's social group.

Mother-right is a highly complex condition in which a large number of social processes are involved. The following are the chief elements that can be distinguished.

1. DESCENT.—This term should be limited to the process which regulates membership in the social group, such as clan, caste, family, etc. In mother-right descent is matrilineal; a person belongs to the social group of his mother. The use of the term is most appropriate when the community is divided into distinct social groups, and this distinctness is most pronounced in the clan-organization in which the practice of exogamy separates the social groups called clans from one another. The social organizations based on the family or kindred are made up of social groups less clearly distinguishable from one another, and, though we may speak of descent in the family whether in its narrow or extended sense, the term is here less appropriate.

2. KINSHIP.—In a community based purely on mother-right kinship would be traced solely through the mother and recognized only with the relatives of the father. Everywhere in the world, but especially among peoples who possess the clan-organization, kinship carries with it a large mass of social duties, privileges, and restrictions (E.R.E. vii. 705), and in a typical condition of mother-right these social functions would exist only in connexion with the mother's relatives. We have no evidence, however, of the existence of any society in which kinship is not recognized with the relatives of the father, although in many cases the functions are very restricted as compared with those of relationship traced through the mother. The case of a kinship was such that, by which marriage is allowed with any of the father's relatives, but is strictly forbidden with equally near relatives on the mother's side.

3. INHERITANCE.—In a condition of typical mother-right children would inherit nothing from the father; their rights to property would be determined solely by relationships through the mother. Where descent, instead of that right, in property should be vested either mainly or exclusively in women. On the contrary, in many cases in which children inherit nothing from the mother, women are debarred from holding property, though they form the channel by which it is transmitted from one member of the community to another. The usual rule of inheritance in mother-right is the property of a man passes to his brother or his sister's son. Often it passes from brother to brother, and, on the death of the last surviving brother, to a sister's son.

4. SUCCESSION.—This term is most conveniently used for the process whereby rank, office, or other special position is transmitted. In typical mother-right succession usually follows the same rules as inheritance, a chief, priest, or other holder of rank or office being succeeded either by his brother or by his sister's child.

5. AUTHORITY.—Mother-right has often been supposed to imply mother-rule, but in the great majority of the societies which furnish us with examples of mother-right authority is definitely vested in the male—in the father or oldest male as the head of the household, and in the chief as the head of the tribe or corresponding social group. In some societies, however, authority in the household is vested in the mother's brother, giving rise to a form of social organization which has been called the 'avunculacite,' and the authority of the mother's brother in one form or another is very commonly associated with a form of mother-right, but in societies in which descent, inheritance, and succession are patrilineal. Only very rarely is authority in the household vested in the mother or youngest female. The term 'matriarchate,' which is often used loosely as the equivalent of mother-right, should be limited in its scope to this condition of mother-rule. Many societies exist in which women are chiefs or monarchs, but, as a rule, this condition is not associated with mother-right. Among peoples over whom women rule the father is usually the head of the household.

6. MARRIAGE.—Mother-right in its typical form is associated with a mode of marriage, most suitably called 'matrilocal,' in which the husband lives with his wife's people. In its extreme form the husband may be only an occasional visitor to his wife's home, so that the children grow up with little or no social obligation towards their father, and live under the authority of the mother and the mother's brother.

In a state of typical mother-right a person would belong to his mother's social group. He would not recognize the existence of any kind of social duty except towards his mother's relatives, and would ignore the relatives of his father; property, rank, and office would pass solely through women. It is not a necessary feature of mother-right, however, that authority should be vested in the woman. It might be so vested, but, if the woman is not the ruler, it would be vested in her brother. In mother-right in its most typical form the father should have no authority in the household.

The condition thus described as typical mother-right occurs very rarely, being found most purely among such people as the Iroquois and Seri Indians of N. America and the Khasis of Assam. In many cases which have been regarded as examples of mother-right some of the social processes included under this head depend entirely on the mother, while others are determined by relationship traced through the father, producing social conditions of the most varied kinds. Thus, while descent is matrilineal, succession may be patrilineal. Kinship is everywhere, so far as we know, recognized through the father as well as through the mother, and authority in the household is often paternal. In many cases, however, both mother and father are matrilineal. Moreover, a mixture of social groupings may be present, one of which may be patrilineal while the other is matrilineal, this being
especially the case when local organizations accompany different forms of exogamous grouping.

In several cases matrilineal processes show themselves only in certain departments of social life. Thus, a people who possess patrilineal institutions in general may yet show the presence of matrilineal organization with slavery. The children of a free father and a slave mother may be slaves even if the father is of high rank, while the children of a free mother and a slave father may be free, and even noble, if the mother be of sufficiently high dignity. Another condition in accordance with mother-right is that in which marriage between half-brother and sister is allowed when they are the offspring of one father and of two different mothers, while it is forbidden when they are of the same mother by different fathers. The form of marriage which is forbidden would be impossible with mother-right, while that which is allowed would be natural, provided that the mothers belonged to different exogamous groups.

Another large group of matrilineal practices is characterized by the authority of the mother’s brother. Among a people who practice patrilineal descent, inheritance, and succession the mother’s brother has sometimes more authority than the father, and this authority may be accompanied by a more or less ceremonial function which shows that the tie with the mother’s brother is closer than with that with the father. Thus, mother’s brother and sister’s son may hold their property in common, or may take the leading part in such rites as circumcision and its variants, ear-boring, knocking out teeth, and other operations.

2. Distribution and varieties.—Owing to ignorance and prejudice, the exogamous only, and matrilocal, on the part of ethnographers, the available evidence often leaves us uncertain how far the social processes of a people correspond with those of mother-right.

(1) America.—Mother-right exists in America in an especially pure form. Not only are descent, inheritance, and succession purely matrilineal among many of its peoples, but the woman takes a position in life which would justify the use of the term ‘matrarchy.’ A striking example of this condition is found among the Iroquois and Hurons,2 where women are the heads of the households, elect the chiefs, and form the majority of the tribal council. Almost as striking an example occurs among the Pueblo Indians, where, with the exception of the Tewa,3 descent is matrilineal, the house is the property of the woman, marriage is matrilocal, and the children are regarded as belonging to the mother. Other purely or predominantly matrilineal stocks are the Caddoan (Pawnee, Arikara, the Mask hogan of the Creek, Choctaw, Seminole), the Yuchi, and the Timucuan.

In other cases matrilineal and patrilineal tribes are found among one stock. Thus, though the Siouan tribes are mainly patrilineal, the Siletz, Tolowa, Hidatsa, Oto, and Mandan are matrilineal; while among the Winnebago the sister’s son formerly succeeded, a woman could be chief, and the mother’s brother exercised much authority.4 Again, though the majority of Algonquians are patrilineal, the Mohegans are matrilineal, succession formerly passed to the sister’s son among the otjibwa (Ojiyot). There is evidence of matrilineal inheritance and of the authority of the mother’s brother among the Menomini.5 Another stock with both modes of descent is the Athapaskan. While the onlying Navaho and Apache in the south are matrilineal, the same body of the people in the north vary. The western tribes, such as the Loucheux, Takulli, Tahitan, and Knaikokotana, have matrilineal moieties or clans with inheritance and succession in the female line. The eastern tribes, on the other hand, are made up of bands within which social rights pass patrilineally.6 The tribes of California, broken up into a large number of linguistic stocks, are organized in villages. Marriage is often matrilocal, but inheritance and succession are patrilineal. A totemic clan-organization has been recorded among the Miwok, and the totemic organization of the Yokut is said to be associated with matrilineal descent.4 The Yuman stock practise patrilineal descent, but have also another form of social grouping which may stand in some relation to mother-right.5 The local form of organization seems to prevail in the Shoshonean stock, except among the Hopi, who are, however, Pueblo Indians in general culture though they speak a Shoshonean language. This mixture of organization extends as far as the Salish, beyond whom the Kwakiutl form an intermediate link with the matrilineal Haida, Tsimshian, and Tingit. The Tsimshian show traces of the same mixture with the Shoshonean, though a man belongs to his father’s clan, he takes the name of his father’s totemic crest as part of his personal name.6 This mixture is still more evident among the Kwakiutl, where a man belongs to his father’s clan, but takes the totemic crest of his wife’s father when he marries, and transmits it to his son, who bears it till his marriage, when, in his turn, he takes the crest of his father-in-law.7 It is very doubtful whether the Eskimos possess any form of clan-organization. The chief social unit seems to be the family, the social rights of which pass from a father to his children.

Southward of the United States, the Seri Indians possess mother-right in a most complete form.8 Women take the chief place in government, some times puritanically executing their functions themselves, while in other cases their brothers execute their wishes and are consulted by them in cases of difficulty. The husband only visits his wife and takes a very unimportant place in her household, though he may occupy a leading place in another household in his capacity of mother’s brother.

We have little knowledge of the social organization of the peoples of Central America, but the Aztecs appear to have been matrilineal, at any rate so far as succession was concerned, the ruler being followed by his brother or by his sister’s son.

Our knowledge of the social organization of S. America is more fragmentary than in any other part of the world, but there are definite records of the presence of mother-right in several regions and facts which suggest its presence elsewhere. One centre of the practice is the Santa Marta peninsula in Colombia,9 where the Guajiro are...

1 Morgan, Ancient Society, p. 105.
organized in totemic clans with matrilineal descent. Property passes to the sister's sons, and compensation for the wrong of injury is claimed by relatives on the mother's side. Among the Arnaes, who are said to have been the original inhabitants of the peninsula, we have no record of the nature of the social organization; but the people trace their descent to an ancestor and women take an important place in social life. Another centre of mother-right is in British Guiana, where the Arawks practise matrilineal descent and matrilocal marriage. The neighbourhood of these two examples of matrilocal transmission is in the determination that if a Makusi woman marries a man of another tribe, the children will belong to the Makusi; but, as it is said that these people may marry the daughter of the sister, it is improbable that they have a matrilineal clan-organization. Apparently this region is in an intermediate condition, and the presence of patrilineal succession among the Shus, a branch of the Arawaks, also points in this direction. The Arawaks who have wandered into Brazil are matrilineal, and there is another centre of mother-right in this country on the Kuiische branch of the Xingu River. The Bakairi of this region are matrilineal in that the children of the Bakairi woman who marries a man of another tribe belong to the Bakairi, and this is true of other tribes; but, as in British Guiana, we do not know whether they hold to their descent to an ancestor and women take an important place in social life.

(2) Oceania.—Since the great majority of Polynesians do not possess any form of clan-system, and we know little of their local organization, the nature of descent is doubtful; but where the clan-organization exists, as in Tikopia, it is definitely patrilineal. The communism of the people also makes the nature of inheritance doubtful, but there is certainly no evidence of any of the modes of transmission which accompany mother-right. Chiefs are usually succeeded by their children, and this mode of succession also holds of hereditary occupations. In Tonga, however, succession may pass to the son of the woman, and succession may be chief in several parts of Polynesia. As a rule, the father has authority in the household; in some islands, such as Tonga and Tikopia, the mother's brother has certain social functions, but not of a kind that shows any special exercise of authority. In New Zealand, and perhaps elsewhere, matrilineal marriage is frequent.

Micronesia, on the other hand, is the seat of definite mother-right. In the Marshall and Mortlock Islands and in the Carolines, with the exception of the island of Yap, the matrilineal mode of transmission is general. In Ponape there are

---

organized in totemic clans with matrilineal descent, and property passes to the sister's sons. Only in Yap does the son follow his mother's clan. The children are said to be a stranger to his children. Marriage appears to be largely matrilocal. In the Marianne Islands all that we are told is that the woman commands absolutely by right. Among the Loyalty Islands there are exogamous totemic clans with matrilineal descent.

Melanesia has usually been regarded as one of the most definite examples of matrilineal descent; but, even where descent is matrilineal, its social organization departs so widely from the typical condition as to make it doubtful whether the term should properly be used. Descent is often matrilineal, but follows the father in New Caledonia, and in many islands of the New Hebrides as well as in one part of Santa Cruz. In other places, such as most parts of Fiji and one region of the Solomons, the absence of a clan-organization makes the nature of descent doubtful. Chiefship is always patrilineal where it is hereditary at all, and inheritance is in an intermediate condition. Property passes to the children in some places and to the sisters' children in others, where else different kinds of property follow different rules of inheritance. In Santo in the New Hebrides, people take the totem of the father as part of the personal name, but belong to the mother's clan, and in Vanuatu to Levu in Fiji, where there is matrilineal descent, a man pays special respect to the totem of his father, though he belongs to his mother's clan and inherits her sacred land. Matrilocal marriage is not frequent even where descent is matrilineal, and there are often definite social relations between a man and his mother's brother, though not always of a kind to show any special exercise of authority on the part of the uncle.

(3) Australia.—There are at least four forms of social grouping in this continent: the moiety, the matrimonial class, the local group, and the totemic group; since two or more of these may co-exist, there may be more than one rule of descent.

Wherever there is a simple dual organization, as among the Dieri and Ngarabiana (Uralumba) of Central Australia, descent is matrilineal so far as the moiety is concerned. The peculiarity of descent in the case of the matrimonial class is that it is neither patrilineal nor matrilineal, but that the child belongs to a class different from that of either father or mother. Where marriages follow the orthodox rule, it is not possible to tell definitely the nature either of descent of the class or of the moieties of which the classes may be regarded as subdivisions. Marriages do not always follow the ordinary rules, however, and A. R. Brown has used the exceptional marriages of certain eight-class tribes as the means of detecting the true nature of descent. By means of evidence provided by R. H. Mathews he shows that among the Arunta the children of the chief form of irregular marriage belong to the class to which they would have belonged if they had been the children of the man by a regular marriage, thus showing that descent among this people is determined by the father. Among the Tjungu, on the other hand, the children of an irregular marriage belong to the group to which they would have belonged if they had been the offspring of the union of their mother with a husband married according to rule, showing that here descent is properly matrilineal so far as the class is concerned.

6 Man, x. (1910) 55-57; (1912) 123.
The local group is probably always patrilineal, but this form of social grouping has been largely neglected by ethnographers, and we must await further information to show whether this mode of descent is universal.

The totemic grouping shows great variety of detail, sometimes the totemic group corresponds with the local group, and hence the totemic descent in certain cases is not necessarily patrilineal. In other cases, where the totemic groups form subdivisions of the matrilineal moiety, they are of equal numerical strength, and among the Dieri there are two forms of totemic organization: one kind of totem, called *pintara*, is transmitted from father to son together with special knowledge of legends, and the other, a mother kind of totem called *madu* (the *murru* of Howitt) from his mother. The intermediate condition of the people between matrilineal and patrilineal transmission of the totem is shown by the fact that the father often transmits his *madu* as well as his *pintara* to his son. Each man also obtains from his mother or her relatives special knowledge of legends, etc., relating to his maternal ancestors.

The communistic habits and the poor development of personal property in Australia make the subject of inheritance of little importance, but in so far as it exists it seems to follow the same line of descent as that of the brother of a totemic division among the Arunta, whose irregular marriages point to patrilineal descent, certain objects, and especially *churinga*, or ancestral bull-roarers, pass from mother to son if he has no brother, or to his brother and his brother's son. Among the Tjnggili and other tribes whose irregular marriages show them to have matrilineal descent, property passes into the possession of the mother's brother when he is one or the daughter's husbands, the inheritors being men of the moiety of the mother of the dead man. The latter mode of inheritance also occurs among some of the tribes of the western district.

Since the Australians have neither chiefs nor priests, the subject of succession is also quite unimportant. The special powers of a wizard or leech are acquired by special processes of initiation. Perhaps the topic which comes most definitely under this head is the knowledge of native legends and rites, the double character of which among the Dieri has already been considered. Elsewhere this character is more closely connected with totemism, and probably follows the laws of transmission of the totem.

(4) New Guinea.—The most definite example of mother-right in this region occurs among the Massim of the south-eastern islands. This people, who speak a Melanesian language, practise mother-right in a purer form than is found anywhere in Melanesia proper. Not only does a man belong to the totemic clan of his mother, but property passes to his sister's children in some localities, and everywhere a chief is succeeded by his brother or his sister's son. In parts of the Papan Gulf descent is probably matrilineal, but succession to the rank of chief is patrilineal. Another locality where mother-right apparently prevails is on the Manamberu River, in the Dutch portion of New Guinea, where a boy born to his mother's tribe, and wears its distinctive dress, even when he lives with his father's people.

Elsewhere in New Guinea patrilineal customs are found, though there is no indication of the indication of mother-right occurring. Thus in the Mekeo district, which has a form of the dual organization, descent sometimes passes in the female line, and among the neighbouring Pokao descent is sometimes matrilineal, and women are able to succeed to the property of their husbands and pass it on to their daughters.

In several parts of Sumatra mother-right is present in its most definite form. Among the Malays of Minangkabau, of Upper Padang, and certain other districts there are matrilineal clans and the extreme form of matrilineal marriage in which the husband continues to dwell in his mother's house and only visits his wife. The people live in long houses, which accommodate a family in the extended sense, consisting of persons descended from one woman, the head of the household being the son, or, if there is no son, to his brother and his brother's son. He takes the place of a father to his sister's children, who inherit his property after it has been enjoyed by his brothers and sisters. A form of organization similar to this condition of Minangkabau and father-right occurs in Tiga Loeng, where husband and wife live together, but the father has little power over his children. Authority being exercised by their mother's eldest brother. Property belonging to husband or wife at the time of marriage passes to their respective clans, but that acquired by them after marriage is divided between their children and their sisters' children.

(6) Asia.—There are no examples of mother-right in E. Asia, with the possible exception of the Ainu in the north and Cambodia in the south. Among the Ainu the relationship through the mother is said to be more important than that through the father, and the mother's brother is the most important member of the family group, but we have no definite statement concerning the condition of inheritance. The peoples of Siberia are usually organized in patrilineal clans, but matrilocal marriage is frequently present.

In India there are two centres of mother-right. One of these, represented by the Khasi and Synteng of Assam, affords a most definite example of the condition. Descent is matrilineal in the clan, which is traced back to an ancestress and embraces kindred groups consisting of the female descendants of a great-grandmother. The house and other property belong to the women, and the husband or father has no authority except in those cases in which, at some time after marriage, he removes his wife and children to another house. Property is inherited by daughters, the house and its contents going to the youngest daughter, and, in default of daughters, the inheritance passes to a daughter of a mother's sister. The *elcin*, or chief, is a man, except in Klyrir, but is succeeded by his brother or the son of his eldest sister. The neighbouring tribes have, in immediate

form in that both men and women inherit, but the youngest daughter obtains an additional share. The Gáros, who live to the west of the Khasis, and the Megans, or Lyngangs, who are a fusion of Khasi and Garo, practise a form of mother-right closely resembling that of the Khasis. Though a man cannot inherit property and can possess only that acquired by his own exertions, he nevertheless enjoys some control over the property of his wife, and can even appoint a member of his clan, usually his sister's son, to exercise this control in the event of his death.1 Among the Kochs of N. Bengal, and the Garos, marriage is matrilocal, and a man is said to obey his wife and her mother.2

The other Indian centre of mother-right is on the Malabar coast, where matrilineal descent, inheritance, and succession are practised by the Nayars, northern Tyrans, and other peoples, including even the Muhammadan Mappilas, or Moplahs, of N. Malabar. This system of law, known as marranakallilam, is closely connected with the so-called polyandry of this part of India. In the unions of Nayar women with Nambutiri (Nam-бури) men, which are habitual in this region, the father-in-law has no link with his children that he cannot touch them without pollution. Elsewhere in S. India where descent, inheritance, and succession are patrilineal, matrilineal marriage is only known as illatam. This custom is especially followed in families where there is no son, male heirs being obtained by the daughter staying at her own home after marriage. Matrilineal marriage also occurs in Ceylon.

Several peoples of the Caucasus show traces of mother-right. Thus, in marriages between slaves and free persons the child follows the station of the mother, and a woman may habitually go to her husband’s house for the birth of her children.3 The maternal uncle has much authority, and in Georgia the child takes the leading part in all that concerns her welfare.

The earliest record of mother-right comes from Lycia, where, according to Herodotus, the people took the mother’s name, and the status of children in marriage between free and slave was determined by the condition of the mother. Among the Arabs of Yemen succession passes to the sister’s son, and many records of the Semites of Arabia and Palestine have been regarded as evidence of the practice of mother-right.4 The marriage between half-brother and sister, of which the story of Abraham affords an example, accompanies mother-right elsewhere, and several passages in the OT, such as Gn 31:9 and Jg 8:16, suggest this form of social organization.

At the present time the mother’s brother has some degree of authority in Palestine, and a formula used in the Bedoin (Redaw) marriage ceremony shows that great importance is attached to motherhood.5

(7) Africa. The Semites of N. Africa are definitely patrilineal, but in some Arab tribes of the Anglo-Egyptian Sudan the wife returns to her own home for the birth of every child—a custom probably connected with matrilineal marriage. Though the Hamitic Beja are now patrilineal, there are records which show that five centuries ago they counted genealogies in the female line and practised succession to the sons of sister and daughter.1 Among the Bogo, Bara, and other allied Hamitic or partially Hamitic peoples the mother’s brother takes an important place in social life, though the patrilineal character of their institutions is otherwise very definite.2

The Nubians of S. Kordofan form a striking exception to the matrilineal institutions of most of the mixed Hamitic and Negro Nilotic peoples, such as the Shilluks and Dinkas; as boys grow up, they spend more and more time with their mothers’ brothers, who are held to be more closely related to them than their fathers. Property is transmitted to the sister’s sons, and a man lives for some time with his wife’s people.3 The Masai, Nandi, Suk, and other partially Hamitic peoples of the northern part of tropical S. Africa are purely patrilineal.

The Bantu peoples show much variety in the mode of transmission of social rights. About Lake Nyasa and the Rovuma River there are a number of definitely matrilineal tribes, such as the Wa-Yao, Achewa, Wa-Makonde, and Wamakna. The children take the totem of the mother, a child is regarded by his sister’s son, and the mother’s brother is regarded as the nearest relative and the natural guardian of his sister’s children. The Anyanja practise both modes of descent, but the two portions are said to have derived this form of transmission from the Angoni, a branch of the Ama-Zulu. This people, together with the Ama-Xosa,4 Ba-Suto,5 Ba-Tsonga, and other Bantu peoples of S. E. Africa, are definitely patrilineal, though the mother’s brother exercises much authority.

Passing northwards from Lake Nyassa, we find a more or less gradual change from matrilineal to patrilineal descent. The Wa-Sagana and Wa-Digo are definitely matrilineal, while among the tribes about Lindi inheritance and succession pass to the sister’s children. In other tribes, such as the W. Namwesi and Wa-Jagga, the mode of descent varies according as the bride-price has or has not been paid, the children belonging to the mother’s people in the latter case and to that of the father in the former. In general in this region the social institutions tend to become purely patrilineal on passing from the coast to the interior.

The Ba-Guma, Ba-Hima, Ba-Ngongo, and other Bantu peoples of Uganda definitely follow the latter.6 The only exceptional feature is that, while the mode of succession is purely patrilineal, the king of Uganda belongs to the totemic clan of his mother, though he also takes certain other totems connected with royalty.

The Bantu of the northern part of the Belgian Congo are patrilineal.7 Among the Ba-Ngala children inherit, but the mode of descent is determined by a family council, which usually ordains that a child shall take the totem of its

father. Here the same rule holds as in E. Africa; social institutions become more matrilineal on passing from the inferior towards the coast. Mother-right also occurs in Loango and Angola.

Among a group of Bantu peoples in the S.W. Free Congo, property and rank are transmitted to the brother or the sister’s son, and among one of these peoples, the Ba-Mula, kinship is said to be transmitted in this form. In the traditional line, not only is succession matrilineal, but the mother of the chief enjoys great esteem, if not authority. We are not told of any definite social groups with either line of descent, but respect is shown to animals by not eating their flesh, and this ikina bari is transmitted from father to son. This institution is almost certainly a kind of totemic grouping, so that these people show a condition almost exactly the reverse of that found in Melanesia, descent being matrilineal, while inheritance and succession are mainly matrilineal. If, as seems almost certain, the ikina bari is a form of totem, we have here an example of the connexion of totemism with patrilineal descent, and this association comes out still more strongly among the Ova-Herero of S.W. Africa. This people classifies socially groups as one matrilineal and the other patrilineal, and the most recent and trustworthy account shows that, while there is no definite association of animals with the women’s or the men’s clan, eanda, the patrilineal oruza is definitely totemic.

In Nigeria and the countries west of it, we find an interesting series of transitions between mother- and father-right. The westernmost people of whom we have knowledge are the Tshi-speaking peoples of the Gold Coast. They have totemic groups with matrilineal descent, property passes to the eldest brother born of the same mother, and, in default of brothers, to the eldest sister’s son. Only if there are no nephews does the son inherit; and, if there is no son, the chief slave inherits. Succession passes to the brother and the sister’s son. In addition to the totemic clans, called aburua, there are also groups, called ntoro, which appear to have a totemic character. In these groups descent is in the male line, or, as the people themselves put it, ‘a person takes the father of his father and the family of his mother,’ the condition thus having a remarkable resemblance to the two totemic groupings of the Dieri of Australia. Among the neighbouring Fanti-speaking peoples the son inherits as the only property of the mother, a slave inheriting the property of a man if he has no sister’s son. Among the Ewe-speaking peoples of Dahomey kinship is counted through females in the lower, and through males in the upper, classes. Among the former property passes to the brother and to the sister’s son, while a chief is succeeded by his son. The Ewe of Togoland are said to count relationship through the father rather than through the mother, but the mother’s brother is the proper heir. It is noteworthy that the knowledge of the art of circumcision is transmitted from father to son. Among the Yoruba, who, unlike the Dahomeys, are much more to the eastwards, and the Edo, the Yoruba, we do not know of any definite rule of descent, but the people are said to trace kinship in both lines, and a chief is succeeded by his son.

That kinship through the mother is regarded as of great importance is shown by the fact that children of one father by different mothers are scarcely considered as blood-relatives. The property of a man passes to his sons, and that of a woman to her daughters. Next to the Yoruba come the Edo, who practise two forms of marriage. In one, the amboga marriage, apparently the more recent, the eldest son of the father, while in the other, called izomi, they belong to the mother’s clan, unless they are bought by the father, or unless in later life they elect to stay in their father’s country. In the Solo country, whence the Edo are said to have come, there is matrilocally marriage. The Ibo, further eastward, practise male descent, and property passes to the sons, except in the ukwu form of marriage, corresponding with the izomi marriage of the Edo, in which the children belong to their mother’s clan and are the heirs of their mother’s father. As a rule, a man allows his daughter to contract this form of marriage only when he has no son, the custom thus resembling the itilattam of S. India.

(5) Europe.—There is hardly a European people of antiquity to whom some form of mother-right has not been ascribed. Perhaps the clearest evidence comes from the Basques, among many of whom the father has little authority, whereas the women hold the title of property, and sons, that of their children, even when they cannot exercise them themselves. According to Strabo, women were the heads of families in Spain, and the Picts are said to have been matrilineal, the chief line of evidence being that where the fathers of kings are mentioned they are neither kings nor Picts, but belong to neighbouring tribes. Among the Celts the king and magician are said to have been succeeded by the sister’s son. In Ireland the sister’s son was important, and the frequent mention of this relative in English ballads has led F. B. Gummere to infer the close relation between a man and his mother’s brother which is one of the features of mother-right. The account by Tacitus of the authority of the mother’s brother affords the chief evidence in favour of mother-right among the Teutons, but the position of a woman at the head of the genealogical tree of the Lombards and passages in the Nibelungenlied and Edda point in the same direction. The inscriptions of the Etruscans and other facts point to the prevalence of some form of mother-right among the Etruscans, and this form of organization has also been claimed for the early inhabitants of Lattum. The evidence for matrilineal institutions among different elements of the people of Greece has also been much discussed. Perhaps the

19 See, among many other works, McLennan, Studies in Ancient History, p. 268; H. J. Rose, F.L. Llull (1911) 177 ff.
strongest evidence is that in Athens half-brother and sister were allowed to marry when by the same father. Lastly, though, rather than of, Europe, may be mentioned the Gypsies of Transylvania,1 another example of a father's children, who remain with their mother's people if their mother dies and their father, as usual, marries a woman of another 'clan.'

3. Mixture-forms.—The following survey has shown not only that descent may follow one mode of transmission, while other social processes, such as inheritance and succession, may follow another, but that there may also be two kinds of descent. This is especially frequent where a local grouping is combined with exogamous clans or moieties, the usual rule being that the local grouping is patrilineal, while the grouping in clan or moiety is matrilineal. Another kind of mixture is that found among the Dieri of Australia and the Tshi of W. Africa, in which there are two forms of totemism with different modes of descent. The condition of the Ova-Herero of S. Africa, where a patrilineal totemic grouping is combined with matrilineal clans which are probably non-totemic, affords another example of the combination of two modes of descent. The reason is that in which combined with one or other definite mode of descent, there are customs which bring a person into definite social relations with relatives on the side from which descent is not counted. An interesting example is among the widely separated Tsimshian of N. America and the people of Santo in the New Hebrides. In both of these localities a person belongs to the totemic clan of his mother, but takes the totem of his father as part of his personal name. Another form of totemism which shows mixture of the two modes of transmission is found among the Massin of New Guinea, in Fiji, where persons belonging to the social group of the mother pay special respect to the totem of the father. A still more eccentric example is that of the Kwakintl of the N. W. Pacific coast, who belong to the clan of the father, but are indirectly brought into relation with the clan of the mother by receiving from the father the totemic crest which he had adopted from the father of his wife when he married.

4. Associated conditions.—It is not at present possible to connect mother-right with race. It occurs side by side with father-right and with interdeterminate survivals including the Australian, Melanesian, Indonesian, Bantu, W. African Negro, and N. American Indian. At the present time it is absent among Caucasian and Mongolian peoples, but it is doubtful if this has always been so. There is more reason to connect mother-right with scale of culture. Most of the peoples who practise it rank low in the scale, but there are definite exceptions to this generalization in the Khasis of Assam, the people of the west coast of India, the Minangkalan Malays of Sumatra, and many tribes of N. America.

As already pointed out, mother-right in its purest form can occur only in conjunction with the clan-organization, but it is not connected with any special form of this organization. The dual system, in which the whole community forms two exogamous groups, is more or less matrilineal in Melanesia and, where not complicated with a class-system, in Australia, but the dual systems of N. America are sometimes patrilineal.

Totemism is still less habitually associated with either form of descent. As was said above, one person may even possess two forms of totemism, one associated with matrilineal and the other with patrilineal descent. The special regard for the father's totem which accompanies some cases of matrilineal transmission suggests a peculiar connexion of totemism with father-right, and other considerations also imply that the transmission tends to be patrilineal.1 Social organization founded on a local basis, especially those with local exogamy, are usually patrilineal, and in the case of the clan-organization, in which kinship is equally important as on the side of the mother, it is exceptional for inheritance and succession to be matrilineal.

If mother-right is especially connected with the clan-organization, we should expect to find it associated with the classificatory, or 'clan,' system of relationship, and so it is. We do not know of any people with definite mother-right who do not use the classificatory system. The correlation is especially striking in Africa, in more than one part of which classificatory and kindred systems exist side by side. Thus, in the Anglo-Egyptian Sudan the only people who use the classificatory system are the Nubas, and they are also the only people to practice mother-right. Again, in the series of peoples of W. Africa who show so definite a transition from matrilineal to patrilineal institutions (see above, p. 505) it is the Tshi, with their classificatory system, whose social institutions are most clearly matrilineal.

There is some reason to suppose that mother-right is interestingly associated with agriculture. In N. America typical clan-systems are found especially in the maize country;1 and in Africa mother-right seems to be present especially among peoples who live chiefly by agriculture, while father-right is associated with pastoral life. The association is, however, by no means universal.

5. Survivals of mother-right.—By this expression is meant social customs found in societies organized on a patrilineal basis which are the natural concomitants of mother-right and are, therefore, assumed to be vestiges of the earlier presence of this form of society. The most prominent of the customs which have been so regarded is the relation between a man and his mother's brother. Many peoples among whom descent, inheritance, and succession are patrilineal show the existence of just such relations between a man and his sister's child as are prominent among the social practices of mother-right. That they are such survivals is especially probable when they show the authority of the mother's brother, while the power of the nephew to take any of the property of his uncle is also a natural survival of a social condition in which the sister's son is heir to his uncle's goods. Advocates of the view that these relations between a man and his mother's brother are survivals of mother-right regard it as psychologically natural that such rights to authority or property would not easily be relinquished, but would persist in one form or another long after the formal laws of the community had ordained a different disposition of authority or property.

The marriage of half-brother and sister when of the same father but different mothers has also been regarded as a survival of mother-right. In a society which attached any great importance to kinship through the father such a marriage would be impossible, while it is natural among people who pay special regard to kinship through the mother. When, therefore, this form of marriage is found among a patrilineal people, it has been held to point to an antecedent condition of mother-right.

Other survivals of mother-right have been seen

2. For Melanesia see Rivers, II. 327.
in tradition and myth. It is frequently the case among matrilineal peoples that the descent of the clan-trait is ascribed to a female ancestor, and the belief in a female ancestor among patrilineal peoples has been regarded as a survival of mother-right. A similar supposed survival is the widespread belief among many peoples that the female is the controlling force in the family, and that girls are taught the arts of life. This absence of knowledge of the father would be natural in the more pronounced forms of matrilineal marriage, and, in consequence, the occurrence of the myth that the people has been regarded as evidence that the people were once in a stage of mother-right. Amazon-legends have also been interpreted as relics of mother-right.

Less direct is the relation of certain social customs, such as the cowrie and the cross-cousin marriage. According to one theory, the cowrie is associated with the desire on the part of the father to assert rights over his child, and those who adopt this explanation of the custom will regard it as a survival of mother-right when it is found in a patrilineal society. Again, there is reason to believe that in some parts of the world the cross-cousin marriage (see above, p. 229) has come into existence through the desire of a father that his son shall acquire his property by marrying a woman who would be one of his heirs under a condition of mother-right. Another custom which may be a survival of mother-right is the rule found in several parts of Africa that the daughter or sister of a king shall not bear children. Such a prohibition would put an end to succession by the sister's son.

Etymology has also been called upon for evidence of former mother-right. Thus, the fact that the Chinese word for clan-name means 'born of a woman' has been held to point to matrilineal descent in China, and the derivation of the Arabic word for 'clan' has been adduced to support a similar conclusion in the case of early Semitic society.

6. History.—In several parts of the world we have definite evidence that a condition of mother-right has changed either into one of father-right or into a form of social organization in which social rights are recognized with the relatives of both father and mother. Thus there is evidence that some form of mother-right once existed in Europe, while in the Sudán there is historical proof that a thousand years ago the Beja, who are now definitely patrilineal, kept their genealogies in the female line and transmitted property to the sons of sister or daughter. In Melanesia, again, and in some parts of America, there is positive evidence of a change from matrilineal to patrilineal institutions, the transition being still in progress in some parts of Melanesia. On the other hand, there is no unequivocal evidence from any part of the world of a change having taken place in the opposite direction. Consequently, it has been held by many students that the change from matrilineal to patrilineal institutions has been a universal feature of the history of human society, and this proposition has become a dogma among many anthropologists.

This dogma has recently been attacked from two sides. The first is the theory of mother-right is supported in many parts of the world by the low state of culture of the peoples who possess this form of social organization, and, as already pointed out, it is not universally true, and students of the ethnology of N. America have been led to question the dogma, largely because the matrilineal Iroquois and Pueblo Indians are among the most advanced peoples of the continent. The second is the frequent change of one mode of descent into another. Personal names are often definitely connected with a moiety or clan, each social group having names especially recognized by the matrilineal. Among some matrilineal people of N. America, such as the Shawnees, a father gives his own clan-name to his child, thus taking a definite step towards the transference of the child to his own social group. This or some similar mechanism might come into play to assist a change in the opposite direction.

One of the cases most often put forward by the evidence of former mother-right, that is, matrilineal organization, has been the fact that in many parts of the world the right of inheritance has passed from mother to daughter.
American ethnologists as an example of change from father- to mother-right is that of the Kwa-
kus. 

The Athapascan tribe bordering on the Chilkat are a large body of people which has been ascribed to the influence of those matrilineal neighbours, the Tsimshian. Other ethnologists are the Athapascan tribe bordering on the Tingit, who are said to have adopted the matrilineal dual organization of the people, and the Babine band of the Tahltan, another Athapascan tribe who are said to have had their matrilineal four-clan system from the Taschishan.

In other parts of the world there is definite evidence that the change has been from the matrilineal to the patrilineal mode. There is a large body of evidence pointing to the change having been in this direction in Melanesia 2 but even here it is possible that certain conditions, such as the highly developed mother-right of the Massim of New Guinea, may have been assisted by some later matrilineal influence. In Africa, again, there is much reason to believe that the change has been in the same direction. The transition from matrilineal to patrilineal institutions which occurs among the peoples of W. Africa from the Tshi to the Ibo points to the gradual infiltration of immigrants coming from the north-east, who became the chiefs of those among whom they settled. While introducing their patrilineal institutions completely in the east, they did not succeed in altering descent among the general body of the people as they proceeded westwards.

The transition from matrilineal to patrilineal and from the Bantu and the association of patrilineal transmission with high development of culture among such people as the Ba-Ganda and Amazulu would seem to be the result of the settlement of many patrilineal pastoral people among a matrilineal population who, till then, had thriven upon agriculture.

7. Origin.—Until we know the history of this form of social organization, it is hardly profitable to discuss its origin at length, but some of the leading views which have been put forward may be mentioned.

In the first place, mother-right has been widely held to be the natural consequence of sexual promiscuity and group-marriage. The less important is fatherhood in a society, the more will that society be driven to base its social rights upon the mother. Another view is that matrilineal descent is a secondary consequence of matrilineal marriage. Where a husband merely visits his wife and is only an outsider in her household, descent and other social processes must be expected to rest on the relation between mother and child. A third view regards mother-right as a social state which has resulted from the dominance of woman, and especially from her importance in agriculture. As already seen, there is reason to connect mother-right with a high development of the art of agriculture, especially in N. America, and it is noteworthy that it is in this continent that we have our clearest evidence of the dominance of the woman.

MOTIVE. I. Different senses.—The term 'motive' is used in philosophy and psychology in four different senses.

(1) In the first and most general sense it means any force, of an internal or mental character, which impels to action or prevents the performance of action, be the force conscious or unconscious, and the action voluntary or non-voluntary. Thus Bentham defines motive as 'anything that can contribute to give birth to, or to prevent, any kind of action' (Principles of Morals and Legislation, p. 46). In this sense motive includes what Reid calls mechanical principles of action, such as instinct and habit, and also what Bentham calls 'speculative' motives, which influence acts that rest purely in the understanding.

(2) In a second sense 'motive' is taken with a more restricted signification, as limited to some end which we present to ourselves and of which we are conscious. Bentham has this meaning in view when he defines motive as 'anything which, by influencing the will of a sensitive being, is supposed to call into action as a means to an end for him to act, or voluntarily to forbear to act, upon any occasion'. Such motives are termed by Bentham 'practical', and are, he holds, ultimately reducible to pleasure and pain, and whether it be the expectation of the pain or the reward that accompanies that expectation that is the motive he leaves undetermined (p. 47, note). This contains the germ of an important distinction. In motives in this sense we may distinguish two things: a subjective and affective element, sometimes called affect, a spring of action, Trieblefeld; and an objective, presentational, or intellectual element to which this subjective element is reducible to pleasure or pain, or includes more, and in what relation it stands to the objective, intellectual element and to the expressive factor in mind, are among the most difficult questions in the psychology of the feelings. Here it is taken as standing in relation to certain volitions as a spring of action (see Morell, Outlines of Mental Philosophy, pt. vii. chs. i and ii; Baldwin, Handbook of Psychology, ii, 312-316, 321 f., 354; Stott, Manual of Psycholoty, bk. i. ch. i.; Mellone and Drummond, Elements of Psychology, Edinburgh and London, 1907, ch. iv.). Cf. Bentham's figurative and unfigurative motives (infra).

(3) A third sense of the word 'motive' occurs in the writings of Green and his followers. According to the teaching of Green, something more is required to constitute a motive than the conscious presentation of an end. In the analysis of one of Green's followers, the voluntary satisfaction of a want involves five things:

(1) The want. (2) The feeling of the want. (3) An idea of the object by which the want can be satisfied. (4) An idea of the satisfaction actually taking place, the work of the imagination. (5) The presentation of this satisfaction as, under the circumstances, the greatest good. The self-identifying itself with the attainment of the object; finding in the realization of the idea, not the satisfaction of a want merely, but the satisfaction of self (D'Arcy, Short Studies of Ethics, p. 83). It is only to this stage (5) that Green and D'Arcy apply the term 'motive'. Hence the doctrines that a conflict of motives is impossible and a stronger motive an absurdity (Green, Pragymenon to Ethics, bk. ii. ch. 1).

(4) A fourth sense of the word 'motive' belongs to Kant. Kant reserves the term Beugungszuruf for the objective ground of the volition, which he opposes to the subjective ground of the motive or spring of the action (Trieblefeld). The objective ground of the self-determination of the will is the end which is assigned by reason alone, and is free from all
mixture of passion and sensuous affection (Werke, ed. Rosenkranz and Schubert, viii. 55; Abbott, Kant's Theory of Ethics, London, 1906, p. 45). Such objective motives are not necessarily accompanied with all rational beings, and are to be distinguished from subjective ends, to which we are impelled by natural disposition. Unlike all inclination and fear, respect or reverence for the moral law is an effect, not of cause (Kant, Werke, viii. 21, note). Regarded as a spring, this feeling acts negatively only.

In these four senses of the word 'motive' we see a difference among the motives of things which gives satisfaction; finally ending in Kant in the conception of motive as an object which is free from, and even opposed to, all subjective ground of desire. Green's view, though later in point of time, seems not so developed as that of Kant, since in Green the object is still made to be a motive by relation to a want or internal principle of desire, though such want or desire is again conceived as dependent on the object with which the self identifies itself. Kant's distinction of motive and spring and relegation of these terms to different classes of action get rid of the wavering between contrary causes of points of view implicit in Green's doctrine.

Whether we shall give to the term 'motive' the extensive signification contained under (1) may appear a mere question of the use of language; but in practice both important issues lie concealed beneath the purely verbal discussion. This extensive use of the word early aroused dissent. Reid in 1798, criticizing Crombie's 'Essay on Philosophical Necessity,' said:

'1 understood a motive, when applied to a human being, to be that for the sake of which he acts, and, therefore, that what he never was conscious of, can no more be a motive to determine his will, than it can be an argument to convince his judgment.'

Now, I learn that any circumstance arising from habit, or some mechanical instinctive cause, may be a motive, though it never entered into the thought of the agent.

From this reinforcement of motives, of which we are unconscious, every volition may be supplied with a motive, and even a predominant one, 'when it is wanted' (Reid, Works, ed. Hamilton, p. 87).

Reid then acutely remarks that 'this addition to his [Crombie's] defensive force takes just as much from his freedom of action as it gains for the necessary action of motives known or felt. In other words, necessitation by efficient is fatal to necessitation by final causes. At this stage the distinction seems to turn upon the presence or absence of consciousness. But, even if we regard consciousness as the condition of the existence of motive in sense (2), this does not prevent the motivation or impulsing force being essentially mechanical as when non-voluntary in sense (1). Green's doctrine tries to evade this by assigning to self-consciousness the power of determining the predominance of the motive which actually does succeed, while still admitting that the end to which we thus determine ourselves is assigned by the pathological or affective element. Kant, on the other hand, assigns to reason a power of determining action to an end, which is quite independent of, and even opposed to, the pathological feeling.

'Motive' in this sense has passed over entirely from the meaning of an impelling force to that of an object determined and desired by reason.

These distinctions are closely bound up with the inquiry regarding the freedom of the will. If our will is possessed of an original power by which it determines the objects of which it is the subject, we must distinguish between the causal action of motives must be distinct from mechanical impulsion; they may induce, or incline, but do not determine, according to inevitable law. If, on the other hand, our will has no such power, what we call inducing and inclining cannot merely the subjective side of the collision of predestined forces, of which we are the theatre or rather the play itself. If this be the case, the appearance of a causation, which may yield to considerations of motive an effect, not of cause, must be an illusion. The illusion demands explanation.

This Münsterberg undertook to furnish in his Willenshandlung (1879). In Man's Place in the Animal Kingdom (1879) Pringle-Pattison gives an acute analysis of Münsterberg's views. According to Münsterberg, the will is only a complex of sensations. Our activity, whether the inner activity of attention or the outer activity of muscular contraction, appears to be free, just because the result of the activity is already present in idea, and is, in all cases, accompanied by the sensations flowing from previous motor involvements. The feeling of innervation itself is 'just the memory-idea of the movement, anticipating the movement itself.' In the Grundzüge der Psychologie (1890) Münsterberg's position is modified by a Eicheng Point of view. The 'action theory of mind' here put forward makes the consciousness of sensation dependent on motor discharge. It, therefore, precludes any theory of action other than that of mechanical necessity. Nor is this conclusion altered by the theory of taking an attitude (Stellungnahme) towards the world, which Münsterberg puts forward. Such activity as lying outside consciousness could not even give rise to such an attitude.

It was maintained by Hartley (Observations on Man, London, 1810, p. 322) that 'to prove that a man has free will in the sense opposite to mechanism, he ought to feel that he can do different things while the motives remain precisely the same,' and that 'the internal feelings are entirely against free will where the motives are of a sufficient magnitude to be evident,' while he appears to a power of resisting motives. Such a power, on Hartley's view, can come only from some other and stronger motive; that is, there is no intrinsic power of resisting motives.

An intrinsic power of strengthening indefinitely certain desires, which then become motives (in Green's sense), seems the essence of the third theory of motives. There is an illusion at the core of determinism about this. The motives are to be determined by motives. That desire only which is successful. There is no conflict of motives, nor any strongest motive. But then the strongest desire is made to be the strongest, i.e. to be a motive by the action of the eternal consciousness which is perpetually reproducing itself in us, and which helps to constitute, in cognition and action, all the objects of knowing and will. Is now this action of the eternal consciousness something from all eternity, unalterably the same? The result is practically identical with Hartley's—the only freedom is in it is that the ego, since it determines the motive, is consequently, in being determined by the motive, determined by itself. This is only Spinozistic necessity. But, if the action of the eternal ego on the finite ego is not so predetermined, is something which, at the moment of decision, may fall out differently on different occasions, notwithstanding identity of desire and circumstamces, then such action is not different from free will in the ordinary sense and implies an surplus of undetermined or self-determined free activity of the ego, as in the Kautian doctrine.

Green's theory of motives must be carefully distinguished from the epistemological or empirical in which he utters himself and to which he says (Proleg. to Ethics, p. 93)
an appetite or want 'only becomes a motive, so far as upon the want there is the presentation of the want by a self-conscious subject to himself and with it the idea of a self-satisfaction to be attained in the filling of the want.' Stout, too, says (Manual of Psychology, p. 707): 'There are no more impulses than are before consciousness as reasons why I should act in this or that way. They are not independent forces fighting out a battle amongst themselves, while the ego remains a more spectator. On the contrary, the motives are motives only as far as they arise from the peculiar nature of the perception of the self as a determining factor. From this it follows that the recognized reasons for a decision can never constitute the real cause of decision. Behind them there always lies the self as a whole, and what this involves can never be completely analyzed or stated in the form of definite reasons or special motives.

The great verbal similarity of this to what Green says is evident. But to Green the self-conscious subject, through determination by which a want becomes a motive, is 'a principle of other than natural origin,' is, in fact, an entity of a sort. To Stout the self as a whole, even if what it involves can never be completely analyzed or stated, is not an entitative principle eternal or otherwise, but rather, the 'thought of the self.' In deliberation, he says, 'the concept of the Self as a whole will not directly tend to reinforce or suppress a desire' (p. 707).

A certain line of action being suggested as possible, I contemplate myself as I shall be if I put it in execution, so as to make up my actual life-history, and on the other hand I contemplate myself as I shall be if I leave it undone. I follow out this representation of a hypothetical Self in more or less detailed fashion, and the product of such analysis which is called Voluntary Decision emerges' (ib. p. 709).

This theory, that motives arise and are considered by reference to the conception of self, whether it be in Green's metaphorical or in Stout's psychological form, as a general theory of motives, seems not to be true. That very many motives are determined by conscious relating of the desires to this or that self, is not necessarily or universally. The higher moral ends are disinterested. The disinterested character of aesthetic emotion has been emphasized by Burke and Kant, Hegel and Schopenhauer, Molinos, Fichte, and Madame Guyon have maintained, the possibility of a disinterested love of God. It must, therefore, be admitted that, while the analysis of the term 'motive' given under (2) and (3) is in many cases a correct and complete analysis, there is in other cases only the stipulation of tendencies towards the end by some subjective affective element, the self-conscious satisfaction of this impulse need form no part of the objective end in view nor even of the subjective impelling force.

It is when we come to the fourth sense of the term 'motive'—the strict sense given to it by Kant—that we find the most striking detachment of the term from all association with the subjective self. It may still bear relation to something universal, common to the individual selves, but the ends are then ends in which the individual self loses its individuality. They are objective. This is the essential difference between the senses of which Kant speaks from the ethics of Green. It was to retain in the moral motive the reference to self that Green was compelled to characterize the good as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (Short Study of Ethics, p. 277) has seen this defect in the ethics of Green. 'It is, however, a necessary outcome of Green's initial position. To Kant, on the other hand, reason, not the mere self, is able to give itself an end, which, though realized in the matter of desire, is independent of the relation of that matter to the particular self. Kant is often cited for the choice he made of the imperative set up ends, detached from all the material of desire and inclination, as if purely formal ends existed by themselves. It is the impenetrability of particular desires and inclinations by the categorical law of duty that gives to the individual the absolute value expressed in that form of the categorical imperative which is expressed: 'so treat humanity whether in thine own person or that of another always as an end and never as a means.'

We have, therefore, in our highest ends, moral, aesthetic, and religious, the singular paradox that in them is an element, which comes into existence only through particular feelings and inclinations, becomes, as regards its essential character, independent of these and a motive of selfless and disinterested action.

In the above discussion we have considered the several distinct senses in which the term 'motive' may be used. There are, however, some analogies connected with its use which, while not really adding to the multiplicity of senses, might nevertheless appear to do so. Bentham says: 'Owing to the poverty and unsettled state of language, the word motive is employed indiscriminately two hundred or more times of in all, but which, for the better understanding of the subject, it is necessary should be distinguished. In one sense it is employed to denote any of those really existing incidences from whence the act in question is supposed to take its rise. The sense it bears on the other hand may be styled its literal or figurative sense. On other occasions it is employed to denote certain fictitious origins, a passion, an interest, an inclination, or an ideal being, which upon the happening of any such incident is considered as operating upon the mind, and prompting it to take that course, towards which it is impelled by the influence of such incident. Motives of this class are Avarice, Idolatry, Benevolence, and爱美 may be styled the figurative sense of the term motive' (p. 461).

The real incidents—motives in the figurative sense—are:

1. The internal perception of any individual lot of pleasure or pain, the expectation of which is looked upon as calculated to determine you to act such or such a manner; 2. any external event, the happening whereof is regarded as having a tendency to bring about the perception of such pleasure or such pain.' Each of these is further distinguished according as it is in prospect or in case, meaning by the former the possible object which is looked forward to as the consequence of his action (or inaction), by the latter, the present existing object or event which takes place upon a man's looking forward to the other.

These distinctions partly depend on Bentham's doctrine that the only motives are pleasure and pain, which have been adapted to the internal objects, the interests in the objects, the state of mind resulting from one being addressed to the other. The internal perception principle may be dismissed as, at any rate for the purposes of this article, a fictitious entity. The distinction, however, between the external object and the resulting state or affection of mind has an important bearing on the foregoing discussion. It might seem plausible to say, as Fleming says, that 'speaking strictly it [the term 'motive'] should be applied to the terminating state or affection of mind which arises from a principle of human nature having been addressed by an object adapted to it; because it is this state or affection of mind which prompts to action.' This is true in all cases where an affection is the spring of an action. But there are cases in which the affection does not exist before, or the affection is contrary to, its prompting. In the 'beautiful soul' in Schiller's Anmut und Würde, affection produces moral results, but, to Kant, true moral action is independent of such affection. In art, however
much feeling may guide, it cannot be considered as the motive. In true art it cannot even be said that there is a conscious image or ideal which impels the artist to produce. In art, as Schelling says, the ego is unconscious in regard to its product (System der transzendentalen Idealismus, § 146). Tübingen 1800 (Sammel. Werke, Stuttgart, 1856-61, iii.)

An important distinction is that between motive and intention. The nature of intentionality is that of C. Brentano:

1. Let us observe the condition there is between intentionality and consciousness. When the act itself is intentional, and with respect to the existence of all the circumstances adjoined, as also with respect to the matterlihood of those circumstances, in relation to a given consequence, and there is no mis-supposed with regard to any preventive circumstance, that consequence must also be intentional. In other words, asidesness, with respect to the circumstances, if clear from the mis-supposed of any preventive circumstance, extends the intentionality from the act to the consequences (p. 44).

The distinction itself is most clearly expressed by Martineau (Types of Ethical Theory, ii. 272):

'The intention comprises the whole contemplated operations of the act, both those for the sake of which, and those in spite of which, we do it. The motive comprises only the former.'

Dividing the intention as Martineau does into persuasive, disusive, and neutral consequences, it is only the first that fall under the heading of 'motive' (c.f. Utilitarianism, London, 1867, ch. ii. p. 27; Muirhead, Elements of Ethics, p. 61; Mackenzie, Manual of Ethics, p. 61 ff.)

This excludes from intention all motives in sense (ii), that is unconscious or involuntary. It includes motives in sense (2) and (3). It is not difficult to say whether it includes motives in sense (4). The particular object or end is certainly included in the intention, but the law which the will is directed to, while a true reason and determining the intention, seems not necessarily to form part of it. The act, even done for the sake of the law, has not the law in its universality as its end. To Martineau's statement true we must understand 'persuasive' in an affective sense.

2. Classification of motives.—The various classifications reflect the difficulties which have attended the foregoing discussion. Our impulses or active principles are classified by Reid into mechanical, animal, and rational; but only to the last two does he apply the term 'motives.' Stewart has criticized this classification on the grounds that 'mechanical' cannot be applied to instincts and habits (which is done by Reid), nor to any of our active principles. It is capricious to call our appetites animal principles, because common to man and beast; naming them our active or passionate is as much mechanical, in regard to which our nature bears so strong an analogy to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, but not judgment. Rational principles of action require not only intention or will, but judgment or reason. Stewart censures Reid for inclining under animal principles of action the desire of knowledge, of esteem, pity, patriotism, etc.

Stewart's own classification falls under five heads: (1) appetites; (2) desires; (3) affections; (4) self-love; (5) moral faculty. This classification has been ably criticized by Martineau (ii. 134).

McCosh gives the following classification of the active or motive powers, or, as he prefers to say, of the motives and moral powers:

1. The native appetities of the mind leading to emotions. These include: (1) the inclination to exercise every native voluntary or involuntary; (2) the desire to receive pleasures and avoid pain; (3) the apprehension of moral duties (morals and religion, esteem, society, power, property); (4) an inward principle that impels to seek for the beautiful; (5) the moral power as a source of acting; (6) moral appetites prompting to action in relation to other beings, e.g. sympathy.

2. The will not as furnishing inclinations, predispositions, or motives, as stated above, but as sanctioning, restraining, and deciding among them.

3. The conscience—a cognitive power involving certain beliefs and judgments (Intuitionalism, p. 122).

More important than any of those classifications is that of Martineau (ii. 129-175). He begins by distinguishing between two sets of impelling principles in man: (1) those which urge him in the way of unreflecting instinct, to appropriate objects or natural expression, and (2) those which supervene upon self-knowledge and experience, and in which the unconsciously is present of a sort of some recognized feeling' (p. 135). The former he calls primary springs of action, the latter secondary.

Under the primary come (1) propensions, including organic appetites and animal spontaneity; (2) passions: antipathy, fear, anger; these do not arise as forces from the needs of our own nature, but are rather what we suffer at the hands of objects; (3) affections: parental, social, communitive; these operate as attractions towards other persons; (4) sentiments: wonder, admiration, reverence; these direct themselves upon ideal relations, objects of apprehension or thought that are above us, yet potentially obtainable.

Under the secondary principles which are characterized by their interested nature or imitable aim to produce certain states of ourselves come—(1) secondary passions: love, hatred, remembrance, as well as affection, passion, religion, and the like; (2) secondary propensions: mechanical, vindictive, or sentimental; (3) secondary affections: self-love, piety, patriotism.

The secondary series is the self-conscious counterpart of the primary series. These principles give rise to ulterior combinations, such as love of praise, emulation, etc. The addition of these to the above which are prudence and conscience, but neither is, according to Martineau, a positive principle, so as to range in the series of impulses. Each exercises a judicial function—prudence among the secondary principles, conscience over the whole.

If we examine these various classifications, we shall find much to confirm the wide view of motives which we have taken. Martineau's distinction of primary and secondary springs of action immediately contradicts the narrow view of motives taken by Green, which would limit motives to those associated with the notion of self. Such association gives rise to the secondary springs, precisely where, in some of these classifications rightly regard conscience and the moral faculty as motive powers, prompting to action and yet per se incapable of being identified with an affective element. In Martineau's theory the moral element consists in relative position in a scale of excellence intuitively discerned. Other moralists might seek to analyze further in what this excellence consists, and this analysis might be dangerous to the intuitive scale, might show that the position of a spring varies with circumstances; but the insight that the moral element is not an affective spring of action, in either the primary or secondary form, remains; and with it remains the necessity of recognizing a fourth form of motive, the motivity of which, whether proceeding from an antonymy of the will itself or from a combination of an intrinsic authority in certain imperatives of action, or from a recognition of superiority or authority in inward springs or outward courses of conduct, demands a unique position for it in the complex of those forces which impel the human will to action.

MOUNTAINS, MOUNTAIN-GODS.—There are few peoples who have not looked upon mountains with awe and reverence, or who have not paid worship to them or to gods or spirits associated with them in various forms. Their height, their vastness, the mystery of their recesses, the veil of mist or cloud now shrouding them, now dispersed from them, the strange noises which the wind makes in their gorges, the crash of a fall of rock, or the effect of the echo, their suggestion of power, their appearance of watching the intruder upon their solitude—all give to them an air of personality, and easily inspire an attitude of reverence, and of a power of standing behind key perennial forms, and, finally, to their personification in a greater or less degree. The next stage was that the mountain-god—the personified mountain which received worship—became a god of the mountain, separate from it but connected with it. It is difficult in particular cases to say which of these stages is intended, or to disentangle them, since the human mind so easily adopts either attitude; and, even where a god of the mountain is worshipped, the mountain itself still looms vast and, as it were, personal. In this section we shall examine instances where the mountain seems to be worshipped for itself alone or to be regarded as sacred and to some extent personal.

The Choles of Ton regarded one particular hill as god of all the mountains, and on it burned a perpetual fire. 1 To the Huichol Indians every hill and rock of peculiar shape is a deity, 2 and hills as well as lakes, rain, etc., are tribal gods of the Thompson Indians. 3 The mountain hills of mountain (§ 4), but they regarded all mountains as divines and personified them, as did the Vaga of the Philippines. Molina describes the hill Huasacori as the chief god of the Incas. 4 In Korea mountains are personified, and the idea of guardian-ship, e.g., of towns, is associated with them (§ 4). There are also spirits of mountains. 5 In Japan the term Inari, applied to deities, is likewise applied to mountains, which are supposed to possess great power. 6 Similarly in China, where

1. The personification of mountains.—The various impressions which mountains made upon men's minds led to their being regarded as alive, or personified, or in form of gods or of ghosts. Sporadically we find no cult of mountains or mountain-spirits, but that is generally where no cult of nature exists, or, as sometimes occurs where they are feared, it is generally as much because of the demons supposed to infest them as because of their own suggestion of terror. The horror of mountains found in writers from Waller to the time of Scott, Byron, and Wordsworth was perhaps a literary affectation as much as genuine lack of appreciation. Wordsworth's 'voice of the mountains has generally made a strong appeal to men and has given a great impulse to the idea.

MOUNTAINS, MOUNTAIN-GODS

Mountains worship a god of hills, and among the Kols the god of the great deity is, 2 "Great Zeus," which, as in the case of many other deities, Marsus Buru being a conspicuous peak in Choga Nagrur which is either the tomb of that god or one of the mountain-tops, and as the time of the rain sacrifice, ceremonies take place on the mountain for rain and a fruitful season. 3 Mt. Shasta is thought the American Indian tribes of Wintu to be the home of the Great Spirit, 4 from the sky. The volcanic rocks and snow-covered peaks which others might visit him in his visits to earth. Among the Thompson Indians the "Old Man" is a being living on high mountains, and there making rain or snow by scratching his face. 5 Other deities are said to dwell in the Rocky Mountains. The Mexicans thought that Tlaloc, 6 ruler of the earth, dwelt on the highest mountain-tops where the clouds gather. Other gods, his lieutenants, bearing his name, dwell in the mountains, and are worshipped as gods of waters and of mountains. The cult of Tlaloc was of great importance, and was connected with the tending of the domestic fowl. In Central India the god is supposed to dwell on hills, and isolated rounded hills are hence called "sun-rays." Several outstanding peaks in the region where the cult took place gave a title to the god, e.g., Zeus Olympos (here, the cult no longer observed), Zeus Laphystos (Bocotia); on Mt. Pelion he was worshipped as "hiouios" or "unapproachable." In the Parthenon on peaks where Zeus as rain-god was worshipped was a sign of wealth. 7 Hermes had a temple on the summit of Mt. Cyzicus and Apollo on the hill of Philicaea. Artemis was also worshipped on high places in Arcadia. The Cretan Mother-goddess, like the Phegynian Cybele, was also represented as a mountain-goddess, (Mariana montana). Cybele was the Mountain-mother (μητέρα βουνον), and she loved the mountains and the mountain-tops, called by the name Κοφίλα. 8 Another divinity associated with mountains was Pan, who was born on Mt. Lykaion and had one of his sacred groves on Mt. Parnassus. 9 It is related that Pan and the Muses—were sacred to him. There he loved to hunt, and under the trees the children of the Muses were also of the mountains, and were worshipped there. They had caves on Mt. Chitonion, and gave oracles from them. Certain nymphs, called ὄρειοι νόμος, dwelt in the mountains, and were companions of Artemis. 10 Mt. Olympus was supposed to be the seat of the gods, with the palace of Zeus on its summit. In Cappadocia, according to Strabo, 11 a mountain was called after a god Onanios. Some Babylonian gods were called "ruler of the mountains," and Enlil is described as "the great Earth-Mountains"—a reference to Babylonian cosmogony. There he was believed to know all the forces of life. For his worship, and later that of all the gods, an artificial mountain was raised in the plain. 12 The world-mountain was the seat of the gods. Among the Celts gods were associated with hills, where some cult was offered to them, or with mountains. Where these they believed he had retired on the coming of Christianity, and there they live as fairies.

RUBACKE, Berichte II. 589.

3. Ghosts dwelling on mountains. — To some extent the belief that ghosts haunt mountains or that the Other-world of the dead is situated on a mountain-top may have arisen from the custom of burying the dead on hills, but the belief often exists where this custom is not found. It was connected with the fact that mountains are lofty and touch the clouds or are swollen at times in mists. They are near the sky-land which is so often associated with the dead. They are lofty and mysterious, and, as they symbolize the dwelling-place of gods and spirits other than human, it was natural enough to regard them as the habitation of ghosts.

Ghosts on hills. — One of many methods of disposing of the dead, and is by no means universal. It is found among the Comanches, Apache, and other tribes of the Great Plains, and among the Parsi where no akhram exists (the body is surrounded by stones, not by bones). Other tribes also honored the

In Mexican belief the soul of one dying a peaceful death had to pass between two mountains which threatened to meet and crush it, which it escaped with difficulty. 1 In China mountains are sacred to the gods, and in the sacred mountains are buried the remains of the dead, and even venerated-like in the Hebrew temple,-by living men, in the Sha-hi mountains, their power being proportionate to the size of these. Only on certain days shall mountains be crossed, and then only after fasting and after reciting solemn prayers. 2 Sometimes the mountains are believed to send out frightful exhalations, and they are more friendly and have a regular cult (§ 2). 3 In Indo-China the Tai believe in the phu phone cluster of spirits dwelling on or near the hills, from which man’s life issues. 4 This is the reason for the Deliverer, some rez gunatant, rez futurists, like Arthur, who is one day to return as the saviour of his people. 5 In some of these he is in fairyland or heaven, but in others he is a natural being, archetype of that happiness which sleeps within the hills. 6 Sometimes he is seen there by one who has been able to penetrate into the hill. Such tales are told of Arthur, Merlin, Fionn, Brus, and many another hero, and there are many versions of similar tales. 7 The story is also found in Korea. 8 Hartland suggests that these heroes are gods of the earlier faiths, venerated by Christianity but no longer by Buddhism. 9 So in Irish myth the Tuatha Dé Danann had retired within the hills. 10 But, while this is not impossible, the idea seems to be linked more directly with that of the dead being alive in great caverns or for in hills (as in Scandinavian belief), whence they might come in the hour of people’s need.

4. Mountains as the abode of spirits.—Besides being the seat of gods, mountains are also peopled, like other parts of nature, by spirits, or are haunted by fierce demons.

In Australia Tawunjiril is the mountain-spirit of the S. Arunta, and in the Lake Maragle district, Yabo lived on the tops of high mountains and was hostile to the blacks. The Arunta also fear spirits called orrean, dwelling on a hill. 11 In British New Guinea the Koia dreads a spirit living in a hill which will not approach, but a spear made from a tree growing on the peak will enter it. 12 In Polynesia spirits are credited with making mountains, and the people the mountains and are generally dangerous. 13 The yakek of the Vedda people live in rocks and hill tops, among other places, and are named from them. They send disease, and are much feared. Some of these yakeks are spirits of the dead—orheadmen or their spirits. They also have a dangerous aspect—sending sickness or stealing children—and are placated by offerings. 14 The Kayans and other tribes of Borneo believe in spirits manifesting themselves in parts of nature—e.g., mountains. Spirits of this kind are called tok, and are malevolent; hence people are careful not to offend them. Their most dangerous dwelling places are on the most rugged summits, which the natives will hardly approach. 15 Among the Lushai Kuki clans lastly are the dwellers in precipices and controlling animals, but demons people hills, streams, etc., and cause much trouble. 16 In Chirilah, said by them to be the seat of a giant, demons are credited with making mountains. 17 Among the Orongs every rock and natural feature is haunted by spirits. 18 In the Himalaya is the dwelling of immortals beings, its recesses the haunt of demons, its caves of witches and fairies. Other hills are credited with coffins of dead people and with being haunted by demons. 19 Early in Vedic times such beliefs are found, and in the Mahabharata with its many gods and demons, wherever the spirits of mountains are duly worshipped by sacrifices, and on every pass in a shrine where prayer is made to them or an offering laid. They control tigers and give the hunter power to catch them. In China mountains are sacred to the gods, and in the sacred mountains are buried the remains of the dead, and even venerated-like in the Hebrew temple,-by living men, in the Sha-hi mountains, their power being proportionate to the size of these. Only on certain days shall mountains be crossed, and then only after fasting and after reciting solemn prayers. 20 Sometimes the mountains are believed to send out frightful exhalations, and they are more friendly and have a regular cult (§ 2). 21 In Indo-China the Tai believe in the phu phone cluster of spirits dwelling on or near the hills, from which man’s life issues. 22 This is the reason for the Deliverer, some rez gunatant, rez futurists, like Arthur, who is one day to return as the saviour of his people. 23 In some of these he is in fairyland or heaven, but in others he is a natural being, archetype of that happiness which sleeps within the hills. 24 Sometimes he is seen there by one who has been able to penetrate into the hill. Such tales are told of Arthur, Merlin, Fionn, Brus, and many another hero, and there are many versions of similar tales. 25 The story is also found in Korea. 26 Hartland suggests that these heroes are gods of the earlier faiths, venerated by Christianity but no longer by Buddhism. 27 So in Irish myth the Tuatha Dé Danann had retired within the hills. 28 But, while this is not impossible, the idea seems to be linked more directly with that of the dead being alive in great caverns or for in hills (as in Scandinavian belief), whence they might come in the hour of people’s need.
Mountains, Mountain-Gods

6. Fabulous Mountains. — As the preceding section has shown, actual mountains are often regarded in a mythical light — e.g., Alhár in Zoroastrian belief, Himavat in Hindu, Kwan-lun in Taoist. Some mythologies, however, have invented mountain-gods, mainly in connection with cosmogony.

Among such is the fab. 'mountain of the world' (1 § 90). In Hindu and, more particularly, Buddhist mythology, the abode of the gods, especially of the Supreme, is the mountain-god. This is the primal and the chief of mountains, the 'golden mountain.' Himavat is said to have been the abode of the gods before the coming of Buddha. It is at 8,000 miles high, and is surrounded by the heavenly mountain-spirits, of vast mountains that rise above it, with intervening seas. Between these and an eighth octastome ring are the four continents. Round Mera the sun, moon, and planets revolve; and the earth is offered to the Buddhist deities in the universe to use, etc. Mera is represented by a pole of rice in the middle. It is, however, hot here that the mountains of Qitä are believed to encompass the earth and its surrounding ocean like a ring, as Alhär was held to do in the chief abode of the sin. Its earth is one of seven successive mountains, or divinities connected with them cannot be sharply divided into the mountain-gods and the mountain-spirits. Their sphere is that to such gods or to others. In some cases, no doubt, mountain-tops were selected for altars, shrines, or temples because of their supposed nearness to heaven, as, e.g., the sacred mountain Maha-purna, a mountain, etc., borrowing from Hindu belief.

7. Cult of Mountains. — A cult offered to mountains or to divinities connected with them cannot be sharply divided into the mountain-gods and the mountain-spirits. Their sphere is that to such gods or to others. In some cases, no doubt, mountain-tops were selected for altars, shrines, or temples because of their supposed nearness to heaven, as, e.g., the sacred mountain Maha-purna, a mountain, etc., borrowing from Hindu belief.
In India from early times a cult has been paid to or on mountains. The *Institutio Venerandi saeclorum* says that four convenient places for performing *srealism,* and the *Gyapunis* speak of an idol of the *Srealism* made on a mountain to the north or north-east of Srinagar. The cult of sacred mountains, on which shrines or temples are constructed, is widespread in many parts of the world. Among the *Sumerians* the mountain-gods are of great importance. On *Mount* orn the *high *Mountains of *Semitic* tribes, on *Mount* the *Herod* speaks of the *Mount* of the *Jewish* people, and *Mount* the *Aborigines* of Australia. In *Mount* Sumeru of the *Aborigines* and in *Mount* the *Taoists* and *Buddhist* sects.
Mt. Athos was formerly known as 'the Pillar of Heaven.' In Hebrew cosmology the sky rested on the 'mountains of the world.' Is the world itself conceived as a hemispherical mountain with gently sloping sides? In Hindu and Buddhist cosmology the various heavens are arranged on and above the mythical Mt. Meru in an ascending series (see Commonore [Hindia, 1918]). Fragments of the myth suggest that with the Celts also a mountain supported the sky—e.g., a mountain near the sources of the Ebro was called 'the column of the sun,' perhaps bearing up the sky while the sun revolved round it. We may note the Greek myth of the Titans piliming Mt. Ossa on Olympus, and Pelico on Ossa, in order to scale heaven.

(01) The Hebrew story the ark rested on Mt. Ararat after the Flood (Gen. 8). So in Bah. myth the 'mountain of the land of Ninita' held the ship fast and did not let it slip, and on its top Utnapishtim offered sacrifices and incense to the gods. 5 The Hindu flood-myth tells how the fish bade the seven sonsbind their neck to the highest peak of himavan, Manu descended from it on himavan; hence the northern mountain is called 'Manna's descent' (cf. Delhorico).

MOUNTAIN-MOTHER.—The Mountain-Mother is the only Greek divinity certainly known to be of pre-historic origin. In the accompanying figure we have a real-impression of late Minoin style (cf. 156, n.c) found at Knossos. 6 It is of cardinal importance and embodies, indeed, nearly all that we certainly know of the Mother. She wears the typical flounced Minoin skirt, and, always the Mother is dominant. This dominance of the Mother divinity is of prime importance, and is in marked contrast to the Olympian system of Homer, where Zeus the Father reigns supreme. The Mother- and the Father-cults are, in fact, characteristic of the two strata that go to the making of Greater religion—the southern (Egean or Attic-Alcian) stratum has the dominant Mother-god, the northern (Indo-European) the dominant Father-god, the head of a patriarchal family, who, in the main, held the life and death of a subordinate wife. The northern religion obviously reflects patriarchal, the southern matri-linear, social conditions. A further distinction is of importance—the Homeric patriarchal Olympus is the outcome of a 'heroic' communal type of society; it emphasizes the individual; it is the result of warlike and migratory conditions; the worship of the Mother focuses on the facts of fertility, and emphasizes the life and its continuance rather than the individual and his prowess. Mother-worship is of the group rather than of the single worshipper. We find the Mother and her subordinate son or lover attended always by groups of demonic personages—Kouretes, Korybantes, Telchines, Dactyls, Satyrs, and the like.

A further characteristic of this southern matri-linear group-worship is the mystical and orgiastic. The mysteries all centre not on Zeus the Father, but on the Mother and the subordinate son—Demeter in Greece, whose daughter, Kore, is but her young prãnes, and the Dionysos of the mysteries is son of the Earth-Mother. The reason is simple: mysteries are now known to be simply magical ceremonies, dramatic representations of birth, marriage, and death, enacted with a view to promoting fertility. Mysteries, in fact, spell magic, and the mysteries of the Mother stand again in marked contrast to the rational worship of the Olympian system; the Olympian system the worshipper approaches his god as he would his fellow-man, with prayer, praise, and presents; his action is rational and anthropomorphic, not magical, not mysterious, not lascivious.

The mysteries of the Mother are based, like all other mysteries, on initiation ceremonies, which have for their object to prepare the boy for adult life and especially for marriage (see initiation [Greek] and Kouretes and Korybantes). Each young man, each member of the band of Kouretes, or grown youths, became by initiation not only the son but the prince-consort of the Mother; he went through a mystical and magical ἵππος γαμας. 1 This explains at once the expression used by Euripides (Bacchant, 120), ἐπίθεται Κορωπίων. It also elucidates the confusion made by the Orphic initiate, ἔστειλας ἡ τις ἑαυτῷ παρὰ τῆς ἑαυτῆς, ἀθηναῖας ἀδολεστας. 2 Marriage is the mystery περ excellence. In the matri-linear worship of the Mother the series of consorts was perennial. In Crete the fructifying of the Mother was mimetic and dramatic; in some Asia Minor cults it was attended by the horrors of castration. 3 In the Cretans of Euripides (frag. 472, Nauck) the mystic held aloft the torch, 4 ἵππος ἀνήθους ἔρως ἄνθρωπος, the blazing torch being a familiar fertilizer and purifier of fields and crops.

To the Olympians of Homer—a product of the Achæan heroic age—the Mother was never admitted; even Demeter had there only a precarious footing. But in post-Homeric days, when north and south were fused, a place was found for her in a more elastic pantheon as Mother of the Gods.

2 J. K. Harrison, Prolegomena, p. 652.
3 For an examination of the practice see J. G. Frazer, Adonis, Attis, Osiris, London, 1907, p. 224.

Impression of signet-ring showing Mountain-Mother and pillar-skirt.
She lent many of her sacred animals, attributes, and traits to the women-goddesses of Greece—to Hera her leps γυναῖκες, and sometimes her lion, to Aphrodite her dove, to Athene and the Erinys her snakes, to Demeter her mysteries. How far these several goddesses were indigenous forms of the Mother, how far they were directly immigrated from Crete, cannot certainly be stated, but undeniably the dominant Mother with the male attendant—e.g., Attis and Adonis—half son, half lover, is echoed in Helenic mythology in the figures of the great patroness-goddesses with the heroes whom they protect, in Hera and Jason, in Athene and Persons. The Mother has many names—theen, Cyche, Dindymene, Ma—but her functions remain the same; her characteristic attributes and sacred animals—lion, bull, and goat—vary with the culture and local surroundings of her worshippers.

MOUTH.—See Animals.

MOUTH.—In many ways the mouth is of importance from a religious point of view. It is used by which the speaker to the gods in prayer, or utters or sings their praises; many wind instruments used in sacred rites are blown by its means (see MUSIC); sacred things and persons are kissed with the lips, and the kiss has an important part to play not only in sexual but in social and religious life, while it has also a large folklore of its own. Silence is sometimes even more important than speech with the lips in religion and magic as well as in social affairs. Laughter is also a function of the mouth, and plays a large part in life, while it has likewise a ritual and folklore aspect. The MOUTH. Laughter is also a function of the mouth, and plays a large part in life, while it has likewise a ritual and folklore aspect. The
throws new light on the subject, and points to a possible origin for the same practice elsewhere, though it came to be regarded otherwise.

To the same origin may be ascribed the practice of cutting the jaw-bones and head of the dead and leaving them before the burial. This, often regarded as a sacrificial feeding of the dead, may have been intended as a means of recalling the soul, though each instance must be judged by its own circumstances. It must be admitted that quite different reasons are often given by those who practise this rite. Yet, if the dead used earthly food, this would keep them from eating the food of the Other-world, which binds the eater to that world. Thus they might be able to return.1

It is found among the Thb of Tongking (EBW iv. 4189), some Papuans, and the Bedayus (see Crow, i. 357). In the PaOxh leaves of the talas plant and Oates water are placed in the mouth as offerings to Fama, that he may be merciful to the dead (PEF ii. 290). In S.E. India. Kumi fill the corpse's mouth with rice and rice-beer (T. H. Lewis, Wild Races, S.S. India, London, 1870, p. 290). At the ancient Perseus dropped honey juice, which produces immor-
tality, or some poison remains in the mouth of the dead (EBW iv. 4029). With this may be compared the practice of placing the mouth of the dead over a pipe (ib. i. 1823), which was evi-
denced at the 3rd Council of Carthage and at other councils and synods (J. Bingham, Origins Ecclesiastics, London, 1829, p. 339).

Of course, if the dead are to be fed at all, it is most natural to place food in the mouth, and in some instances a table connected with the mouth is made to procline from the grave so that nourishment may be poured down through it.2 Where head-hunting is practised, the heads or, rather, the spirits connected with them are often fed by head hunters after the meal. The Egyptian ceremony of opening the mouth and eyes was performed that the deceased might see and eat the food offerings and utter the right words in the right manner.

As a preparatory rite the mouth and eyes of the mummy or statue representing the deceased were rubbed with part of the mouth to excite the spirits. Then the soul priests addressed the deceased: 'I have set in order for thee thy mouth and thy teeth. I open for thee thy mouth, I open for thee thy two eyes. I have opened thy mouth with the instrument of Anubis, the iron instrument with which the mouths of the gods were opened.' Mouth and eyes were touched with this instrument, and Horus was asked to open the mouth of the deceased as he had opened that of Osiris. With another instrument the lips were touched, then right and left. This was repeated. Then the mouth was touched with other articles to give life and colour to the spirit, and opened again so that he might speak. The mouth was established; and, finally, food was then placed in the mouth.4

The establishing of the jaw-bones probably refers to an old custom of dismemberment. Various texts speak of restoring the jaw-bones and the mouth in the reconstituted body. The lists of the members of Osiris include lips, mouth, and jaw-bones, and there may have been an ancient rite of cutting out the jaw-bone and preserving it separately. This is done by some African and Malayan tribes.

In Uganda the king's jaw-bone is cut out and preserved in a special house, where it is concealed as an oracle, as the spirit is supposed to attach itself to it.5 Widows among the tribes of the Hood Peninsula carry the husband's jaw-bone.6 The Tanacs of German New Guinea exhume the corpse after some months and with great ceremony recover and preserve the lower jaw. Similar customs are observed by other tribes of this region.7 Again, the Sat (Solomon Islands) preserve it with the skull in a box covered with a papoo leaves and a common house.8 In New Britain the jaw-bone is worn by a relative as a means of obtaining its help.9

These customs are perhaps akin to that of making trophies of the jaw-bone or lips of enemies, as in Assam, Dahomey, Togol, etc. (see Histoire, etc. cit.). The purpose is to secure power over the ghost of the dead man.

The Egyptian custom should be compared with the 'way of opening the three mouths'—body, mouth, and heart—as practised on the deceased by the Shigam sect in Japan.10 Among the Basoga the lips of the dead are smeared with oil.11

2. Hostile spirits and the mouth. — The mouth as a spirit-opening is naturally one which is exposed to the entry of hostile spirits which take possession of a man. In India bhutas are thought to enter by the mouth, and in Egypt in common opinion all kinds of evil spirits try to do the same. Various customs are more or less clearly connected with this belief, and have for their object the warding off of such noxious influences. Feeding in a spirit state is one of these; uttering a charm or per-
forming some ritual act after yawning is another; scouring teeth, cleaning, as with the Hindus, is a third; veiling the face is a fourth. Probably the most widespread of them is the act of filling the teeth, usually at puberty, is also connected with these dangers at initiation to man's food.5 Though, from the savage point of view, tainting the lips or mouth of a person with a certain medicine or with a wooden or metal plug, which is often increased to large dimensions, is regarded as ornamental, the origin of the practice is perhaps magical. The lip-ornaments are protective for the body. The act of entering by the mouth door, or perhaps also against the escape of the soul. This custom is found among the Eskimos, Haidas, and other N. American tribes, and very commonly in S. America (the most extravagant use of it being among the Botocudos), as well as among many African tribes.4

3. The mouth and the breath. — As the soul or life is so often connected with the breath, whether breath in general, or, as has been suggested, the last breath—which may be expelled by a sneeze or yawn, and which leaves the body finally at death,12 is the origin of the custom.13 In recent studies of witchcraft among animals at a birth lest they swallow the infant's soul, and the mother and others in the house must keep the mouth shut.13 The breath, again, may have life-giving properties. Hence the Eskimo angebok will breathe on a sick man to cure him or give him a new soul;14 or, among the Bribri Indians, the medicine-man purifies a woman after
during the journey of the Osiris Spirit.
child-birth by breathing on her.1 Healing by breathing or blowing upon a patient is also found among American Indian medicine-men and in Ceylon. On the other hand, the breath as connected with the life may contaminate sacred objects. Hence these must not be breathed upon, or the mouth must be covered when one is near them.  

In Thule the common people, in addressing the Lapps, place the hand before the mouth, lest they profane them by their breath.2

On another hand, the breath as connected with the life may contaminate sacred objects. Hence these must not be breathed upon, or the mouth must be covered when one is near them.

MUHAMMAD

localized as Al-Thāghmūt (‘of the Thāghmūt’) (Mutanabbī, ed. F. Dieterici, Berlin, 1861, p. 331), known by his followers as ‘the Apostle or the Prophet of Allah,’ and also by numerous other names, variously estimated at 20, 300, or even 1000 (see the collection in Qastallān’s Masālikh Ladhuniyāh, Cairo, 1278, iii. 133–179), was the founder of the religious and political system called in Arabic Islam and in English the ‘Shi‘a’ or Neo-Hasidic. The event in his life which furnishes his followers with an era, viz., his migration (hijrā) from Mecca to Medina, is fixed by synchronism with the Fish Day of Atonement for 20 September, A.D. 622. That era was introduced several years after his death, and, indeed, for the purpose of arranging the events in his career, by his second successor Omar i. (Mubarrad [253 A.H.; Kāmil, Cairo, 1908, i. 327]), whereas the calendar on which it is based uses a lunar year of 354 days, introduced by the Prophet near the end of his life. Since both the calendars and the eras previously employed in Central Arabia are only vaguely known, and the story of Omar implies that he had not before heard of an era (which perhaps is confirmed by the fact that the word used for ‘era’ signifies ‘month’ and ‘year’), it is evident that events of the Prophet’s life is impossible. There is, however, an allusion in the Qur‘ān (xxx. 1) to the victory of Chosroes in the Nearer East, which has been taken by some modern writers to indicate that the tradition which Muhammad preached for some ten years in Mecca before his migration. Probably the earliest written account of him is that in the Armenian Chronicle of Sebosa (Armen. text, Paris, Bibliothèque Nationale, in Armenian, fol. 233r; tr. by K. R. Patkanian, do. 1862, pp. 116–118), of the 7th cent.; it is very scanty, giving little more than the statement that he was an Isma‘īlī who taught his brethren to return to the religion of Abraham and claim the promises made to the descendants of Isma‘īl. His career may, therefore, be said to be known entirely from Islamic sources, which contain no biography that is quite contemporary. The earliest work that was intended to be a chronicle of his life is that by Muhammad b. Ishaq (c. 150 A.H.), who composed his Biography (‘Biographia’) for the ‘Abdād Khalīfa Mansūr (136–158 A.H. = A.D. 754–776) at least a century and a quarter after the death of his subject. This work does not appear to exist in its entirety, though probably the bulk is preserved in the first part of Ibn Hisnāt’s History († 294 A.H.) and also the Chronicle of Tabari († 310 A.H.). Its author was in communication with eminent members of the Prophet’s family, but is said to have been a man of indifferent morals, besides being a Shi‘a and a Qadari (believer in the freedom of the will); he employed versifiers to compose poems to be put into the mouths of the personages who figure in his narrative; and his credibility was otherwise impaired.1 Contemporary with Ibn Ishaq was Muḥād b. ‘Uqba († 141), whose collection of Campaigns was studied in Cairo as late as the 15th cent., but of which hitherto only some fragments have been discovered (ed. E. Saadah, CEBAW, 1904), and those of little value. Shāhīn († 204) quotes this author once for what is clearly an edifying fable (‘Umm, Cairo, 1321, i. 100). Later by some fifty years is the work of Ibn Khushk († 230), which to some extent embodies the same materials as the work of Ibn Ishaq; and somewhat later still the encyclopaedic work of Ibn Sīrād († 230), secretary of ‘Umar b. al-Khattāb, the Prophet, his family and his followers. The memoirs or table-talk of the Prophet’s associates were collected and tabulated (with infinite repetitions) by the jurist

Abūn b. Ḥanbal († 241), and the recollections of these persons, after being critically sifted, were arranged in the order of subjects for the use of lawyers by numerous authors shortly after this date, and by some considerably earlier. Very little of this material has historical value. In the main, then, our knowledge of the Prophet’s career comes from the work of Ibn Ishaq.

familiar with the foibles of the Arabs, and utilized them to the utmost advantage. The stories of his successes as told by Ibn Isäq indicate a complete absence of moral scruple; but they also show a combination of patience, courage, and caution. For example, they detail his loyalty when not backed by interest, which fully explain the certainty with which results were won. If his age is correctly recorded, and no events of great importance in his early life concealed, his military career began when he was over fifty; this seems astonishingly late, yet analogies, if not parallels, can be found. Surprise is also excited by the ease with which the Arabs abandoned their gods and goddesses, readily accepting the logic of the stricken field; for, though new prophets arose after Muhammad’s death, there appears to have been no re-

 cerebration of paganism. Yet to this, too, some analogies can be discovered. The fact of primary importance in the rise of Islam is that the move-

ment became considerable only when its originator was able to draw the sword and handle it successfully. That he was summoned to Yathrib was doubtless due in part to the presence of a Jewish element in that community, intellectually further advanced than the Arab tribes, which at first he was able to present as the incipient religion of monotheism. That he was able to make the fullest use of that opportunity was due to his own ability. The only difficulties which are to be found in his career are, therefore, those of the periodic and recurring difficulty. It is impossible to say why one man should be more gifted than his fellows, or why opportunities should occur for the development of special talents.

According to the Qur’an (xliii, 30), he was not a ‘great man’ in his city, and, if the words of xcii. are to be taken literally, he lost his parents at an early age, and at some period was poor and burdened with a family. The question whether he could read and write has been much discussed, and it is unfortunate that we do not know certainly whether those accomplishments formed the basis of education in Mecca when he was a lad; there is, however, some slight reason for supposing that they did. The evidence indicates that he could do both of them, but not well. Thus, when he records the charge made against him of copying the ancient history which he reproduced in the Qur’an from dictation (xxv. 51), it is by the assertion that he could not write. The tradition makes him a tradesman, and can even name his partner and the goods in which he dealt. Some have tried to find evidence in the language of the Qur’an, which undoubtedly takes metaphors from sale and barter, profit and loss; but whether it does so to a greater extent than other books may be doubted. Some stories are that he was employed by his first wife Khadijah in the conduct of a caravan; and others tell of him following this occupation early in life. It is, on the whole, probable that he travelled in his youth for, though the geography of the Qur’an is vague, the descriptions of travel which it contains seem to be based on personal experiences. Moreover, the charge of ignorance which is repeatedly made against the Prophet of Islam is, as we have been brought to one who had some acquaintance with a higher civilization.

3. Origins and development of system.—The tradition does, indeed, name previously Muhammad at Mecca, among them a relative of his wife who had either copied or translated a portion of a gospel. Since Christianity had made progress in both N. and S. Arabia, it is not unlikely either that missionaries had found their way to Central Arabia, or that travellers thence had had their curiosity aroused and made inquiries into the system. The phenomena of the Qur’an on the
whole render it improbable that any part of it is based on book-learning; for, though in one place the Psalms are quoted with fair accuracy (xxvi. 149 = Ps. 37:3), the nature of the references is ordinarily explicable only as the reproduction of hearsay. Thus it cites (iii. 37 f., lxxxvii. 19) 'the Scrolls of Moses and Abraham' for those passages that are analogous to those occurring in the Prophets or the NT, though not quite identical with them; and the mode of quotation implies that the writer had a vague notion of the existence of such a class of books and the kind of story of which those to his hand might be a reproduction, which he would correct. Further, the form assumed by the proper names and the religious technicalities indicates a great variety of linguistic sources; for in these Ethic, Greek, Syriac, Hebrew, and perhaps other languages are represented. Some of the proper names are not at present traceable to any version of the Scriptures—e.g., .IsMatch for Saul, 1Isa for Jesus. Moreover, from the manner in which the Biblical narratives are told it is difficult to imagine that the writer was acquainted with the continuous history of the Bible; he knows only stories out of it. All this points to the probability that Muhammad heard the stories from narrators of different nationalities, who translated them orally into Arabic, leaving on their hearer a decided impression, in spite of the fact that the one who repeated them was not himself a practicing teacher. Besides the canonical books, various uncannonicl works contribute to the matter of the Qur'an, which, in addition, refers to prophets not mentioned in the earlier books. The Prophet was charged with employing as mentor a resident in Mecca, and after the migration to Medina, where there were Jews, he may have been able to utilize the Biblical learning of one or other among his converts. But it seems unlikely that the early period of the Meccan period had been heard from the travelling companions or from Jews and Christians whom he had met in foreign parts.

Prior to his call Muhammad is said to have practiced ascetic retirement on Mt. Hira, and for this an old technical term, *tablunnik*, is preserved, which is said to mean 'to acquire merit,' and certainly has nothing to do with the Heb. *tablannik*, 'supplications.' The call itself evidently took the form of a command to read, which the Prophet reluctantly obeyed. The communications of the Qur'an were, according to the tradition, made to the Prophet and uttered by him in trance; he would wrap himself in a blanket and perspire copiously at the time. A certain number of these stories may be inference from *surahs* xliii. and lxxiv., where the Prophet is addressed as 'Thou that art wrapped up,' combined with *surah* xvii. (supposed to be the first revelation), where he is bid to 'read.' The form of the utterances at times approaches verse, i.e., a series of sentences in which the same quantity and quality of syllables are reproduced, the termination of each unit being marked by rhymes, whereas more usually rhyme only, and this of a somewhat loose character, is observed. The relation of this Qur'anic style to the verse and rhymed prose of classical Arabic is an enigma which cannot be solved. It is true that the form of verse based on the recurrence of letters is obviously literary; i.e., it depends for its existence on the practice of writing, since only those who are accustomed to read and write think of their words as agglomerations of letters; to attempt to translate the word, if not the sentence, is the unit. Indeed, in what is supposed to be the earliest revelation the deity is said to have taught with the *kolomos*, or recel-pen. The existence of pre-Qur'anic poets before the Qur'an is attested, and the practice of those cases in which the poet also claimed to be the head of the community, its priest and its king. Attempts have been made by Spranger and others to specify the epicletic fits which in Muhammad's case ostensibly accompanied the revelations; but it is doubtful how far these are to be regarded as real occurrences. It is clear that he was a man of great physical and mental endowments, and that the central fragment of Medina was spent in constant military expeditions, added to the cares of a rapidly increasing community, of which he was at once priest, legisl-
MUHAMMAD 875

later, ruler, and judge. Yet we never hear of his health breaking down under the strain. The 'Alis seem to have been experienced only when they were required for the delivery of the revelations, and in no case to have interfered with his activities. Abraham, and also to his 'ministers,' as forms, and, when Muhammad became head of a State, his Qur'an served as government organ, containing rescripts and something like an official chronicle of important events, with references upon them. But before the master was not so easily supplied. To a certain extent it reproduces narratives from the Christian Bible, which ex hypothesis could not have been known to Muhammad from books, and therefore must have been communicated to him by direct inspiration, and so are a proof of the miraculous character of the whole work. The chief purpose of these and of the other messages is to insist on the importance of obeying God's messengers implicitly.

It is not easy to say whether Muhammad had any desire to inculcate any particular doctrine, for there appears to be none which he was not prepared to abandon under political pressure, and the tradition represents his followers as far more attached than himself to the dogmas. The main doctrines of which he was accused by his opponent Arabs, such as future life, the unity of God, and the folly of idolatry. Since he ultimately retained in his system the kissing of the Black Stone (cf. ERE VII. 743), it is difficult to treat the campaign against idolatry as quite serious, however. The edicts were preached in the early days as a warning of the approaching end of the world and the Day of Judgment; yet he had afterwards to use the same formula in his cause enter paradise at once, and his enemies enter hell immediately after death—a belief not easily reconciled with the former. According to Tabari, during the Meccan period he set a date certain for the advent of the eschatological event, which is unlikely to have been fixed before the raising of an army was contemplated.

The other canons or main institutions of Islam—the pilgrimage, the fasting month, and the tax called 'alm (sudr or jizya)—belong to the Medina period, though they cannot be precisely dated. The establishment of the first indicates the Prophet's resolve to consolidate so far as possible the pagans of Mecca, and to abandon Judaism, which on his arrival was a clear sign of compromise: 'In the name of Allah the Rahman the Merciful.' Since the last adjective is an Arabic rendering of the second, which is Aramaic, used as a divine name by Jews and pagans, and in Arabic not an epithet, but a name, some mystery must lie behind the employment of this name with a translation following it. The tradition suggests that the name 'Alam was familiar to the Meccans, but not the name 'Rahman,' which, indeed, had been adopted by one or more false Messiahs. In certain parts of the Qur'an, however, it may be said to be dominant. This formula, then, was doubly accommodated to Meccan prejudices.

The tradition does not conceal the fact that the 'canons of Islam' were slow growth; it is probable that the part of the programme which never varied was the revelation of the religion of Abraham. One of Muhammad's predecessors, Zaid b. 'Amr, is represented as travelling with the view of discovering the religion of this patriarch, from whom, it is said, the Jews and Christians are descended. It is not probable that his name was known in Mecca before Muhammad introduced it; but in doing so he was treading on safe ground, since the people of learning, i.e. Jews and Christians, were well acquainted with it. If the tradition is to be trusted, the new institution was called by the Meccans 'Sribism,' a name connected historically with Harran, where a cult of Abraham is likely to have existed; the Harranians appear to have been called Harran 'heathens,' by their Christian neighbours, and possibly this is the solution of the puzzling name 'Hanif' applied in the Qur'an to the religion of Abraham, and also to Muhammad. The former, according to the same book (vi. 163), was a title invented by the patriarch. The Qur'anic tales about Abraham are traceable to the Jewish Midrash; what is chiefly known about his religion is that he was an iconoclast, and was not one of the mushrikun, i.e. polytheists. When the Prophet decided to make the Meccan pilgrimage part of his system, he ascribed the building of the Ka'ba to Abraham and Ishmael (ix. 128), and brought the prayer-ceremonial into connexion with the former. It is probable, though not certain, that both that ceremonial and the fasting month are Harranian.

There is reason for thinking that, besides the prohibition of idolatry, the earliest form of Islam enjoined certain daily ceremonies which were afterwards developed and regulated until they became stereotyped as the five salat; and it is not easy to dissociate from these the theory of legal purity, which, however, seems to have existed in parts of the text of the teachings found in Salamai inscriptions. Of the actual growth of the ritual or liturgy nothing certain is known; the prayer which corresponds with the Faturan, and is called the Fatihah ('Opener') because it is the first prayer taught, contains a number of formulaic references to Jews and Christians ('those who have incurred anger and those who go astray'), which point to a late period in the Prophet's career; for his hostilities with the Jews did not commence until after the migration, and those with Christians were some years later. Moreover, the prayer-ceremonies were connected with military drill, which is unlikely to have been practiced before the raising of an army was contemplated.

The tradition does not conceal the fact that the 'canons of Islam' were slow growth; it is probable that the part of the programme which never varied was the revelation of the religion of Abraham. One of Muhammad's predecessors, Zaid b. 'Amr, is represented as travelling with the view of discovering the religion of this patriarch, from whom, it is said, the Jews and Christians are descended. It is not probable that his name was known in Mecca before Muhammad introduced it; but in doing so he was treading on safe ground, since the people of learning, i.e. Jews and Christians, were well acquainted with it. If the tradition is to be trusted, the new institution was called by the Meccans 'Sribism,' a name connected historically with Harran, where
food-taban which occupies so prominent a place in the Mosaic code, he adopted the minimum retained by the Council of Jerusalem, recorded in Ac I, with the tabn on swine's flesh which some think was originally to be found in those regulations (ii. 168, v. 4, xvi. 116). He held that each of the communities (Jewish and Muslim) might eat the food of the other, and, indeed, went out of his way to record in the Qur'an what he supposed to be the Jewish rules on the subject (vi. 147).

Muhammad's sincerity in his claim to be the spokesman of God is often discussed, and many of his followers have been held on the subject (vi. 207). Sprenger finds no contradiction between his supposed elaborate preparation of revelations and his assertion of them to direct communication from the deity.2 The former, as has already been seen, is scarcely tenable; nor does the latter correspond with the facts, for the revelations furnish little indication of elaborate preparation, and, when once delivered, they appear to have been neglected; there are, indeed, traditions of collections of revelations having been made by some of his followers, but it seems certain that Muhammad himself kept no such collection. Saeedani's theory, however, is probably sound to this extent, that in Muhammad's case, as in those of many other men of vast energy and ability, there was a belief or consciousness of being directed by the deity, which, however, by no means led to his trusting anything to chance; and, while the angels whom he declared to have won his battles were partly pious, partly poetical personifications of the heroism of his followers, he was fully conscious of the value of attributing his victories to his God, and felt that he had been defeated by angelic cavalry with no discredit to any foe. He was also quite conscious of the value attaching to the right to dictate the moral law.

6. Moral reforms. —As a moral reformer Muhammad has to his credit the abolition of infanticide, which, if we may trust the Qur'an (xvi. 61f., lxxxii. 8f.), was commonly practised in Arabia in the case of illegitimate infants. On the other hand, serious evil was caused by his institution (v. 91) of compensation for oaths, i.e. the principle that an oath might be violated at the pleasure of the person who had sworn it, if, when performed, some sort of penance. While the Qur'an carefully formulates any general principles of morals, it on the whole insists on moderation, and probably aimed at no considerable degree of control from outside. Hence it tolerates polygamy and unlimited concubinage, and assumes the institution of slavery. In the matter of the blood-feud Muhammad did not contemplate complete abolition, but he endeavoured to mitigate its effects, and favoured mild reprimands (ii. 173-175). With the institution of private property and the acquisition of wealth found no fault, and he deprecated extravagance in almsgiving as in other matters. The quality of personal courage he rated very high, and, though he often inspired it by the promise of paradise, it is clear that his followers were largely persons who required no such stimulus to make them brave. The ascetic morality afterwards taught by Sufi preachers and, if the tradition is to be believed, approved by some of Muhammad's early adherents finds little support in any interpretation of the Qur'an that is reasonably literal, and clearly receives no countenance from the Prophet's own career, if any credibility attaches to his biography. Like other sovereigns, he claimed a large share of the wealth which was in his possession, and appropriated territory as his domain.

It is not clear, then, that Muhammad can be credited with any considerable reform except in the matter of infanticide, whereas in the subordination of the family tie to the religious brotherhood he appears to have weakened one social sanction without producing any considerable change by way of compensation. The history of this sub-

jibril will basis but avoid anything forget, on narrated There crude conceal the 26, identified a Legislation. as in European codes it was possible to get rid of the doctrine that all law was to be got from the Qur'an or the Prophet's equally inspired conduct, and so lacked the power to legislate on a sound basis.

9. Philosophy.—Though it is not probable that Muhammad had any liking for metaphysical speculation, the rôle which he had assumed rendered it necessary for him to formulate views on various matters which any sort of religious creed brings to the front. The reduction of these questions and their answers to precise and philosophical form probably belongs to a later age, and, indeed, in the tradition Muhammad names sects which came into existence a century or more after his death; but in a vaguer form the Qur'an deals with them, and so furnishes a basis for theology, though one of doubtful fitness. His treatment of the subject, as is, on the whole, naively anthropomorphie; the Allâh of the Qur'an has been compared to a magnified Oriental despot. A royal court is formed by the Qur'an and the angels; Ïibôt conveys messages to the Prophet (ii. 91), whereas they are sent, mounted on horses, to fight the Prophet's battles (iii. 125, viii. 9, ix. 26, 40). Other intelligent beings are the jin, or šari'ûni, whose prince is Ïibûs; the second word is taken from the Ethiopic, the third from the Syriac transliteration of the Greek; the δ of diâboûs was mistaken for the Syriac sign of the genitive, somewhat as Ïbôreia gets transformed into Liber exccstion. To these the Prophet preaches (perhaps through a vague reminiscence of 1 P 3:18), and some are converted (xxvi. 28-30, lxiii. 1 ff.). Satan himself is the power that makes for evil, and even he, in the triumphs and oracles of prophets. He has the divine permission to mislead mankind for a season (xxv. 37-39). The Qur'an, on the whole, seems to favour the theory of predestination, but there are passages which contradict it, and there is a great diversity of a system of what is which is more political than religious. The ultimate system adopted was to permit the existence of communities which professed to follow a revealed rule of conduct. Of these communities three are mentioned in the passages, and the Muslims in a context which implies that the prospect before them is less satisfactory (xxxii. 17). At times no form even of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islam or pay tribute, which they are to bring in humiliation. Friendship with members of other communities is excluded. The most ancient of these communities—believers, Jews, Sabians, and Christians—on condition of their believing in Allâh and the last day, and doing good works; in another the last three communities are mentioned with the pagans, and the Muslims in a context which implies that the prospect before them is less satisfactory. At times no form even of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islam or pay tribute, which they are to bring in humiliation. Friendship with members of other communities is excluded. At times no form even of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islam or pay tribute, which they are to bring in humiliation. Friendship with members of other communities is excluded. 

8. Legislation. —As a legislator Muhammad probably perpetuated current practice rather than invented a fresh system, and the Qur'an is characterized by many grounds ill-suited for a basis of jurisprudence. It is imperfect, self-contradictory, and defective of order. So far as any principle can be traced in its arrangement, the collecter seems to have been anxious to avoid any semblance of chronological order, whence, in the case of conflicting enactments, it has to be supplemented by tradition. Where, however, there is a systematic treatment of any topic—e.g., the laws of inheritance in surah iv.—the signs of improvisation are very apparent; and even a little consideration should have shown the barbarity and folly of the punishment of hand-cutting for theft (v. 42). There is a curious tradition that on his death-bed Muhammad desired to frame a code for the guidance of the community; but to those who supposed that they had in the Qur'an the actual word of God this was not unnatural. But utterance not unmurdered is the law, and the State, however, suffered very seriously for the want of guidance in the matter of appointing successors to the sovereign; and until the introduction of European codes it was impossible to get rid of the doctrine that all law was to be got from the Qur'an or the Prophet's equally inspired conduct, and so lacked the power to legislate on a sound basis.

10. The Prophet's apologists. —The distinction drawn in the case of the founder of Christianity by D. F. Strauss between the historical and the mythical can be accommodated to that of the founder of Islam, though as regards Muhammad we have not so much to sift canonical documents as to contrast the impressions left by the biography of Ibn Isâq with the work of the Prophet as it appears at later periods of Islam. That biography, as will be seen, left room for some important supplements and called for modification in certain respects. The character attributed to Muhammad in the biography of Ibn Isâq is, as has been seen, exceedingly unfavourable. In order to gain his ends he resorted from no expedient, and he approves of similar unscrupulosity in the matter of his adherents, when exercised in his interest. He profits from the
to the utmost from the chivalry of the Meccans, but rarely requires it with the like. He organizes admirable and wholesome resources. His career as tyrant of Medina is that of a robber-chief, whose political economy consists in securing and dividing plunder, the distribution of the latter being at times carried out in a manner which fails to satisfy his followers' ideas of justice. He is himself an unbridled libertine and encourages the same passion in his followers. For whatever he does, it is to advance the great ends of which he is chief.

The Angels, however, to whom He declared the same doctrine, were dissatisfied with the unity of God and his claim to the title Prophet. This is a disagreeable picture for the founder of a religion, and it cannot be pleaded that it is a picture drawn by an enemy; and, though Ibn Ishaq's name was for some reason held in low esteem by the classical traditionalists of the 3rd Islamic cent., they make no attempt to discredit those portions of the biography which bear hardest on the character of their Prophet. The theory that this person's conduct was a model for his followers has in consequence done serious mischief, which apologies for Muhammad were started in the 18th cent. by H. de Bougainvilliers, who was favoured by Gibbon because this apology provided some instruments against Christianity. More important still, it is claimed to have been the line from which the Prophet, just as God was made the type of a heroic divinity, the author's knowledge of the two personalities being about equal. Another apologist who acquired some popularity was Boulainvilliers, who, by the help of superficial and second-hand information, and committed the error of basing his estimate of Muhammad's character and aims on the ill-recorded Meccan period instead of on the far more accurately chronicled period of Medina. No European apologists for Muhammad seems to have possessed any proper acquaintance with the Arabic sources. Only after the definite assertion of European secession by the fourth cent. of Islam, which may be dated from the Napoleonic invasion of Egypt, and the acquisition of European nationality or its equivalent by large numbers of Muslims, has the necessity for apologists become felt in Muslim communities. The most prominent writer on this side is Syed Ameer Ali, but there are many others. These apologists endeavour to discredit the biography of Ibn Ishaq where it shocks the European reader; and, where this cannot easily be done, they suggest honourable motives or suppose the course followed by the Prophet to have been the least objectionable of those which were open to him at the time. Thus his toleration of polygamy is declared to have been a limitation with the view of ultimate suppression, and his attitude towards slavery is regarded as similarly intended to lead to its abolition. The Prophet did doubtless express the sentiments of most of his contemporaries and successors in Arabia; but this is no great that the result is unconvincing.

But, while Muslim dogma, by assuming that whatever the Prophet did was necessarily right, renders apology unnecessary, from the earliest times there has been much edifying fiction in which the Prophet is shown to have practised all the virtues which mankind agree in admiring. The lines on which this has been distorted and a mythical character substituted have in the past been three.

(1) In the Qur'an Muhammad on the whole disclaims the character of thauatyrge, arguing that his predecessors were ordinary men, though he accepts the most important of the miracles ascribed to Moses, Jesus, and the prophets by which the natural access or as being of unattainable eloquence (cf. xiv. 1 ff., liii. 1 ff.). To these it is possible that one case of foretelling the future, viz. the recovery of the Rome of which he treated at the battle of Uhud, was, according to the tradition, revealed to him in a dream, though the official account of that affair in surah lii. 133 ff. makes no allusion to the warning. Of marvellous experiences which has attracted most attention is his supposed "ascent into heaven," which grew out round a text of the Qur'an (xvii. 1), which merely says that God took His servant by night from the sacred place of prostitution to the furthest place of mankind as a temptation to the people, i.e. a stumbling-block to those whose faith was weak. Nothing more is known of this 'dream,' of which we should gather that the Qur'an had contained an account which was afterwards expanded; but in the tradition it has been so expanded as to form the analogue on the one hand of the Christian Transfiguration, on the other of the exoegy of Moses on Sinai. There is even a tendency to ascribe to this ascent into heaven such non-Qur'anic legislation as is generally adopted by Islam, in the same way as analogous Jewish legislation is called 'rules' given to Moses on Sinai, because it is set on an example of monogamy, but the genuineness required for this is so great that the result is unconvincing.

(2) The Prophet's sayings and doings were made into a source of law, corresponding with the Oral Law of the Jews, like the latter, not at first written down. The great collections of these precedents or rulings date from the second half of the 3rd Islamic cent., but their accumulation goes back to the 1st cent. of the migration, when the
system of jurisprudence began to be established by the labours of jurists of Medina. The impartial criticism of these traditions seems to lead to a purely negative result; the practice of inventing scenes in which the Prophet delivered some judgment or of fathoming sayings upon him was so common from the very beginning of the Islamic empire that any genuine sayings of his are inex- traicularly mixed up with such as apocryphal. The question is, therefore, for this sort of ascertainment if possible the credibility of the per- sons who had handed it down. This was by no means easy, and various motives prevented those who endeavoured to criticize it from exercising their judgment freely; hence the chains which are technically regarded as strong appear to the non- Muslim critic fatally weak. The Prophet's merits as a legislator must, therefore, be judged ex- clusively by the Qur'an; for, though the rest of the 'sacred code' is ascribed to him, there is little reason for thinking it to be his.

(3) The Prophet is supposed to have expressed opinions upon all sorts of subjects—e.g., medicine—and writers of essays usually start by quoting these dicta. Those which have to do with the commendation of various virtues or the condem- nation of vices, are usually noted. An important scale by Ghazzal († 505 A.H.) in his Revival of the Religious Sciences (Cairo, 1292 A.H.), the standard text-book of orthodox Islamic theology; he was, however, a critic of the Companions of the Qur'an as one of the most splendid and sonorous dicta, many of which could be traced to the fabricators.

11. The Prophet's Companions.—No account of Muhammad, however brief, could omit all notice of his Companions, the persons by whose instrumentality he accomplished so much. Many of these became historical figures, as sovereigns, governors, or generals; it is remarkable that none of them undertook the office of biographer or even collector of memoirs. The tradition implies that certain institutions were suggested to the Prophet by one or other of these adherents; but there is no evidence that he was seriously influenced by any one of them, and we should gather that their attitude towards him was that of worshippers. Although the later parts of the Qur'an approach the character of official documents, and we actually have a State paper inserted in surah ix., it is not clear that these associates had any share in their composition. Indeed, such participation would have been at variance with the theory that the Holy Book was inspired from the inner- most deity. The tradition represents Abū Bakr and 'Omar, both of whom gave their daughters to the Prophet, as the innermost cabinet; the former is said to have been regularly in favour of mild, the latter of severe, measures. Of emissaries sent to reach us very little; an agent was sent to Medina to prepare for the arrival of the Prophet, but the duties of this person were probably political, at least as much as religious; and, when the policy of winning the Arab tribes had commenced, missionaries were sent to teach neophytes those portions of the Qur'an which were to be employed in their local dialects. The other Companions, however, were to have had in part military character. When the time had come to extend the mission outside Arabia, envoys were sent bearing copies of the Prophet's letter to all monarchical kings; but, as these contained a command to adopt Islam on pain of being attacked, there was no occasion for the messengers to endeavour to per- suade.

The theory that Islam is primarily a political adventure is borne out by the subsequent careers of its most distinguished adherents. They accumulated fortunes, and otherwise obtained conspicuous worldly success; 'Omar is credited by some historians with consummate statesmanship, and several others displayed talents as commanders of armies; but there was much rivalry for the first place, and a great part of a commander of the Prophet's death different groups of Companions led armies against each other. The later legend transforms all of them into saints and preachers, and sometimes into ascetics. This is done in particular in order to be accommodated in the history of the cult, especially in Persia; history, however, presents him as an ambitious libertin, endowed with personal courage, but little else that merits admiration.

12. His domestic affairs.—The women of the Prophet's family enter into the story of his career somewhat as they enter into the subsequent his- tory; the tradition makes the first wife, Khadijah, a woman of wealth, whose acceptance of her hus- band's claim to a supersaturated mission was an important element in determining its success. Her death is said to have occurred shortly before the migration. Since his followers at Mecca were at least to some extent persons who required temporal support, it is likely that her wealth (whatever that term may have meant) was devoted to this purpose and used to prop up the Prophet. After her death the Prophet began to course of poly- gamy and concubinage which has given offence to European students of his career, but does not so appear to have scandalized his Arabian contem- poraries, except, indeed, in the case of his marriage with the wife of his adopted son, which is defended in a Qur'anic revelation (xxxiii. 4). On two other occasions the pages of the sacred book are devoted to the Prophet's domestic troubles—once when his girl-wife A'ishah had incurred the suspicion of unfaithfulness, and was defended by a special oracle (xxiv. 11 ff.); and another time, when, owing to the introduction of a Coptic concubine to the karim, the remaining members of it were so embittered that the Prophet threatened to divorce them all, and the revelation which he produced assured him that he would be able to find adequate substitutes (lxvi. 1 ff.). Since matters no less private and delicate find a place in the prophetic books of the OT ( Hosea and Isaiah), perhaps their presence in the Qur'an ought not to shock us; nevertheless the tradition states that, according to A'ishah, the Qur'an would have profited by the omission of the affair of the adopted son, and this criticism might be extended to the others. In several of the prophetic changes it is easy to see that political considerations were dominant. Mu- hammad, like other leaders, wished to unite his chief helpers to himself by as many bonds as possible, and to get a hold on dangerous opponents. Had he had sons, he would probably have utilized them in the pursuit of this policy. Of these women A'ishah, the daughter of his most faithful follower, Abū Bakr, played a historical part of great con- sequence, and in the first civil war herself took the field. The descendants of the Prophet, disting- uished since the year 773 A.H. by green turbans, all trace their pedigree to Fāṭimah, his daughter by Khadijah; but other Companions, however, died without issue. Fātimah herself, the wife of 'Ali, seems to have been cruelly treated by the first successor, and died six months after her father, being called to play a political part for which she was unfitness in supporting her husband's claim to the succession. It is curious that the exact number of his sons is unknown, though it is certain that all died in infancy. Of the number in his life in a Coptic concubine, sent as a present by the Byzantine governor of Egypt, the death synchronized with an eclipse of the sun, supposed to be that of 27th Jan. 622.
MUHAMMADANISM (in Great Britain).—MUHAMMADANISM (in N. Africa).

Literature.—This, in both the Islamic and the Christian languages, is enormous, and even a list of important works would be lengthy. Besides the sources enumerated above, the Islamic writers give a great deal of space to the Prophet’s biography,—e.g., Isma‘il Abü’l-Fidā‘ (1722) A.D., whose account, ed. with Lat. tr. by J. G. Seeley, Oxford, 1875, was for more than a century the best of European researches. Many Arabic monographs in prose and verse are enumerated in W. M. Flügel, ed., Geschichte der Prophetenleiers (1858–1868, 4 vols. 640–690). To these should be added the work called Tanwîr al-Durr of Burhan abu al-Dawûd (1314 A.D.), ed. and annotated by the modern European student of the subject was started by G. Weil, Muhammad des Propheten (Stuttgart, 1845; it was popularized in English by W. V. Miller, Lives of the Prophet (1848)). The work of A. Spranger, Das Leben und die Lehre des Mohammed, Berlin, 1859, claimed to be based mainly on new material, much of which was simultaneously employed by W. Muir, Life of Mahomet and Hist. of Islam, London, 1860–61, reprinted in an abridged form, 1877, and ed. T. H. Weir, 1912. More recent biographies are those by H. Grimm, Mohammed, Munich, 1894, and D. S. Margoliouth, Mohammed and the Rise of Islam, London, 1906.

Besides biographies, there is a vast deal of space devoted to the Prophet’s character or certain aspects of his work. One of the earliest and most valuable is the对待 al-Mustakhf of the qadi ‘Iyâd (1514 A.D.), on which there is a vast literature described by Bâkî Khalîfah, ii. 56–61; the ed. of C. P. Hartmann, Das Waslah, Leipzig, 1839; O. S. D. L. Jones, Al-Mustahf of the qadi ‘Iyâd (1514 A.D.), published with the commentary of Zarrûq, 8 vols., Cairo, 1875. Of European mention may be made of C. P. Hartmann, Mohammeds Lebens aus der Orientliteratur, Leipzig, 1839; O. S. D. L. Jones, Mohammed, fut il-mustukhîf I, Paris, 1894. The ninth volume of V. Chavannes Biblicalische des oummares erat, etc., Liege, 1908, contains a list of all European works on the subject from 1610 to 1885.

MUHAMMADANISM (in Central Africa).—Muhammadanism is said to have reached Central Africa from three sources—Egypt by the Nile and its affluents, Tripoli via Ghadames to Timbuctu, and Algeria via the Western Sahara. Certain details of the dates of its introduction into various communities were collected by the traveller, H. Barth; about A.D. 1000 it found its way into Songhi, near the end of the 11th. century, into Kanem, about 1500. into Bagirmi, and not much later into Islamic Nigeria. Islam was introduced into Logon about the beginning of the 19th. century. In 1897 it was computed that the number of indigenous Muslims in British Central Africa was 50,000 as compared with 500,000 fetishists. Its introduction in certain places is connected with the names of historical personages; the chief missionary for Central Negroidal was one Muhammad b. Abd al-Karim b. Maghilli, a native of Buda in Tawat, who flourished about 1500.

The Islam of Central Africa seems to be every-where of the Mulkite school; and, if it has pro-duced a literature, few monuments of it have as yet come to light. In Revue du monde musulman, xii. (1910) 197, Isma‘il Hamet gives a summary of the Kitâb al-Tarîkh by Muhammad b. al-Mukhtar of Kamerun. The account of the death of the invader, published in the Revue de monde musulman, xiv. (1911), Hamet gives extracts from the works of a somewhat earlier writer Sidi Muhammad al-Yaddali (1725), a poem by whom in praise of the Prophet was published by L. Massignon (ib. viii. [1909] 199). Some contemporary poems (satires) by one Bakai were published by Barth. There appears to be nothing in these specifications of the magazine (viii. 499) Massignon published the catalogue of a library belonging to a Central African chieftain Shaiib Sida; the editor notices the absence of books bearing on philosophy, science, and music; but cannot determine whether this is due to the political character of other Islamic libraries, and the want of representation of these subjects may be due to accident.

D. S. Margoliouth.

MUHAMMADANISM (in N. Africa).—l. History. —The introduction of Islam into N. Africa commenced shortly after the conquest of Egypt by Amr b. al-As, who in A.D. 641 penetrated as far as Barca, and in the following year took Tripoli by storm. It was not till the autumn of 647, however, that Islam was organized for the subjugation of Africa; whereas the Patridus Gregory had declared himself independent of the Byzantine emperor, and made Sbeitla (in Tunisia) his seat of government. The Arab invaders, Akuba, Akhlagh, was re-taken by the interior, defeated the forces collected by Gregory in the battle of Akuba, where Gregory himself perished, took and pillaged Sbeitla, and proceeded to devastate the country southwards as far as Gasa and Jerid and northwards as far as Marmajanna. Permanent occupation was yet contemplated, and the conquerors were satisfied with a heavy money payment, on the receipt of which they withdrew; certain conversions, however, were made. The civil war which followed the death of Uthman delayed the activities of the Muslims in this region for a time, but in 665 the first Umayyad Khalifah, Mu‘awiya, dispatched an expedition thither, which overcame the troops sent by the Byzantine emperor, and in 669 established a province Ifriqiyyah, with ‘Uqbah b. Nafi’ for its first governor. In the following year the Emperor employed Berber convicts as soldiers, and founded the city of Kairawan. Since the Islamic kingdom was carried out by this governor, who threatened the pagans with extermination, the religion began to spread fast among the Berber tribes. In 675 ‘Uqbah was replaced by a less vigorous governor; but he was sent back to his province by Yazid I. shortly after his accession, and proceeded to organize an expedition which finally reached Ceuta in the extreme west of Africa, whence he turned south and saw the Atlantic before starting homewards. That morning the army was attacked by superior forces and annihilated at Tehuda, N.E. of Biscar. His defeat and death (683) were followed by a general revolt of the Africans from Arab rule, and an independent Berber state, with Kairawan for capital, was able to maintain itself for five years. In 690 this city was re-taken by the Arabs, who, however, vacated the province, which lapsed into anarchy. An end was put to this by Musa b. Nusayr, sent in 705 to Kairawan as governor of Ifriqiyyah, who traversed as far as Ceuta the country previously invaded by ‘Uqubah, penetrated as far south as the Oasis of Sijilmasa, took Tangiers, and installed
a Berber convert there as governor. He returned to Kairawan in 708, having definitely won N. Africa to Islam, and put an end to Christian domination, where it still existed. The pious Umayyad Omar it is said to have manifested zeal in the propagation of Islam among the inhabitants of these territories.

The Kharijites, who were giving much trouble in the eastern dominions of the Khalifas, also sent missionaries to the west; but the fierce and impetuous zeal of the Kharijites was not equal to that of the Fatimid missionaries, who were also active in the west; and the Kharijites were gradually driven out. The carrying of the faith to the West by the Fatimid missionaries is recorded by Ibn Jarir Al-Tabari.

The Tafiri doctrine spread among the western tribes, the Badi' in Ifriqiyyah proper. In 740 a revolt broke out in the extreme west against the Umayyad ruler in favour of the Kharjite doctrine, and, as it met with some initial success, it spread over Muslim Africa; a Syrian force sent by the Khalif Hisham to quell the rebellion was defeated on the Sen. Another force headed by the governor of Egypt in 742 was more fortunate; but, though Kairawan was rendered secure, the Kharjites maintained themselves at Tlemcen and in the neighboring parts of the modern Morocco, and various independent Kharjite communities established themselves to the west of the continent.

At the beginning of the 9th cent., while the dynasty of the Khalifahs was establishing itself at Kairawan, under the nominal suzerainty of the Khalifahs of Baghdad, but virtually independent, an 'Alid dynasty called the Idrisid became dominant in the city of Fez. Other petty dynasties were also established in various places. The great event in the history of Muslim Africa during this century was the arrival of the Fatimid missionaries Abu Abdallah, who won adherents among the Keta, and by skilful organization and strategy was able to overthrow the Aghlabites, and install at Kairawan a Shi'ite dynasty, which presently substituted for Kairawan a new city, Mahdiyah, as metropolis. The petty principalities to the west of Kairawan alternated in their allegiance between the Unayyids of Spain and the Fatimids of Mahdiyah; but the latter remained the dominant power in N. Africa until they, having conquered Egypt, transferred their capital to Cairo, leaving in possession of Mahdiyah a dependent dynasty called the Zirids, who, in the middle of the 9th cent., thrust off Fatimid suzerainty. As the 11th cent. neared its end, the Almoravid dynasty, founded by an adventurer named Yusuf b. Tashfin, with its capital at Morocco, obtained the hegemony; and thus in the 11th cent. the capital of the Almorahids was displaced by that of the Almohads founded by Ibn Tumart, which under its first actual sovereign, Abu al-Mu'min, obtained possession of all N. Africa as well as Spain. This dynasty lasted one century only, and was succeeded by three—the Merinids with their capital at Fez, the Ziyanids with theirs at Tlemcen, and the Hafsids, with theirs at Tunis—which constant disputes kept N. Africa in a state of turbulence for some two centuries. In the 16th cent. various points on the north and west coasts were seized by Portuguese and Spanish forces, and later by Turks; the three national dynasties were displaced by a fourth, that of the Ottoman, whereafter that of Tunis gave way to Ottoman domination, which had Algiers for its centre, in the west a new empire, that of the Sharifs, arose. The capital of the Sharifs was at different times Morocco and Fez, and sometimes Meknes; their first dynasty, that of the Sa'dians, lasted from 1520 until 1654, when it was ousted by that of the Hassians, who obtained the throne of the Sharifs in 1662. The Ottoman power, which prevailed during the 18th and 19th cents., was, however, constantly undermined by the power of the Zirids, who in the 19th cent. succeeded in uprooting the Christian invaders from the places which they had occupied, but in 1830 Algiers was occupied by the French, whose empire has ever since been extending in N. Africa. The connexion of the Turkish settlements in N. Africa with the government of Constantinople grew constantly looser from the time of their establishment, and the pasha of Algiers had difficulty in maintaining his authority over the territories which lay to the west of that place.

The population forming the Islamic communities has remained Berber in the main, but, besides the influx of Arabs at the time of the original invasion, and the introduction of Carthaginian tribes, some African stock, the Sultain in the 11th cent. has been of great importance for the political development of the country. These tribes, which had been located in Egypt, were, it is said, sent westwards by the Fatimid Khalif Mustansir, by way of avenging himself on the Zirid Mu'izz, who in 1048 had accepted the suzerainty of the 'Abbasid Khalifah, destroyed the Ismaili college at Kairawan, where the Sh'ite doctrine was taught, and burned in public all that was indicative of Sh'ism. The Arabs advanced victoriously, and compelled the Berber sovereigns to make terms with them; under the Almohads some of these tribes were introduced into the western provinces and employed by the government as a military force.

'Far from attaching themselves to the cause of the Almohads had hoped, these tribes continued to live in the nomad state and to annoy the government by their turbulence' (E. Sicheux-Feller, 'Les Tribus berbères de la vallee du Lekhme', in Archivc.s moraves, iv. [1905] 59).

Indeed, their rising form many a chapter in the history of N. Africa. In the beginning of the 17th cent. the Hassanid Sharif Isma'il purchased or procured a great number of Negroes, of whom he formed agricultural colonies, chiefly in the neighbourhood of Morocco, enjoying various privileges, but bound to place all male children from the age of ten at the disposal of the sovereign, to be trained for his guard, while various employments were also found for the females. By the end of his reign as many as 120,000 of these black soldiers were registered in his lists; they were placed under the patronage of Bukhâri, the author of the chief collection of traditions, whose sanctity in certain parts of the Islamic world approaches or even exceeds that of the Prophet. The purpose of this scheme was to provide the Sultan with a guard unconnected with the native population, on whose fidelity he could rely. A Turkish and a Levantine element, neither very considerable in magnitude, were introduced into the eastern provinces by the Ottoman conquests.

sects and orders.—It will have been seen from the sketch just given that during the first four centuries of Islam both Kharijite and Shi'ite opinions held sway in different parts of N. Africa. The former are still represented by certain isolated communities (see art. Kharijites); while the Zirids asserted their independence of the Fatimids, Shi'ite opinions were condemned, and a general persecution of those who held them took place (1014); some years later (1045), on the occasion of a further dispute between the Zirid and the Fatimid monarchs, the former asserted the legitimacy of the 'Abbasid Khalifah and proclaimed the orthodoxy of the Malikite school, upon which the Almoravids also insisted. The commander of the Almoravid army was a follower of the Ash'arite theology, and himself propagated it in Africa, displacing that of the Zahhâris (Qalqashandî, Sahib al-Âshâ', Cairo, 1915, v. 191). The further changes of dynasty appear to have produced no alteration in the dominance of these systems. The historians of the earlier period call attention to two purely religious communities, the Shi'ite and the Kharijite. The first of these was that founded by Sâlih b. Târîf, prophet of the Bargwata in Temesna, who about A.D. 750 promulgated a Qur'an containing sûras named after 'the Cock,' 'the Elephant,'
the Asses,' 'Adam,' etc., and was recognized by his tribe. After a reign of forty-seven years he departed to the East, promising to return under the seventh sovereign of his dynasty and leaving his son Elias to continue his work. This successor reigned, as we are told, fifty years, professing Is'a, but we are not informed of his beliefs or of the power and influence which he exercised over the tribe. In 1464, al-Tayyib apparently wrote to the Massa of the Sultan of Morocco, then at the zenith of his power, to proclaim his Son of Mary, and that the assurance of it to Ibn Tumart was a fable. Numerous claims to the title have risen since that time (see art. MAHDI). Of an obscure sect called the Badawis, located on the right bank of the Sebu, an account is given by G. Salmon in Archives marocaines, ii. (1905) 358–363. A branch of these called 'the sect of Yusu' is mentioned as having arisen in the 13th century (cf. Les Croisades, iii. 857). It was a missionary sect and the base of their system on the Qur'an, but not from other Muslims in points of ritual.

The general dominance of the Malikite code, of which the most noted were the Mahdies, or the founder of the dynasty was that of Sidi Khallil (Abu Diya), was not affected by the dynastic changes, except that in the provinces governed by Turks the official system of the Ottomans, that of Aba Janiha, was introduced without displacing the other; in these regions there were two gâdis. In the cities of N. Africa there were theological schools which produced orthodox writers and teachers of eminence, and such works were to be found as far south as Timbuktu, which was made subject to Morocco in 1590; one of the prisoners then taken, Ahmad Bâhi, who belonged to a family of theologians, complained in his apologia that the conquerors had pillaged his library, which, though containing 1000 volumes, was smaller than others which belonged to his relatives.

The Islam of N. Africa was greatly influenced by the introduction of the form of the Qur'an they used was that of Abd al-Qadir al-Jilâni (q.v.), 561 A.H.), to whom the establishment of orders is traced. In one of the earliest European accounts of the orders (E. de Neven, Les Croisades, i. 857), the Redemptorists, which contains the lives of ascetics of Morocco; A. Graule, who is the trans-
MUHAMMADISM (in Arabia) 883

_*The people are fanatics rather than believers, haters of the non-Muslim rather than religious*; the member of an order shares the superstitions of the ignorant, but is more bigoted and, having acquired his own salvation, looks down on others who are less fortunate. *Convinced of his immense superiority, he believes himself the equal of kings and illustrates the anarchy and pecuniary observation of the rites which take up his time and save him the trouble of reflecting* (p. 4).

It is asserted that religion occupies a much larger share of Berber thought in Arab life, and the names of the dynasties, Almoravids, Almohads, bear this out. In the 16th century the devotess (called marabout, or marabout) begin to play a positive part in the occupation; but the marabout (zawiya, or hermitage) at times like towns in magnitude, are regularly employed as refuges; they themselves in times of peace (so far as there were any) enjoyed divers privileges—e.g. under Turkish rule the marabouts of the Almoravids in the neighbourhood of Jijel had the right to direct the provision of timber for shipbuilding, and others had a share in the proceeds of the piracy; they were employed as envoys, as mediators, and, at times, as regents. Most frequently we hear of them as heading insurrections. The dynasty of the Sa'diian Sharifs is said to have commenced with the seventh generation of ancestors and at the time of the Portuguese settlements betaking themselves to a marabout named Ibn Mubarak, whom they implored to place himself at their head and march against the infidels. He referred them to the Sharif Abu 'Abdallah al-Qain, then residing at Tagmadet, whose sons undertook the duty. In 1012 the Sa'diian Sharif al-Mu'min, who, in order to regain his throne, had handed over Al-Arish to the Spaniards, was assassinated by the muqaddam (about) Muhammad b. Abd-Latif, at the instance, it is said, of the marabout Abul-Mahalli, who belonged to the Khamam order, and even proclaimed himself Mahdi. This personage was able to take Morocco, where he established himself as sovereign untill defeated by another marabout Yahya, who espoused the cause of the Sa'diian Za'idah, and was then, without difficulty, persuaded to return to his monastery. In 1619 the province of al-Habt was headed by a marabout al-'Hassan b. Raisun, also in favour of a Sa'diian, who undertook to restore orthodox practice; and early in the 17th cent. the marabouts of Dela, Sale, and Sijilmassa headed political parties in different parts of the Sa'diian empire. In 1639 a Turkish force dispatched from Algiers which had occupied Tripoli and Constantine was repulsed by the intervention of a marabout, who obtained reasonable terms from the natives for it. In 1641 the Algerian pasha Ysuf, starting an expedition for the suppression of anarchy in the province of Constantine, obtained the good offices of the marabout Ibn Sasi of Bone. In 1641 one named Sidi Hamud obtained a passage for the Algerian troops marching to the relief of Jijel, which had been occupied by the French. In 1668 the marabouts of Della were at war with the Hassanian Sharif Rashid, who defeated them and stormed their Zawiya, which had grown into a populous and sumptuous town. His brother and successor, Isma'il, had to face an insurrection headed by one of the survivors from this monastery, named Ahmad b. 'Abdallah, who was defeated in the neighbourhood of Tidza. Their activity was no less marked in the 18th century. In 1727 a marabout raised the standard of revolt against the Hassanian Sharif Muhammad b. 'Abdallah in the country of the Ghumarah. In 1777 an insurrection was started at Fez; the Sa'diian Sharif in the Derkaou order, named Muhammad b. 'Abdallah, whose followers were ultimately bought off. In 1787 Salah Bey of Constantine conducted a series of campaigns, not all of them successful, against the heads of Zawiya in this province. In 1803 another Derkaou, Ibn al-Ahras, said to be favoured by the British Government, established himself at Jijel, and organized the natives against the bey of Constantine, after which he died, and in 1805 the Derkaou revolted in the province of Oran and besieged Oran itself. In 1818 the marabouts of this province gave further trouble, having undergone many more recent instances of their activity are recorded.

In general the ostensible aim of these devotees has been to free the soil of Africa from Christian occupation; but as they have not been able to do this completely, as there are instances of the marabout in compromising with the Christians or even invoking their assistance against rivals (Archives marocaines, ii. 40).

3. Cult of saints.—Close连接ed with the orders is the cult of saints, which is wide-spread in N. Africa. The tomb of Idris, founder of the Idrisi dynasty, is a common place of pilgrimage, and both it and other tombs figure in the history as places of refuge. The tomb of Ibn Maslakh (see above, p. 852) is visited in the month Shaban, and comprehends a series of visits to those of his predecessors and contemporaries (see above, p. 24). A list of the tombs visited in the Ghurb is given in Archives marocaines, xx. [1913] 246—275; of the saints thus venerated the most popular is Sid Qasim b. 'Abi Hamida († A.D. 823), whose tomb is stated to be so fortunate that he has two sanctuaries, one on the left and one on the right bank of the Sebu' (p. 261), and that he has several festivals in the year, one of which lasts three days. A list for the province of al-Habt is given in Archives marocaines, xvii. (1911) 451 ff. These saints have functions corresponding closely with those of the patron saints of Christianity.

*The Zawiya Sharqiya of Bu'Ja'd is not only a religious centre, but likewise a centre of preparation for the sacred war, and the greater number of the horsemens and shooters of the Ghurb are placed under the patronage of Sidi Bu'Abid al-Sharqawi. In this region one frequently finds the name Bu'Abid, which is considered to be of good omen for horsemens. Parents often give their children the name of a marabout under whose patronage some military exercise is placed* (ib. xx. 39).

An account is given (ib. p. 270 ff.) of various Maraboutic 'tribes', i.e. groups of villages attached to some saintly cult, and not, like the Zawiya, isolated villages.

D. S. MARLIOULOUTH.

MUHAMMADISM (in Arabia).—One of the results of the taking of Mecca by Muhammad was a determination on his part no longer to tolerate paganism in Arabia, and the destruction of the ancient cults took place throughout the peninsula with extraordinary rapidity; the ease with which the fetishes were discarded by their worshippers has elicited expressions of wonder from some who have chronicled the period. It is indeed suggested at times that there are still unexplored regions in Arabia whither Islam has not penetrated, but of these rumours there appears to be no confirmation. So far as the authorities before us warrant, every tradition of the existence of paganism has perished; statements about them which meet us in Arabic literature are ordinarily fictitious based on Qur'anic texts, and the so-called 'pre-Islamic poetry' must, if genuine, have undergone wholesale expurgation. Even the revolts in Arabia which followed the Prophet's death do not appear to exhibit any recrudescence of paganism, but merely a desire for liberation from some of the
more onerous exactions of Islâm; and permanent relief in one matter (the number of daily prayers) is said to have been obtained by one of the rebellious tribes, though the revolt was otherwise a failure. It is worthy of notice that these rebellions were led by people who aimed at re-enacting Muhammad's part, not by priests or other representatives of the fallen idols. The liberation of Arabia from paganism was speedily followed by the conversion of many of the inhabitants of the different parts of the peninsula. Even the Jews and Christians, whose rights had been respected by the Prophet, being either banished or forcibly converted in the time of the second Khalifah.

The murder of the third of these rulers in 35 A.H. was an event of the greatest importance for both Arabia and Islâm. On the one hand, as some of the far-sighted are said to have urged at the time, it split the community into sects; complete unity has never been restored. On the other hand, the political centre of Islâm was thereby shifted to a point outside Arabia; the Assassins came from Egypt and the battle for the succession was fought from Basra, Kufa, and Damascus. These cities became the capitals of the rival claimants, and Medina was never reoccupied on its former position. Once held by Arabia has, therefore, ever since been a province, at a distance from the seat of government; and such principalities as have asserted their independence have been negligible both in magnitude and in importance. Such talent as Arabia produced has been attracted to the political centre, whereas the persons attracted to it from outside have been mainly devotees.

There are, however, certain ways in which the influence of Arabia upon Islâm has been constant or permanent. On the one hand, Mecca has maintained its position throughout history as the greatest Islâmic sanctuary; some sovereigns are said to have contemplated substituting either Jerusalem or Baghdad, but to have abandoned the idea as impracticable. This place has not only served to perpetuate the traditions which Islam took on from earlier times, but has also served as a rallying ground for the sects; and only occasionally has its sanctity been violated. Mecca is the place where the Islâmic world as a whole can be most easily addressed, and to this day revivalist movements, which are usually reactionary, have a tendency to materialize there.

Al-Mahmoud, Medina remained the chief seat of Islâmic learning some generations after it had ceased to be the political capital. At this place, the residence of the Prophet's widows, several of whom survived him for many decades, and the theatre of his most eventful years, the science of tradition came into existence, and this speedily became the most important source of law, though not first in the list. In the 1st cent. of Islâm, Medina produced a school of jurists who, though they left nothing in writing, by their labours prepared the way for the codes whose publication followed shortly after the foundation of Baghdad. In the 9th cent., it was the home of the jurist Malik, where he received as pupil Ša'būr; Ša'būr in later life went to Baghdad, where alone conspicuous ability could find its reward. In the 10th cent., the three great Islâmic codes are connected. It is, therefore, Arabic (and indeed Medinese) law that theoretically is observed throughout Islam, though in the more civilized States the civil and criminal codes have been derived from the ghafis of Napoleon.

The development of the other Islâmic sciences has little to do with Arabia, which in these matters has lagged behind the other provinces. The chief battles of the sects, too, have been fought outside Arabia; they could not, however, cut quite adrift from the sacred territory, where they did not, as a rule, win many enthusiastic adherents. There has, however, been always a smouldering desire to recover that hegemony which was lost after the murder of Othman; hence there has generally been dissatisfaction towards the ruling power. Perhaps the most serious attempt made at recovering the lost hegemony was when in the early 'Abbásid period the period Abūl-Aswār, son of Zubair, was able to maintain the two sacred cities for a time against the 'Abbasid generals. His cause perished with him; and rebellions which have since taken place in Arabia have had for their object recovery of independence within the peninsula rather than re-establishment of the political headquarters of the empire.

An account of the religious condition of Arabia in the 4th cent. of Islâm is given by the geographer Muqaddasi (ed. M. J. de Goeje, Leyden, 1877, p. 96). The three great political sects, the Sunnis, Shī'ah, and Khalīfi (called by him Shurāt), were represented. The Sunnis, under the leadership of 'Abbās b. Abū Ša'int, have been the most numerous of the sects. The Khalīfi, which has since disappeared, the Qarmātī, was dominant in Hijār. The Sunnis schools were not then restricted to four, and, besides the other systems of law, the Shī'ah of Dāwūd the Zāhirī, Sufyān al-Thaurī, and Ibn al-Mundhir had adherents. The Shī'ahs in parts of the country were also distinguished as Mu'tazilites.

Of the rise of the Shī'a it is difficult to give an account has been given in the art. 'IRĀDĪ. Of a Khalīfi who maintained himself in Yemen from 558 to 569 A.H. a notice is given by Ibn Khaldūn (tr. H. C. Kay, Omarrā's History of Yemen, London, 1892, pp. 161—165). The branch of the Shī'ah which has maintained itself permanently in S. Arabia is the Zādī (q.v.). It is called after a descendant of All, Zād, who perished in an abortive rising of the year 122 A.H. For its history, references may be given to the work of H. C. Kay (pp. 184—190), and Khazarji's History of the Rashīdī Dynasty of Yemen (tr. J. W. Redhouse, 5 vol., London, 1907—13). An account of the Qarmātīs in Yemen by Janādī is also translated in the work of Kay (pp. 190—212). Other sects were either at one time represented in Arabia or are still to be found there; as a Shī'ah sect, called Sab'iyah representatives are to be found in a Yemenite community called Yām (Ahmad Rāshīd, History of Yemen and Sanā' [Turkish], Constantinople, 1291 A.H., ii. 87); their views appear to be similar to those of Azaqīr (Vāqūt, Dictionary of Learned Men, ed. D. S. Margoliouth, London, 1907—13, i. 301).

Probably the most important religious movement which has taken place in the older Islâm is that called Wahhābī (q.v.), the origin and course of which have been described by the English travellers W. G. Palgrave, Lady Anne Blunt, C. M. Doughty, and the Austrian traveller E. Nolde. So far as the literature of these sects has hitherto been made accessible, it would appear that they have had to adopt and modify the results of the labours carried on in the older Islâm and have themselves been incapable of producing original works of any consequence. One of the few specimens as yet accessible of purely Arabian theology, Al-Imām al-Muhātikā, by Salīh b. Māhī, has been published of Yemen (†1108 A.H.), in which an endeavour is made to find a common ground for the sects by going behind the supposed innovations of the founders, applying to rest entire theological works, already known in Europe, the authors of which were natives of extra-Arabian provinces. We learn from this work that the Shī'ah order and practices, which originated in Baghdad and Basra, were in the author's time
wanderings as a dervish in Iran gave him a very poor opinion of the piety and virtue of their teachings. Outward appearance and formalities, hypocrisy and fanaticism, hatred and implacability, are the main characteristics of the sect; and the fact that a good deal of the hierarchal power is invested in the hands of the Sultán, in Persia we find the clergy the supreme arbiters of the spiritual life, unchecked by the secular government, and very frequently in conflict with it. There, if not in the 40 years' rule of the present Persian dynasty the Shāhs have striven in vain to curtail the influence of the priests; the Imām ʿAmīn is Islāfān and Karbalā were and are their equals if not superiors in power, and the Shāhs' ordinances are nil without their consent.

If we turn now to Central Asia, the difference will at once appear which separates Islam there not only from Iran—which is very natural—but also from the western portion of the Muhammadan world, in spite of their common Sunnite character and common Hanifite rite. For it is only in E. Turkostan that adherents of the Shāfīīite rite are to be met with. There we find a distinctly different religious life, the manners and customs of which do not resemble those of W. Asia. There everything bears the marks of fanaticism, of an exalted conception of the value of ritual trivialities, and of a deep hatred against innovations. In observing the Central Asian traveller the Visābī and his followers of S. Arabia appear to have undergone little molestation on religious grounds; intertribal wars and international politics have interfered with them much more. It is worth noting that the Cairene journal which is conducted ostensibly in the interest of the Muslim chiefly of S. Arabia has for its proprietor and editor a Christian with the unsatisfactory name ʿAld al-Maṣāḥ, "Slave of Christ." 

it is necessary to begin with the impression which the difference between the religious life in Western and middle Asia must make upon any one who has occasion to study these vast central portions of the Muhammadan world. From Constantinople east a gradually increasing fanaticism and ignorance will be observed, and the deeper the penetration into Asia, the more outspoken and intense become the hatred and aversion of the believer to the adherents of a foreign creed, and the less is it possible to ignore the points of divergence separating men of various religions. In Turkey, where Christians and Muslims have lived for centuries in close proximity, a long existing and continuous intercourse with the European world has undoubtedly smoothed away many asperities, and has, to a certain extent, prepared for a mutual understanding. In spite of the temporary outbreaks of enmity between Kurds and Armenians, caused by the predatory habits of the Kurds and not by their religion, very lax Muslims—the relations between Christians and Muslims are fair, and would be much better if the misrule of the central government on the Bosphorus and the political instigations from without did not steadily worsen the situation. In Persia ʿAlīn presents itself in quite a different form. There first appears the deep-rooted enmity between Shīʿites and Sunnites, and the fire which this feeling has been fanning through the ages is still raging. As for the life of the Shīʿite sect, what the present writer saw and heard during his

1 Description of L'Arabe, Amsterdam, 1774, p. ix.
MUHAMMADANISM (in Central Asia)

of delirium tremens; and Báb and his followers transported this vice to the court of the Mughals. This, however, could not be said of the Masses. In the present writer's time (1862-64) they were rigorously abstemious, and it is only since the annexation by Russia that the use of brandy and beer has been allowed to spread among the inhabitants of the towns.

In the observance, then, of the ruling precepts of the Qur'an and Sunnah the Muhammadan in this region, as in all conservative Mohammedan countries, is subject to many exceptions. Only the higher dignitaries, viz. the El-Khidjís, are undisturbed by the law of Friday; but the lower orders of society are free to forsake the mosques upon their return from the market. However, it is seldom that a. Muhammadan in Central Asia will commit the offense of 'impurity' after any meal, during the day, that he may not be compelled to go to the bath. As a result, the emphasis of the religious code is laid upon the observance of the sabbath, and of Friday, and the law of respect for the religious orders and institutions of the Koran. The Muhammadan of Central Asia, like the Muhammadan of Persia, has, however, many peculiarities of his own; and the writer has observed such strict adherence to the rites of the different orders and such veneration for their members, generally called derivishes, as in Turkestan. In the case of the genuine Turk— the Maulavi, the Baqáši, the İfifá, and the Qádiír orders have many votaries among the lower classes, and the respective derivishes are looked upon as saints.

But the laws, as well as the religious observances, in the higher dignitaries, very rarely manifest the same degree of attachment. They visit the convents on Friday afternoons, they attend the sacred ceremonies, and they take advice sometimes on both worldly and spiritual matters; but they have long ago ceased to be weak instruments in the hand of the Shaikhs, and particularly of the Baqás, who, having acted as revolutionary factors against the innovations in the time of Sulaymán Mahmuíd, are officially interdicted and only secretly followed. Somewhat similar is the case in Persia, where the conflicts between the Central Asiatic and the Western Asiatic have attracted much more attention to leave room for the orders, although the Shaikhs and 'Ali Illähíh find followers among the lower classes. The host of derivishes is to be met with in towns and villages in either case, and vanishing, living nowhere in a true sense, is the superstition of the people, or harmless idlers who conceal their laziness under the khirgah (mantle) of religious exaltation.

In the settled part of Central Asia, and even among the nomads, the orders play a very different and a far more important part. There they have taken hold of the entire population; they have pitted classes, i.e. the El-Khidjís; the 'ulamá, or priests educated in the madrasa, and appointed as such by the government. These, of course, are continually at war with the members of the Bahá'í, among whom the Naqshbandi, founded by Bábá al-Din, best known as the author of the Baskhisat 'asín al-hayát ' (Drops from the Fountain of Life'], occupy the foremost place. Having associated with the Naqshbandi derivishes during his stay in Central Asia, the present writer found among them various subdivisions, the character of which is expressed partly in outer appearance, partly in the way in which they fulfil their obligations. They begin as murids (disciples), and as such they must forsake all worldly pursuits and, clad in the khirgah and kuláb (conical hat), holding in one hand the 'nág (staff) and in the other the kashkál (a bowl made of a half coco-nut), have to wander about singing hymns or taking part in the dhikr (mentioning the name of God) and tevhéd (acknowledgement of the unity of God). As the majority of the derivishes are illiterate, they learn a certain number of hymns by heart and recite them in chorus, accompanying the monotonous melody with frantic gesticulations and wild exclamations.

Public places of performance, in order to attract attention and to collect contributions; for the derivishes, although forbidden to accept money, often betray the greatest greed, and their obtrusiveness has become proverbial. Once or twice the present writer tried to join such a howling company, but he could hardly stand the fatigue for more than an hour, whereas these processions wander about becoming exhausted. What struck him most was the endurance manifested during the dhikr, and he remembers having seen one derivish crying
MUHAMMADANISM (in Central Asia)  887
two nights without interruption the Ya ḫārī, Ya ḫāqān (‘He is the true and the right’) without exhaustion. This, of course, refers to the lower degree only. Higher adepts, who attain the rank of khalifah, a kind of graduate, entitled to preside over a takyrāh or kāhīyāt (convent), and to lead the ritual proceedings. The title of khalifah is mostly given to learned dervishes, whereas afterwards it is addressed as ishā (‘they,’ as a polite expression instead of ‘thou’), and have always a group of followers, who either stay continually with them or call on them once or twice a week. The takyrāh or kāhīyāt is really a kind of lodging-house in which there are always a few stationary dervishes, while the majority of the inmates are wandering members of the respective orders, who get a temporary shelter in an empty cell without any furniture or bedding and no regular food, except from time to time a pilāw (rice dish), and, if deprived of all means, a piece of bread. The guests and inmates of the takyrāh regard it as a duty to assemble round the chief at the time of the five daily prayers and also at the particular exercises of the dervishes, such as the ṭawfīn (recitation or instruction) and, the takyrāh (a circle of dervishes, presided over by the ishān, who sing and cry so long and so vehemently that they pass into a state of excitement and hallucination; they foam, they tremble in all their limbs, and whoever touches a dervish in this state of ecstasy is believed to have a share in his devotion, and to be cured of all kinds of infirmities. Strange to say, the spiritual leader, who presides over the exercise, always remains quiet and motionless, unaffected by the eccentricities of his disciples, and expressing his satisfaction only by a complacent nodding. They are, and you will find many young women, children, grey-beards, and particularly illing people, press around; they spasmodically seize the dervishes by their arms, head, or shoulders, they cling round their necks and embrace them, crying and sobbing; and some of them actually surpass the dervishes in their ecstatics. In Turkey this excitement, bordering on madness, is seldom or never seen, nor is there a similar participation on the part of the public.

In this and in many other respects the Islam of Central Asia stands alone. Everything in it bears the stamp of extravagance, unbridled passion, and we cannot believe it expected to follow blindly the tenets of the Qur'ān; no discussion or explanation is permitted, nor any effort to attract. Hence we see that, whereas in Western Islam the ishān (call to prayer) is given from the top of a minaret in a sweet melodious song, the muʾaddādhin in Turkestan summons the faithful in rough and half-articulated words from the flat roof of the mosque. The performance of religious duty, they say, does not require any adornment. Austerity and draconic rigour, too, prevail with regard to neglect or trespass of the laws of Islam. In the present writer's time a Muslim convicted of the use of alcoholic drinks was sentenced to death by being hurled from a tower, and a woman caught in adultery had to undergo the penalty of rajm (being stoned to death). Strange to say, the Central Asians are themselves fully alive to the exceptional position which they occupy in Islam; they are even proud of it, asserting that they are the most rigorous executors of the ordinances of the Prophet, and the only Muslims whose religious belief has not been contaminated by fruitless discourses. With Yosufī it is to the northern part of Turkestan, Mashrâb (personal name, Rahīm Bābī) is for the east and south. He was a native of Namangan in Khojand, and known as a divānah, a religious madman. A divānah is a dervish from place to place, behaves like a man insane, but, possessed of divine powers, works miracles, and has consequently an extraordinary influence over the ignorant masses. The present writer's observation of these divānahs or faqīrs (poor) has led him to the con-
viceion that most of them are cunning men with a lust for adventure, ready to exploit the plain people, and unwilling to submit to the sometimes rigorous monastic regulations of the orders to which they belong, or, disliking the individuality of their iṣām, or spiritual chief. It was chiefly in the villages and in the tents of the nomads that he met with these religious vagabonds; there they are highly revered. The mujālā, on the other hand, those of the incendiary, of breakers of the precept of Islam—Lā rukhūdān Fīl-Islam, 'There are no monks in Islam.' The majority of them are illiterate, but the present writer has met with mujašnā who were versed in religious lore, had studied in madrasahs, and had been moved simply by wandering propensities to renounce the regular and sedentary life of a priest. Among these dervishes there is also a certain Turk-dīrānāh, a Turk by origin, as the name indicates (date unknown), who is very often spoken of by the nomads as a saint, and who interceded with Allah for sinful humanity. He asked Him to deliver mankind from hell, to which Allah replied that He would when peace, justice, charity, etc., reign supreme in the world. Further, among the latter dervishes there are many of local celebrity, though others of the countries have their own influence; in fact, the farther a dervish has wandered, the greater is deemed his supernatural power, and the stronger is his position. A distinguishing feature of this extraordinary influence of the beggar-dervishes does not lie merely in the utter ignorance of the people, but rather in the tyrannic rule of the governing classes, laic and ecclesiastic, are everywhere hated. These unofficial servants of God, then, discredited and despised by the mujālā are regarded by the lower class as of themselves; they thus very naturally appeal to the people of the countries, and frequently play the part of publicly avowed protectors against oppression.

In Western Islam there is hardly a trace to be found of these roaming saints, and those whom the traveller accidentally meets in the Balkan countries, in Asia Minor, and in Syria are mostly foreigners, and principally adventurers from Central Asia, India, or Persia. The Turk himself is too large, too easy-blamed, and too much given to a quiet life to find pleasure in the eccentricities of the wandering dervish. The Ottoman Turk, like the Kurds and the Arab, clings with great attachment to his faith; but he is very far from giving way to the religious ecstasy and wild fanaticism which are imputed to him by his detractors. In this respect the Western Muhammadan is many hundreds of years ahead of his fellow-believer in Central Asia; for the latter has remained absolutely in the position of the first centuries of Islam, and, indeed, at the beginning of the past century was even more fanatic and orthodox than in the time of Hārūn al-Rashīd and al-Ma'mūn. Such, however, was not always the case. As long as the Iranian element was predominant beyond the Oxus, worldly science found many votaries, and during the reign of the Samanids and later of Central Asia was the birthplace of literary celebrities of high standing. But with the increase of the Turkish population and under the rule of warlike Turkish chieftains, the nomadism and later Central Asia was the birthplace of literary celebrities of high standing. And with the increase of the Turkish population and under the rule of warlike Turkish chieftains, the nomadism and later Central Asia

Naturally, then, scientific inquiry having been gradually banished, religious eccentricity has taken its place, and Central Asia has long been the seat of fanaticism. Jalāl al-Dīn Rūmī, the author of the Mathnawī, was right in saying:

'Ve can see the backbone of the tree with the fingers of thy paint.

Thither thou goest, to be put into chains.'

Similar things were said to the present writer by his learned friends in Turkey and Persia when they heard of the Czar's visit of breaking the Central Asia; and when, on returning, he related to them his experiences, many of them disdainfully criticized and laughed at the overreached religious zeal of their fellow-believers. At other times, for this great difference is to be sought in the belt of dreary sand steppes, infested by nomadic robbers, which surrounds Central Asia, and has always been a great hindrance to its communication with the rest of the Muhammadan world. Whilst Western Islam has undergone essential changes in the course of time, Islam in Central Asia has remained stationary, unaffected by the temporary intellectual movements in the West, and checked by the strong conservatism of a fanatical clergy and a despotic form of government. If Shi'ite Persia had not produced its great chief in the general Muhammadan body, distantly related to the shores of the Adriatic, Islam in Central Asia could hardly have retained its fanaticism or degenerated into these aberrations, often censured by plausibly rationalists, and extolled by the Central Asians themselves, who accuse their co-religionists in Turkey and Arabia of levity of mind, and proclaim with pride: 'Bukhārī is the real strength of Islam and of the faith.' This difference becomes still more important when we observe that the spirit of zealotism has extended into N. India, and has particularly infected the barbarous mountaineers of Afghanistan. At other times we hear of a murderous attack by some Pathān or Khaiābī on an offending British officer, we have always to think of one of those fanatics, who, anxious to become a ghāzī, a warrior for the faith, is ready to sacrifice his life for the title of martyr, and for the prospect of a place in Paradise. The existence of such ghāzīs was formerly reported among the adherents of Shāh Shāhīn in the fierce struggle between the Russians and Persians in the N.W. Caucasus, but nowhere else in Islam. It is, therefore, to the wild influence of the Islam of Central Asia that their appearance in the north of India must be ascribed.

A. VANDERBILT.

MUHAMMADANISM (in China).—I. Historical.—China, regarded as a portion of the Muhammadan world, may be divided into (1) China proper (the 'Eighteen Provinces'), and (2) the external provinces (Turkestan, Tibet, and Mongolia). Of the external provinces only Turkestan need concern us here, for the Muhammadans resident in Tibet and Mongolia have never been more than an insignificant fraction. According to H. d'Ollone, Beuse du monde musulman,2 v. 1908 94, they are to be found all along the highway to India through Tibet; thus, 400 are recorded for the hundred or so Muslim families living in the vicinity, while mosques are found also in Batang and Lhasa, in the latter city being attended, it is said, by British Mohammedans. The Lamas of Tibet are in no way hostile to Islam—a fact that need excite no surprise, since the adherents of the two religions have a common political interest in alluding to all their schools and colleges, the students, flocking from all parts of Central Asia and India, have turned their attention to purely religious questions, neglecting even such subjects as philosophy, law, and philology, which are still cultivated in the colleges of Western Islam.

1 Hereafter cited as RMM.
have brought about no conversions to Islam, though the commercial bond is far from being insignificant. In particular, the Muslims of Sung-p'ang-ting in Sze-chuan carry on with Tibet an important traffic in tea, but in this body of the Ommar expedition of 1097 found only a single Tibetan convert to Islam, who, moreover, was rather lukewarm in his adherence (RMMI v. 403 ff.); on the other hand, several attempts to convert to Christianity were met with in Sung-p'ang-ting.

Muhammadanism was introduced into Turkestan at the time when the powerful kingdom of the Sâmanîs was pressing towards the east. According to the tradition—in common with many legendary features—which is given in the Ta'rikh al-Bughra (extracts in R. B. Shaw, Sketch of the Turki Language, Calcutta, 1878-80), the Turki prince Satak Bughra was converted to Islam at the age of twelve (A.D. 966; he reigned till 1047) by a certain Abû Naqr Sâmanî, who came from the west. It is a fact of history that the descendants of Satak Bughra, known as the Boghrais or Ilkeids, maintained their power till the year 1103, and in 1070, during the reign of Taghbehr (one of that dynasty), Yusuf Khass Hajib finished his great work (Mirâj-ud-Din, or Divining Science), a work imbued with the spirit of Islam. Probably the diffusion of the Persian language and civilization among the Turki population had contributed to the spread of Islam in that region. From this it results that the Turki language of the rulers, it certainly was no more than tolerated in the adjacent Turki kingdom to the east—the land of the Uigurs. Nor can the position of the Muslims have undergone any essential change by the time when the Kara-Khitai overthrew the Ilkeid kingdom, since the conquered people were left in full exercise of their religious freedom as long as they adhered to the old beliefs. Similar methods were practised by the Mongol conqueror Jenghiz Khan and his immediate successors. At the division of his empire Turkestan fell to his grandson, Jagaïï, whose successors soon embraced Islam. Even at a later time, however, as the records conclusively show, the adherence of princes and people alike to the new faith was half-hearted, and the ideas and usages of Lânism (q.v.) were quite common among the professed Muslims. The blind superstition of the people facilitated the unscrupulous tactics of the philosophically gifted descendants of Makhdum A'zâm, who at first ruled as Khalifah (Murad) and then became Khan of Jagaïï, and eventually in their own name. The dissensions that arose within the family of Makhdum, their struggle with the Kalmucks of Zungaria, and the internal wars of the Sahidian khan led (c. 1750) to the conquest of Zungaria by the Chinese, who shortly thereafter won Kashgar as well, and joined the two territories together as the 'New Province' (Hain-chin). Ever since that time the Chinese have been the ruling power there, and various attempts at revolt have proved abortive. Only for a short period, from 1864 to 1877, did the country—as Al'tishshahr (‘Six Cities’), and subsequently Yethishshahr (‘Eleven Cities’)—figure as an independent Muhammadan State under the savage but politically capable Ya'qub Beg, who recognized the suzerainty of the Sultan of Constantinople as his suzerain. The population is estimated at from 1,000,000 to 1,500,000.

In China proper there existed no considerable groups of Muslims before the Mongolian period, and the reports of an earlier immigration are altogether legendary. Chinese tradition says that Islam found its way into the country by land and sea. It tells of a maternal uncle of the Prophet, Walîh Abû Kâabah, who landed at Canton in A.D. 628 or 629, bearing presents from Muhammad to the emperor of China, who was prevailed upon to embrace Islam, and who then proceeded to Hsi-an-fu. Other reports say that the earliest message was brought by Sâd Ibn Abî Wâqwâs, whose tomb may be seen in Canton. The tradition attaches special importance to an expedition of 4000 Muslim troops which the Khalifâh Mânûr is said to have sent to assist the emperor in a struggle with rebels (A.D. 655). The emperor permitted them to settle in the southern cities of the country; they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

These traditions find no corroboration in the writings of Arabian historians. China and Islam, as a matter of fact, were brought into contact with each other as a result of the conditions prevailing in either sphere. About 620 a new power in Nearer Asia emerged, and another in China, each characterized by a remarkable ambition for conquest, and, advancing respectively eastwards and westwards, at length came in contact with the ancient world. In the 8th century the Khalifâh Mahdi (c. 720) conquered Transoxania, which it had been attacking incessantly after the conquest of Khurâsân, so T'ai Tsung (627-649), the second emperor of the T'ang dynasty, made himself master of Kashgaria. Of the new religion of the conquerors the strongest was commerce, which was strenuously fostered by the later emperors of the Sui dynasty; another connecting link was the work of Christian missionaries, of whose bold advance into China the Nestorian stele of Hsi-an-fu (dating from 781) affords telling evidence. Against these influences, however, must be placed the impediment to intercourse between the empires of both empires to rest content with their gains, and so to limit their frontiers. The emperor T'ai Tsung showed caution in rejecting the appeal of Yânlâqirît (for assistance as may be inferred from Tabârî, l. 2960 l.), though the report of the ambassador is a fabrication; cf. i. 2876). The Muslims became more aggressive after their able general Qutabî Ibn Muslim had subjugated Farâghânâ, but his expedition against Kashgar in 713 was unsuccessful. A comparison of the sources (Tabârî, i. 1275-1279) shows that Kashgar remained unconquered. The sending of ambassadors to the imperial court of China during the first nine years of the reign of the latter is probably historical, though, as narrated by Tabârî (i. 1277 l.) in the traditional form, it is garnished with all the conventional features. Under the Umayyads the Muslims had, indirectly, a good deal to do with China, since the Khân of the Turki, and also the jâlghû, were vassals of the emperor. A time-honoured tale is that of the scene between Naizak and the jâlghû on the one side, and the shâdî (the shade of the Orchenian records) and the sîbel (probably to be identified with the zîbel of Theophanes; cf. E. Chavannes, Documents sur les Tou-Kui (Turcs) orientaux, St. Petersburg, 1903, 259) on the other, in which the sâdî makes the low-bow to the jâlghû (Tabârî, ii. 1224, year 91 [A.D. 710]).

1 Notwithstanding the surreptitious introduction of silk cultures into the Inner Asian Huns and their cultivation of silk merchandise of China was largely imported to Nearer Asia. It was conveyed on land by the ancient 'Nor ad happiness', or by sea through the Persian Gulf, on the north shore of which Ambarîsah (Tabârî, ed. Leyden, 1879-1891, i. 284), and afterwards Sîrî (cf. G. Le Strange, The Land of the Huns, 1893, 281, p. 385), was the port for such products.

2 Nothing is said, however, of an embossing of the Chinese side. At an earlier date, in the reign of Chowonos Amihirâvan there were Chinese at the Sasanian court (Tabârî, i. 589 l.; cf. Z. Scholz, Griech. der Parsch und Araber zur Zeit der Sassaniden, Leyden, 1879, p. 107).
MUHAMMADANISM (in China)

was sent to Damascus, and was probably the first Chinese, or of Chinese Turks, that the Syrians had ever seen. It may be regarded as certain that it was Chinese statecraft that abetted the opposition of the Turkī khāqān and that of the smaller nationalities in Transoxiana dependent upon him or upon China itself, so that the Muslims had to maintain a ceaseless struggle. The Khotzal, who are probably to be located in the Pamirs, were not divided (A.D. 769) (Tahard, ii. 74), while Afīkhrīd, king of Khwarezm, was himself—costly Chinese ware—being conveyed to Abū Muslim at Samarqand (Tahard, i. 79 f.). When with the downfall of the Arabian empire the vigour of the Muslim religion in China was at its height, the central authority was busy with the maintenance and organization of what had been won, and when contemporaneously the central power of China under the T'ang emperors showed symptoms of decline, the intersert territory was soon occupied by strong buffer States—first of all by the Uigurs, and then by the Ilekids (see above). Isbihān was thus placed in a very unfavourable position for making an advance into China. Weak as were the dynasties that followed the T'ang emperors, the people held firmly to the maxim, 'The rule of China is better than that of Buddhism.' It is true, had made a successful entry in the face of vigorous opposition, but this is explained by the facts that (1) Buddhism was to some extent in harmony with the cult of reason (6), which, if having been taught by the Chinese in the most widely diffused than any other, and (2) it assimilated certain elements of the national spirit and so adapted itself to the prevalent sentiment (see art. Chinese, i. 598). Islam, which with its rigid doctrine of uniformity does not on principle express itself in creeds, and tends to repel by the defiant and arrogant tone of its adherents, and which, although the Buddhism of China is essentially a political religion, could not strike root in China save under the protection of the strong hand. The required protection was first provided by the rulers of the Mongol empire founded by Jenghiz Kháñ. These potentates had no religion—nothing at all events beyond the worship of their lucky star, conjoined with the egregious ambition to bring this star down from heaven. Jenghiz Kháñ found himself first in the field of Buddhism. Islam, its doctrine of uniformity does not on principle express itself in creeds, and tends to repel by the defiant and arrogant tone of its adherents, and which, essentially a political religion, could not strike root in China save under the protection of the strong hand. The required protection was first provided by the rulers of the Mongol empire founded by Jenghiz Kháñ. These potentates had no religion—nothing at all events beyond the worship of their lucky star, conjoined with the egregious ambition to bring this star down from heaven. Jenghiz Kháñ found himself first in the field of Buddhism. Islam, in which one of the most widespread and long-lasting elements of the population, so that he might have nothing to fear from the formation of any powerful alliance against him. He found his auxiliaries—apart from his own countrymen—in the various Muslim tribes of the West, a race renowned for their courage. Among these the Turks took precedence, alike in numbers, in importance, in capacity for bearing arms, and in discipline. We shall hardly err in adding Afghan mercenaries; for the Afghans—the Pāshāns of India—were always willing to serve for pay and bands of warriors may also have flocked to him from the mountains of Persia—the fastnesses of the Kurds—though not the Persians in the narrower sense, the inhabitants of the plains, who had small reputation for bravery. Yezidis and Chaldaean, were Mongolia's mobile reserve, and the Mongols were themselves men of war, and kept of trim muster-rolls. We may venture to assume, however, that the largest hordes of their followers were supplied by the countries lying nearest the scene of their conquests, viz. besides the land of the Turki between the Great Wall and the mountain barrier of the T'ien-shan (Chihli-Tien-Kuang, Transoxania and Khurasan. This explains also the curious phenomenon that from that day till the present Persian has been regarded by the Muslims as the language of polite education, and that the vernacular Chinese written by these Muslims is mixed with scraps of Persian. 1 In eludication of this it has been supposed that at some time or other Persian immigrants had settled in the country, and their tenantry, perhaps, preserved vestiges of it in these numerous fragments. This, however, is certainly erroneous, 2 for the intermixure of Persian in the Muslim idiom of China was from the very beginning a circumstance which was regarded for the Persian language entertained by the barbarian and semi-barbarian hordes of Neerth Asia who swarmed to the camps of the Mongol Khan (Khāñ), and established his sway in China, he brought Persians in great numbers to fill the offices connected with the government and the court. Both Marco Polo and the Arabic traveller Ibn Battūfah supply full information regarding these foreigners in the Chinese services. 3 To a great extent they would be full-blooded Persians, and they no doubt helped to establish the policy of keeping the Chinese out of the empire, and to keep it alive in the very heart of the country.

As to the numbers of Muslims brought into China by the Mongol emperors, we can hardly err in estimating them at a million. The emperors and their auxiliaries, who now to hand may throw light upon such importations. In A.D. 1236 a young Muslim warrior, a native of Bukhārā, who claimed to be a descendant of the Prophet, 'Ali, 4 longed for a career as an explorer. The official employment of this Muslim from Bukhārā, who, of course, did not come single-handed, but was attended by a company of armed men, was of special interest, because his soldiers were sent on service to Yün-nan, while he himself was installed as viceroy of that province. We may accordingly infer that the influx of Islam into Yün-nan began at that time, for that it reached

1 An excellent specimen of this idiom is found in the short Chinese MS (MS Sio. Hartmann 1 of the Royal library, Berlin). 2 It is no argument against the theory, however, to say that it would involve a wider diffusion of Shi'ism than we can suppose, for the introduction of Shi'ism to the national religion of Persia and the dispersion of the Shi'ite predilections among the people did not take place till a later period. There is also a tendency to regard all Persian writings as of Shi'ite origin—an utterly mistaken idea, as even the widely-read work, Mādrj al-Nabūrat, 'Life of the Prophet,' by Mu'in al-Dīn al-Mishkīn (t. A. 1091), is by no means in character.

3 One of these officials made himself very obnoxious—'Azmān al-A'imād, 'the Bůlī,' whose story is given not only in the Chinese sources (cf. J. A. de M. de Martina, Hist. générale de la Chine, Paris, 1777-85, lv. 414 f. (Strange and Kung-Mun), which might occur to be expected to take a more or less cynical tone, but also in a straightforward account by Marco Polo (cf. H. T. de Bosis, The Black Prince, p. 74). But even this was largely brought to a graphic and ingenious sketch (RMM iv. 1167, 320 f.).
that province by sea is in the highest degree unlikely.

Now, when we take into consideration the number of Muslims in China at the present day and the isolated requirement just mentioned—the only known instance of the systematic migration of Muslims into China, and there was certainly no other—we are prompted to ask how the Muslim element was arrived at, and the extent of its proportions. The total number of Muslims who settled in China from the date of the earliest campaigns of Jenghiz Khan (c. A.D. 1200) to the fall of the Mongol dominion (c. A.D. 1367) cannot certainly be reckoned at more than 1,000,000. At the present day, however, the Muslims resident in China amount on the lowest estimate to 4,000,000. That this vast expansion is due entirely to natural increase is inconceivable; we must therefore look for other possible factors. (1) From time to time fresh companies of Muslims came to China, as, e.g., in the retinue of Turki princesses of Muslim faith who entered the harem of the Chinese emperors. (2) Chinese-born children were, and still are, sometimes made Muslims. (3) When great devastations occurred among the Chinese, the vacant places were filled by Muslims, as the latter, being endowed with a greater courage, would evidently be more capable of grasping with the manifold misfortunes which throughout the centuries have fallen upon this ill-governed country. It has already been noted that the Muslim expansion is connected with the Mongol invasion and conquest, by which the Chinese were brought into contact with the nonChinese peoples, and were thus enabled to gain a more complete knowledge of the exterior world and its products. (4) As the territory which before the Mongol conquest was inhabited by an Indo-European population was now colonized by people who, though descended from a race that was Indo-European in language, had adopted a non-European religion, the extent to which they share the distinctive qualities of the Chinese peoples cannot be precisely determined, the requisite data not being available. In any case they all speak the language of their adopted country; they share the variation of idiom that resembles the real Chinese in their ways of thinking, while in writing also they use almost exclusively the national language. At the same time they are different from the Chinese as regards their physiognomy, characteristics, and the division of the people as a whole—exclusive, however, of the Tatars.

1 The leading instance of this is furnished by the still existing colony of Tatars who are traceable back to the reception of a Turkish princess into the harem of the emperor Ch'ien-lung; cf. J. Arndt, 'Peking und die westlichen Urgelen,' Mitteil. der geograph. Gesellschaft Hanover, 1839-90, p. 64.

2 This term may signify 'those who have come home,' i.e., those who have returned to the true faith, the expression being that all human beings come into the world as adherents of Islam, and only by contact with the Chinese is the 'return' to the true religion possible, and so becomes Jews or Christians. The word corresponds, therefore, to the Osmanli dawma, the name applied to the Jews of Saloniki who have been converted to Islam. The designation Dungan would thus seem to imply that the majority of Chinese Muslims have been converted.
MUHAMMADANISM (in China)

(Mongols) and the aborigines of the south (Lotos, Minjero)—indicate that Islam holds good throughout. The name Dungans is applied to a large section of the Chinese Muslims, who, how-

ever, as was said above, term themselves simply Han (cf. Dungan; but they would never think of calling themselves Han (‘Chinese’), nor are they ever designated so. They form, in fact, a distinct racial aggregate, co-ordinate with the Chinese and the Turks in the name by which they are erronaneously extended also to the Turki of Turke-
stan, but in reality there exists a marked contrast between Dungans and Turki. The Dungans who speak Turki—they are by no means few—use a peculiar dialect of that language; and, as regards the Chinese spoken by the Dungans, it should further be noted that the document of Dungan origin in the Berlin Royal Library (see above, p. 890) is composed in a very corrupt Chinese. In Forke’s opinion, however, its solitude is not such as might be perpetrated by an uneducated Chinese, but in many cases got Chinese at all, suggest-
ing that the Dungans are of alien origin. As a special illustration of the intercourse between the Chinese Muslims and the Turki, cf. the story of Hidayat-Allah (Agap Khojans) of Kashghar, who came to Hui-ning-in, in Ns Hartmann I (Forke, p. 65 f.)

The process which dominates everything found within the Great Wall is one of adaptation to Chinese culture, this involves the Chinese, the col-

er of the yellow race—or ‘black heads,’ as they like to call themselves. This process overcame the Manchus and many other peoples who invaded the country, and it was impossible that the Muslims should altogether elude its operation. The Chinese have a capacity for dissolving racial character-

istics. This holds good even of physical qualities, for example, the small size, which is a peculiar attribute of native women with foreigners, while Muslim women cannot legally be given in marriage to non-Muslims. The resultant division of Chinese blood among the Muslims is of vast importance, and we cannot but admire the tenacity with which the latter have kept themselves from complete absorption by the Chinese. In spite of a consider-
able degree of assimilation in external matters, they hold on to their own a fundamentally different standpoint. For the Chinese reason (ii) is supreme; for the Muslims tradition is all. Notable, too, is the contrast in certain traits of character. The Chinese, as a rule, are unreserved, and will put up with a great deal; the Dungan has an intense self-esteem, and is a dangerous man to offend. The difference reveals itself also in the outward bearing. The Chinese notion gives one the impression of being a dejected and downtrodden man; the Muslim carries himself proudly, and faces the world with a frank and open coun-
tenance. The relative physical desirability of the Chinese may be due in part to the opium habit. Among

the Muslims this is but rarely found; tobacco smoking is prohibited, and the drinking of wine and other intoxicants, which the stringent interd

cies of the Turks does not prevent, is abroad in Western Islam is quite inconsiderable among the Muslims of China. All this testifies to a very real cleavage between the Chinese and the Muslims, and is a constant reminder that the latter are not Han-yen, but something else.

What, then, are the Muslims of China, ethno-

logically considered? To this question there is no answer. It is generally stated that the name Hui-lui (Hui-ta) and the name Uigur with all its various transcriptions in the Chinese language (Chavannes, pp. 87–94). From the time of the earliest considerable incursions of

Muslims, this region of many races has been over-

whelmed with so many invaders that it is impossible to speak of any single racial type. In addition to this we must also take into account the Muslim policy of incorporating people of other faiths, notably the purchased children (cf. the present writer’s note in his Der islamische Orient, i. [Leipzig, 1905]; more recently d’Ollonne, in RMM ix. Such absorption of foreign elements must be regarded as a very important factor. In this con-

nection we may note that the Chinese of d’Ollonne to the effect that the purchased Chinese children do not exhibit a uniform Chinese type, and that the homogeneity of the Chinese race is simply due to the immense and increasing amount of foreign blood. The Chinese are a mingling people. They are a degenerate Turkish people (see above, p. 890; with reference to the well-known canons allowing the Muslim to marry as many as four wives, and to have slaves as concubines, but cf. also the Marjani, p. 156, n. 11); they are a mongrel people, and the Marjani are forced to submit to the laws of the land regarding marriage. This is undoubtedly a mistake in so far as it implies that
MUHAMMADANISM (in China)

The like is true of the position of women in general. According to d'Ollone, the so-called law of veiling is not observed by Muslim women in China, who walk abroad without reserve (RMM ix. 540); Germain had indicated the fact, but noted an exception in the case of the wealthier classes. In Ho-chow, however, d'Ollone found a different practice, the women there wearing a veil of black silk below the head. The writer was acquainted with the present writer to be connected with the sect of Ma-hua-lung; further, they go on the street on horseback instead of in carriages. As regards foot-binding, d'Ollone says, "Moorish Muslim women and Chinese women; in Kan-su especially the practice is very common. That a Muslim should take in marriage one of alien faith is not objected to; it is rather deemed a meritorious act thus to bring an unbeliever to the true religion. The Muslim woman, on the other hand, must not be given in marriage to a non-Muslim; such a union is regarded as the most heinous of sins. In this matter, however, compromises are sometimes made with heaven: the marriage of a Turkqi princess with the emperor Ch'ien-lung has already been referred to; and, when the present writer passed through Kucha (Kashgar) in 1902, a Chinese with a Turkqi wife (tconcubine) was presented to him. Illicit intercourse is not punished here, any more than in other Muslim countries. At the same time, the greater part of this country is not a country that gives to women the free and open way to the beauty that is not accompanied by the fear which the Orientals place on women's beauty."

The habit of wearing veils, however, is less prevalent among the Muslims. No special attention is devoted to the education of children (for the schools see below (d)). Two very prominent features of family life are filial piety and ancestor-worship. The former is extolled in the narrative given in the Chinese-Arabic MS edited by Forke; the latter finds expression in the literal prayer for parents and ancestors, while use is also made of pictures of ancestors after the Chinese manner. Social distinctions are not invariably fixed by descent, except in the case of the Prophet's descendants. The latter have been brought in other Muslim countries by surreptitious enrolment in the sacred lineage do not seem to be extensive among the Muslims of China. Nor does the veneration of Sayyids appear to have assumed any unusual proportions; the Moslem is simply a venerated man, in the case of the schismatic Ma-hua-lung, who claimed to be a Sayyid, but who failed to win such prestige as the notorious sons and grandsons of Makhdu'm 'Aqsa (see above, p. 899). The relative indifference to Sayyids (Sharifs) in China is explained by the popular belief that they are for the most part converts to Islam or the descendents of converts (Danguans).

(c) Industries.--The industries in which the Chinese Muslims are engaged are (1) agriculture, (2) commerce (including handicraft and traffic in goods), and (3) transit-trade. The Muslims do not take an active part in commerce. They have, however, taken the environment has asserted itself, inasmuch as the Chinese are pre-eminently an agricultural people, and have in great measure the faculty of infecting the alien population with their own habits. Accordingly, the Chinese Muslim is everywhere one of the most industrious tillers of the soil, so that it was recently reported that those employed in Chinese law would intrude upon this domain of personal rights, though it may not be necessary to ask for the universal validity of the imperial ordinances. These ordinances are binding on all by virtue of imperial decree (Le Mariage, p. 583; and see the preface to the Manuel d'Islamologie, 1884, No. 186, Shanghai, 1885). The present writer has not succeeded in discovering among them anything that formally concedes an exceptional position to the Muslims, and beheaded. At that time he acquired landed estates of enormous extent. It was also now that the revolution of 1895 in Hsi-nung-fu and Ho-chow, enriching himself, as usual, with the spoils filched from his co-religionists. He received the title of 'generalissimo' (ta ju), and was in effect king of the country. When the Boxer rising broke out at Peking in 1900, Tung hurried thither with his henchmen—the foremost of whom was the infamous Ma-an-liang, Tongling of Ho-chow—and made himself conspicuous by his violent and malicious proceedings against the foreigners, who saw in him only a Muslim at the head of a horde of Muslims, but a mere adventurer, who gained a following amid the chaos caused by the rising of 1861-74, and who, in return for the gift of a mandarinate, made himself the tool of the viceroy, Tso-tsung-lung, and of General Lu-soung-shan. He caused Ma-hua-lung, the prime mover of the revolt, and the prophet of the 'new doctrine,' who fell into his hands in a sortable from the rebel city of K'un-k'i, to be beheaded. At that time he acquired landed estates of enormous extent. It was also now that the revolution of 1895 in Hsi-nung-fu and Ho-chow, enriching himself, as usual, with the spoils filched from his co-religionists. He received the title of 'generalissimo' (ta ju), and was in effect king of the country. When the Boxer rising broke out at Peking in 1900, Tung hurried thither with his henchmen—the foremost of whom was the infamous Ma-an-liang, Tongling of Ho-chow—and made himself conspicuous by his violent and malicious proceedings against the foreigners, who saw in him only a Muslim at the head of a horde of Muslims,
and were quite unaware of his real relation to Islam. Having been ostensibly punished by 'banishment' to Kan-su, he lived there like a sülān. He held two fortified castles near Kinki-pu, and had a bodyguard of two retinues—tenants of the surrounding estates which he had taken from Muslims. The local councils of Kinki-pu and Lin-chou could not lift a finger without his approval. After his death in February 1908, all his crimes, as well as his crimes, his enemies, instance of the European Powers, were restored, and his remains were buried with the highest honours at Kan-yuen, his birth-place (RMM vi. 706 ff.). Apart from adventurers of this stamp, whom probably the majority of Muslims would regard as apostates, there is a far-reaching antagonism between the indigenous and the immigrant peoples. The Chinese realize the danger involved in the Muslim aspiration of an imperium in imperio, while the Muslims, rejoined as they are by the Qur'an to fight against the unbeliever, feel the ascendancy of the latter as a heavy infliction, and from their time the strain has found expression in open revolt. The most notable and most serious of such outbreaks have been those of the north (Kan-su and Shen-si) in 1801-74, and of the south (Turkestan) in 1872. It would be a mistake, however, to attribute these ruinous insurrections to religious motives alone, for racial antagonisms and the conflicting interests of different social classes were certainly no less potent factors.

The mosques resemble pagodas, the minārāb and minbar alone proclaiming their Muslim origin. We sometimes meet with Indo-Arabic styles, as, e.g., the two cupolas above the porch of each of the mosques in Sui-fu. For occasions of prayer the akhona (Pers. akhnâd, 'learned one'; in China, 'mosque-minister') don the white turban; the rest of the faithful wear for the time a cap never otherwise used, which is encircled by the turban, and may be of various colours—white, blue, green, or red. This cap has two shapes: the Meccan—a round, low cup, wholly covered by the turban—not worn by many; and the Bukharan—cylindrical, being formed of four or six pieces—which hangs out from beneath the turban. It is identical with the ḥāba, or toqūr, worn by all Muslims in Russian and Chinese Turkestan.

The disruptive tendencies so common in Islam generally have made themselves felt in China. Ma-hua-lung was in fact a pretender. Even during the rebellion in Kan-su, was the founder of a new sect, and his followers in Kan-su, where they are numerous, and in Sze-chuan, where as yet they are but few, regard him as the true successor of Muhammad. His descendants and disciples claim to possess superhuman powers. His teaching is called khein chiao, 'new doctrine,' in contradistinction to loo chiao, 'ancient doctrine' (RMM vi. 93). The nature of this new doctrine is something of a mystery. There is a tendency to regard it as an endorsement to Shi'ism, or perhaps an unusually bold representation of Shi'ism, but the notices of d'Ollone (q.v.) are by no means conclusive. The sect in reality is of genuinely Sunniite character, and not a degenerate variety of the mystical philosophy so widely diffused throughout Central Asia. Ma-hua-lung had evidently not yet wakened the immoderate representations in Chinese Turkestan by the Khodiyas, i.e. the descendants of Mahdiyān 'Azām, of whose ecclesiastico-political organization the present writer has given a detailed account in *Ecclesiastical History* i. 195 ff.). It remains an open question whether the Mahdist idea played any part in the project of Ma-hua-lung; the reports of d'Ollone make no distinct reference to it. In any case, the pretender was regarded as an incarnation of the Spirit—a *sheng jen* ('holy man,' 'prophet') equal to, or even higher than, Muhammad himself. It speaks well for the Muslims of Kan-su that only few sided with him and his brother. His motive, wholly diabolus de learning, presumably to know everything, and had his answer ready for every question. As the founder of a new sect, he had to enjoin certain external forms by which his adherents might be distinguished from the Muslims. For this purpose he chose the practice of praying aloud and of holding the hands straight open and horizontal in the *nīyām* (at prayer), in contrast to the general custom of silent prayer with the hands rounded and hollow. From this practice of audible prayer is derived the usual name of the sect, viz. Zaitūrīyah (corrupted to Chaiheriney, 'those who pray openly,' as contrasted with the Khūfīyah (vernacularly 'Hufey'), 'those who pray secretly'). In these externals Ma-hua-lung shows a certain affinity with a movement in the West which had found its way into China at an earlier date. About 150 years previously a reformer had appeared among the Salars (see above, p. 892) in the person of Muhammad Enun, known in China as Ma-ning-hsin, who introduced the custom of praying aloud, and of holding the hands straight open and horizontal in the *nīyām* (at prayer), in contrast to the general custom of silent prayer with the hands rounded and hollow. Usually three or four houses have a place of prayer in common, i.e. a single room set apart for worship, this arrangement being designed, it is said, to familiarize the adherents with the practice of prayer (RMM ix. 571). In Sung-yen-ting, according to *RMM* v. 463, the followers of the new faith attend the same mosques as those of the old, while in Shen-si, on the other hand, the breach is complete (RMM v. 463, ix. 561). The d'Ollone expedition had a very unceviable reception in the mosque at Ch'êng-tu; the people of the 'new doctrine' have the name of being hostile to Europeans, while the Muslims in general are friendly. After Ma-hua-lung's death in 1871, a rupture took place within the sect. His son-in-law, Ma-ta-hsi, and his grandson, Ma-mihi-hsi, fought with each other for the sacred inheritance. Ma-ta-hsi, who is now (1915) sixty-two years old, has the advantage in numbers, and his place of residence, Cha-kou, near Ku-yuen, is an important religious centre and a chief battle-ground. Ma-hua-lung's teaching was introduced into Yün-nan by his younger brother (or nephew) Talasan or Talaesan, who fell in a struggle with Ma-jun-lang. In Yün-nan, however, the sect has apparently a smaller following than in Sze-chuan, where d'Ollone met with adherents of the Hsin chiao from the boundaries of Yün-nan to Sung-pan-ting on the border of Kan-su.

Alongside of the two groups of Hufey and Chaiheriney are found two others, viz. Kuberiiney and Kateriney. The meaning of 'Kuberiney' cannot be precisely determined—the word may possibly stand for *khawāla* 'grants)' or *khawālah* 'patron,' which is undoubtedly equivalent to 'Qadiriyyah,' signifying the adherents of *Abd al-Qādir al-Jilānī* (q.v.). It is maintained by a certain akhān that four of these sects are related, and classes of visionaries are attached to each of them. The khulāsfahs, each of whom is said to have inaugurated a particular ritual, viz. Abū Bakr that of the Hufey, Othman that of the Chaiheriney, Omar that of the Kuberiiney, and Ali that of the Kateriney. The Khulāsfah *khulāsfah* may be applied also to those who venerate graves. In China, as elsewhere on Muslim soil, peculiar honour is accorded to the tombs of the eminently pious—those who have given credentials of saintship,
MUHAMMADANISM (in India) — Islam was introduced into India by the Arab invaders who entered Sind under Muhammad ibn Qasim in A.D. 712 and founded a Muhammadan State which was eventually absorbed by the Muslim Empires of the East. But the system of elementary education is to inculcate the rudiments of religious doctrine, the children being taught by readings from the Qur'an and by short extracts from the Hadith and the bibliographies of the languages in both languages are also found. The life of the Chinese Muslims has no place for art. To anything in the nature of artistic activity only as the means of subsistence of the poor. It is often elaborated in pedantic forms suggestive of the Chinese method of writing, angles and loops being formed as in the native calligraphy (especially in epigraphs). The Muslims also erect ornately written Arabic tablets, which, however, often show such a divergence from the common script that they are very difficult to read. Even the experienced E. Blochet mistook an r for a y (REMM, 821).

(c) political relations.—In China proper the Muslims have never secured an independent political existence, while in Turkestan, since its annexation (c. 1750), they succeeded in establishing only the short-lived Muslim government of Yaqub Beg (see above, p. 889). The object of the Muslim rising in Kun-su and Shen-su (1863-74), which was among the contributing causes of Yaqub Beg's success, was likewise independence; but the movement proved abortive, and, in fact, no other issue was to be expected. The necessary condition of a permanent political organisation is that it shall have a basis of nationality, and no such thing exists among the Chinese Muslims. The latter, as interspersed among the Han (Chinese), form, not a national, but merely a religious, aggregate, and all history teaches that political establishments based upon religion are ephemeral. It has certainly been hinted that the Muslims of China may possibly force their religion upon the rest of the population, and thus evolve a powerful Islamic-Chinese kingdom. It is indiscernible that such an ambition is not wanting among the Muslims, and it will continue to act in certain localities as a source of insurgent movements against the imperial government. It is regrettable that the idea has been exploited for the double purpose of acquiring religious influence among the Chinese Muslims and of furthering political ends. Considerable efforts in this direction were made—though without the least success—by Sultan 'Abd-al-Hamid in the latter part of the 19th century; and minor attempts at a later date proved equally abortive. The word was not abandoned even after the deposition of the Sultan.

M. Hartmann.
monarchs were signalized by outbursts of fanaticism and the cruel oppression of unbelievers, their temples were destroyed and many of them converted by force. One of the greatest of these persecutions was that of the Hindu king of Delhi, Sher Shah Suri (1537-93) was hated by the Hindus for the stringency of his enactments against them. In Kashmir Sultán Sikandar (1393-1417) acquired the desire of converting the Hindus to be Muhammadans, but his ruthless destruction of Hindu idols and temples, and in Bengal Jalaf al-Din Muhammad Shah (1414-31) made himself notorious by his persecution of unbelievers. Among the later Hindu kings (1669-1720) attempts to carry out a policy of unification led to several acts of repression, and tradition attributes to him the destruction of temples and the forcible conversion of Hindus in various districts throughout the whole extent of the Moghal empire. The latest example of such fanaticism on the part of a Muhammadan ruler was that of Tipú Sultán (1782-99), whose barbarities outdid anything recorded of previous monarchs after the first conquerors. Apart from such outbursts of fanaticism, the rule of the Muhammadans has generally been characterized by an attitude of toleration towards their Hindu subjects, and the adherents of the rival religions have often been closely drawn together by a spirit of amity and mutual respect.

The fact that the Muhammadan dynasty in India has been almost entirely replaced by foreign invaders was of great importance in the history of Islam; they brought with them a large number of foreign troops, and attracted to their courts military men, merchants, priests, poets, scholars, and others, who ultimately settled in the country. The foreign immigrants and their descendents—Arabs, Persians, Turks, Mughals, and Pathans—formed an important element in the total Muhammadan population, and exercised a preponderating influence in the administration, the social organization, and the religious life. They received grants of land from the Muhammadan governments, or in times of political unrest arrogated to themselves rights of ownership, and thus formed the nucleus of an aristocracy that looked down with contempt on the native converts. The missionaries, to whose proselytizing efforts the conversion of whole tribes is attributed, and the saints, whose tombs are still venerated throughout all parts of Muslim India, were for the most part of foreign extraction. The shrines and the saints are still centres of religious influence and attract thousands of pilgrims every year; among the most famous are those of Khwájah Mu'mín al-Din Chishtí (1256) at Ajmir, Farid al-Din Shakarganj (1299) at Pákpatán, Nižám al-Din Awliyá (1235) at Dihli, and Shahí Alam (1475) near Ahmadábad. The great family of Buhárá Sáyídís, who settled in Úch in the 16th cent., may be taken as a typical example of the wide-spread influence exercised by some of these foreign immigrants. The effect of this constant stream of foreign immigration has been to keep India in close contact with the main currents of theological thought and speculation in Islam, and the religious beliefs and practices of the educated section at least of the Muslim population, whether Sunni or Shi'ah, have tended to conform to those in other parts of the Muslim world. A large part of the religious literature has been written in Arabic, and still more in Persian—both languages foreign to India—and the study of these languages has kept the theologians acquainted with the writings of Muslim thinkers outside India, and their foreign influences have thus prevented Islam in India from taking on a provincial character, so far at least as the literate are concerned. But among the uneducated, particularly the descendants of Hindu origin, especially in the country districts remote from the centres of Muslim culture, many survivals of older cults are to be found, and there the Muhammadan differs little but in name from his Hindu neighbour. He continues to worship the gods of his ancestors—particularly the village godlings, whose rites are associated with the cultivation of the soil, and the deities of disease, especially Sitala, the dreaded goddess of smallpox—and forsworn (jihád) by his attachment to the festival of the spring equinox, and Dáshárá, the festival of the autumn equinox. Against such the Hindu king frequently instigated the people at all times protested, but the first active campaign against them appears to have been started by Saiyid Ahmad and Háji Shari'at Alli, who, in the second decade of the 19th cent., began to disseminate in India the doctrines of the Wahhábí reforming movement. The writings of a later religious reformer, Munáví Karámát Ali (1874), were especially influential in combating the observance of Hindu rites and ceremonies by Muhammadans. In more recent years, the greater facilities of communication between one part of the country and another, the spread of education, and the consequent growing influence of theological text-books have increased the tendency towards an orthodox uniformity, but the low level of education among the mass of the Indian Muhammadans still keeps back many from adherence to the tenets of the faith which they profess.

The abiding influence of Hindu institutions on the converts to Islam is still further shown by their great devotion to their own institutions, by the observance of some of their old tribal ordinances in regard to marriage and inheritance. As is well known, Islam is not merely a body of religious dogma but also a system of legislation, but the Muhammadanized Rajputs and Jás in the Panják and the Mughal districts on the west coast of S. India have always continued to follow the customs of their Hindu ancestors in preference to the Muslim law of succession.

The influence of Islam in India has not been confined to the Mushálmáns themselves, but may be observed in sections of the population that stand outside the Muslim community. There can be little doubt that the Hindu reform movements of the 15th and 16th centuries, especially those connected with the names of Kabir and Nának, owed much to Muslim influences. Many low-caste Hindus, such as the sáints of the Muhammadan order, have taken up the old Mughal saints; these saints are sometimes legendary, like Sákhi Sarwar and Sháh Mádár, or historical personages such as Pir Shama Tabriz of Multán, or sometimes a mixture of both as in certain enumerations of the Páchí Pir (‘five holy men’), who are represented by some thousands of Hindus to be the only divinities that they worship. An influence of a different character was that of the Mughal court upon the higher ranks of Hindu society, resulting in the adoption in many Muhammadan habits and observances such as are generally significant of adherence to the faith of Islam.

As an ethico-religious system Islam in India presents in many ways a strong contrast to Hinduism. Both, it is true, cherish an ascetic ideal, pursued by the few, and Hindu and Muslim ascetics have often found that they have much in common, and both have often received the veneration of the adherents of the rival creed. But the stern Puritanism of Islam has set its face rigidly against those characteristics of Hindu conduct which are set forth in the Páchí Pir and illustrated on such Hindu temples as have escaped the iconoclastic wrath of outraged Muslim sentiment. This austerity of Muslim morals runs through the whole of their life. Their life of convents and their wearing an aspect of dignity and self-respect such as springs from a constant recognition of moral
obligation; at the same time it delegates women to the seclusion of the zenana, depriving social intercourse of any sympathy, and depriving women of all hope of being educated to the highest light, deprives usages that other countries find harmless, such as dancing and card-playing. This moral fervour is capable of producing such types as that of the judge who cut himself off from all human relations and lived in a seclusion of his own. The doctrine of the Zab, which depended largely and in part on the battle of the Irán. Although revolts were common, the authority of the 'Abbâsids had been generally recognized by the ruling dynasties in Persia, few of which were Shi'ite. Their determined and powerful attempt to establish Shi'ite Islam was that of the Ismailis, or Assassins (q.v.). Persia was the greatest sufferer of all in the ruin wrought by the heathen Mongols, and Islam seemed about to perish; but Timur willed the revival of Shi'ite Islam, but he had mercy on none. With the rise of Šafavi kings (A.D. 1500) Shi'ite Islam of the Twelve was established as the State religion—a position challenged since only by the audacious Nadîr († 1747), who proposed to make Shi'ite Islam a fifth sect co-ordinate with the four recognized divisions of Sunnite Islam. The paper constitution of modern Persia recognizes Shi'ite Islam as the religion of the realm.

The influence of Shi'ite Islam in Persia is a larger subject than Islam in Persia. Traces of Zoroastrian influence are to be found in the Shi'ite, and still more in the developed Muslim theology.

The victory of the 'Abbâsids was in a sense, a conquest of the Arabs by the Persians. The Nahawand were avenged; Persian ideas and Persian religion began slowly to work on the faith of Muhammad.5

What Islam owes to Persian thought, especially to Persian Shi'ite, is not less. Islam is, in fact, the study of the Zab, which, strangely, has left scarcely a trace in modern Persia. The influence of Shi'ite Islam in Persia is a larger subject than Islam in Persia. Traces of Zoroastrian influence are to be found in the Shi'ite, and still more in the developed Muslim theology.

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia)

Even among the Sunnites (especially the Kurds) religion centres much in the cult of the Shahkis, who are credited with miraculous powers. Many of these are connected with the dervish orders, especially the Naqshbandis, practically all the shrines of the Shī'ites is the veneration of the family of 'Ali and the doctrine of the imāmat. While every community numbers its kāfigh, the great shrine for pilgrimage of the living and burial of the dead is Karbalā, which, moreover, is the place of religious authority, the seat of the chief mujtahids, and the centre of theological education and learning. In every city there is a madrasah (college), but an ambitious student completes his training at Karbalā, or at one of the neighbouring shrines that share in its importance. The unifying power of such a centre is very important. The other shrines of importance is Mashad.

For the mass of the people the great religious observance is the commemoration of the battle of Karbalā on the 10th of Muharram and preceding days. On the spectacular side it is the carnival of the religious orders, the timid disapproval of the educated is unavailing to check continual increase of the excesses of grief in cutting the head and beheading the breast. Regular passion-plays are unknown. The saint's shrines with their daily doings, the ḍālān, has an important place in the mosque life, and the great topic for sermons is the life of the Imāms. Ghādir Bāirām (when Muhammad is supposed to have handed over his mantle to 'Alī as his successor) is at least equal to Qurān Bāirām in popular estimation. The hadith (traditions) deal with the sayings and doings of the Imāms as well as of the Prophet, the most popular collections being those of Muḥammad Baqir Majlisī of Isfahān, made three hundred years ago. The expectation of the reappearance of the Twelfth Imām as al-Mahdi is general. The Seyyids rival the mu'llās in authority and claim the fifth of field and herd. So far the description applies to all Shī'ite sects.

The Mutasharīfs, who are by far the most numerous sect, regard the mujtahids as the only representative of the Qāsim, or hidden Imām, and the only inasmuch as they interpret the sharī'ah (canon law). They are conservatives and traditionalists. The Shāhīds, Zaⱬābīs, and minor sects hold that the Imām is always a representative of the Imām, who possesses in some degree his divine authority. They differ as to who that representative is, and in other matters. The Shāhīds are the intellectual mystics, interpreting, e.g., the mi'raj (Muhammad's ascension) in a very different way from that implied in a spiritual way. Zaⱬābīs resemble the dervishes in ascetic practices and in the use of the dhikr, but sofarī and goli (spoken and silent).

The influence of Islam in the world and in foreign lands has always been either as a political or a religious force, often both combined. The influence of Islam has been largely due to the fact that it has been able to adapt itself to the conditions of the countries in which it has been introduced. The influence of Islam has been greatest in the countries where it has been able to establish itself as the official religion. In the countries where it has been introduced as a minority religion, the influence has been much less.

W. A. SHEED

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia).—A. SYRIA.—Syria and Palestine have always formed one of the outlets for the superfluous population of Arabia. The invasion of the country by the Arabs in the first half of the 7th cent. A.D. was only one of a series of invasions...
which had been going on from time immemorial. The conquest, which took place in the Caliphate of 'Omar, only a year or two after the death of Muhammad, occupied a few years (13–15 A.H.), and was facilitated by the fact that the people of Syria came, to a large extent, both in origin and in language, to the pre-Islamic Kingdom of Ghassan, which, with that of Hira on the other side of the Syrian desert, formed a buffer State between the empires of Rome and Persia, was of pure descent, and had made their inroads into the country, they were not invading a foreign people, but rather attacking the governing classes only, the representatives of the Eastern Roman empire. Moreover, it was only a score of years since the Persians had wrested the country from the Greeks and held it for ten years. The Persian Wars had depleted the exchequer of Constantinople, and Heraclius had been compelled to withdraw the wanted subsidies from the frontier tribes—a fact which made them all the less unwilling to throw in their lot with the Arabs. When, therefore, 'Omar's forces entered the country, they did not come altogether as invaders, and to the indigenous population the issue was not subjection so much as a change of masters; and it was not impossible that the new masters might be more tolerable than the Romans.

To the Arabs the conquest of Chaldea was motivated by the lust of plunder, the conquest of Egypt was to a large extent a necessity—had it been, it has been said, that the Caliph of Medina would have been saved from famine—but the conquest of Syria was largely a matter of sentiment. Within its borders were contained nearly all the holy places of Islam. Had Salih ministered to tribes within the boundaries of Arabia, but nearly all the remaining prophets—Abraham, Solomon, last above all Jesus—had lived and died in Palestine. Muhammad, too, had visited Syria, once as a mere boy, with his uncle Abu Talib, and again as the agent of Khadijah. Jerusalem had been the goal of his mysterious night-journey, from which he had ascended to the Divine Presence, and it was from Damascus that he had turned away, saying that one could not enter Paradise twice. The reverence of the Arabs for Jerusalem is shown by the fact that it was towards it that the Muslims turned in prayer during the first two years after the death of Muhammad. It was the Caliph who, after the capitals of the city in 637 was accepted by the Caliph in person. On this occasion 'Omar visited most of the sacred places, under the guidance of the patriarch Sophronius. He is said to have identified the site of Solomon's temple, and he erected a small mosque, probably of wood and clay, for the worship of the Muslims. Jerusalem did not become the political capital of the province of Palestine. For that Ramleh was founded somewhat later. But the sacred character attributed to the ancient city by the Arabs appears in the name Bait al-Maqdis (the holy house) by which their historians always call it, or in the shortening of Al-Quds, by which it is known at the present day.

The sanctity in the eyes of the Muslims even of Jerusalem is, however, surpassed by that of Hebron, the holiest place of the Prophet of Abraham, Ishmael, and Jacob, with their wives, as well as Joseph. Hence it used to be named Masjid Ibrahim (Abraham's mosque), but now it is always called Al-Khali (the 'friend'), abbreviated from the city of the friend of God.' Hebron fell into the hands of the Crusaders in A.D. 1099 and remained so until it was retaken by Saladin in 1187. The Crusaders had expropriated of his property, and had made scruples about entering the sepulchral chamber, but the curiosity of the Muslim does not exceed his sense of reverence, and one of them mentions with a feeling of the deepest awe that he had conversed with one who had with his own eyes seen Abraham. At the present day Europeans are not permitted to enter the mosque (originally a Crusaders' church), with very rare exceptions, and then only by a special firman.

Under the Umayyads (A.D. 661–750) Syria attained to the hegemony of all the Arab States, and Damascus became the capital of an empire stretching from India to Spain. Mu'awiyah, the first of the line, had bestowed the government of the Caliph 'Othman: it was to the Arabs of Syria that his dynasty owed its birth and stability, and the Caliphs of the line naturally wished to do all in their power to strengthen the position and precedence of their adopted country. Hence it was that, after the assassination of 'Ali, Mu'awiyah proclaimed himself Caliph, not at Medina, which had been the political as well as the religious capital under the first three Caliphs, but at Jerusalem. When, on the death of his son Yazid, the rest of the Muslim world did homage to the rival Caliph Ibn Zubair in Mecca, it was no doubt in some measure owing to the possession of the sacred city of Jerusalem and the tombs of the patriarchs at Hebron that the Umayyads were still able to maintain their position in Syria. And, whilst their rival was engaged in rebuilding the Mosque at Mecca, which their armies had besieged, the Umayyad, 'Abd al-Malik was building the famous Dome of the Rock upon the site of the Temple of Solomon, as the inscription on it states, in imitation of the Abbasids, still bears witness; and it was only after the building was finished, and a substitute for the Ka'bah had been provided to which the pious Muslim might make his pilgrimage, that the rival Caliph was crushed and the Muslim world once again united under one head. Mu'awiyah had already wished to remove the pulpit of the Prophet at Medina to his new mosque, but in deference to the religious feelings of the people he refrained from doing so. There is no reason to suppose that the Umayyad Caliph acted in this matter from merely pecuniary motives, because he wished to divert the immense revenues arising out of the sacred ground of the Hijaz into his own coffers; because, as soon as he was undisputed Caliph, it would not have mattered which town became the object of pilgrimage (J. W. Wellhausen, Das arabischliche Reich, Berlin, 1902, p. 132 f.). The truth is that the Caliphs, except the exception of the pious 'Omar ii., were not Muslims at heart. They sprang from the old aristocracy of Mecca, the bitterest opponents of the Prophet, who submitted to him only at the last possible moment. They did not scruple to attack and plunder the city of Medina where he had lived and died, and even to destroy the Ka'bah itself, and they had well-nigh exterminated the family of the Prophet. They were a purely civil dynasty ruling in the name of religion, and they did not care what means they used to attain their ends. The great bulk of the population of Syria were Christians. They were, many of them, well educated, and in every way, except in fighting, more useful to the dynasty than the Arabs themselves. All the clerks in the government offices were Christians, and the State archives were written in Latin. A similar state of things existed in Persia and in Egypt. It was only under 'Abd al-Malik that the Arabic language began to be used exclusively, and even then the clerks continued to be non-Arabs. Some of the most influential persons about the Caliphs were also Christians. John of Damascus, as well as his father, held high office under these Arab masters of his race. The panegyrist of the Umayyads was the Christian poet al-Akhtal. Moreover, it was not that these Caliphs merely made use of their Christian subjects,
MUHAMMADANISM (in Syria, Egypt, and Mesopotamia)

while ignoring their religious creed. Questions of theology seem to have been discussed by the two parties in the presence of the more liberal Caliphs upon equal terms. Al-Akhflat made no attempt to conceal either his religious belief or the external emblems of his faith, when he stood before the Caliph Fatimid; and it was the ambition of Damascus to be an ardent defender of the use of images in divine worship, wherein he stood in opposition not only to the Caliph but to the Greek emperor as well. Such a thing was not to be endured in the sphere of Islam, and there is little doubt that some of the less strict ways of thinking which began to prevail were due to this cause. It was to condone the delinquencies of the Umayyads that the Menfi professed to believe that there was no deadly sin for any one who made the profession of Islam, or that at any rate the sinner would not be punished until the Day of Judgment. Belief in the delinquencies of the caliphs, and not merely in the direction of an admission of free will. This tendency towards freedom of thought culminated in the Mu'tazilite movement under the 'Abbasids (see above, p. 349). Nor was it only on the religious side that Christianity moulded Muslim life. Hishâm, one of the last and best of the Umayyad Caliphs, was a notable agriculturist. His governor was the famous Al-Khidr, who was also a farmer on a grand scale. Khalid's mother was a Christian, and he built her a chapel beside the mosque at Kufa. He employed Christians and other peoples, and other periods appear preferential; as Muslims, as he so doubt found them more intelligent and capable. In Hishâm's days the doctrine that the Qur'an is not eternal, which became the accepted creed for a short time under the 'Abbasids, began to be professed. The century and more during which the Umayyads ruled the Muslim world from Damascus was the most glorious in Arabian annals, and it is not without significance that it was after the last Caliph of the line had removed the capital to his native town of Harrân that the dynasty fell and was replaced by that of the 'Abbasids.

With the fall of the Umayyads the Arabs ceased to be the ruling race and Syria became one of the provinces of the empire, not specially distinguished in the religious aspect from the rest. On the break-up of the Caliphate, with its resulting chaos, Syrians and Greeks, Persians, and the holy men of the belligerent-man of Christianity and Islam. When it was prosperous and well-governed, it was generally as a dependency of Egypt, under Fâtimid, Ayyûbid, or Mamlûk rulers. For the last four hundred years it has formed a province of Turkey.

B. EGYPT.—Since its conquest by the Arabs about the A.D. 640, Egypt has owed its wealth and partly its possession of the Azhar University and its frequent sovereignty has been enjoyed or the holy places, played a leading part in the material and spiritual progress of Islam, and especially during the last hundred years it has outstripped all other countries in the direction of the Europeanizing of the faith. The people of Egypt have always been subservient to those of another race. At the beginning of the 2nd cent. they had to endure twelve years of Persian domination. After the conquest was over, however, the Persians ruled, as they generally did, with moderation and tolerance, and, when the country was recovered for the Eastern empire by the conquests of Heraclius, the change of masters was a change for the worse. The natural craving of the Egyptian for a strong arm on which to lean was supplied by the 'Abbasids, who, through the influence of the great Madhhabians, were the confessors of orthodox doctrine in the sphere of theology in their deification of Jesus Christ, which was the basis of their whole-hearted attachment to the Monophyist doctrine; and, therefore, when Heraclius made it his aim to force upon them the orthodox formula, and at the same time to increase the revenues obtained from the taxation of the country, the attempt was met by the Copts with dogged resistance, culminating in the flight of their patriarch Benjamin. It was owing to this prevailing discontent that the conquest of the country by the Arabs was a comparatively easy matter, accomplished within a couple of years, and with not more than a handful of troops. 'Amr, who had planned and carried out the expedition, became the first governor of the country. He at once granted religious toleration to the people, whose disputes he did not understand; he restored the Coptic patriarch to his office; and he, at any rate, did not increase the burden of taxation. The seat of government was transferred to the fortress of Babylon, close to the modern Cairo, around which a town, called Fustâs, soon sprang up. The southern boundary of the province was at Philæ, the residence of the patriarch, and the capital of Nubia, with which the Arabs concluded a treaty.

The Copts did not at once go over to the faith of the conquerors. Probably they believed that the occupation would be temporary, as that of the Persians had been, and that the enslavement of Egypt in the hands of Islam would be a temporary one. This belief was strengthened by the fact that the chief internal sources of the country's wealth, as in the case of the Persians, were connected with the administration of the conquered territories. The Copts, however, were not too much interested in the conquest of the country, for they did not want to make converts to their religion, but to maintain public order, to see that justice was executed, and to collect the revenues. This was pre-eminently the case in Egypt, to such an extent that the new-comers, professing unitarians as they were, to whom images and pictures were abhorrent, did not scruple to take over even the seals of their predecessors in office, on which was frequently engraven the figure of a wolf or other animal—a rather hard nut for modern writers of Hebrew history to crack. The wise tolerance of the Arabs is shown by the fact that not only were their official documents written in Greek and Coptic as well as in Arabic, but many important positions in the government were filled by Christian subjects. The Copts were not allowed to have a native intermediary. Once more it fell to 'Amr to become the conqueror, and this time on behalf of the Umayyads, in whose hands it remained for nearly a century (A.D. 698-750). The tragic fall of the Umayyad dynasty and the massacre of their house
made a deep impression upon the Christian population of Egypt, and it is not without significance that it was in Egypt that the last of the Umayyad Caliphs sought shelter from his enemies. For a century the 'Abbásids continued to send Arab governors to Egypt, and it was not until the year 858 that Harun al-Rashid, setting aside the heterodox peoples, the Fātimids were enlightened rulers. In spite of famine at home and the inroads of the Copyright © B.R. Hughes, Inc. 1987. All rights reserved.

of the dynasty, proclaimed himself Caliph, in opposition to the 'Abbásid Caliph in Baghdad, and he called Al-Qahirah ("the victorious"), the modern Cairo. The name bears a curious resemblance to that of the ancient Egyptian town of Edfu. From Khere-bi in the neighboring overshadowed all the countries bordering upon the shores of the Mediterranean, from Algeria to Syria, the holy cities of Arabia also acknowledging their sway. Security of life and property led to a great increase of the population. Commerce was flourishing, and the trade of India, which had up till now passed through Baghdad, began to flow into Egypt, and from this period begins the decadence of the 'Abbásid capital and the resulting aggrandizement of Cairo. 'Aziz, the son of Mu'izz, was especially distinguished for his enlightenment and religious tolerance. His reign is the culminating point of the dynasty, although it was considerably later that the prayers were said in the name of the Fātimid Caliphs in the 'Abbásid capital itself, but only for one year (A.D. 1059). Under Ḫikīm, the son and successor of 'Aziz, the position of the Fātimids was that the most in the Ikhshidids (A.D. 935-969), who also ruled both Syria and the holy cities of the Hijaz, Mecca and Medina.

The Arab did not leave behind them much in the way of architecture to tell the visitor of their occupation of the country. The so-called 'mosque of 'Amr' may at least indicate the site on which that of the first conqueror of the country was built, but it is a long way behind the Kufic type of modest dimensions than the present spacious place of worship, and not a trace of it remains. Indeed, the original Arab town of Fustāt, although it received an independent importance for many centuries, is now regarded as merely a part, and not the most florishing part, of its younger sister, Cairo.

The dynasty of Ibn Ṭulūn, on the other hand, left many memorials of their supremacy. The mosque of Ibn Ṭulūn, said to be an imitation of the Ka'bah designed by a Christian architect, but with a dome superimposed and a minaret round which winds a long moral staircase leading to the roof of the Church of the Redeemer in Copenhagen, is still one of the sights of Cairo. Ibn Ṭulūn's brilliant but unfortunate son also resembled the late Khedive Ismail in his devotion to building and public works.

It was, however, under the Fātimids that Egypt rose to the height of its greatness. Claiming descent from Fātimah, the daughter of the Prophet, these sectaries, as they were held to be by the orthodox 'Abbásid Caliphs, took their origin, like so many other movements, both political and religious, in N. Africa, from which they conquered Egypt (A.D. 909 or 911), the fourth century. The site of the mosque remains the most important of Cairo. The four schools of doctrine which are recognized as orthodox by the Summite Muslims, the one

which first prevailed in Egypt was that of Malik ibn Anas († A.D. 804). It is still the accepted rite of the rest of N. Africa, but in Egypt itself it has been replaced by that of his friend and disciple Shafi'i, who died in Fustat in the year A.D. 819, and whose tomb is visited still by the pious near the foot of the Mokattam Hills. With a view to removing this advantage, he planted in their stead the orthodox faith, Saladin despoiled the Azhar of many of its privileges and endowments, and founded in its place a mosque and college renowned as the University of Cairo († A.D. 1191), at the same time instituting missions to the outlying districts for the propagation of the true faith.

The Azhar, however, quickly rose again into favour with the great and benevolent, and it is from the Ayyubids rather than from the Fatimid period that its career of brilliance and usefulness takes its beginning. With the coming of the Mamluks (1250-1517), who succeeded the Ayyubids, the University school (called after Abu Hanifa, † in Baghdad, A.D. 767) came into prominence, and still more under the Ottoman Turks (from 1517 on). Being the least strict of the four schools and also the most inclined to eclecticism, it was naturally favoured by the government, whilst the Shafi'i remained the popular school. As for the Hanafi, the last of the four orthodox schools (founded by the Prophet), it never took hold in Egypt, and its students in the Azhar have never been more than a handful at the most.

Meantime the Azhar University, which may be considered as the university of the Orient, grew in importance and splendour by leaps and bounds. In the West the conquests of the Christians ending in the expulsion of the Moors from Spain by Ferdinand and Isabella in 1492, and the incursions of Jenghiz Khan at the beginning of the 13th cent. and of Timur Lenk (Tamerlane) at the end of the 14th in the East, left Egypt untouched. Thus, when its rivals in Cordova and in Baghdad had been swept away, Cairo remained the undisputed mistress of Muslim learning and culture. Both its professors and students were drawn from all parts of the Muslim world, a preference even being given in some cases to those whose homes were most remote. The Muslim man of learning is cosmopolitan in his habits; he visits all countries where he may hope to pick up some core of knowledge, and returns from some world-famous; and the fame of the Azhar and its instructors naturally led many of these travelling students to settle in Cairo, and sometimes to lecture in its college. The best known of these is probably the philosopher-historian Ibn Khaldun, who was a native of Tunis and was given posts in the government not only of that country, but also of Fez and Granada. He then came to Cairo, where he was given the office of qadi of the Malikis. From there he paid a visit to Timur Lenk at his camp in Syria, and finally died in Cairo in A.D. 1406.

But, while the Azhar may be considered as holding aloft the torch of learning to the whole world, both Muslim and Christian, up to the period of the Renaissance in Europe, it must be confessed that after that it became somewhat of obscurantism. This is evident from the books which continued to be studied there. The ancient poetry, which is the whole literature of pre-Islamic Arabia, was unheard of, and even the Assemblies of the Hadith were neglected. A study was theological (including jurisprudence; or grammatical. Even the original texts of the Qur'an and the Traditions of Bukhari were not studied at all, and no critical commentaries on these. Mathematics, natural philosophy, history, and geography were ignored. In other words, the Azhar, like the 'University' of Fez, continued to be a medieval school after the Middle Ages had passed away.

Egypt was one of the first homes of Christian monasticism, and this religious tendency of the people showed itself also after they had largely gone over to Islam. Among the earliest and most typical mysteries of Egypt is called Da'ül-Nun (a name of the prophet Jonah, meaning 'he of the fish'), who flourished in the first half of the 9th cent. A.D.; the other one is the Shafi'i al-Farid, who is considered the greatest of all the poets of the mystics. He was born in Cairo in 1181, and died there in A.D. 1235. He was buried on the Mokattam Hills near the tomb-mosque of Shafi'i. His principal poem, in 671 lines, has been translated by J. von Hammer-Purgstall (Vienna, 1854). Already under Saladin not only cells and monasteries, but even convents (for divorced wives and other women), began to multiply rapidly. Bajiri († A.D. 1279), the author of the famous 'Ode of the Mantle,' which is known all over the Muslim world and has been often printed and translated in the East, was, as his name implies, of Egyptian origin.

Although Islam is theoretically a strictly monotheistic religion, there is perhaps no faith in which the fountain of the worship is more all-embracing than human nature. A centre of prayer is found in practically every town of the Moslem world, and it is in the very heart of these prayer-books of Yazuti, a native of Morocco who died in A.D. 1465, consisting of litanies in which the Arabian Prophet is a being certainly more prominent than human nature, that widespread. They are found, and not least in Egypt. The whole of N. Africa, and indeed the Muslim world generally, is honey-combed with secret societies or brotherhoods (bekta), mostly religious in object. They form such an ekklesia in ecclesia. In Egypt there are four such orders named after four mystic or Sufi (see Sufism) saints of the highest rank called 'poles' (qutub). The most famous of these is the Shafi'i Abu al-Qadr al-Ma'in († 1165), whose shrine is to this day a place of visitation in Baghdad; but the best known locally is Ahmad al-Badawi, a native of Tunis of the 12th cent., whose tomb-mosque is at Tanta, a town of 60,000 inhabitants, on the railway line about halfway between Alexandria and Cairo. A fair is held there annually on his saint's-day, during which the population or about 200,000 is drawn from the neighbouring countries. It resembles a fair elsewhere, shows of all kinds predominating over whatever religious motive ever existed. In Morocco the four recognized 'poles' differ from those acknowledged in Egypt, and one of them, Shadhilt, a native of the country († in 1258), is also the eponym of one of the more important brotherhoods. In these shrines the room containing the catafalque of the saint is lined with banners, rosaries, ostrich eggs, and votive offerings of every description. Where the shrine has fallen into ruin and consists of four bare walls, rugs and other pieces of cloth are often tied to a neighbouring tree. These pious emblems represent the prayers of the faithful to the saint to intercede for them in order to obtain some much-desired object, recovery from sickness or, often, the birth of a child. The saints' tombs are a marked feature of the landscape in all Moslem countries, are the emblems of an ineradicable superstition, and, it is said, in many cases the haunt of evil spirits.

With the French expedition of 1798, a new era began in the history of Egypt, owing to the attempts of the Khedives to transform it into a European State and super-commercialize the affairs of the ruling classes to be educate in Paris, from which they too often returned imbued with the
vices rather than the virtues of Europe. Isma'il laid down railway and telegraph lines all over the country. Under Taufiq slavery largely disappeared, and the doing away with it was a thing of the past. From Taufiq also dates the liberty of the Egyptian newspaper press, a liberty which has been mostly abused. Indeed, the number of newspapers is proportioned to the number of readers. They are, as might be expected, for the most part published in the interest of some political propaganda, nationalist (which generally means Turkish), conservative, or progressive. The best Christian newspapers are edited by Syrian immigrants. There are three or four journals published by and for women.

The progressive movement initiated by the Khedives naturally reacted on that stronghold of conservatism, the Azhar University. Incredible as it may appear, the instruction given there continued on the same lines as in the 13th century. To meet present-day needs the Gordon College was founded at Khartum, and also a modern university in Cairo, but the latter has practically no students. Meanwhile the students of the Azhar, who have always been more or less inclined to make the law into their own hands, in 1909 went out on strike, with the result that some concessions were made to modern ideas. The last century in Egypt, however, can hardly be fairly considered as an example of that spirit of enlightenment which is characteristic of European, although the instruments putting them in force were Muslim.

On the whole, it may be affirmed that the Muhammadanism of Egypt has, considering the times and country, been enlightened and a source of enlightenment. Even at the period of conquest they did not put in force the iconoclastic theory of their faith, and under the Mamluks, and also under the Fatimids, stone and metal work are, as may be seen by the specimens of the latter in the museum at South Kensington, of a very high order. Neither was it customary, as in the case of the Mamluks, and also under the Fatimids, stone and metal work are, as may be seen by the specimens of the latter in the museum at South Kensington, of a very high order. Arabs of the tribe of Qurān, it rapidly assumed a leading place in the Muslim world, and remained for three centuries, even when the political capital was Damascus, the intellectual and religious centre of Islam. It was generally divided into two provinces—Iraq, the southern half, its most northerly town being Takrit, and the northern portion, Jazirah (the Levant). Of much importance to these two provinces, from the point of view of the history of the faith, is Iraq. It has always been the storm centre of S.W. Asia, from which the majority of the great schisms and dissensions arose, and it remained to-day the seat of the Shi'ah, or party of 'Ali. Even in the days of 'Ali himself it produced the Khawārij or Sceceders, whose main principle was to oppose the established order of belief and of society, and to clamour for a theocracy, by which they really meant anarchy and nihilism. Often apparently exterminated, they continued to be a thorn in the side of the recognized Caliphate for many a day. Baghdad itself was originally built and fortified to protect the province of the Caliph against the fanatic Rawāndis, a sect of Khurāsān (A.D. 762). In the last half of the 9th century, three of the Abbāsid Caliphs threw in the lot with the Mu'tazilah, or party of freedom of thought, and instituted a vigorous persecution of the orthodox believers; and in the second half of the same century the country was divided into a state of anarchy over the north of the Persian Gulf and continued for fifteen years before it was quelled. With the 10th century the inroads of the terrible Caramātians began, and, during the remaining of Bahrain, quickly overspread and devastated Mesopotamia, Syria, and Egypt (see Caramātians). Meanwhile the Turkish slave-soldiers of the Caliphs had become so numerous that the Caliph was compelled to quit Baghdad and establish itself at Sāmmārā, some seventy-five miles further up the Tigris, and remain there for fifty-five years. By the time they returned the glory had departed from the Caliphate, and the supreme pontiff of Islam had become a puppet in the hands of the military power which happened to be supreme at the moment, until the last semblance of authority was swept away by the Mongol invasion.

But, whilst Iraq was the principal seat of heresy and sedition, it became for that very reason a stronghold of orthodoxy and firm government. Here the Sayyids of Sennarim and the strongest arm to keep them in check, and their very opinionativeness led to the necessary evolution of the particular view which eventually became accepted by the civil power. Just as some of the Caliphs liked to send their worst governors to the holy city of Mecca, so some of the best, from the point of view of the Caliph, were sent to Iraq, which governors were, under the Umayyads, Ziyād, half-brother of the Caliph Mu'awiyah; the famous, if bloodthirsty, Hajjāj ibn Yūsuf, and Khālid al-Qurṣi. 'Iraq, too, produced Ḥasan al-Baṣrī (+728), a commentator on the Qur'ān and collector of traditions about Muhammad, to whom the mysteries trace their origin; and Abūl-Ḥasan al-Ash'ari, who at first a Mu'tazilah, ended by reducing the faith to a system which was quickly acknowledged as orthodox and remains so at the present day.

The two cities of Baṣra and Kāfā were founded immediately after the conquest of Mesopotamia; by the Arabs about A.D. 629. They were at first cantonments for the Arab garrison stationed in the territory conquered by them. These two cities, however, quickly lost their military character, and became centres of intellectual and religious towns of Islam. They have been well compared to Oxford and Cambridge, not only in their mutual rivalry, but also in the wide-spread authority which attached to their diicta. Their scholars laid down the principles of Arabic grammar, and decided, or at least pronounced upon, the proper reading of the text of the Qur'an, those of one city often taking the view opposed to that advocated by the other. Baṣra especially was the home of free-thinking. It was there that the most famous of the pedants published their tracts, and nowhere could the Assemblies of Ḥarīrī (+1122), with their airy use of expressions from the sacred volume, have been so fitly written. The Zanj and the Caramātians in directions, which devastated 'Iraq, brought ruin to both towns; but, whilst Baṣra, under the enlightened 'open door' policy of native rulers, rose again, and is likely to continue an important centre too long; Kāfā has been, as they were one of the chief means of introducing Greek learning into Islam. They produced many writers and translators, of whom perhaps the best known is Tabīt ibn Qurrah (+901).

The Abbāsid was essentially a Persian dynasty. The cause had its beginnings in Khurāsān. One Caliph even wished to make the capital there. But the claims of the West were still too great for that, and so the Centre, which was then called again and Persian, became and remained the seat of government. Baghdad was founded by Mansūr in the year 762, and quickly eclipsed in greatness all the other cities of the empire. Originally built on the west bank of the Tigris, the government offices and residence of the Caliph were later removed to the east. The insubordination of the Turkish guards at one time necessitated the withdrawal of the court to the small town of Sāmmārā further up the river. There it remained for over half a century (830–892). During this and the subsequent period nearly all the Abbāsid Caliphs came to a violent end at the hands of their own pretorians. Order was somewhat restored when the temporal power of the Caliphs was taken over by the Buwahīdīs (A.D. 945). These princes were, however, shifting, whereas the Buwahīdīs of Baghdad were Sunnites. Thus religious strife was added to civil, and was arrested only on the coming of the Seljuqs (A.D. 1055). Mesopotamia had been split up under innumerable petty chief- tains, but now all Asia from Egypt to Afghanistan was under one strong ruler. The proclamation of the Fatimid Caliph in Baghdad in A.D. 1055 was merely a passport upon the proper reading of the march of events. The Buwahīdīs had already restored the old royal palace of the Khulād and
turned it into a hospital, and now under the Seljûqs many colleges sprang up in Bagdad. Their famous Wazir Nizâm al-Mulk, among his other benefactions, founded the college named after himself, which then came to be the principal college in Bagdad, until it was replaced by that of the second last of the Caliphs, Mustansîr (A.D. 1226–32). Meantime the commodities handled in the Caliphate went through the same change as the temporal power of the Caliphs, and it was not the spiritual head of Islam, but the Seljûqs Sultans, and later Saladin, that proved the chief obstacle to the Christian. After the fall of Bagdad and the extinction of the Caliphate by the Mongols, Mesopotamia came under the sway of Persia until these were driven back by the Ottoman Turks, who have held it for the last four hundred years. Thus the old rivalry of Constantinople and Iran has been revived, with the added bitterness of the hatred of Shi'ah and Sunnâh. To the Persian Muslim Mesopotamia is the most sacred country upon earth, holding as it does the dust of 'Ali and his son Hussain. 'Ali was assassinated in Kufa in A.D. 601, but it was not until 791 that the place of his burial was so consecrated that no one save a priest who has even that authority for this statement is much later. To 'Ali were quickly attributed superhuman qualities, until he came not merely to be regarded as not inferior to the Prophet himself, but even to occupy the second place of honor after Christ and God the Trinity. Najaf or Mashhad ('Ali's shrine'), some four miles to the west of Kufa, and Karbala, the scene of the battle in which 'Abbas and most of his family perished in A.D. 680, some fifteen miles to the north of Najaf, are held, by the Persian protagonists of the divine right of Caliphs, to surpass in sacredness Medina itself, whilst to the Turk, who now rules the land, as to some of the AAbbâsid Caliphs, this devotion is nothing less than idolatry.

Mesopotamia, like N. Africa, has always been and still remains a forcing-house for religious fanatism. In the strife of sects this fair province, one of the richest in the world, has almost gone out of cultivation. There is some prospect, however, that with the construction of the Esphurata valley railway and the annexation of Basra, the efforts to repair the system of canals, which were recently begun under W. Willcocks, will have the effect of restoring the country to what it was under the Christians, and bring the basin of the Tigris, one of the most important points of the capital penalty for apostasy from Islam. In connexion with these points a new penal code was issued, and the suppression of slavery resolved upon, in 1858.¹

No one of these reforms sprang from the will of the Turkish people themselves; on the contrary, they were effected at the instigation of the European Powers, especially of Great Britain, and were introduced only after long temporizing on the part of the higher governing classes in Turkey. When the Western Powers had succeeded in saving Turkey in the Crimean War, they demanded, as an act of gratitude, the abrogation of the ordinances which could not but be humiliating to the Christian mind. They likewise expected that the changes would serve to intensify the nationalistic consciousness of the various Mohammedan elements in Turkey, and thus provide a barrier to the growing

² Heretofore cited as R.M.M.
The abolition of capital punishment for detection from the Muezzin's $\pi$-year, in 1845, the s.knowing principle all every religion and sect in my empire may practice its form of worship with complete freedom, no one shall be obstructed or molested in the exercise of his own religious and spiritual convictions, and no one shall be compelled to change his religious or sect (Fr. text, 8). The abolition of hard (poll-tax) and the introduction of military service for non-Muhammadans were affected in name, but commutation (fihd-i-askari) was still to be allowed (cf. the present writer's art. 'Bedel-i-askeri,' in DI). In reality, the abolition of hard remained to be affected in the laws, but the old modification being that the term $\text{hard}^2$ was replaced by the expression $\text{hard-i-fihd}$. It was not till the Revolution of 1846 that the official services comprised mere civil registration—i.e., the Muslim and non-Muslim subjects alike were subject to the same religious and ecclesiastical jurisdiction. Similarly, the new penal code was altogether on the basis of the penal code of the sultan, and based on the simple process of taking over the French code pertain in 1858, although as early as 1849 the $\text{hard-i-fihd}$ had promised that such a code would be attempted. The new penal law was at length modernized by the supplementary decrees of 4th April 1911. The later code, however, did not supersede the penal ordinances of the ancient $\text{hard}^2$; on the contrary, the two sets of laws remain in operation side by side, and offences can be tried by either (Ch. F. Nord, Des türkischen Strafgesetzbuch, Berlin, 1912, and A. H. von der Trenck, Der Prozeß (laufs des administrativen und des empire ottomani., Vienna, 1900, p. 384). Of the other reforms, reference need here be made only to the enactments relating to the slave-trade. A band of 1st Oct. 1854 forbade the buying and selling of Georgian slaves; various ministerial ordinances, dating from the time of the Sultan's deputy of administration, established the slave trade in slaves whatsoever; since 1852 the trade has been regarded as smuggling. From 1860 Turkey has taken part in the treaty for the suppression of the slave-trade in Africa at Brussels.

While it is true that many of these reforms were very imperfectly carried out, or not carried out at all, yet their importance should not be underrated. In not a few cases they made a breach in the fabric of the sultan's alike in theory and in practice, and the inconsistencies of the new laws would serve to bring Islam into line with modern ideas; but to what extent this may be affected without great religious wars, and how far Muslim theology is able and willing to deal with the fresh problems involved, the future alone can show. Hitler's Muslim theology has tacitly submitted to the reforms, and has not expressed itself openly regarding them. It is only within recent years that the aspirations of the young Turks have won support among the theologians, but no attempt has been made as yet to produce works of importance in the field of scientific theology. The views of this liberal tendency if we may so call it— i.e., theology find expression in the Siriat-i-Mustaqim, a periodical founded immediately after the Revolution, and from no. 183 (8th March 1912) continued under the name of Sabit al-Rashid (cf. 1. Bouvle, in RMM xx, [1912] 292-304; M. Hartmann, Un-politische Briefe aus der Türkei, Leipzig, 1910, p. 137).

2. Religious organization. — Apart from the theological group just referred to, the religious ranks of Islam in Turkey have no liking for innovation in the name of the entire class, as well as the spiritual member of it, is known is alem (the plural of 'alem', 'known'). This long-established organization, as still existing with but little change in its main features, was founded in the reign of Sultan Mahmut II., the Conqueror (1451-81) (cf. J. von Hammer-Purgstall, Die osmanischen Reiche Staatsverfassung und Staatsverwaltung, vol. II, Vienna, 1813, p. 376 ff.; W. Gibb, A Hist. of Ottoman Poetry, London, 1900-09, li. 394; C. d'Onsem, Tableau général de l'empire ottoman, iv. 2, Paris, 1791, p. 492 ff.). At its head stands the Shaiikh al-Islam, whose office, it is now considered, was created by the imaginative ruler Suleiman I. the Magnificent (1520-66), though the title had been conferred by Sultan I., the Conqueror, upon the mufti of Constantinople. In consequence of the reforms, and especially the creation of the mahkim-i-nizâmiyyâh (see above), his authority has suffered a considerable decline; he now controls only the religious schools and the sultan's. The board over which he presides is called Bâb-i-mašaḥfat-i-islâmiyyâh, Bâb-i-fuatânâdi, or, popularly, Şîh-i-islamîân, and consists of the following departments:

(a) Administrative boards: (1) Muğlis-i-ihtisâb-i-fihd-i-askari, for the selection of spiritual judges; (2) Muğlis-i-ihtisâb-i-birâhîmî, for the selection for the office of mufti; (3) Muğlis-i-ihtisâb-i-mâlî, for the selection of judges; (4) Muğlis-i-ihtisâb-i-nâmârî, for the selection of clerks; (5) Muğlis-i-ihtisâb-i-emîlî, for the selection of examiners; (6) Muğlis-i-ihtisâb-i-fâyizî, for the selection of accountants; (7) Muğlis-i-ihtisâb-i-fikrî, for the selection of lecturers for the imperial theological seminaries; (8) Muğlis-i-ihtisâb-i-nâmârî, for the selection ofppers for the imperial theological seminaries; (9) Muğlis-i-ihtisâb-i-mâlî, for the selection of officials; (10) Muğlis-i-ihtisâb-i-emîlî, for the selection of clerks; (11) Muğlis-i-ihtisâb-i-fâyizî, for the selection of accountants; (12) Muğlis-i-ihtisâb-i-fikrî, for the selection of lecturers for the imperial theological seminaries; (13) Muğlis-i-ihtisâb-i-emîlî, for the selection of clerks; (14) Muğlis-i-ihtisâb-i-mâlî, for the selection of accountants; (15) Muğlis-i-ihtisâb-i-fâyizî, for the selection of accountants; (16) Muğlis-i-ihtisâb-i-fikrî, for the selection of lecturers for the imperial theological seminaries.

While the standing of the Shaiikh al-Islam, as of the 'ulamâ generally, is now greatly inferior to what it once was, their influence among large masses of the people is still very considerable, and to this day they form a power which cannot safely be ignored by the politicians.

4. The dervish orders. — Perhaps an even greater influence among the people is enjoyed by the dervish orders. From the foundation of the Ottoman empire they have played a great rôle in Asia Minor, as they did to some extent even before. As a matter of fact, the gradual Islamization of the Christian elements in Turkey has been their work; in their indifference towards the existing forms of religion, views of the most diverse character could find a refuge in their midst. Their ideas and ideas of slaves, as assimilated to those of the official and national religions. The order of the highest repute at the present day is the Mâlî, so called from the name of its founder, Mâlîâdî Jalâl al-Din Rûmi (q.v.), and known in the West as the Rûmî (the so-called "dancing dervishes.") The next in general regard are the Tâlî's—den the same "howling dervishes." Certain orders which at one time occupied a powerful position—e.g., the Naqshbandi, the Halvâ, the Qâdirî, etc.—have now sunk to a lower level; others, again, have been of late gradually growing in prestige—e.g., the Maliki (cf. Hartmann, Index).

The Bâqtilâsh, an order which at one time, owing to its close connexion with the Janizaries, held a position of special prominence, sank into the background after the suppression of the Bâqtilâsh by Sultan Mahmut in 1826, but have quite recently begun to display a more active spirit. In Asia Minor, and even more decidedly in Albania, this order is constantly adding to its numbers; the reason of its heterodox views it should hardly be regarded as belonging to Islam at all, but it certainly makes this claim.

It has been methodically dealt with in several recent works of great reliability, such as G. Jacob, Einzige sur l'histoire des

**MUHAMMADANISM** (in Turkey)
MUHYI AL-DIN IBN AL-'ARABI

Pilgrimage to Mecca. He did not return to Spain. Many of the remaining years of his life were passed in the neighbourhood of Mecca, but he also travelled extensively in Babylonia, Asia Minor, and Syria, everywhere gaining the respect of the people and spreading his doctrines in conversation with high and low, while, as behoved a good Muslim in the period of the Crusades, he called for protective measures against the Christian colonisation and encouraged his fellow-Muslims to persevere in their faith. He died at Damascus in A.D. 1240.

Whether we regard the extent of his theological writings or the number of his disciples and the rapid development of Islamic mysticism, Ibn al-'Arabi can justly claim the supreme position among Sufi authors which posterity has accorded him, and which is attested by the title, 'al-Shaikh al-Akbar,' conferred on him by the almost unanimous voice of those who are best qualified to judge.

The list of his works drawn up by himself contains 280 titles (Broedelmann, Gesch. der arab. Litteratur, iv. 443), and some of them are of enormous length. The most famous and important is the Futuhat al-Makkiyya (4 vols., Eulàq, 1876, comprising about 3500 pages). In this, as in many of his works, Ibn al-'Arabi presents to the reader truths revealed to him in ecstatic vision by prophets, angels, and even God Himself (a brief résumé of part of the contents of the Futuhat will be found in H. O. Pellat, and F. D. H.amil, The Turanian library manu. libri. senatore. Lippman., Grima, 1838, pp. 490-495). Another book, of smaller compass but equally celebrated, is the Fuguy al-Hikom, in which the author discourses upon the national and religious significance of the revelations imparted to twenty-seven prophets, beginning with Adam and ending with Muhammad. Besides the Futuhat and the Fuguy, both of which contain a considerable quantity of verse, his prose writings include a mystical commentary on the Qur'an, a collection of definitions of Sufistic technical terms, which has been edited by G. Fluegel, (Leipzig, T. 1846), and a short treatise on mystical psychology (Arab. text with Span. tr. by Asin Palacios, in Acta du xi,e Congres interant, dos orientalistes, iii. 151 ff.). He also produced several volumes of mystical poems, one of which, the Tariyimé al-suhayl (cf. with Eng. tr. by the present writer, London, 1911), has a curious history. The erotic style in which it is written gave rise to scandal, and in order to refute his accusations Ibn al-'Arabi published and dedicated to the caliph a poem accompanied by a commentary in which the mystical sense of each verse is explained. Although his interpretations are often far-fetched, the poems themselves supply evidence that there was no ground for the charge brought against him, plausible as it might appear to the uninitiated. The question of his orthodoxy was keenly debated, and, if many Muslims saw in him a dangerous heretic, others had no doubt that he was a great saint; but even his admirers recognized that the outward sense of his writings was frequently ambiguous, and that the study of them should be permitted only to those of ripe experience. At first sight, it seems hard to reconcile Ibn al-'Arabi's extreme conservatism in the sphere of religious law with his remarkably bold and fantastic speculations in the domain of theosophy. He belonged to the Zahirite school, which rejects opinion, analogy, and authority, and takes its stand on the external (zahir), literal meaning of the Qur'an and the Sunnah. His attitude in regard to legal and ritual practice was that of the literalist (zahir), who looks only at the outward form, in all matters of doctrine and belief he was pre-eminently the mystic (bâtinî), who fixes his gaze on the inward spirit and seeks to
MUHYI AL-DIN IBN AL-ARABI

discover the reality of which the words and letters are a symbol. As I. Goldzieder has shown (Die Zähriten, Leipzig, 1884, p. 179 ff.), the two points of view are not mutually exclusive. The Zährite procedure failed to find an expression of their own dislike for the hair-splitting pedantry of the rival schools of law, for the acceptance of external authority as the standard. 

But the Qur'anic and theosophical aspects of one Absolute Reality: the world could not exist apart from God, and, if the world did not exist, God could not be manifested and known. The terms 'creator' (al-hakim), 'light of God,' and 'manifestation' are all in one another as moments of the Absolute Being, not indeed of equal worth—since al-hakim is eternal, while khayy is contingent (i.e. eternal in the sense of being constituted as the whole universe of created things). 

Although the contrary might be inferred from some passages of his writings, he makes a distinction between the absolute and the world. His pantheism does not lead to the doctrine of incarnation (khayy) or identification (tithahid). 

Man can never say with Hallaj, 'I am God' (una al-hakim), because, over and above the constitution of his mind, he is unable to think all objects of knowledge simultaneously, as God thinks them; therefore he is only 'a truth' (khayy), not 'the Truth' (al-hakim), which is God, the Body of the universe of created things (cf. Massingham, p. 182 ff.).

In view of the scanty attention that Ibn al-Arabi has hitherto received from European scholars, it would be impossible to give a detailed account of his doctrines, and premature to make a more definite statement concerning the character of his theosophy as a whole. Much of it, of course, belongs to the common stock of Sufi speculative discussion, but there is also a great deal that appears to be original and based upon the immense store of his own mystical experiences, which he has so copiously recorded and analyzed (for his theory of destiny and the significant constitution of his mind, see Asín Palacios, "La Psicologia según Muhàhidn Aëbnàrì," in Actes du x° Congrés internat. des orientalistes, ii. 125 ff.). Among the twenty-four heretical doctrines attributed to him by Ali al-Qarî ('Ilàl al-fish yahd al-wujûd, Constantiopole, 1294 A.H.), the following are noteworthy:

(a) That man stands to God in the same relation as the pupil of the eye, which is the instrument of vision, to the eye; i.e., man is the means whereby God beholds Himself as He really is. This description refers only to the supreme type of humanity, 'the perfect man' (al-innàf al-karan), whom Ibn al-Arabi identifies with Adam as representing the class of men—prophets, saints, and theologians—that possess a unique knowledge of God (Fawqàl al-fikr, ch. i.; cf. Bi, art. 'al-innàf al-karan').

Knowledge is a process of reminiscence. In proportion as each particular soul is purified, it receives illumination from Universal Reason by means of revelation (wukhûy), and from Universal Soul by means of inspiration (ilhâm). The organ of this knowledge is the reasonable soul (al-nafis al-nàtìq), which must be distinguished from the vital or animal soul (al-rûq al-hayauk). When the former has had a spiritual connexion with the body and is incapable of sin, the animal soul, though not consciously evil, is naturally corrupt, and suffers punishment for sins committed in the flesh.

The system of Ibn al-Arabi may be described as a pantheistic monism. God and the world are two correlative and complementary aspects of one Absolute Reality: the world could not exist apart from God, and, if the world did not exist, God could not be manifested and known. The terms 'creator' (al-hakim), 'light of God,' and 'manifestation' are all logically involved in one another as moments of the Absolute Being, not indeed of equal worth—since al-hakim is eternal, while khayy is contingent (i.e. eternal in the sense of being constituted as the whole universe of created things). 

(6) That God is the 'self' (a'in) of the things that He brought into existence, for He is the 'self' of things in manifestation, though He is not the 'self' of things in changes. Therefore Ibn al-Arabi holds that the true mystic, combining the doctrines of twair and tawâlî, worships God both
MULLA

as absolutely transcendent and as externalized in
name (Fusils, etc.).

(c) That all forms of religious belief are relatively true. This follows from the proposition that God is the ‘self’ of all created things, whether they be
sensible or intelligible. Every sensible form some
notion of God, and in praising the god which he
has made he praises himself, while at the same
time he blames the gods of other sects and indi
dividuals. It would be more wise and just if he
preached of himself and dwelt in his gospel,
according to the verse (Qur'an, ii. 109), 'Whereso
ever ye turn, there is the face, i.e. the reality, of
Allah' (Fusils, ch. x. and xxvii.; cf. Tahir'um al
ashrâq, Preface, p. vii).

(d) That, even if the infidels shall remain in hell
for ever, their torments will ultimately be trans
mitted into such pleasure is as enjoyed by the
blessed in the paradise of love.

Abd al-Karim al-Jilji develops this theory in his Insin al-Kûmil (see the present
writer’s article, 'A Moslem Philosophy of Religion,' in Musîm, 3rd ser. i. i. (1919) 83 ff.). Evidently
there is no room in Ibn al-‘Arabî’s system for the
Muhammadan scheme of rewards and punishments.
The fullness of the divine wisdom as manifested in
creation requires that the spiritual capacities of
human souls shall be infinitely variously and
indefinitely expanded. His aim is to show that
correspond in the capacity eternally implicit in God’s
knowledge of every human soul before its individualiza
tion in the material world. Ibn al-‘Arabî proceeds
to show further, inasmuch as knowledge is a relation
dependent on the object known, viz. the soul and
its potential capacity, each individual is responsible
for the good and evil which are produced by that
capacity (Fusils, ch. v.); but in another passage of
the same work (ch. vii.) he declares that it is a
more profoundly mystical thought to regard the
soul as a mode of God, and its recompense as a
divine act of generosity (Ilm al-khalîq) in the form of pleasure
or pain which are felt by God Himself.

(e) That the saints are superior to the prophets.
Ibn al-‘Arabî does not state the doctrine in this
absolute way. The prophets, he says, may be
viewed in three aspects: as apostles, they bring a
religious code to their people; as prophets, they inform them about God in proportion to their own
knowledge; and, as saints, they pass away in God
and are not answerable to the world, nay universal
eternal, everlasting element in prophecy. Hence
the prophet qua saint ranks above the prophet qua
religious legislator or preacher of divine truth
(Fusils, ch. ii). Ibn al-‘Arabî compared this to the
ulamâ‘ and to appointment to the higher judicial
and university positions. Owing to the Oriental
veneration for scholars, as well as to certain privi
ges which the ulamâ‘ enjoy (such as exemption from
military service, and free, though very simple, food
and lodgings), many students enter the madrasah
who are physically unable to bear the hardships
of the student life and mentally unfit for the
full curriculum. Accordingly, the majority leave
the madrasah after from one to five years of study,
during which any tendency to independent thought
and investigation has been discouraged and a blind
devotion to tradition has been fostered. By this the
Arab religious mode of life was made the fixed principle of life. At the end of
each year’s work or the completion of each pro
fessor’s course, the student receives a certificate
(of the kind of line of life). It is a common
reigning that amount of learning. Leaving the
madrasah, he is now in the mulla class, and
receives the support of that class in the appoint
tment to some minor office, generally in some village
or small town in the provinces. He may become an
imâm, ‘leader in prayer’ (though this office is
not reserved exclusively for the mulla class), or
a teacher in a primary school (and the incapacity
of such teachers in the Orient is proverbial), or a
lecturer in some small madrasah, or even a judge
of one of the minor courts. It is the mulla as a
provincial mosque preacher who is regarded as typical of
the class. Once in office the mulla is in a more position for life, though he may be transferred from
one school or mosque to another.

Without any fixed organization, the mulls
nevertheless almost a caste. It is almost the lowest
of the three main religious orders, distinct by
the large turban and the flowing robe,
notwithstanding. In influence over the
masses and in devotion to formal
religion, the mulla class has often been likened to a priesthood
of the primitive hunter and
sages. It is even the case as far as the mulla
receives no special consecration to
office, does not in any way replace the individual
in offering prayer or sacrifice, cannot grant absolu
tion, and performs no necessary part in the rites connected with birth, circumcision, marriage, or death. But, in being the teacher of these rights and duties and the accepted adviser in questions of faith as well as of daily life, the mulla considers himself in a position above that of the other Oriental clergy—which equal at least he generally is in learning and whose superior he is in the persuasive powers of his dialectics.

In their conservative and reactionary tendencies the mullâs have generally given their support to the absolutism of temporal authorities—in Turkey especially to the Sultan as head of both the Church and the State—and they have opposed the introduction of Western culture as encouraging religious indifference and ceremonial laxity, and as substituting rationalism for their own fatalism. In Persia, however, where the Shi'ite form of Muhammadanism prevails, and where, consequently, the temporal ruler is not regarded as the head of the Church, the mullâs often exercise their popular power against the State authority, matching the despotism of the latter with their own extreme fanaticism. There the house of the mulla, like mosques and shrines in all Muhammadan lands, is an inviolable place of refuge; and Persian mullâs have often been charged with harbouring outlaws, whose services they have then used in furthering their own designs. The power of the mullâs is sometimes checked to a certain extent by that of the dervish orders, and in Turkey, India, and Egypt by the secular courts instituted in more recent times to administer the so-called 'urf ('customary law').

The mullâs in general, being sincere in their devotion to their calling, are seldom guilty of infractions of the moral law; indeed, they have generally been held to contrast favourably with the lower priesthood of other faiths. Moral probity is less marked among the Persian mullâs, however, who, at heart more devoted to Persian poetry than to Muhammadan theology, hold their own functions in light esteem. In one respect, too, the mullâs everywhere, especially those who fill the office of minor judge, are not above reproach; insamuch as the stipend furnished by the mosque endowments, and official salaries in general, are very small, the practice of usury and acceptance of bribes is frequent—an abuse which early Muhammadanism attempted to avoid by the principle that religious teachers should always have some other means of gaining a livelihood.

Despite the reactionary tendencies and the corruption generally ascribed to the mulla, the history of Muhammadanism contains the names of many mullâs conspicuous for nobility of character and devotion to absolute justice, who have risked their lives to reprove the corruption and tyranny of rulers. To-day, too, the number of clear-headed, honest leaders among the Turkish, Arabic, and Indian 'ulama is steadily increasing; not a few softâhas have been sent from Turkey to receive part of their education in Europe; in India the mullâs have sometimes warmly advocated the innovations of the English; and everywhere in the larger cities subjected to European influence the traditional type of mulla is being combated by advanced Muhammadans who, even when they are rationalists, at the same time deny that they are guilty of any defection from the fundamental principles of Muhammadanism; and fatalism is often taught, practically if not logically, as a doctrine which induces fortitude in bearing the accidents and misfortunes of life, without permitting the cessation of righteous endeavour in any cause as long as Allah has not shown, by making its failure a fait accompli, that His will and decree are opposed thereto.
